QUINLAND—LONDON.

MINING MARKET.

CITY, FRIDAY EVENING.

BETTER MARKET—REASONS TO HOPE FOR IMPROVED PRICES—REFERENCES TO CALLAO BIS, TOLIMA, MYSORE WEST AND OTHER MINES—INDIAN RETURNS.

THE position of the Mining Market this week has been decidedly more encouraging than it was when we wrote last, and almost buoyant, compared with what it was the week before, which, indeed, was about the worst ever experienced in the annals of share dealing. There is a hopeful feeling at the present moment, the index to which may be found in the gradual hardening of prices and the steady inquiry for promising shares with a view to early business.

We think there is a good deal in the theory that has been advanced, that most persons like to close the year and the half-year with a good balance on current account, and that when those momentous dates, Dec. 31 and June 30, are passed, a sort of financial relief is felt, and something like a fair range is given to the spirit of speculative investment. This feeling cannot fail to be helped by two other causes—first, that the rate of interest on deposits is now as low as it can be, namely, 1 per cent., and that the temptation to leave a large sum of liquid cash in the hands of one's bankers is removed; and the second cause is this, that at the present time large numbers of concerns are declaring their dividends, and scattering broadcast over the face of the country huge sums of money, which must find an outlet for investment in some other direction. If in all this the Mining Market does not participate, less than justice will be done to it, and far less than justice to numerous concerns, to the favourable position of which we have so frequently called attention. Line upon line, and precept upon precept, here a little and there a good deal, we have endeavoured to indicate the best of the mining companies that are now before the public, and by inference the shares which, in the present state of affairs, it would seem most desirable to purchase.

There has been a better attendance during the week in the Mining Exchange and round about the mining door of the big house over the way—in other words, the Stock Exchange—and this is a

sign of better business. Otherwise it would not have been worth the while of brokers to return from their holiday resorts to their business haunts. Most of them had repaired to the former with the excuse that it was useless to remain in town doing nothing, and that they might as well be taking a little instalment of their holiday on account; but they have returned to town at the invocation of the telegraphic wire, or of the urgent letter. In any case, there has been more business to do, and there have been more about the market to do it.

Up to the time of going to press the returns of only three of the Indian mines are to hand—Ooregum, Nundydroog, and Balaghat. Ooregum is to the front with 1,354 tons producing 2,902 ozs., which contrasts with 1,367 tons, producing 2,890 ozs. the month before. Nundydroog crushed 1,050 tons, which produced 1,812 ozs., as compared with 1,000 tons, producing 1,637 ozs.; Balaghat crushed 270 tons, and produced 472 ozs., whereas the month before it crushed 210 tons, and produced only 256 ozs. To turn from the foregoing to the crushings of the Indian Gold Mines Co. of Glasgow is like proceeding from the sublime to the ridiculous; 1,000 tons of quartz only produced 93 ozs., and the month before 980 tons only produced 95 ozs. This speaks but poorly for the Wynard in comparison with the Colar Goldfields, if, indeed, the former can be called a goldfield at all.

It has been with satisfaction we have heard from many quarters that the map of the Colar Goldfield, published as a special supplement to the MINING WORLD of last Saturday, has been greatly appreciated. Should any of our subscribers not have received a copy we shall be happy to forward one on the receipt of stamped addressed envelope.

Reverting to the position of mines generally—the reader will not fail to note that Tolima Co. has 400,000% worth of ore in reserve: that it made nearly 30,000% profit last year, and that the estimates of the manager point to double that amount during the currency of the present year. Neither will the satisfactory meeting of Mysore West be passed idly by—particularly by those who wish to become interested in promising Indian Mines. To the satisfactory meetings of Bonnie Dundee and Namaqua (the latter has paid 37½ per cent. in three years), reference is made in our leader columns, and the Wheel Grenville dividend of 2s. 6d. was quite up to expectation. A good telegram from Akankoo will probably lead to the further continuance of that enterprise, and a bad telegram from Etheridge—see leader columns and report of meeting—will not lead to the discontinuance of that.

To-day Callao Bis shares were firm on the receipt of perhaps the best telegram that has yet come from its mine. 452 tons produced 714 ozs., working 14 days with a 10-stamp mill. This gives 1.58 ozs. to the ton, and goes far to justify the hopeful forecasts of the speakers at the recent annual meeting. It also justifies our own leading article on the subject for which, in another column, it will be seen, we are severely called to task. We are, however, not ashamed of what we have said about Callao Bis, or any of the other mines named, and are quite willing that it should be proclaimed from the housetops.

Coming to the position of the market to-night, the Kaffir section calls for no special remark. There has, however, been marked activity in Indian shares, which, generally speaking, are better. The Goldfields of Mysore circular issued to-night receives special attention elsewhere. Australian Broken Hills have been largely dealt in, but close firm at better prices than have been seen for the last two or three days. There has been a good deal of business in Gympie Great Eastern and the shares seem decidedly too cheap. The copper and general sections call for no special comment, unless we notice that the change of management of Yuruari, which many shareholders have long desired to bring about, caused a rise in the shares. Generally speaking the Miscellaneous section has been dull, and prices mark an almost general fall.

The position of Home Mines is again very unfavourable. Some statistics are given in this issue, which indicate it only too well.

The outlook for next week may be described as fairly good, and we should not be surprised to see a substantial revival in the Indian and Miscellaneous markets.

KAFFIRS.

There has not been much business in this class, although the outlook is more hopeful. Johannesburg Water and Jumpers are slightly higher, while Jubilee sustained a rather severe fall. The tone at the finish is dull.

Business.—A rise is shown in Crœsus, 6d.; Glencairn, 3d.; Henry Nourse, $\frac{1}{8}$; Heriot, $\frac{1}{8}$; Johannesburg Water, $\frac{1}{8}$; Jumpers, $\frac{1}{8}$; Modderfontein, 6d.; Salisbury, New, 1s.; and Simmer and Jack, $\frac{1}{8}$. The falls are in Battery Reef, 6d.; Jubilee, $\frac{3}{8}$; Langlaagte, $\frac{1}{8}$; Langlaagte, Block B, 6d.; Robinsons, $\frac{1}{8}$; and Spes Bona, $\frac{1}{8}$.

DIAMONDS.

This market has been almost lifeless, if we except dealings in De Beers and Jagersfontein. Both these have fallen on being forced for sale. If market rumour be correct a further fall may be expected.

Business: There is no rise to record, whilst a fall has taken place in De Beers of $\frac{1}{8}$; New Jagersfontein, $\frac{3}{8}$; and Burma Ruby, $\frac{1}{8}$. Others remain unchanged.

LAND COMPANIES.

There has not been much doing, if we except Ocean shares have fallen about 8s., but do not close at the Exploring and London and South African Exploration lower, while Explorations are slightly higher.

Business.—A rise is shown in British South African of $\frac{1}{8}$; Explorations, $\frac{1}{4}$; Goldfields of South Africa, $\frac{1}{8}$; Zontpanberg, 1s.; whilst a fall has taken place in Explorations, London and South African, $\frac{1}{4}$; Oceanas, $\frac{1}{8}$; and Transvaal Estates, 6d.

AUSTRALIANS.

The feature of the week has again been the frequent dealings in Australian Broken Hills, which at one time changed hands at $1\frac{3}{4}$, but have since receded, and close $1\frac{1}{2}$, $1\frac{1}{8}$. Wentworths have been offered, and fell slightly in sympathy with its progenitor. Gympie Great Easterns have made a good market, and prices close firmer. Bonnie Dundees were fairly good on the meeting, even though it is known that a re-construction must take place.

Business.—A rise has taken place in Day Dawn P.C. of 3d. Gympie Great Eastern, 1s.; Kangarilla, $\frac{1}{8}$; and New Queen, 6d. whilst a fall is shown in Bonnie Dundee of 3d., and Day Dawn Block 3d. Others unchanged.

INDIANS.

A firmer market has been shown for these shares, which close at their best, with every indication of higher prices. Nundydroogs have changed hands freely at $1\frac{1}{2}$, while Goldfields are inquired for, although not at high prices.

Business.—A rise is shown in Mysore Reefs, 3d.; Nundydroog, $\frac{1}{8}$; and Ooregum "Pref." $\frac{1}{8}$; but a fall is to be noted in Balaghat of 3d., and Nine Reefs, 6d. Others remain as last quoted.

COPPER.

There has been a somewhat more free market in Copper shares than last week, although prices do not close at their best. Capes and Tharsis are higher, while Masons and Tintos are quoted slightly lower. The market closes fairly firm.

Business.—A rise is shown in Bratsberg of 3d.; Capes, $\frac{1}{8}$; Quebrada, $\frac{1}{8}$; and Tharsis, $\frac{1}{8}$. Whilst a fall has taken place in Mason and Barry of $\frac{1}{8}$; and Rio Tinto, $\frac{1}{4}$.

GENERAL FOREIGN SHARES.

There has been a slightly better tone, although business is still very restricted. Those shares most dealt in have been Callao Bis, Dickens Custers, Esmeralda, Golden Gates, Gravel Gold, New Emma, Orita, Palmar, Tesoro, Tolima "A." and Yuruari. Flagstaffs have not been very active, and on a few selling orders prices receded. Golden Gates fell about 3s. 9d. per share, but chiefly on "bear" selling. John del Rey shares are a shade lower. Tolimas were good on the meeting, which is reported on another page.

Business.—A rise is shown in Colorado of 3d.; Don Pedro, 6d.; Tolima, $\frac{1}{8}$; and Yuruari, 3d.; whilst the falls are in Almada, 3d.; American Belle, 6d.; Balkis, 6d.; Flagstaff, 1s. 3d.; Golden Leaf, 3d.; Graskop, 6d.; Kapanga, 3d.; New California, 3d.; New Guston, $\frac{1}{4}$; Orita, 1s. 6d.; St. John del Rey, 9d.; United Mexican, 1s.; and Yankee Girl, 1s.

The following list shows the principal changes which have taken place :—

LATEST FROM THE MINES.

INDIAN MINES.

BALAGHAT MYSORE.—A telegram, dated July 3, gives last month's return of gold as follows :—"270 tons of quartz produced 472 ozs. of gold."

INDIAN GOLD (GLASGOW).—The following information has been received from the mines to-day by cable :—"June : total amount crushed is 1,000 tons, yielding 93 ozs."

NUNDYDROOG.—A telegram, dated July 3, gives last month's return of gold as follows :—"1,050 tons of quartz produced 1,812 ozs. of gold."

OOREGUM.—A telegram from the mine, dated July 3, gives last month's return of gold as follows :—"1,354 tons of quartz produced 2,902 ozs. of gold."

COLONIAL MINES.

AUSTRALIAN BROKEN HILL CONSOLS.—The warrants for the dividends payable on June 30 were posted on that day. A telegram from the managing director, resident at Broken Hill, June 26, states :—"2 tons of ore, containing 17,439 ozs. of silver, raised during the fortnight. Fourteenth shipment, consisting of 2 tons of ore, containing 17,439 ozs. of silver, will be shipped for London per steamer leaving Adelaide on July 8. Additional output from other parts of the mine, consisting of 25 tons of ore, containing 5,977 ozs. of silver raised since last advice, and now in course of being shipped. The rich vein below the 280 level west promises well for important developments."

BLUE SPUR AND GABRIEL'S GULLY.—A cablegram from superintendent is as follows :—"June yield, 159 ozs., owing to the severe frosts."

DAY DAWN BLOCK AND WYNDHAM.—The transfer books will be closed from the 7th to the 14th inst., both days inclusive, prior to the general meeting to be held at the Cannon Street Hotel on Tuesday, July 14.

HARRIETVILLE.—A telegram from the mine, dated July 1, is as follows :—"Cleaned up June 29. Mons Meg Mine, 610 tons 310 ozs. Tiddledie Mine, 266 tons 60 ozs. Amalgamating pans 28 tons 93 ozs., also 10 tons pyrites, assaying 4 ozs. per ton."

MOUNT MORGAN.—Messrs. Laughland, Mackay and Baker have received the following telegram from the Mount Morgan Gold Mining Co., Limited, Queensland :—"We pay 25,000% on Wednesday, being a dividend of 6d. per share (free of dividend tax) for the month of June."

NEW QUEEN.—Cablegram dated Charters Towers July 2 :—"370 tons yielding 395 ozs. gold. Mill stopped for boiler to be cleaned and repaired."

FOREIGN MINES.

CALLAO BIS.—Telegram from the superintendent at the mines :

"452 tons, 714 ozs. gold, 10-stamp mill, 14 days. Have struck it rich in the mine. The gold bearing veins run north and south."

COLOMBIAN HYDRAULIC.—The fifteenth dividend of 1s. per share, free of income tax, is payable on July 28.

CORTEZ.—Shipped June 12, lot 67, 12 bars bullion containing 12,761.39 ozs. Silver as per our assays.

DE LAMAR.—The company give notice that having compounded with the Commissioners of Inland Revenue for the payment of the Stamp Duties, all transfers on and after July 6 inst. must be presented unstamped. They must, however, be accompanied by the amount of the Stamp Duty which would have been payable to the Inland Revenue, in addition to the registration fee of 2s. 6d. per deed.

DICKENS CUSTER.—The eight bars of bullion (Nos. 1 to 8), being the result of the crushings from May 11 to 31 last, have been sold for the company by Messrs. Pixley and Abell, and realised 2,090% 14s. 10d.

ELKHORN.—Cable from the mine : "Bullion produced for week ending June 27 \$8,300."

MONTE DEL ORO.—A telegram from the manager, dated July 2, states :—"Water forked. All operations resumed."

NEW PIERREFITTE.—The company has sold 300 tons of blende to Mr. J. F. Kimmel at 5% 7s. 6d. per ton f.o.b. at Bordeaux.

OURO PRETO.—The directors have sold, through Messrs. Johnson, Matthey and Co., Limited, the gold obtained in the month of April, which realised 3,864% 8s. 3d.; also the bismuth obtained in the months of Mar. and Apl., which realised 323% 8s. 9d.

PINOS ALTOS.—The out-turn for the week ended 20th inst. was \$10,680.

RETIRO (HONDURAS).—Telegrams from Mr. L. F. Spring, the manager at the mines, state : On the 15th inst. :—"Mill working well since June 8." June 30—first clean-up. "40 tons Cavanah, 52 ozs."

RUBY.—Telegram received from Eureka :—"41 tons tribute ore shipped; 72 tons tribute ore smelted; producing to company \$408."

TOLIMA.—The directors will pay, on July 31, the following dividend on the shares as they stand on the register on the 16th inst., viz. : Dividend of 10s. per share on the A shares, being the dividend at the rate of 10 per cent. per annum for the year 1886.

YURUARI.—The secretary advises receipt of telegram from the mines in reply to one sent enquiring as to when crushing would commence, as follows :—"Remitted 313 ozs.—PRYOR."

HOME MINES.

DEVON UNITED.—In sending a notice of call the board point out that they are anxious to pay off the long-standing loans, amounting to 800%, as per the statement of accounts submitted to the meeting of shareholders on the 26th ult., and to provide the necessary funds to push on more vigorously the several developments of the underground operations, believing that by so doing good results will be attained. The sale of copper ores (for two months) 70 tons, on 19th inst., realised 234%.

LOVELL.—The general meeting was held at Palace Chambers, Westminster, on the 24th inst., G. P. Bidder, Esq., in the chair. The accounts were passed and report of agent received, and a dividend of 1s. 6d. a share declared. It was pointed out that the severe snowstorm in Mar.—which for a time stopped all operations—and shortness of water lately, had considerably reduced the returns during the 16 weeks.

WEST WHEAL GRENVILLE.—It was finally decided to-day to wind up the affairs of West Wheal Grenville and to dispose of the mine, if possible, as a going concern. The directors are to be congratulated upon the decision not to spend uselessly any more of the company's capital, of which 20,000% remains to be called.

FOR LATEST PRICES

AND ALL PARTICULARS OF FOREIGN AND HOME MINES
SEE PAGES 14 AND 15.

AFRICA.

LATEST FROM THE GOLD AND DIAMOND MINES.

PRIMROSE.—A dividend of 5 per cent. has been declared to June 30.

WEMMER.—The company has received, ex Tartar, from Cape, 1,165 ozs. smelted gold.

WITWATERSRANDT (KNIGHT'S).—The company has received, ex Tartar, from Cape, 547 ozs. smelted gold.

SIMMER AND JACK.—Quartz crushed during month 7,331 tons, obtained 3,306 ozs. gold during month.

CITIZEN.—A crushing of 350 tons of ore has yielded 106 ozs. 12dwt. of retorted gold.

STANHOPE.—The manager writes :—"I have mined and milled 1,450 tons of quartz, which yielded 868 ozs. of retorted gold. The 20 stamps worked 26 days."

SHEBA.—A cablegram announces the June yield as follows :—"2,025 tons; 2,625 ozs." The company notify that warrants for the debenture interest due on July 1 have been posted.

ORIENTAL AND SHEBA VALLEY.—Cable : "60 stamps running 25 days crushed 2,860 tons; yield, 650 ozs. gold and 22 tons concentrates, assaying 8 ozs. per ton. Working expenses for month, 2,450%."

GELDENHUIS ESTATE.—Active work is going on, and the tram to connect it with the Jumpers mill has been completed. Crushing with 50 stamps of the Jumpers mill was to have been begun on the 10th ult.

NORTH-EASTERN BULTFONTEIN.—This company has telegraphic advice announcing for last week 7,900 loads washed, producing 1,700 carats of diamonds, making, for the four weeks ending 27th inst., a total of 6,750 carats of diamonds for 37,000 loads washed.

VIRGINIA (TRANSVAAL).—The following cablegram has been received from the company's manager at Steynsdorp:—"Lode near Blignaut's shaft 15 dwts." Office memorandum:—"With the abundant water supply, the cost of mining and milling is calculated to be about 5 dwts. of gold per ton.

SHEBA.—The meeting usually held about the middle of July has been deferred pending the arrival from the mine, of Mr. Chambers, who is to sail from South Africa on the 8th inst., and, therefore, may be expected to arrive here about the end of the month. The date of the meeting will be duly announced by circular.

FERREIRA.—A dividend of 50 per cent. has been declared, and the transfer register will be closed from July 8 to 15, both days inclusive. The dividend warrants will be sent from the head office at Johannesburg, as soon as possible after the arrival of the returns of transfers lodged for registration in this office up to 4 p.m. on Wednesday 8th inst.

SIMMER AND JACK.—The company notifies that definitive certificates are now ready for delivery at the offices of the London secretaries, in respect of provisional certificates deposited for exchange, and with regard to which no irregularity has been discovered. Receipts must be surrendered upon application, endorsed in accordance with the notice thereon. Certificates may also be obtained in respect of transfers lodged for registration prior to 1st instant.

MOODIE'S EXPLORATION.—The statement of profit and loss for the year ended Mar. 31, 1891, shows a profit of 969l. 6s. 5d., and after writing off 921l. 11s. 2d. for depreciation on buildings, etc., and stocks held by the company, a balance of 47l. 15s. 3d. is carried forward to next account. During the year 19,925 tons of ore have been crushed by claimholders, yielding 8,518 ozs. of gold, or an average of 8½ dwts. per ton.

CERRO DE PASCO.—The following report has been received from the mine, dated Barberton, June 1:—"Block F extension: South-east cross-cut has been driven 90 ft., making total distance 206 ft. At 167 ft. we cut a reef 2 ft. wide, which is gold-bearing. Block 12: North-east cross-cut has been driven 43 ft., making total distance 59 ft. Block F, main shaft: We have had eight natives continually employed drawing water at this shaft. Battery site and water race: We have had one European and 10 natives employed clearing away all grass from the flumings and the battery shed to prevent danger from grass fires.

COMMERCIAL NOTES.

METALS.

THE Metal Market has been fairly active during the current week. Bank rate was reduced yesterday to 2½ per cent. Bar silver closed 46½d. per oz.

COPPER has been steady, and a fair amount of business is reported to have been done for India. G.M.B. warrants were sold on Monday at 55l. 16s. 3d. cash, and 56l. 7s. 6d. three months, but declined to 54l. 17s. 6d. cash, improving again to 55l. 6s. 3d. cash, and 55l. 16s. 3d. for three months, closing yesterday with buyers thereat. To-day's prices are 55l. 7s. 6d. cash, and 55l. 15s. three months. Arrivals in England and France during June were 11,026 tons; deliveries, 11,959 tons; stock, 54,525 tons, including 5,553 ton Anaconda matte sold forward. Visible supply July 1, 57,325 tons against 58,258 tons on June 1. We quote English tough, 58l. to 59l.; best selected, 60l. to 61l.; strong sheets, 68l.; India sheets, 62l. to 62½. 10s.; yellow metal, 5½d. to 6d.; ore, &c., 10s. to 10s. 9d. per unit.

TIN has been quiet. Straits on the spot sold from 92l. 10s. to 91l. 12s. 6d., improving again to 92l. 5s. cash. Three months was done at 91l. 10s., and improved to 92l. 7s. 6d. To-day's prices are 92l. 12s. 6d. cash, and 92l. 12s. 6d. three months. Arrivals in London during June were about 1,100 tons. Delivery, 1,467 tons, including 159 tons to America. Stock in London, 2,335 tons, against 2,701 tons on June 1. Straits shipments in June were: England, 1,850 tons; America, 600 tons; Europe, 170 tons. The Dutch Market is quiet. Banca, 155½. Billiton, 155. English ingots, 95l. 10s.

TINPLATES quiet. We quote ordinary coke, Liverpool, about 13s. 6d. to 14s. per box.

SPELTER has been firm at 23l. 15s. for ordinary brands ex ship here.

SHEET ZINC.—In public sale, yesterday, 25 tons sold at 26l. nett at works.

LEAD dull. We quote soft Spanish, 12l. 10s.; soft English, 12l. 12s. 6d. to 12l. 15s.; L.B. China pigs, 13l.; sheets, 13l. 10s. to 13l. 15s.

QUICKSILVER steady. Rothschild's price in 7l. 15s.

ANTIMONY dull and easier. Hallett's price for America is 50l.; ordinary brands and delivery, 46l. to 48l.

THE PACIFIC MINING CO., LIMITED.

THE following cable has been received from the manager at the mine:—"Just returned from inspection of the mines; old workings in good order; prospects splendid; forwarding specimens; fine stones; beginning energetic work immediately."

The telegram from the manager of the Pacific Mining Co., Limited, contains very favourable news for the shareholders in that concern, it will be found in another portion of our issue. The branch of mining carried on by this company is one of which little is known practically by Europeans, and yet it has been pursued with great success for about 300 years in the district in which the Pacific Company's property is situated, and it will no doubt interest our readers if we give a brief sketch of the history of this industry, viz., the mining for emeralds. When the Spaniards conquered Colombia, they found the natives possessed certain green stones to which they attached great value—in fact, one very large stone was revered as a deity—these stones proved to be emeralds, and the chief, if not only, source of supply of these beautiful gems since then has been the district of Muzo, in the department of Boyaca. The Muzo Mines were the appanage first of the Spanish Crown, and after the Revolution the native Government which succeeded it; they have been worked at times by Government, and also farmed out to lessees at a rent or royalty, and there exist many official documents showing the productiveness of these mines during several centuries past. Coming to modern times, a French company which had the lease for 10 years (1875-85) paid during its tenancy dividends amounting to 1,000 per cent. on its capital, and only failed to renew the lease owing to a much higher rental being offered by a native company. The price of fine emeralds reaches as high as 60l. per carat, while ordinary fairly good stones are worth more than diamonds. The great market is in the east, and the collections of some of the native potentates are of incalculable value; to Mohammedans the emerald is of special attraction, as its colour is the sacred green of their Prophet. The company under notice owns 750 acres of freehold adjoining the Muzo Mine, and containing extensions of its veins. Stones have been found from the surface downwards, and a number of experts who have at various times held the management of the Muzo have unanimously declared their opinion that the property (locally known as "Santa Rosa") will prove a better one than the older mine on account of its geological features and situation.

PALMAREJO MINING CO., LIMITED.

THE MILL AND OTHER WORKS COMPLETED.

THE directors in their report state that by this it is clear that not only the mill at Zapoté, but also the large ore bins at the Palmarejo terminus and the tramways from these ore bins to the mines are completed, and the directors have no doubt that the supply and treatment of the ores can go on without interruption as soon as the sections of the railway between Palmarejo and Zapoté are joined up, which is expected by the end of Aug. as already announced. The work carried on in the mines since the last quarterly report was issued, has been the continuation of the Dios Padre tunnel, the driving of galleries and passages for connecting the Socorro level with the new workings in the Tucson Mines, re-timbering where necessary, and the renewal of tramway lines within the mine. A full statement of details as regards the progress of the company's general operations will be given at the annual meeting on July 9.—ROBERT J. SCRIVEN, Secretary.

THE letters of allotment of the Colorado Boy Silver Mines, Limited, have been posted.

MR. ALDERMAN DIMSDALE, in consequence of increased claim, upon his time, has retired from the Boards of the Transvaal Mortgage Loan and Finance Company, Limited; the Northern Transvaal Lands Company, Limited; and the Transvaal Lands Company Limited.

WOODHOUSE AND RAWSON UNITED, LIMITED.—Mr. Charles A. Smith, of the Athenæum, 71, Temple Row, Birmingham, has been appointed agent for Birmingham and district, and has opened show-rooms at the address given, where samples of the goods may be seen, as well as local orders executed from stock.

VAN MINING CO., LIMITED.

SPECIAL REPORT BY THE NEW MANAGER.

CAPT. PAULL, the new manager, in a report dated June 27th, states:—Upon the restarting of the mines at the end of March last, the 120-fm. level east of Seaham's shaft soon entered ore-bearing ground, and some good lead ore was passed through for about 3 fms. in length, since then the lode for the last 8 fms. has not been so productive, but has all along yielded some lead and blende ores, and in the present end (being driven by six men) is of a most promising character, likely to produce rich ore at any moment. About 20 fms. behind this end, and where the lode is very large, a cross-cut is being driven southward by four men, to cut through the vein to the south or hanging wall; it is now in 17 ft. from the part of the lode on which the 120 has been carried, and good stones of blende and lead ores are met with, which leads us to the opinion that there is something richer ahead of us in the remaining portion of the lode still to be proved by the cross-cut. Near the bottom of Seaham's winze a cross-cut (the 150-fm. level) has been driven south 3 fms. in a strong lode, composed of quartz and clay-slate rock, containing rich stones of lead and blende ores, and so soon as the lode is fully cut through to the south side this level (the 150) will be driven eastward along the lode under the 120, and we look for the discovery of ore-ground at this point. In the western part of the mine, nearer to Edwards' shaft, at the 150-fm. level, a cross-cut is driving south by six men, having in view the intersection of the south lode, which was discovered from the 135-fm. level above, and produced some rich lead ore there. We consider this a good trial to be made: the cross-cut is in about 10 fms., and there remains 29 fms. more to drive to the line of the lode as seen at the 135-fm. level. These four points above referred to are the present most important ones of exploration, and the prospects of making discoveries of ore in them are good. They will be pushed forward as rapidly as possible with rock drills, which will be forthwith adopted for this purpose. At present six stopes are in operation at different levels in the mine, the lode yielding on the average one ton of lead ore per fm. Dressing operations were recently resumed, and in ten days' time we shall have 50 tons of lead ore ready for market.

BRITISH MINING INTELLIGENCE.

DERESBY AND GWYDYR (July 1).—No. 10 level south: The rise going up on the footwall of the lode has been yielding very good lead this week. We cut into a large vein yesterday, full of splendid cubes and lumps of lead, with crystallised spar—a very promising feature. No. 9 level: The lode we are stripping down from No. 1 cross-cut south of shaft is sometimes yielding very good leadstuff, and at other times poor. The stope behind the shaft is making an average yield of 15 cwt. to a fm. No. 8 level: The stope south of No. 2 winze is looking better for lead this week; worth about 12 cwt. per fm. New shaft: The blende stope above No. 4 is worth 1½ ton of blende to a fathom, with occasional stones of lead. Surface: We have a fresh supply of water this week, enabling us to do the dressing and other work by day without the engine.—H. NOTTINGHAM.

DEVON CONSOLS (July 2).—Watson's engine shaft: In the 172 west, the lode is 4½ ft. wide, composed of capel and quartz, with a little copper and mundic and tin ores. In the 160 east, the lode is large, 5 ft. wide, very promising, and worth 4 tons of copper and mundic ores per fm. In the 160 west, the lode is 4 ft. wide, composed of capel and quartz, with fluor and saving work of copper and mundic ores.—I. RICHARDS.

LEADHILLS (June 22).—Brown's vein: The 145-fm. level north of Jeffrey's shaft keeps in a vein above 4 ft. wide, mixed with kindly quartz, but without ore at present. The stope above the 145 north of Jeffrey's shaft is worth 15 cwt. of ore per fm. The two stopes above the 145 south of Wilson's shaft are worth 25 and 60 cwt. of ore per fm. respectively. The stope above the 145 north of Wilson's shaft is worth 25 cwt. of ore per fm. The 130-fm. level north of Jeffrey's shaft shows a vein 4½ ft. wide, mixed with kindly spar, but without ore; it has a nice dampness. The three stopes above the 130 north of Jeffrey's shaft are worth 10, 35 and 10 cwt. of ore per fm. respectively. The stope above the 130 south of Jeffrey's shaft is worth 10 cwt. of ore per fm. The 115-fm. level north of Jeffrey's shaft is in a vein above 4 ft. wide, charged with strong quartz, but rather dried for producing ore. The stope above the 115 north of Jeffrey's shaft is worth 30 cwt. of ore per fm. The 100-fm. level north of Jeffrey's shaft is in a vein above 4 ft. wide, mostly spar of a promising character with ore worth 15 cwt. per fm. The stope above the 100 south of Wilson's shaft is worth 15 cwt. of ore per fm. The 85-fm. level north of Jeffrey's shaft keeps in an unproductive vein above 4 ft. wide, and rather unpromising again. The 70-fm. level south of Wilson's shaft shows a vein 3½ ft. wide, mixed with better quartz, but yet without ore. The two stopes above the 35 south of Flat Rod shaft are worth 35 and 50 cwt. of ore per fm. respectively. Sarrowcole vein: Gripp's adit north of George's Roust vein is in a vein above 4 ft. wide, charged with quartz but no ore.—T. NEWBIGGING.

LEADHILLS (June 30).—Brown's vein: Five men are set to drive the 145-fm. level, now 159 fms. 6 ins. north of Jeffrey's shaft, at 120s. per fm.; vein 3 ft. wide, showing quartz joints, but without ore. Five to stope above the 145 north of Jeffrey's shaft, at 40s. per fm.; worth 20 cwt. of ore per fm. Four to No. 1 stope above the 145 south of Wilson's shaft, at 45s. per fm.; worth 25 cwt. of ore per fm. Four to No. 2 stope, at 37s. 6d. per fm.; worth 90 cwt. of ore per fm. Four to stope above the 145 north of Wilson's shaft, at 40s. per fm.; worth 25 cwt. of ore per fm. Five to drive the 130-fm. level, now 189 fms. 2 ft. north of Jeffrey's shaft, at 120s. per fm.; vein 4½ ft. wide, mostly hard stone, with quartz joints, but without ore. Four to clear out broken ore from old stope above the 130 north. Four to No. 1 stope above the 130 north of Jeffrey's shaft, at 45s. per fm.; worth 30 cwt. of ore per fm. Five to No. 2 stope, at 45s. per fm.; worth 25 cwt. of ore per fm. Five to No. 3 stope, at 50s. per fm.; worth 20 cwt. of ore per fm. Four to stope above the 130 south of Jeffrey's shaft, at 45s. per fm.; worth 15 cwt. of ore per fm. Five to drive the 115-fm. level, now 41 fms. 1 ft. 6 ins. north of Jeffrey's shaft, at 115s. per fm.; vein nearly 4 ft. wide, charged with stone and quartz too dried for yielding ore. Four to stope above the 115 north of Jeffrey's shaft, at 45s. per fm., worth 25 cwt. of ore per fm. Two to drive the 100-fm. level, now 19 fms. 0 ft. 9 ins. north of Jeffrey's shaft, at 105s. per fm.; vein about 4 ft. wide, charged mainly with quartz and ore, worth

25 cwt. per fm. Two to stope above the 100 south of Wilson's shaft, at 45s. per fm., worth 15 cwt. of ore per fm. Two to drive the 85-fm. level, now 216 fms. 6 ins. north of Jeffrey's shaft, at 125s. per fm.; vein above 4 ft. wide, mixed with kindly white stone and quartz, but without ore. Four to drive the 70-fm. level, now 74 fms. 3 ft. south of Wilson's shaft, at 90s. per fm.; vein 3 ft. wide, showing decidedly improved quartz, and very small specks of ore. I anticipate an early improvement here as to ore. Four to No. 1 stope above the 35 south of Flat Rod shaft, at 32s. 6d. per fm., worth 35 cwt. of ore per fm. Eight to No. 2 stope, at 45s. per fm., worth 25 cwt. of ore per fm. Sarrowcole vein: Five to drive Gripp's adit, now 12 fms. 6 ins. north of George's Roust vein, at 115s. per fm.; vein about 4 ft. wide, mainly composed of hard stone and quartz joints and without ore.—T. NEWBIGGING.

PRINCE OF WALES (July 1).—In the 180-fm. level east we have taken down the lode, which is 3 ft. wide, composed principally of peach and tinny capel, but not at present so good as it was; now worth 7½ per fm. We are expecting an early improvement in this end. We are again driving by its side. In the 180 west we have also taken down the lode, which is 2 ft. wide, and the above remarks will apply to it. The lode in the 166 west is 4½ ft. wide, and worth 12½ per fm. for tin and copper ore, but getting harder, which we take to be a good indication. There is no change in the cross-cut south at this level, except an increase of water. The copper ore and mundic pitches are much the same as for some time past.—S. ROBERTS, J. PROWSE.

ROMAN GRAVELS (July 2).—The 155 north is driven 6 fms. 4 ft., the forebreast to-day being in a very fine and promising lode, 5 ft. wide, producing some nice stones of lead ore. The 155 south-east on caunter vein is driven 6 fms.; the drivage is going forward on the hanging-wall division of the lode, and is producing good blende stuff. This forebreast is at present being driven due east in order to intersect the footwall division, and when the latter is reached it is our opinion that a profitable lode will be found. The 140 south-east is driven 18 fms., and the forebreast is still in a very promising vein, worth quite 2½ tons of lead ore and about 1½ tons of blende to the fm. The cavity is open in several places in back of the level to heights varying from 1 fm. to 3 fms., and as far as we are able to judge the vein is equally productive throughout. We can safely say that this bunch is 6 fms. long; in other words, the forebreast has passed through ore ground, say, 6 fms. in length, worth 2½ tons of ore to the fm. The 140 south on Roman vein is driven 101 fms. 4 ft. 6 ins., and the vein seems to be improving day by day. We feel confident that ore ground will very shortly be reached by this level. The three stopes in back of the 140 north average 1½ tons each to the fm., and as soon as the second stope behind the forebreast is sufficiently advanced a winze will be started, where the vein is worth 2 tons of lead ore to the fm. We expect the vein will increase in productiveness below the level. The remaining points throughout the mine are just as reported last week. The 20 tons of blende sold to-day realised 140½ 10s.—A. WATERS.

SOUTH CONDURROW (July 1).—The lode in the 40 end east of engine shaft yields low quality tinstone. Three stopes in the back of this level are producing fairly well, and are worth together about 30½ per fm. We are sinking on the lode underlying north that branched off from the main lode in the stope 12 fms. above the 40-fm. level; so far it is regular and well defined, and is worth 7½ per fm. The stope in the back of the 123 east of Marshall's shaft is worth 12½ per fm. The winze below this level is also worth 12½ per fm. We are pushing on the 138 east of Marshall's, and as we intersect the cross-course we shall force on the drivage north to cut the main tin lode.—W. RICH, W. THOMAS.

SOUTH DARREN (2nd July).—The shaft is 43 ft. 6 inches under the 142, having been deepened 4 ft. this week. No lode has been broken since last reported. The 130 end west is worth 12 cwt. of silver head ore per fm. having improved a little, and is looking very kindly. All other work is going on satisfactorily.—J. MITCHELL.

VAN (June 25).—In the cross-cut south at the 150-fm. level (driving for the purpose of intersecting the south lode) the ground continues hard, with small strings and spots of lead ore to be seen in the joints crossing the level. This point is being pushed forward by six men, and the lode should be met with in 29 fms. further driving, if it keeps the same course as where seen in the winze sunk about 3 fms. below the 135-fm. level. In the stope over the 150-fm. level west of No. 1 winze (on the main lode), now worked by four men, at 37. 5s. per fm., the lode yields 18 cwt. of lead ore per fm. At the stope over the same level east of No. 2 winze there are four men employed, at 37. 15s. per fm., and the lode is worth 1 ton of lead ore per fm. In the stope over the 135-fm. level on the south lode the vein has improved, and is at present producing 25 cwt. of lead ore per fm.; let to four men at 37. 15s. per fm. The 120-fm. level east of Seaham's shaft is now driving by six men, at 87. 10s. per fm., in a large lode, the part carried having a promising appearance, with occasional good stones of lead ore. At the cross-cut south of this level, the lode is strongly mixed with quartz and blende ore; the ground is stiff for going through, and is let at 87. 10s. per fm. to four men; we intend driving at this point to fully prove the whole of the lode to the south side. At Seaham's winze, having cross-cut north (at the 150) 4½ fms. in dark slate rock, and not meeting with the lode, we put the men to drive in the opposite direction to intersect that part of the lode struck in the winze when down 16 fms. under the 120. It has been cut into about 10 ft., and shows nice spots of lead ore. We propose driving right through to the south wall before starting the 150-fm. level eastward upon the lode; nine men are employed here at 107. 10s. per fm. for the cross-cutting. The lode in the stope over the 105-fm. level west of Seaham's shaft is worth 18 cwt. of lead ore per fm.; four men are working this piece of ground at 3s. 6d. per tram lode of ore stuff. In the stope over the 90-fm. level, east of Seaham's shaft, the lode yields 1 ton of lead ore per fm., and is worked by four men at 4s. 6d. per tram load of ore stuff. At a point (east of Seaham's shaft) about 5 fms. above the 75-fm. level, we have commenced to drive east from the end of an old stope; the lode is large, and producing 25 cwt. of lead ore per fm.; let to four men at 67. per fm. This end is in whole ground, and we expect to open out a fairly good stope in this direction, as well as driving forward to prove the lode in fresh ground. Some alterations are being made in the appliance for working the air-compressors, and as soon as these are completed rock-drills will be put in operation to force on the most important levels in

the mine. We are also preparing to fix guide rods in Edward's shaft, and put in the machine cage from the 120 to the 150-fm. level, for the purpose of dealing more economically in the future with the water and stuff coming from this part of the mine. Dressing operations were resumed on May 26, and there is at present in the bins 35 tons of lead ore towards a parcel for market whenever you think proper.—J. PAULL.

WEST WHEEL GRENVILLE (June 30).—The shaftmen have this week been engaged in stoping the back of the 120 east on No. 2 lode, and for the part of lode carried is producing stuff worth from 20 to 25 lbs. of tin to the ton of stuff.—J. SKEAT, N. TEMBY.

WHEEL CREBOR (June 30).—We are still cross-cutting the lode at the end of the 156-fm. level east of new shaft. The progress made during the past week has not been satisfactory, principally owing to having encountered a hard bar of ground running in the lode, but I am glad to say there are signs of being nearly through this tight ground, and we hope the progress made during the coming week will be much greater. The part of the lode through which the cross-cut has gone contains a little mundie, but not enough to pay for working. The stope in the end driving west at the 132 on the south part of the lode is yielding 3 tons of mundie per fm. The value of our stopes and pitches are the same as reported last week.—P. D. HOLMAN.

WHEEL METAL AND FLOW (July 1).—There is no alteration to notice since last reported on. We have commenced to dress another parcel of tin.—S. P. CURTIS.

WHEEL UNY (July 1).—Hind's engine shaft is down near 3 fms. below the 244-fm. level. We are now cutting into the lode, and expect shortly to be sinking entirely in it, which at present is opening out very strong, and promises well for depth. The 244 end west : We are now driving on the north part of the lode ; the ground at this point is hard ; turning out stamping work. Stope in back of this end without change. The 230 east and west unaltered since last reported. The 203 end west : Here the ground is easier for driving, and letting out water freely. This is a good indication for an early improvement. Stope behind this end yields its usual quantity.—J. WHITE, D. H. WILLIAMS.

FOREIGN MINING INTELLIGENCE.

ALMADA AND TIRITO.—Report for the month of May.—Mining exploration : Cross-cutting east at 137-ft. level, Cruz Verde Mine, 7 ft. on barren lode ; suspended. Cross-cutting west at 137-ft. level Cruz Verde Mine, 16.6 ft. ; 7 ft. of cutting on lode, and the balance on horse matter. The object of this cross-cut is to explore the 100 lode. Driving south on 100 lode from the San José long west cross-cut tunnel level, 17.5 ft. on unproductive lode ; total length of drift, 42 ft. ; breast looks well for ore. Cross-cutting west of No. 2 winze tunnel level, 6.8 ft. on barren lode ; suspended. Cross-cutting west at 12-fm. level north of No. 5 winze to 100 lode, 16.5 ft. on very hard lime rock ; total length of cross-cut, 39.8 ft. Driving north end on 100 lode, 24-fm. level, 19.1 ft. on unproductive ground, containing only occasional stones of green ore ; the breast is now 34 ft. north of cross-cut : total exploration, 83.5 ft. Developments : Driving north and south of winze at Cruz Verde Mine, 30 ft. below 85-ft. level, 8 ft., on scattered green ore of good grade. Driving south end on 100 lode west wall at 24-fm. level, 19.6 ft., on ground worth from 5 tons to 9 tons low grade ore per linear fm. Driving north from stope over 36-fm. level, 100 lode, 3.1 ft., on partly mineralised ground ; stopped : Driving south from stope over 36-fm. level, 100 lode west wall, 15.8 ft., on ground worth from 3 tons to 8 tons ore per linear fm. ; total development, 46.5 ft. Stopping : At main stope back of 24-fm. level north of No. 7 winze four pairs of drillers, 21 shifts on pay ground, and two pairs 15 shifts prospecting ends and sides of stope. Estimated ore ground stopped away, 28 cubic fms. At stope north and south of No. 7 winze, under 24-fm. level, three pairs of drillers, 20 shifts, and one pair nine shifts ; estimated ground stopped out, 21 cubic fms. At back of 24-fm. level, 100 lode (new ore body), four pairs drillers, 15 shifts, and six pairs, six shifts ; stopped out 20 cubic fms. ; at Cruz Verde Mine stopped out 3 cubic fms. ; total ore ground stopped out estimated 72 fms. Miscellaneous work : We cut the floor at Primera Veta drift (grading it for tramway) for a distance of 116 ft. Two timbermen, with from 6 to 10 labourers, were engaged in completing the re-opening and re-timbering of the Tirito part of the tunnel, repairing partial runs of ground occurred in Mina Grande under the tunnel, raising shoots and ladderways under main stope over 24-fm. level, cribbing mouth of No. 5 winze and fixing new ladder way through it, fixing stall under new stope in back of 24 level, 100 lode, collaring up Dios Padre shaft, &c. Ore reserves : The condition of the stopes at end of the month was as follows :—The main stope over 24-fm. level north of No. 4 winze is 43 ft. above rail at 24 level ; length of pay ground, 67 ft. ; average width, 10 ft. ; worth in ore about 5 ft. (in width). The stope north and south of No. 7 winze under 24-fm. level ; length of pay ground, 67 ft. ; average width, 12 ft. ; thickness below the 24 rail, 6 ft. ; ore very scattered. The stope in back of 24-fm. level, between Nos. 4 and 5 winze, stands the same as before. The new stope in back of 24-fm. level 100 lode (new discovery) is 92 ft. long ; average height of back, 14 ft. ; average width, 6½ ft. ; worth in mineral about 12 tons per linear fm. This stope is looking very well and is lengthening and widening upward. The stope in back of 36-fm. level 100 lode, between the two winzes, is the same as at the end of February last, with the only difference that we have developed 15.8 ft. of ore ground south of it on a branch of from 2 to 4 ft. of ore. Reduction : The mineral output for the month was :—Milling ores and smalls, estimated 749 tons ; smelting ores, estimated 45½ tons ; total, 794½ tons. The cleaned ores sent to the mills amounted to 752 tons, with an average ley of 31.2 troy ozs. per ton as per daily samples taken from the batteries (during the first two weeks we crushed low grade ores averaging 18.1 ozs. per ton, in the last three weeks the average grade was 42.9, but the general average for the whole month was as above.) The stamped ores chloridized in the five weeks amounted to 735 tons, the average ley of which was :—Before roasting, 33.2 ozs. per ton ; after roasting, 29.2 ozs. per ton ; showing an apparent roasting loss of 4 ozs. to the ton. The roasted ores served to the leaching vats in three weeks were 711 tons, with an average assay value of 28.6 ozs. per ton. The tailings discharged were 721 tons, averaging 2.2 ozs. per ton. The precipitate obtained amounted to 6,516 lbs., with an assay value of \$23,681.29. The silver produced was 25 bars pure silver, Kilog 658,336 (21.166 troy ozs.), valued at \$39,109 per kilog fine

\$25,746.85. Financial result : The amount of silver obtained was \$25,746.85, and we collected for 650 lbs. litharge \$39.00 ; total receipts, \$25,785.85. The expenditure for the month was \$15,667.77, there being an excess of receipts over expenses of \$10,118.08. The estimated value of argentiferous stocks in hand was increased by \$99.00, which, added to the above makes the total net profit for the month, \$10,217.08. after charging to revenue account. \$829.62 spent in dead-work and repairs underground ; \$662.06 spent in development, and \$82.92 spent in exploration ; total, \$2,354.60 in all outside of ordinary working expenses. The principal causes of the fair result of the month's working were :—1st. The satisfactory grade of the ore extracted. 2nd. The comparatively large scale of operations owing to an improved supply of labour. 3rd. The reduced roasting and tailing losses in the leaching department. 4th. The strict economy observed in every department. Prospects : Extreme scarcity of labour and water are the worst inconveniences just at present, and are likely to prevail during the next two months ; then the rainy seasons with all their usual inconveniences, preventing reduction to be conducted effectively will be an unfavourable period, so that for the next four or five months we cannot anticipate any such profits as the one here reported. We shall endeavour, however, to overcome all difficulties the best we can, and obtain the best possible results.

ARGENTELLA (June 25).—No. 2 Marine : Driving east of south. The progress during the past week has been good. The ground is not so hard as it was in the early part of the month. The forebreast is very wet. This is remarkable, as this side of the hill at surface is very dry. I, therefore, come to the conclusion that the lode before us is wet and porous, being connected by cross joints. Quartz reef : Cross-cut south : The forebreast is now in a lode of killas, carbonate of lime, quartz, and pyrites. The ground does not break so easily as the week before. There is, however, more water. Ogliastrone Valley : Driving east of south : This point has shown great improvement since last Monday. The end is passing through strings of solid pyrites ; also veins of quartz containing copper and iron pyrites. I intend continuing the present drive a few metres further. Our progress is slow, the ground being very hard. If we find no improvement ahead I think it advisable to come back and drive east on the mineralised ground referred to. I am very pleased with the indications so near surface. We cannot expect great riches until we get well under the mountain. No. 3 Rowe's workings : Cross-cut south : Last week we cut into an east and north lode. A winze has been started, which is at present down 1 metre to prove it deeper, as the best part, when discovered, was under foot. I find it continues about the same as already reported. I think it advisable to drive east on this lode.—J. BROAD ROBERTS.

BALAGHAT-MYSORE (June 9).—Report of work for the past fortnight :—North engine shaft, 600 north : This level has been driven 23 ft., making a total distance of 70 ft. We are still rather handicapped in getting away the dirt. When we have cut the plat here I hope we shall make better speed. The quartz in the end is about 14 ins. wide, and worth 7 ozs. 13 dwts. 12 grs. per ton. We are now passing through a rich section of ground. The 500 winze has been sunk 8 ft. ; total depth, 74 ft. I am pleased to say the quartz has improved again in value, assaying 4 ozs. 8 dwts. 4 grs., and being about 10 ins. wide. The 500 back stopes : From the midway winze, assay 1 oz. 6 dwts. 8 grs., and average about 2½ ft. ; the quartz is wider here than we generally find it, though rather poorer. The 500 back stopes, 3 and 4 : Quartz about 8 ins. wide, worth 3 ozs. 2 dwts. 1 gr. The 500 back stopes south of shaft have been temporarily suspended, and we are sinking a winze in the bottom of the 500 south of the shaft. The 410 stopes : Average 6 ins. of quartz, worth 2 ozs. 18 dwts. 19 grs. The 330 plat stopes : Quartz averages about 10 ins., worth 3 ozs. 5 dwts. 8 grs. The 270 cross-cut west has been driven 3 ft. ; total, 8 ft. 6 ins. ; there does not appear to be any lode standing to the west of the main drive south. The 205 winze has been sunk 3 ft. 6 ins. ; depth, 14 ft. ; there is about 3 ins. of quartz in this winze. The 270 back stopes south : We have taken the machines away from here, and shall continue them by hand labour ; quartz averages 10 ins. wide, worth 3 ozs. 11 dwts. 10 grs. The 205 back stopes : Quartz 1 ft. wide, worth 2 ozs. 15 dwts. 12 grs. Haines' shaft : Work is going on here fairly satisfactorily, and I hope by next report to be able to say we have carried the shaft the full size down to the 330-ft. level ; the ground is now secured 50 ft. below the 270-ft. level. We are still much handicapped in hoisting milling ore through our old shaft. I hope, however, the June returns will be better than those for May month.—A. S. B. OAKLEY.

BRATSBERG.—Report for week ending June 20.—Hoffnung Mine : There is practically little or no change to notice in the various points at this or Johannes Mine. Surface work and remarks : We have suffered rather a check in the despatch of the dressing work, owing to the breakdown of the crusher shells, but we have managed to keep going the horses carrying ore to Bandakslid. Owing to the John Evans arrival at Harburg, being delayed by hindrances, we could not wait for this vessel, but have engaged another of similar tonnage, which is now probably en route to Skien from Harburg, due to load the first days of July, for which sufficient ore is now forward.—J. D. HOLMAN.

BRATSBERG SMELTING AND REFINING.—Report for week ending June 20 :—I beg to report that the roaster has fully borne out our opinion expressed in last report, having worked continuously and well all last week, when we let it burn out, owing to a sufficient quantity of ore having been treated to meet present requirements. On Wednesday last we recommenced operations in the smelting house, and were highly pleased with the results obtained with the roasted ore, as the quantity of copper turned out exceeded what we have hitherto had, and the effect of the bessemerising on the converter lining did not appear to have been so injurious. We have been running every day since, and see no reason to doubt that when the qualified man from Mr. Manhes arrives he can at once put matters on a satisfactory basis, and enable us to run night and day without further hindrance and with satisfactory results.—T. F. SMITH.

CALLAO BIS (June 8).—Advices from the mines.—Independiente : Since the 24th ult. the shaft has been continued a further distance of 5 ft. ; from surface, 157 ft., or 17 ft. below the No. 3 level. No change has taken place in the ground since last reported, still very hard. Water proceeding very freely, so much so that we are obliged to keep one of the steam pumps at work continually, so as to continue sinking. The No. 3 level west has been driven 3 ft. ; from cross-cut, 95 ft. ; lode 5 ft. wide, of fair value. We have been obliged to stop driving at this point on account of so much quartz being extracted

during the time of connecting trussle work to shaft. In the meantime I had commenced to raise in the back of this level to communicate to the No. 2 winze. We are advanced 24 ft., lode showing 7 ft. wide, of good value, showing splendid specimens of quartz. I shall continue raising until communication is made to the No. 2 winze, after which, resume the driving of No. 3 west. The No. 3 level east has been driven 20 ft.; from cross-cut, 84 ft.; lode 2 ft. wide, of fair value. The No. 2 level west has been driven 6 ft.; from shaft, 218 ft.; lode 2 ft. wide. No change in the appearance or value of this lode since last reported. The No. 2 winze has been advanced 13 ft.; distance from the bottom of level, 55 ft.; lode 7 ft. wide, of good value. Stopos east of the No. 1 winze advanced 2 ft.; lode 6 ft. wide, of good value. Stopos west of the No. 1 winze advanced 2 ft.; lode 8 ft. wide, of good value. Surface work: Mill: We commenced to crush with 10 stamps on the 1st inst. Everything connected with same giving good satisfaction. We are now making ready the other 10 stamps, building room for retorting and cleaning amalgam, &c., to have everything completed as soon as possible.

CASTILLON (June 29).—The parcel of silver-lead ore sampled on the 19th, weighed out 51 tons 11 cwt., and it has been carted to St. Girons, there to await your instructions as to destination. On Saturday last we began sending away the blende from St. Girons to Bordeaux, for shipment to Antwerp on the 4th proximo; we shall complete a cargo of 250 tons to-morrow. I am pleased to be able to say that the lode in the bottom of St. Eugenie level, Block D 12 and 13, has become more productive for both lead and blende since the values were last given. Its present yield is 30 cwt. silver lead and 60 cwt. of blende per cubic fm. In order to develop the ground at and around this point, and to work it to the best advantage, we have decided to advance the No. 5 level—the next below—and communicate the same with the stope in question, to effect which we have to drive south-west $1\frac{1}{2}$ metres and rise 4 metres, when, judging by present indications, we shall have laid open a valuable piece of stoping ground. The other points continue without change worthy of remark. We are sending a good supply of crude ore to the dressing floors, and the dressing is being carried on with regularity.—**Capt. EDWARDS.**

CHAMPION REEF (June 8).—Superintendent's fortnightly report:—Mysore section: Carmichael's shaft has been sunk 3 ft.; total depth, 245 ft. No change in the rock since last reported. The drift south at the 225-ft. level has been extended 10 ft.; total, 37 ft. 3 ins. Beyond a few stringers of quartz, nothing of importance has yet been discovered in this direction. Ribblesdale's shaft: The shaft coolies have been employed in driving a cross-cut east, at a depth of 240 ft., the amount driven is 5 ft. 9 in. The rock in the end is slightly mineralised, and still underlies west. In the course of a few days, we shall put a rock-drill to work at this point, which will expedite the work. The sinking of shaft has been resumed, but unfortunately there is a difficulty at present to get a full number of coolies for this work. Garland's shaft: At a depth of 240 ft., we have been cutting away the necessary ground for a plat, and at the same time we have commenced to drive on the course of the lode at this level. The north drift has been extended 3 ft. 6 ins., and the south drift, 5 ft. A rock-drill is now at work in the north drift, and we shall, as soon as convenient, put another rock-drill in the south drift in order to effect a communication with the drift north at this level from Dalyell's shaft. Dalyell's shaft: The drift north at the 240-ft. level has been driven 13 ft. 6 ins.; total, 25 ft. 6 ins. The south drift has been advanced 12 ft.; total, 20 ft. The lode in this end is fully 2 ft. wide, carrying about $1\frac{1}{2}$ ft. of quartz, which gives an assay value of 7 dwts. per ton. The lode in the north end is a little smaller, but is very regular, and the quality of the quartz has slightly improved. We have a little more ground to cut away for the plat, which we hope to accomplish this week, the sinking of shaft will then be resumed on the lode. Coromandel section: The work at this section of the property has been mostly confined to Prospect shaft. A drift has been commenced north at a depth of 380 ft., and driven 5 ft. 9 ins. We have at present a small branch of mineral, which apparently is a portion of the lode; by extending this level north we anticipate getting into a good lode about 50 or 60 ft. from shaft, as the lode in the level above showed much stronger in the bottom. The 320 drift north has been advanced 6 ft. 9 ins. The appearance of the rock in the present end indicates that we are getting near the other side of the fault, which was reported last fortnight. A few coolies are now employed cutting ground for a windlass, in order to sink a winze to communicate with the 320-ft. level from bottom of shaft. The 290 end north has been driven $\frac{1}{2}$ ft.; total distance, 164 ft. The lode maintains a width of 2 ft., carrying 1 ft. 6 ins. of glassy quartz, which contains a trace of gold only. Surface and general work: At Coromandel section we have been costeaning a little to the west of the two shafts, but up to the present without any favourable results. The branch of mineral cut in the trench west of Coromandel is about 1 ft. wide, and is sufficiently encouraging for us to open it up a little more. At Garland's shaft, Mysore section, we have started both the pumping and winding engine, which, I am pleased to say, are working very satisfactorily. The pitwork in the shaft is completed to the 240-ft. level. The various other works on surface are progressing satisfactorily.

COLAR CENTRAL (June 9).—New shaft: 200 west cross-cut has been driven 4 ft. 6 ins.; total distance, 51 ft. The drive on the quartz has been extended 1 ft. 6 ins., making the full drive 6 ft.; the ground is very hard. I am pleased to be able to report that we have cut the lode in this cross-cut at 47 ft. from the north drive; the quartz is about 20 ins. wide, and worth 14 dwts. 3 grs. per ton. Some samples have been considerably richer than this assay. The lode shows two good walls, and is in very hard ground, which we regard as a good sign. This is undoubtedly the same lode that the old men worked upon south of the dyke, but they do not appear to have worked north of the dyke at all.—**A. S. B. OAKLEY.**

—Office note.—A recent telegram states that the lode was 8 ins. wide, and of the value of 18 dwts. of gold per ton.

COLORADO.—The manager writing (June 15) reports that 60 men are at work on 20 different points, and that during the past two weeks the various drifts have been advanced 55 ft. Coin lode—Brown adit level: Lode fully 4 ft. wide, vein, 1 to 3 ins. Considerable solid ore is being encountered on the footwall. With reference to the ground lying between the main shaft and the West Terrible, the manager states that the drift east upon the West Terrible lode is improving, and as the west drift from main shaft on the 8th level is

also showing a continuous improvement, it leads him to believe that the ground between those drifts is very valuable, and that he expects new ore shoots.

DAY DAWN BLOCK AND WYNDHAM.—Mine manager's report for fortnight ending May 9:—No. 2 underlie shaft: This shaft has been sunk a further depth of 8 ft., and timbered; total depth from the surface, 1,435 ft. 902-ft. level west: Preparations are being made for driving this level to the west. 805-ft. level west: The rise above this level has been connected with the winze, and the ventilation in this portion of the mine very much improved thereby. The block of ground between this and the 630-ft. level measures 177 ft. in height. The reef in the stopes will average 5 ft. in thickness of good quality. 630-ft. level west: Stopping is being carried on above this level on a reef averaging $3\frac{1}{2}$ ft. in thickness of good quality. The footwall was cut in the cross-cut after driving 6 ft. 500-ft. level west: The contractors have driven this level a further distance of 16 ft. for the past fortnight, making total distance from the shaft 71 ft. I expect to intersect the cross-course during the coming fortnight. No. 3 underlie shaft: No sinking has been done for the past fortnight. The men have been employed timbering, &c. All work will be suspended for the present, total exemption for three months having been granted.

ELMORE (June 14).—Since writing you last good progress has been made. The west drift has been advanced 40 ft.; total distance now in from cross-cut, 130 ft. The east drift continues hard; progress 25 ft.; total distance in from cross-cut, 150 ft. No. 1 raise started near the cross-cut, not improving much. We concluded to stop work on it for the present, and have started another 100 ft. east, which is now up 10 ft. This raise will be known as No. 2. We have a splendid well-defined ledge, both in the east and west drifts, of nice-looking quartz, but the grade of the ore continues poor. The west drift shows some improvement this morning; hope it will continue.—**G. A. MCCORNICK.**

EMMA (June 15).—Since my report of 8th inst. an improvement has taken place in the Illinois tunnel level. Near the top of uprise from this level we drifted on the vein south easterly 15 ft., following the seam of iron and ore, intermixed when the ore seam suddenly turned downwards, so that we are now sinking on this vein, which shows from 10 to 14 ins. first-grade ore, and is about 5 ft. long, besides about 12 ins. of soft oxidised iron, which runs $5\frac{1}{2}$ per cent. lead, $7\frac{1}{4}$ ozs. silver, and 46 per cent. iron. We mined some 4 tons first-grade ore here, besides a considerable quantity of the iron, which we may be able to treat in the mill. The outlook here is certainly most flattering; worked six men. In the drift above No. 4 level we worked two men; advanced 7 ft.; total, 270 ft. The ground is still hard, but we expect to get through it within a few feet, and hope to cut ore in quantity beyond. On the Emma tunnel level we worked six men, stoping low grade ore and timbering the ground. On the footwall drift from Emma tunnel level we have commenced sinking in the vein near end of drift. Sunk 10 ft.; working three men. The vein is 2 ft. wide of about the same character of material as mentioned in my letter of 8th inst. Cross-cut towards hanging-wall from No. 3 south-east level worked one man, advanced 3 ft., total 160 ft., without change. The mill has worked very smoothly all the week, producing on an average about 2 tons concentrates per day, or 14 tons for the seven days. This is worth from \$55 to \$75 per ton. We now have from 30 to 35 tons of ore in the market, which will be sold this week. We will keep sending the ore to market as fast as possible, and have no doubt our showing for the season will be good.—**H. C. WALLACE.**

ESMERALDA.—Work has been commenced on the Esmeralda ledge, a shaft has been sunk 100 ft. deep, and a cross-cut is now to be run to cut the ledge. The length of the cross-cut is estimated to be about 60 ft. The ledge, which is of great width, has yielded from the surface some rich ore carrying silver and gold, but principally the former. Owing to the increase of water, the large consumption of wood for fuel, and the splitting of the ledge, work has been discontinued on the Durand Mine for the present, and operations commenced on some of the other properties; this will reduce the expenses more than half. The 40 tons of ore crushed have yielded \$1,100. Copies of the engineer's reports on the Grand Central Mines in which Esmeralda, Limited, has acquired one-fourth interest will shortly be sent to all the shareholders.

GYMPIE GREAT EASTERN.—Report of the mine manager, dated May 14:—The 730-ft. level: During the past fortnight the rise on the Orient reef has been put up 16 ft.; total, 157 ft., and have holed through to the winze sunk from the 580-ft. level. We have now good ventilation. The cross-cut at this level has been extended 7 ft.; total, 434 ft. from the shaft; there is no change to report, the country being hard, green stone. The north drive has been extended 7 ft.; total, 87 ft.; the reef formation is getting wider between the walls, being now over 6 ft., but the quartz is getting less, but shows a little gold. The south drive has been extended 6 ft.; total, 62 ft.; the crushing stuff is about the same as last reported, a little gold being seen in it. The stopes going north above the level all show a little gold, with a fair average of crushing stuff. The 690-ft. level: The back stopes above this level going south show a little gold for the past week, but those going north are still looking poor. Washing-up will take place Monday next. The battery is now fully employed on stoue from 2 Great Eastern, 10 head; Nicholls's lease, 5 head; and 10 head for the company. Everything about the mine, winding engine and battery, is in good working order. There are 56 men employed—46 at the mine and 10 at the battery.

—May 18.—Extract from letter of local secretary:—I now confirm my cable of to-day's date reading, "There is great improvement in Orient reef, first-class ore being taken out." As the stoue is continuing to improve, and not, as we feared it might be, just a chance patch, we deemed it advisable to cable. As you will observe from it, the stone at present from the Orient reef is first-class ore, we might almost say specimen stone; in fact, we have culled specimens in small lots from the reef, and if you wish to see some of the stoues for yourselves we could ship a box of the best class stone as a sample for the benefit of the London shareholders. Kindly advise us of your wishes on this point. There would not be very much risk about it, especially if an insurance could be arranged. The board instruct me just to mention it for your consideration. Herewith I enclose the manager's report of 14th inst., which was laid before my directors at their board meeting held that day, and I am instructed to inform you that the manager has been instructed to start work on the reef west of the dyke. The prospects on this reef in the adjoining claim—1 North

Glaumire—are very good, the reef being about 1 ft. wide, showing very good gold. As already advised, we were unable to do any prospecting on this reef till we broke through to the winze. This we did last week, and now have good ventilation, and can open out on the western reef without any inconvenience.

INDIAN CONSOLIDATED (June 6).—Phoenix section: No. 1 level has been extended 8 ft. during the fortnight. The appearance and width of lode are much the same as when I last wrote, with, perhaps, more quartz showing. A strong stream of water is now coming out, and the general appearance of the end is promising. Tramway level: The lode here has widened to 4 ft., and is much mixed with quartz. The ground being softer, we have been able to drive 13 ft. Drive above tramway: A small exploratory drive here has been stopped, appearances not being encouraging. Stopping: In stope A there is rather more quartz than when last reported, and it continues of good quality. Width of lode at this point, 3½ ft. Stope B: This is virtually the same stope as A, and my remarks on that ground will apply to B. Stope C: The lode here continues about 5 ft. wide, of very fair quality. Stope D: We have all but finished here going south, and will leave a pillar and work north where the stone is still of milling value. Stope E: Lode is quite 5 ft. wide, and is improving. Stope F: No work has been done here, both contractor and coolies being ill. Stope G at back of tramway still looks well, but is small, being only 2 ft. wide. Winze below No. 2: We have not yet got the pump rigged, but are cutting a plat for it, and as soon as it is in position will recommence work. Mill: We began crushing yesterday. We have 300 tons at mill, and 300 ready to hoist, with some more in the mine, and I hope to work steadily through the month. All repairs are finished in mill. The incline itself is also completed, and can be utilised, although the engine shed is not yet done. Sundry small repairs are wanted at race, but nothing which will interfere with work. The monsoon burst last Sunday in a very mild way, but we are at last able to work with water power. Labour still rather short, but there is less sickness, and coolies are beginning to come in.

—(June 9).—Colar section.—No. 1 new shaft: The 210 ft. south has been driven 26 ft., making a total distance 49 ft. 6 ins. We have now about 3 ins. of quartz in the forebreast, with 2 dwts. 14 grs. per ton. No. 2 new shaft: Was sunk 2 ft. more vertical, making full depth 225 ft. We have now come up, and have commenced to sink on the underlie below the 210 ft. level, and have sunk 3 ft. by hand. When we get a little deeper we shall sink with rock-drills, and will, I trust, make good speed. We are carrying about 2 ft. of quartz in the south end of the shaft, and there is scarcely anything in the north end. The 210 ft. north has been driven 62 ft., making a total of 223 ft. 3 ins. We have made very good speed here, having driven 111 ft. in the past four weeks. There is nothing of value in the present end. We shall have holed to the drift coming south from No. 1 shaft before next report. The 210 ft. south has been driven 21 ft. in very hard ground. There is no quartz at all in the end, and I think it advisable to cross-cut west for a little. North drift: Hand labour driven 2 ft. 6 ins., total 32 ft. 6 ins. and suspended. South drift on lode driven 2 ft.; total, 34 ft. 6 ins.; also suspended. Main shaft: The 240 north drive driven 8 ft. 6 ins.; total, 206 ft., and suspended temporarily on 30th ult. The 240 main west cross-cut: The drill from the north end has been put to work here and driven 6 ft. 9 ins.; total, 371 ft. The end must be close up to the big dyke. The 240 ft. cross-cut from north drive driven 15 ft.; total, 15 ft. We have had much difficulty in blasting at Main shaft, on account of the very poor ventilation. Roache's shaft: Driven 3 ft.; total, 17 ft., and stopped on 4th inst., as the old shaft was unsafe. Machinery at surface continues to work very satisfactory. The engineer is now busy with the new pumping engine at No. 2 shaft.—A. S. B. OAKLEY.

LEEDS COPPER (June 18).—Kent shaft: The 20-fm. level driving west of shaft is being pushed on with all speed; the vein continues good, 3 ft. 6 ins. wide, producing 2½ tons 15 per cent. ore per fm. No. 1 stope in the back of the 20 fm. west continues in bed vein, 2 ft. 6 ins. wide, producing 2 tons 15 per cent. ore per fm. No. 2 stope in the back of the 20-fm. level continues in bed vein, 6 ft. wide, producing 3 tons 20 per cent. ore per fm. Henwood stope in the bottom of 20-fm. west level is in a splendid vein of ore, 2 ft. wide, producing 2½ tons 40 per cent. ore per fm. The 15-fm. level driving west of shaft is in bed vein, 3 ft. wide, producing 1½ tons 15 per cent. ore per fm. No. 1 stope in the back of the 15-fm. level is in bed vein, 4 ft. wide, producing 2 tons of 15 per cent. ore per fm. No. 2 stope in the back of this level is in bed vein, 2 ft. 6 ins. wide, producing 2½ tons 15 per cent. ore per fm. No. 3 stope is suspended. McGees shaft: The drift in this shaft is without change, still meeting good branches of ore; we are sending up good quality ore from No. 1 stope in this part. Adit: We have started a party of men on No. 2 bed. These are producing good stones of ore; but bed irregular. We have started two men on a place known as Kent's bed, this work at present is not sufficiently advanced to say what it will be. Surface: We have now the crusher almost complete. All work here is being pushed on simultaneously.—T. R. DAVEY.

MESQUITAL DEL ORO (June 8).—The mine manager reports:—Mill: After the general clean-up we started up the same day (30th May) at 5 p.m., losing only 11 hours. To date we are running without interruption; have crushed about 750 tons to the 6th; amount of amalgam on hand, 922 ozs. Mine—San Miguel east: Driven 4 ft. 6 ins.; total, 278 ft. 6 ins.; width of lode, 6 ft.; assay value, 0.90 oz.; this in every respect looks well. San Miguel west: Driven 8 ft. 6 ins.; total, 303 ft.; width of lode, 5 ft.; assay value, 0.22 oz. Here the lode looks well, and hope soon to report an improvement in the value. Prospecting—San Carlos, Don Pedro shaft: Driven south 6 ft. 6 ins.; total from shaft, 24 ft. 6 ins.; here we have cut a small vein 14 ins. in width; shows some fine colours, quartz of good appearance; assay value, 0.40 oz. Looks encouraging, but the developments are not sufficiently advanced to form an opinion as to its importance. Driven north 4 ft. 6 ins.; total, 29 ft.; no results.

MOSMAN.—Mine managers report for month ending May 16:—North Australian Mine: There is nothing fresh to report from this mine, the usual work of stoping is going on, and stone of fair quality in limited quantity is being obtained, the reef at times appears to be widening out into a good body, at other times it has nearly cut out altogether. The quantity of stone now raised is about 100 tons; 80 tons of which has been obtained during the last four weeks. The quality I think so far is about 3 oz. per ton. Having had some weeks of fine weather the water making in the mine is much lighter than it has been, although heavy yet. Eastward Ho! Mine: The 1,100 ft.

level winze has now attained a total depth of 26 ft.; the reef being sunk on is 3 ft. in thickness, of poor quality, i.e., about 18 dwts. to 1 oz. per ton. Stopping above 1,100 ft. is being carried on from which a small quantity of quartz is coming; the reef is 6 ins. about in thickness, showing heavy mineral. There are about 20 tons stone in the paddock, raised during the past four weeks; there are only four men working to hold the lease. Wyndham Mine: The underlie shaft has been sunk a further depth of 38 ft. during past four weeks, making total depth from the surface, 787 ft. No reef has been met with so far, but a change appears to be coming in. We have a soft pipeclay seam making between hanging and footwalls, which may at any moment open out into a reef; the rock is also changing into a more favourable description for a reef to live in. The 400-ft. level: This level has been further driven 12 ft.; total from shaft, 78 ft.; the reef is 19 ins. in thickness, of not high quality stone. The 550-ft. level south: 21 ft. has been added to the length of this drive during four weeks, making total of 99 ft. from shaft; the reef here is only 8 ins. thick, of same quality as above. The 550-ft. level north: Driven during four weeks 19 ft.; total from shaft, 103 ft.; the reef here is also only 8 ins. in thickness. From the stopes above the various levels some stone is being obtained. I am looking for a change for the better before long in the northern drive and the stopes above it. During four weeks 110 tons stone have been raised which is in the paddock ready for crushing. Crushing mill: The mill is engaged on stone from the Victoria Gold Mining Company's mine, and will be during the next five days, after which about 130 tons of quartz from other mines will go through before North Australian stone is commenced. The mill boiler will have to be cleaned out before starting on the latter stone.

NEW CALIFORNIA.—Mine report for first half of June:—The 2,200-ft. level drift east of shaft in 19 ft.: Work in this and the opposite drift had to be abandoned temporarily soon after reporting last, on account of the very heavy influx of surface waters. The water has raised above the 2,100-ft. level, but this extraordinary water-flow will not last more than a few weeks. It is due to a sudden thaw after a winter of heavy snows, and continuous spring rain besides. The end is much as last reported—3 ft. wide and of good grade. The 2,000-ft. level—Drift west of shaft in 834 ft.: There is no change at this point. The 1,900-ft. level—Stopes west of shaft: A few feet of holing sufficed to break into the old stopes, between 700 and 800 ft. west from the shaft, and stoping has just been started. The 1,500-ft. level—South vein east of junction: The lode in the back has pinched since last reporting, and we are now sinking on the vein to prove up the bottoms and connect with the level below. The 1,500-ft. level—South vein cross-cut raised: The last shipment of 88 tons from these workings milled 44.17 ozs. of gold, which result, with the concentrates saved, makes it a very profitable vein. The width of the vein in the stopes is 2 ft., and it is improving on development. The 1,100-ft. level east of shaft in 510 ft.: There is no change in this end.—F. RICKARD.

NEW DEVALA-MOYAR (June 8).—Main shaft: We have sunk this 6 ft.; total depth from surface, 38 ft. We are still in good sinking ground, and keeping the timbering well down. No. 1 winze: We have sunk here 2 ft.; total depth, 70 ft. below the 116-ft. level; the reef continues to make as we descend. Preparations are being made to open out the 186-ft. level in this winze. The 116-ft. level—Drive west: This end has been driven 9 ft.; total from cross-cut, 199 ft. As the reef has broken up in the end work has been stopped. Our stopes are all in good order, and during the past week 120 trucks (90 tons) have gone to the mill. Mill running, and everything working well. We have had fairly good rains of late, which is clearing away the fevers which prevail at this season.—R. B. JOHNSTON.

NEW EBERHARDT (June 12).—We are progressing fairly well at Eberhardt with our repairs. I expect to commence on Monday next putting in new timbers and ladders in our No. 2 upraise, the length of which is 230 ft. above the back of our south drift, it is my intention to run a drift south from the top of this upraise. My reasons for running this drift south from the top of upraise 2, are as follows: In running our south drift from the point where the No. 2 upraise was started until reaching the point marked B on Mr. Hooper's map, our prospects were considered very good for finding ore in large quantities. The distance between No. 2 upraise and point marked B is 261 ft., and at point 228 ft. south from No. 2 upraise we came upon 4 ft. of good ore, and here it was that the No. 3 upraise was started, and from memory I believe the total height of it is 85 ft.; the ground in the face of this upraise is very hard, but shows spots of very good ore, and is I think quite favourable ground for ore. Now 33 ft. south from where this upraise was commenced is the point marked B, and immediately over this point is our No. 4 upraise, this raise is up about 65 ft. In running the drift south from the top of our No. 2 upraise it will be running through and prospecting good ground, and with very favourable prospects for the finding of ore in paying quantities, and should ore be found connections could be made with our No. 3 thereby giving good air and good facilities for getting the ore down; the ground can also be prospected much cheaper in this manner than it could by extending up either our No. 3 or No. 4 upraises.—Capt. READ.

NEW HOOVER HILL.—Report to June 20:—There is a good deal of quartz coming in the drift going south of Briols shaft at the 130, otherwise there is no change. Following the ore below the 50-ft. level, south of Provost shaft, the vein is very small, and we have a good deal of water to contend with. We are still breaking some low grade ore around the old workings.

OOREGUM.—Report of the superintendent for the fortnight ending June 8:—Wallroth's shaft: The sinking of the shaft and the driving of the 360-ft. level north have been suspended, pending the completion of the tip plat at that level. The 360-ft. level south advanced 20 ft.; total, 43 ft.; lode, 2 ft. wide; value, 4 ozs. 18 dwts. per ton. The 280-ft. level south advanced 21 ft. 6 ins.; total, 639 ft.; lode, 3 ft. 6 ins. wide; value, 2 ozs. 3 dwts. 13 grs. per ton. This is an important improvement in this part of the mine. No. 1 winze bottom 280-ft. level south sunk 1 ft.; total, 49 ft.; lode, 10 ins. wide; value, 6 ozs. 12 dwts. 20 grs. per ton. No. 2 winze 280-ft. level north sunk 5 ft. 9 ins.; total, 36 ft. 9 ins.; lode, 6 ins. wide; assaying 1 oz. 10 dwts. 12 grs. per ton. No. 3 winze sunk 5 ft. 7 ins.; total, 49 ft. 5 ins.; lode, 6 ins. wide; value, 1 oz. 6 dwts. 2 grs. per ton. The 215 level north advanced 2 ft. 10 ins.; total, 75 ft. 7 ins.; lode, 1 ft. 6 ins. wide; value, 3 ozs. 5 dwts. 8 grs. per ton. The 215-ft. level south advanced 5 ft.; total, 275 ft. 11 ins.; no lode; now suspended. Low's shaft: Sunk 2 ft. 9 ins.; total, 366 ft. 4 ins.; no lode. The

350-ft. level south advanced 13 ft.; total, 152 ft. 2 ins.; lode pinched, being only 3 ins. wide; value, 1 oz. 6 dwts. 2 grs. per ton. The 350 level north advanced 1 ft. 6 ins.; total, 79 ft. We have reached the cross-course in this level, and after cutting through same shall drive north-east on its course until we pick up the lode as found in the upper levels. Winze in bottom 270-ft. level south, sunk 5 ft. 5 ins.; total, 36 ft. 9 ins.; lode, 1 ft. 6 ins. wide; value, 10 dwts. 12 grs. per ton. Probyn's shaft: Sunk 6 ft.; total below, 450 ft.; level, 102 ft.; lode, 5 ft. wide; value, 1 oz. 3 dwts. 22 grs. per ton. When we are deep enough for plat and fork, we shall suspend sinking and commence 550-ft. level north and south, and cut plat at that point. 450-ft. level south advanced 25 ft. 3 ins.; total, 220 ft. 7 ins.; lode, 3 ft. wide; value, 1 oz. 17 dwts. per ton. Rise in back this level, 10 ft. 5 ins. risen; total, 49 ft. 3 ins.; no lode. We must cut through the floor of country for ventilation. No. 1 winze bottom 450 ft. south, sunk 5 ft. 2 ins.; total, 8 ft. 8 ins.; lode, 4 ft. 6 ins. wide; value, 5 ozs. 11 dwts. 3 grs. per ton. No. 2 winze sunk 3 ft. 9 ins.; total, 8 ft.; lode, 3 ft. 6 ins. wide; value, 4 ozs. 18 dwts. per ton. 450-ft. level north advanced 6 ft. 9 ins.; total, 53 ft. 6 ins.; then suspended, being within a few feet of the boundary. Rise in back this level 5 ft. risen; total, 7 ft.; lode, 3 ft. 6 in. wide; value, 5 ozs. 8 dwts. 21 grs. per ton. No. 2 winze, 366-ft. level south, sunk 3 ft. 7 ins.; total, 22 ft. 4 ins.; lode, 1 ft. wide; value, 1 oz. 8 dwts. 7 grs. per ton. 300-ft. level south advanced 4 ft. 3 ins.; total, 280 ft. 3 ins.; lode, 6 ins. wide; value 1 oz. 1 dwts. 19 grs. per ton. No. 1 winze bottom 230-ft. level south commenced, and sunk 6 ft. 8 ins.; lode, 2 ft. 6 ins. wide; value, 5 dwts. 10 grs. per ton. Stopos: Wallroth's shaft back 280-ft. level south cut 4½ fms.; lode standing 2 ft. 6 ins. wide, assaying 2 ozs. 14 dwts. 12 grs. per ton. Bottom 215 south cut 4 fms.; lode, 1 ft. 6 ins.; value, 1 oz. 2 dwts. 21 grs. Back 215 ft. south cut 6½ fms., lode standing 1 ft. 6 ins. wide; average value, 2 ozs. 17 dwts. 10 grs. per ton. The 215 level north cut 9½ fms.; lode averages 1 ft. 6 ins. wide; average assay, 3 ozs. 4 dwts. 12 grs. per ton. Low's shaft, back 350 level, cut 9 fms., lode standing 1 ft. 6 ins. wide; value, 1 oz. 12 dwts. 5 grs. per ton. Back 270 south cut 7 fms.; lode, 1 ft. 6 ins. wide; value, 1 oz. 3 dwts. per ton. Bottom 200 level south cut 12 fms.; lode standing 2 ft. wide, assaying 10 dwts. 21 grs. per ton. Probyn's shaft, back 300 level south cut 7½ fms.; lode 5 ft. wide; value, 1 oz. 12 dwts. 16 grs. Bottom 300 level south cut 13½ fms.; lode standing averages 4 ft. 6 ins.; average value, 3 ozs. 16 dwts. 15 grs. per ton. Bottom 230 south stopped 5½ fms.; lode, 2 ft. 6 ins. wide; value, 2 ozs. 14 dwts. 10 grs. per ton. Bottom 166-ft. level south cut 9 fms.; lode, 3 ft. wide; value 1 oz. 15 dwts. 12 grs. per ton. Surface work: Good progress is now being made with the erection of the tailings machinery, and excavations commenced for the new stamp mill. Our return for May was 2,890 ozs. of gold from 1,367 tons of quartz.

OSCAR (June 26).—Report from mine:—Hodgkinson lode: The quartz in the lowest levels, 270 ft., is at present somewhat mixed with country rock, but has possibly an aggregate width of 2 ft. The quartz in the south level has rather the more promising appearance, and is carrying both copper and iron pyrites. In the 200-ft. level north, we are just now driving through the disturbed section previously met with in the higher levels. We anticipate, however, in a few more metres drive, to get clear of disturbance and again have the lode intact. There is a good lode in the winze sinking in bottom of 200 north. The quartz is of a hard blue character, carrying galena and copper. The stope working in back of 200 level north, is showing a good run of quartz, 3 ft. in width, and stones with visible gold are occasionally met with. The quartz in the 200 south has shown considerable improvement within the last few days, both as regards quantity of quartz, and value for gold.

PACHUCA (June 6).—Extracts from reports:—I am pleased to say the western drift continues to improve, which goes to prove the importance of the junction of this vein with the Carretera lode. The average assays this week have been 14 oz. of silver per ton. East drift: The ground here is a little easier, and now the drift is freely letting out water, which, in itself, is a remarkably good indication. I expect to intersect the main vein this week.

(June 13).—Western drift: I have nothing new to report in this direction; the vein continues of the same size and value as last week. Eastern drift: Yesterday we intersected three or four small veins, which I judge to be branches from the main vein, which from my dwelling is distant 6 ft. from the present end of the drift, so we shall cut it now in a few days.—F. W. BALADEN.

RED MOUNTAIN (June 16).—The manager reports:—The Pickwick tunnel has entered the Mountain Quail claim. The ground is becoming harder, and showing some quartz and iron pyrites in isolated bunches. A clay seam lately cut in the tunnel is giving out considerable water. It is evident that a large tract of the Mountain Quail and Jackstaff claims is being drained from the surface to 120 ft. (the tunnel level). Air pipes are now in place up to the face of the tunnel, giving good air and clearing out smoke in 30 minutes after blasting, instead of three hours as formerly. I therefore look forward to our old rate of progress again, 100 ft. to 120 ft. per month.

(June 17).—The manager writes:—Now comes news of a strike of quartz and iron pyrites 3 ft. thick; the ground well mineralised, and letting out abundance of water.

On the 23rd inst. Mr. Argall cabled: "The mine continues to improve: drift now in ore."

WEST INDIAN NEW GOLD (June 10).—We learn that owing to a continued downpour of unprecedented rains, the washings have been seriously impeded, and the results he had hoped for have consequently delayed. He is having the small 5-stamp mill repaired, and has purchased a steam pump to feed the boiler, and hopes within a fortnight to be in a position to crush some quartz, which has the appearance of being of value. The construction of the two sluices has almost been stopped by the floods, and so much time lost, but on the cessation of the rains the work will be pushed on, and it is expected good results will ensue.—L. CAMBISO.

(June 7).—Mr. Johnson reports that about 4 or 5 miles further up the river he finds gold is much more plentiful. There are some pretty nuggets enveloped in quartz, which shows that reefs cannot be far off. Some of these nuggets have been sent forward, and will be at the office for inspection in a few days.

Mr. Cambiso acknowledges receipt of the two last remittances, viz., 200£. and 300£.

YURUARI.—The secretary advises receipt of mail from the mines. In a letter addressed to the chairman, dated Chile, June 12, Mr. Pryor writes:—"I am still prevented from sinking the water shaft by a flow of water, and shall be prevented until I make communication between levels No. 6 water shaft and No. 9 Cenicero shaft. As I mentioned in my last letter, I am also prevented driving No. 5 westward from this same cause, as you will see from the mine report forwarded herewith. It may take more than a month to knock through, or we may with good fortune manage it before the end of the present month. In the meantime, as you are aware, expenses are very low, and the work of sinking, after the completion of this process, will be all the cheaper and easier. I have taken careful samples in all parts where we have been recently working in the water shaft, which will form a guide in deciding where to commence operations after the present development work is completed, which, as I have stated above, will now be at an early date. With regard to your supposition that I have a large amount of good quartz at surface, I would venture to point out that I have done nothing in opening up stoping ground since the mill stopped. My labour in or near the water shaft has been entirely devoted to sinking and opening up levels east and west of the shaft as reported from time to time. The great stumbling block to as rapid progress as we made a month ago, viz., water, is an excellent sign, both in the shaft and in the level. All that is necessary for the present is to keep down expenses until both shaft and level can be dried by the means I have described, and available stopes laid open in the direction where I have always indicated that good ground is to be found." This refers to Cenicero No. 9, and entirely confirms the opinion which Mr. Pryor has always held out to the directors, viz., "That when this development work was completed they would possess a mine with such reserves opened up as he believed would ten times over recompense shareholders for present outlay." In the mine report for the month of May Captain Rogers states:—Water shaft: The present depth of this is about 42 ft. below No. 6 level, showing 22 ft. sunk during last month, or rather to 11th inst., when sinking had to be suspended on account of the large influx of water. Our last work at bottom of shaft was to cut 2 ft. into the hanging wall, and sample of the quartz obtained is being assayed. No. 6 drift east of shaft is now extended 57 ft., making 40 ft. driven during the month. No. 6 west of shaft is now advanced 62 ft., or 43 ft. for the month. The lode at face within the last day or two has greatly improved and promises further improvement. No. 5 drift west of shaft is advanced 20 ft., and No. 3, 36 ft. The miners at this point have been removed to No. 9 drift, West Cenicero, so as to push from this side the communication with No. 6 water shaft, the distance still to be cut being now only about 70 ft. When completed, and water thus disposed of, the sinking of the water shaft will be resumed, as well as the driving of No. 5 drift west, and from both points; judging from present indications, considerable improvements may speedily be expected. In No. 5 drift west, although the lode is still mixed, it is of the most satisfactory nature, containing more quartz than we have yet seen, and also more water. The indications are most favourable for meeting with a rich payshoot in this direction, and the work is accordingly being prosecuted with the utmost vigour. Cenicero shaft—No. 9 drift: Driving was resumed on the 22nd ulto., but here, owing to the length of level, the air is bad, and we can only work two out of the three watches, so that progress is necessarily slower. The water in this shaft is still 39 ft. below No. 9 level.

THE CWMYSTWYTH CO., LIMITED.

A FORMAL MEETING.

AN extraordinary general meeting of the company was held yesterday at the Offices, No. 6, Queen Street Place, London, E.C., when the following resolution, which was passed on June 18, was duly confirmed:—

"That article 7 of the articles of association of the company be repealed, and that in lieu thereof the following be article 7:—Messrs. John Taylor, Frank Taylor and Robert Taylor, now carrying on business in co-partnership as civil engineers at No. 6, Queen Street Place, London, under the firm of 'John Taylor and Sons,' and the survivors and survivor of them shall be, and they are respectively hereby appointed the managers or manager of the company, and they or he shall continue to be such managers or manager until resignation, or until removed by special resolution of the company."

KINGSIDE MINING CO., LIMITED.—At an extraordinary general meeting of this company held yesterday at the Offices, No. 6, Queen Street Place, the following resolutions passed at the meeting held on June 18, were duly confirmed:—"That the directors may forthwith raise the sum of 4,000£. by the issue of mortgage debentures for that amount, bearing interest at 10£. per cent. per annum, and to be charged upon the whole of the property of the company, the said debentures to be redeemable by drawings, with a bonus of 25 per cent., on the amount paid on them, such redemption to be at any time, upon the company's giving three calendar month's notice, but the redemption to become absolute on July 1, 1894."

"That article 17 of the articles of association of the company be repealed, and that in lieu thereof the following be article 17:—Messrs. John Taylor, Frank Taylor and Robert Taylor, now carrying on business in co-partnership as civil engineers, at No. 6, Queen Street Place, London, under the firm of 'John Taylor and Sons,' and the survivors and survivor of them shall be and they are respectively hereby appointed the managers or manager of the company, and they or he shall continue to be such managers or manager until resignation, or until removed by special resolution of the company."

HOLLOWAY'S PILLS.—Sudden transitions from heat to cold, or from raw inclement weather to oppressive climates, favour the development of manifold diseases, which may in most instances be checked and rendered abortive by an early resort to these purifying, regulating and strengthening pills. This well-known and highly esteemed medicine affords a safe and easy remedy for almost every constitutional wrong which unhealthy climates, rapid changes, and dietetic errors can engender, and effectually removes any weakness self-indulgent habits may have induced. In all conditions of the system bordering on disease, such as are indicated by anæmia, listlessness and restlessness, Holloway's Pills will prove especially serviceable in beguiling the vivacity of mind and body appreciated by both sound and sick.

THOMAS THOMPSON,**STOCK AND SHARE DEALER**

ESTABLISHED 1862.

8½, ANGEL COURT, LONDON, E.C.,
And MINING EXCHANGE, LONDON.

Bankers:—THE CITY BANK, LIMITED, and METROPOLITAN
and BIRMINGHAM BANK, LIMITED.

INVESTORS in all classes of Stocks and Shares should read
Mr. THOS. THOMPSON'S MINING AND INVESTMENT CIRCULAR,
 free on Application.

Shares sold at Special Prices for forward delivery (One,
 Two or Three Months) on deposit of 20 per cent.

Orders by Letter or Telegram promptly attended to.

Telegraphic Address:—"REMEMBRANCE," LONDON.

NOTE ADVANTAGES WE OFFER TO INVESTORS
AND SPECULATORS.

LOCKWOOD, WHITLARK AND CO.,

5, THROGMORTON AVENUE, LONDON, E.C.

We make Mines a special study, and invite correspondence, whether
 business results or not. We can always give reliable information.

We open any number of all classes of Mining Shares at close
 market price of the day on 10 per cent. deposit, and carry them over
 as long as clients wish at low contango rates.

We close speculative accounts at any time, and pay profits instantly,
 irrespective of account day. We sell shares at current prices for for-
 ward delivery at one, two, or three months on 15 per cent. deposit.
 We are members of the Mining Exchange, and subject to the rules and
 regulations of that institution.

Send for our prices before dealing elsewhere.

Options at low rates for account, one, two, or three months in
 Mining, Land, and Miscellaneous Shares.

We deal in every description of Miscellaneous Shares.

We publish a South African Share List daily at 4.15 p.m., containing
 useful information as to claims held, dividends paid, &c., post free.

Telegraphic Address: "PERSONIFY," LONDON.

JAMES HOOK,

Option, Stock and Mining Share Dealer,

2, COPTHALL CHAMBERS, E.C.

(LATE LESTER AND HOOK),

Deals in Home, Colonial, Foreign and American Rails for three
 months forward on deposit of 2 per cent., and guarantees to close
 before the account specified on the contract expires.

JAMES HOOK has made it a speciality to fix contangos at a low rate,
 therefore it is very advantageous to country operators, and it avoids
 exorbitant amounts appearing when operators desire to continue
 stocks for better prices.

JAMES HOOK is prepared to deal on the Cover System for current
 account, and the stock must recede fully 1 per cent. before the amount
 paid runs off. £50 controls £5,000 Stock, with no further liability.
 In the event of the Stock being stationary, no contangos are charged
 for continuing the same to the successive account. I am the only
 dealer that gives this advantage. Official prices and substantial
 advice forwarded daily free on application.

JAMES HOOK is prepared to deal in Mining or Miscellaneous Shares
 for six months forward on deposit of 20 per cent. Instructions will
 receive immediate attention.

JAMES HOOK,

Option, Stock and Mining Share Dealer,

2, COPTHALL CHAMBERS, E.C.

BANKERS.—THE IMPERIAL BANK.

Telegraphic Address:—"LONGEVIOUS, LONDON."

SOUTH AFRICAN TRUST AND FINANCE COMPANY, LIMITED.

SUBSCRIBED CAPITAL, £255,000.

BOARD.

B. B. TRENCH, Esq., Chairman.

Sir CHARLES METCALFE, Bart.

L. BALFOUR BURNS, Esq.

Sir STUART S. HOGG.

Major J. W. M. COTTON.

RICHARD SMITH, Esq.

EDWARD DICEY, Esq., C.B.

HEAD OFFICE.—19, ST. SWITHIN'S LANE, LONDON, E.C.

SOUTH AFRICAN OFFICE.

NATAL CHAMBERS, JOHANNESBURG.

GENERAL MANAGERS IN SOUTH AFRICA.

W. Y. CAMPBELL, F.G.S., and E. W. EVANS.

BANKERS.—THE MANCHESTER AND LIVERPOOL DISTRICT
 BANKING COMPANY, LIMITED.

THE STANDARD BANK OF SOUTH AFRICA, LIMITED.

The Company undertakes the following business:—

The skilled investment in South African Mining, Land, or other
 securities for European investors.

Professional and confidential reporting upon companies, mines,
 mineral properties, lands, and generally advising European share-
 holders and others in South African ventures.

To act as agents on behalf of principals interested in South
 African investments, and for the protection of their interests, and
 where desired, to register shares in such undertakings, and to issue
 certificates in exchange for same, thereby enabling European holders
 to co-operate for their mutual protection.

Financing or advancing moneys to corporations, companies, syndi-
 cates, or persons in South Africa.

The receiving of money on deposit.

The purchase and sale of properties, and all classes of South
 African securities or interests.

A Mining Circular containing special information will be posted
 weekly from the South African Office to all subscribers.

A SPECIAL CABLE CODE FOR PROMPT AND ECONOMICAL COMMUNI-
 CATION BETWEEN THE SOUTH AFRICAN AND LONDON OFFICES.

Further information can be obtained at the Head Office of the
 Company.

NOTICE TO READERS.

Replies to Annual Subscribers will be sent by wire or letter, as
 may be necessary.

A. B. C. (Cork).—They are likely to recover very soon. The directorate is all
 that can be desired.

Sidney M.—It has weathered the storm, and we think the company's prospects
 first rate. The shares should be bought.

American Sub.—Not to our liking as a permanent investment. Only for specu-
 lation do we advise their purchase.

K. M. (Bristol).—Buy 1, 4, 5, 6 and 7, as we consider them very cheap. Others
 do not touch.

Clergyman.—Cannot recommend any of those named. Shares like Mysore West,
 Wynaad, and Indian Consolidated would be more likely to improve.

E. E. E.—No immediate prospect. Perhaps you had better sell.

Pussy.—Yes. The managers are now Messrs. John Taylor and Sons, of Queen
 Street Place, London.

M. C. H. (Reading).—Do not sell just now.

Constance.—We advise you to secure the profit by acting at once.

Anxious (Durham).—Sell all three now, and buy back the first-named should
 they drop again to the price you originally gave.

Sunny.—Yes. A dividend we believe will be paid to the preference shareholders
 only, after accounts have been passed.

Weak Holder.—We are of the same opinion as you are. They cannot go much
 lower, and the risk is not great.

A. K. (Ladywell).—Buy a few to average cost of those you have already. The
 prospects are of a more encouraging nature now that the management is changed.

Doctor J. J.—Dispose of 4, 5, and 8, but hold on to others for an improvement.

Value.—It is rather out of our way. We happen, however, to know about
 them. Will write to you fully in the course of a few days.

General Dealer.—The shares are fully paid, therefore, the price you gave is your
 only liability.

Oliver Cromwell.—If you can afford it hold on to them until the inevitable rise
 takes place. Their prospects were never more encouraging.

Tickler.—Our opinion is very different from yours. They should be sold
 immediately.

Hatton (S. N. D.).—We think you are in the wrong by not replying to his letter.
 As far as can be seen, your broker has acted fairly.

Operator.—Those mentioned hold for a small rise.

The Mining World.

LONDON: SATURDAY, JULY 4, 1891.

The "MINING WORLD" is not the property of a Mining
 Speculator nor under the control of any clique.

MINING IN THE HALF-YEAR.

THERE have been few periods of such prolonged inactivity in the
 mining share market as the half-year which has just come to a close.
 In this respect, of course, the mining department has only shared the
 experience of every other section of the Stock Exchange. Indeed,
 as compared with some parts of the "House," the mining
 market has, at times, been almost lively. For examples: when the
 speculation in Australian Broken Hills and Wentworths commenced;

when the talk about a fresh copper combination sent Rio Tintos to over 23½, and other copper shares in sympathy reached the highest point of the half-year; and when the successive sales of property by the Goldfields of Mysore showed what an important position that undertaking occupies in the Colar district. Still, these movements have been, like oases in the desert, few and far between, and the intervening spaces have been as dull as ditchwater. The number of new mining companies introduced in the six months has seldom been so small, and even re-constructions have been anything but numerous. In spite of all this, however, mining prices have been fairly well maintained as compared with the closing quotations last Dec. Usually prices have been higher during the half-year than they finished; but the fluctuations have been, generally speaking, less violent and less considerable than in many other markets where the speculative element is prominent. In the following table we compare the prices at the end of last Dec. with those quoted at the close of June, and we give particulars also of the highest and lowest prices touched in the half-year:—

Company.	Price end Dec., 1890.	Price end June, 1891.	Highest and Lowest Quotations.
Alamillos	1¾	1¾	2 — 1½
British Broken Hill	3	2½	3½ — 2½
Burma Ruby	5/8	5/8	1½ — 7/8
Cape Copper	4 5/8	2 7/8	4 3/4 — 2 3/4
Colombian Hydraulic	1½	1	1 5/8 — 1 1/8
Copiapo	2½	2 3/8	2 3/4 — 2 1/8
Day Dawn	1	3/8	1 1/2 — 1 1/8
Day Dawn P.C.	5/8	7/8	1 1/8 — 1 1/4
De Beers	16½	14	17 3/4 — 13 1/4
Don Pedro	1 1/2	1	1 1/8 — 1 1/4
El Callao	1 3/8	3/4	1 7/8 — 3/4
Frontino and Bolivia	3 3/4	7/8	1 1/8 — 3/4
Goldfields of Mysore	5/8	1 3/4	2 1/8 — 1 1/8
Great Laxey	9	9	10 — 8 1/2
Gympie Great Eastern	3 3/8	7/8	7/8 — 1/4
Leadhills	1 7/8	1 3/8	1 1/4 — 1 1/2
Libiola	2½	2 1/8	2 3/4 — 2 7/8
Mason and Barry	7 1/8	5 7/8	7 1/2 — 5 1/8
Montana	1 1/8	7/8	1 1/8 — 7/8
Mysore	6 1/8	5 3/8	6 1/4 — 5 1/2
Namaqua	2 1/8	2	2 1/2 — 1 3/4
New Guston	3	3 3/4	4 — 2 3/4
Nundydroog	1 1/8	1 1/4	2 — 1 1/8
Ooregum Ordinary	2 1/8	2 1/4	2 1/8 — 2 1/8
Ooregum Preference	2 1/8	2 3/4	3 3/8 — 2 1/2
Palmarejo	1 1/8	3/4	3/4 — 1/8
Panulcillo	1	7/8	1 1/8 — 7/8
Quebrada	1 3/8	1 7/8	2 1/8 — 1 3/8
Richmond	1 3/8	7/8	1 1/8 — 7/8
Rio Tinto	23 3/8	23 1/8	23 1/2 — 20 1/8
Tharsis	5 7/8	6 1/8	6 1/2 — 5 1/8
Tolima "A"	8	9	9 3/4 — 8
Yankee Girl	1 1/8	1 3/8	1 1/4 — 1 1/4

This is a fairly representative list, though, of course, the contrasts would be more conspicuous if we included Randt Gold shares and other "Kaffir" descriptions, which have, during the six months, stood at lower figures in many cases than they have ever been quoted at before, for it is to be remembered that some of the shares had been forced up a good deal above their par value before they were introduced to the British public. Money is now so cheap, and so many of the mines are exhibiting improved results, that we are inclined to believe that the half-year upon which we have entered will witness a larger amount of briskness in the mining market, and that, as a result, the general run of prices will move upwards.

MYSORE WEST MEETING.

WE have long held that the quotations for Mysore West and Mysore Wynaad shares represent the dulness of the market, and not the value of the Tauk Block property, which, on a joint purse arrangement, these concerns are now working. Mysore West and Wynaad Companies (thanks to the timely action of Mr. Robert Walker, the chairman, when visiting the properties in India) secured 164½ acres, representing a run of 2,200 ft. on the Champion lode of the Colar Goldfield for a sum of less than 7,000£. between them. The "good business" to which Mr. Walker referred in his speech is best shown by the circular issued by the Goldfields of Mysore directors last night, from which it is seen that Mysore, Ooregum and Nundydroog mines paid between them in shares, for 492 acres on the run of this reef, an amount assessed at 220,000£. It works out thus: that if Mysore West and Wynaad had paid on a similar basis, the cost would not have been 7,000£. between them, but roundly 73,000£.

Now, Tank Block, as shown by our map (the accuracy of which has been attested by the mouths of many witnesses, and notably by Mr. Walker himself), lies between Balaghat-Mysore property to the north and Nundydroog to the south. In both properties the Champion Reef has been found rich, but in Tank Block it has not been found, for the simple and sufficient reason that the mine

is not yet deep enough. But can anyone imagine a freak of nature so extraordinary and so perverse, that a lode found rich north and south of Tank Block should be found poor or not found at all in the intervening property itself! The idea is absurd, and must be dismissed from the thoughts of practical men. The motto, therefore, of Mysore West and Wynaad is to "go in and win." It appears to us, looking at the whole question from what seems a reasonable and business point of view, that the success of the two concerns merely resolves itself into the dual question of good management and a properly supplied exchequer, and in neither are Mysore West and Mysore Wynaad deficient. It goes without saying that Monday's meeting passed off satisfactorily, for all the facts (after a long and trying period of suspense) point to the early success of the two companies, and also to this, that buyers of Mysore West and Wynaad shares are wiser than sellers.

THE POSITION OF COPPER.

THE statistics of the copper trade, which we have received this week from Messrs. Henry R. Merton and Co., are eminently satisfactory, and they prove once for all that the current price of the metal tends rather to increase consumption than to check it. For the past month the total supplies in England and France amounted to 11,026 tons, while the deliveries reached a total of 11,959 tons, showing an excess of deliveries over supplies of nearly a thousand tons—933 tons to be exact. The stocks of the metal in England and France and afloat thereto have now been reduced to 57,825 tons, a lower figure than they have stood at since March, 1888, and comparing with 124,876 tons at the end of March, 1889. The striking change which has taken place in the past three years will be seen from the following comparison of the supplies and deliveries:—

		Supplies.		Deliveries.
		Tons.		Tons.
Year ended June 30, 1891	...	117,085	...	132,253
" " " 1890	...	114,892	...	154,088
" " " 1889	...	113,137	...	73,691

In the 12 months closing with June, 1889, it will be observed that the supplies exceeded the deliveries by 39,446 tons; in the following year consumption was greatly stimulated by the heavy drop in the price of the metal; but in the 12 months which have just come to a close, with prices ranging from 51£. 5s. to 60£. 5s. per ton, the supplies have increased only about 2,000 tons, while the deliveries have exceeded the supplies over 15,000 tons. The copper market has thus become normal once more, and if matters are left as they are, without the imposition of any artificial stimulus, the prospect is that the statistical position will further improve, and that, in consequence, the price of the metal will steadily advance. We regard the outlook as decidedly encouraging to the producers of copper, and to the holders of copper mining shares generally.

THE REMARKABLE FACTS AND FIGURES OF TOLIMA MINE.

THE main interest of the Tolima meeting centred in the speeches of Mr. Green, the superintendent, and Mr. Thomas Thompson, chairman of the Mining Exchange—the one giving a succinct statement of the position of affairs underground, the other an able synopsis of that position as it is viewed from the standard of the Mining and the Stock Exchanges, as well as and also by practical miners unconnected with the actual management. Referring to the speech of Mr. Green first, that gentleman said that it was just three years since he arrived at Frias to take the management of Tolima Company. He found its administration in a state of chaos, and its mine in a condition of ruin. Not only were the underground works in a wretched condition, but even had there been any considerable output of ore the machinery at surface was inadequate to deal with it. When Mr. Green asked for funds the directors naively replied in effect that the mine must pay for itself or stop. Had Mr. Green been an ordinary manager ill would it have fared with Tolima shareholders, but he was not an ordinary manager, as events soon began to prove. A sum of 2,700£. was provided by Mr. W. D. Powles, and this was the basis of the company's fortune. At the present time thanks to the conspicuously good management of Mr. Green, the estimated value of the reserves is not less than 400,000£., without a "red cent." allowed for the worth of the continuation of the ore body below the 110-fm. level, now valued at 200£. per fm. Mr. Green believes that Frias will eventually prove "one of the greatest of silver mines." This is not all in the future, for the profit for the year ending Dec. 31, 1890, was 29,833£., whilst Mr. Green anticipates that the profit for the present year will be 60,000£., or 60 per cent. on the total capital of the company. He naturally commented on the low price of the shares, the "A's" being quoted at about 9£. 10s., and the "B's" at 5£. 10s., and thinks they ought to go to 20£. a share.

It was at this point that the practical experience of Mr. Thomas Thompson came in, and that he offered to the directors the weighty suggestion which is likely, if acted upon, to make Tolima shares much more popular on the market—in other words, more dealable than they are at present, and greatly to enhance their value. He suggested that each 10£. share should be subdivided into ten of 1£., and predicted that there would result from the change an all

round advantage. In the first place, the public would freely buy Tolimas, and, in the second place, the shareholders relatively would see a better price for their 10 shares of the denomination of 1½ than for their one share of the denomination of 10½. This suggestion seems like "the unstrained quality of mercy"—doubly blessed. If acted upon, it would bless the shareholder by enabling him, if he wished to do so, to realise better prices for his shares; and it would bless the public, for it would put within the reach of people of moderate means the shares of a company the prospects of which as various speakers showed are second to none of any that can be named. Mr. Thompson, who is nothing if not a business man, views the position of Tolima from that standpoint. He has been identified with most, if not all, of the Colombian successes, and with others that are to be, and if we mistake not, he took part in the promotion of Tolima itself. He has no reason to be ashamed of it, though naturally, like all mining enterprises, time and good management have been required to bring its riches to fruition. Mr. Green said the shares ought to go to 20½ each. "Will they ever go to that?" asked Mr. Thompson. "No," in effect he replied, "if you limit your market by keeping them on the 10½ basis." "Yes," he emphatically answered, "if you reduce them to a denomination of 1½, because you at once place within reach of the man of moderate means the opportunity of joining one of the most remarkably successful mining companies that is to be found within the four corners of the share lists."

GYMPIE GREAT EASTERN.

IN our usual notes upon the Mining Market in last week's MINING WORLD we referred to the encouraging character of the report, dated May 5, from the local secretary of the Gympie Great Eastern Co., and we added, "an eye should evidently be kept on these shares." Our suggestion has been promptly acted upon, for during the week Gympie Great Easterns have been actively bid for at steadily improving prices. They still, however, look so tempting that we believe they will receive more and more attention. In the letter to which reference has been made the local secretary said, "We are happy to state that never since the old workings on Gympie Great Eastern reef were in full swing has the mine looked so promising. As far as one can anticipate in mining there seems years of profitable work ahead." Since then a report from the mine manager, dated May 14, has been received, and will be found published on another page of our current issue; and writing on May 18 the local secretary confirms his telegram, announcing the great improvement in the Orient reef, and suggesting that a box of specimens should be sent over to the hoard in London. We trust that the suggestion will be acted upon, for among shareholders in the company there are many who take a very intelligent interest in its welfare, and to them, at all events, the specimens would be instructive as well as satisfactory. The returns have been steadily improving recently, the May crushings having shown a profit of about 1,000½. We are, therefore, of the opinion that Gympie Great Eastern shares are among the cheapest purchases in the market at the present time.

BONNIE DUNDEE GOLD MINING CO.

WE cannot imagine that the shareholders of this company, in the face of the facts stated at the meeting this week, will be so shortsighted in their own interests as not to respond to the appeal which the directors are about to make for additional capital. In the case of this company we have another instance of the way in which the prospects of a really good mine are blighted at the very outset by being inadequately provided with working capital. This is generally the fault of the promoters, whose responsibility ceases when the company is safely launched; but it tells very unfairly against the directors.

It will be in the recollection of our readers that towards the end of last year, when the Bonnie Dundee Co. was becoming seriously embarrassed, an important discovery was made on the Queen reef in the western portion of the property. The hopes then raised respecting it, although not wildly extravagant—such a thing would be impossible with canny Mr. Hopkins as chairman—have been borne out by what has taken place. Up to the end of May, 749 tons of stuff from this part of the mine have been crushed, and the yield has been 1,217 ozs. The proceeds of this have enabled the company to discharge its liability to the bank at Charters Towers, and it has now a respectable sum of money there to its credit. The western part of the mine is by no means the only encouraging feature of the property, and Mr. Hopkins and his colleagues are anxious to go to work in a miner-like way, instead of, as he described it, "trifling with the property," as has been done hitherto. A plan of campaign has been formulated, and it is estimated that 20,000½ will be required in order to carry it properly into effect. During the four years that the company has been in existence, a profit of between 10,000½ and 12,000½ has been earned by the mill, but this, instead of being distributed as dividends to the shareholders, has had to be expended in opening up the mine. The last attempt of the directors to raise money by the issue of preference shares was not warmly responded to. If the shareholders only possessed a modicum of the faith that the directors have in the property, the money would be forthcoming without delay.

A TIN SMELTING COMBINATION.

DURING the week a company has been registered under the title of the Consolidated Tin Smelting Co., Limited, for the purpose of amalgamating and carrying on, under limited liability, the well-known Cornish smelting firms of Thomas Bolitho and Sons, of Chyandour, Penzance; Daubuz and Co., of Carvedras, Truro; and R. R. Michell and Co., of Trecreife, Penzance. The directors of the company will be T. B. Bolitho, M.P., Chyandour, Penzance; T. R. Bolitho, Chyandour, Penzance; J. C. Daubuz, Carvedras, Truro; T. W. Field, Marazion; and E. T. Gregory, Irwell Chambers, Liverpool. The head office will be at Chyandour, Penzance, and the London agency (under the title of the new company) will be at 39, Lombard Street. In Liverpool, Messrs. Gregory, Lawson and Co., who have acquired the business of Thomas Bolitho and Sons there, will act as the company's agents. At other places the existing agents of the several old firms will continue to act for the new company. The capital of the company has been fixed at 250,000½, in 2,500 shares of 100½ each, and the qualification of the directors is 2,000½ each. We understand that it is not intended to offer any of the shares to the public. Our readers are, no doubt, aware that the Cornish smelters have for a long while had matters very much their own way, with the result that mining shareholders have found plenty of room for grumbling at the treatment which they have been occasionally subjected to. The smelters have been practically buyers and sellers at the same time, and if the sellers have suffered in consequence, that is only what might be expected from such a one-sided arrangement. However, until the producers of tin take matters into their own hands, they will have to bear their ills, and grin if they can. Without going further into the much-debated question, we content ourselves with expressing the hope that those whose enterprise has kept the Cornish industry alive may have no reason to regret this latest combination.

AKANKOO GOLD MINING CO.

THE difficulties and disappointments which this company has met with in the past have been so great and so many, that it is hardly to be wondered at that the shareholders decided on Wednesday last to go into voluntary liquidation, and get whatever they were able out of the concern. There apparently comes a day when the patience of the most long-suffering shareholder is exhausted, and that day appears to have dawned upon the majority of those who invested their money in the Akankoo Gold Mining Co., Limited. But what struck us at the meeting (and it has been still more forcibly brought home to us since), was that the shareholders were abandoning the concern at a time when the prospects must be regarded as anything but hopeless. It has often happened in mining in the past, and we suppose it will continue as long as there are mines to be worked and those to work them, that men, after having spent their time and their money in the search for the precious metal, have at last given up the attempt in despair when within only a few feet of untold riches. Whether this is the case with the Akankoo Co. or not we do not pretend to know, but we hardly think that the shareholders would be wise in letting the concern go out of their hands at the present juncture. Surely there are some gentlemen among the shareholders who would be able and willing to form a new company with a fair amount of working capital. Mr. Tolputt, the chairman, has very little doubt about the richness of the property, and in fact believes it to be far richer than anything in the Transvaal. He is not alone, however, in his opinion, for several people who have seen the property have spoken very highly of it. In addition to this there is the telegram which has been received since the meeting, stating that they are crushing 12 tons from the new reef daily, and that the prospects are considered good. Under these circumstances it seems to us it would be a suicidal act to abandon the property at the present time.

It is a matter of regret that Colonel Champion has not been able to agree with his colleagues. We do not wish to enter into the dispute, but we do say this, that he injured his own case rather than otherwise by some of the remarks he thought fit to make.

NAMAQUA.

SHAREHOLDERS of Namaqua Copper Co. have no reason to complain of their investment, for in these days, when banks are offering 1 per cent. for deposits, Mr. Howard (the chairman) was able to refer to dividends declared since the formation of the company three years ago of 15 per cent. for the first year, 12½ per cent. for the second, and 10 per cent. for the one under review, which was by no means characterised by exceptional prosperity. The 4,700 tons of ore extracted yielded a profit of 21,703½, after making ample allowance for depreciation. The mine fell off during the year, but later reports are far more reassuring, and as they come from a manager who, by the moderation of his estimates and their realisation in fact, has earned the character of sober-mindedness, the shareholders may sleep comfortably, knowing that Namaqua still holds its own. The meeting would scarcely have been complete without an address from Mr. Weir, properly described by the chairman as "an expert in copper." It is satisfactory to hear this gentleman declaring that the copper trade is in a healthy condition. In proof of this he pointed to the diminution in copper stocks of 25,000 tons since he took up his

parable on this subject a year ago. He also considers prices satisfactory, and that the favourable position has been assisted by the dreadful war in Chili, and by the temporary closing of the Anaconda Mine, which, when opportunity offers, will probably be put upon the English market. The position of Namaqua at the close of the third year of its existence is, in every respect, satisfactory.

THE POSITION OF CORNISH SHARES.

WE have repeatedly called attention to the doleful condition in which Cornish mines are now to be found, and the following table speaks only too plainly of the deep depression to which they have been subjected. We cannot think that the tin combination, elsewhere referred to, will, in any degree, help them, but rather the reverse. At the same time we cannot but regard the price at which the majority of these shares are quoted as ridiculously below the intrinsic merits of the mines.

	Dec. 27th, 1889.	July 4th, 1890.	Dec. 26th, 1890.	July 3rd, 1891.

NEW ORIENTAL BANK.

THE affairs of this company, as disclosed by the chairman on Thursday last, were not altogether of a pleasing nature, and the shareholders were no doubt disappointed, but the fact was apparent to all who were disposed to regard matters in a calm and business-like manner, that the difficulties were entirely beyond the control of man. It has often been said that troubles never come singly, and the truth of the statement is certainly borne out by the affairs of this company. The chairman said "at certain distances of time some exceptional loss seems to fall on every bank, and having in the year under review had our turn it is not unreasonable to expect a period of exemption." It is, however, satisfactory to learn that the silver capital has increased, that debentures have been paid off to the extent of 71,924/., and that the directors were able to declare a dividend of 6s. a share, making 6 per cent. for the year. The outlook for the current year is of a most hopeful kind.

GOLDFIELDS OF MYSORE.

ITS SALES AND ITS PROFITS.

THE shareholders will learn with pleasure that at a meeting of the directors yesterday it was resolved "That an interim dividend, free of income tax, represented by fully-paid shares in the Mysore Gold Mining Co., Limited, in the proportion of one Mysore share for every 10 shares held in this company be and is hereby declared payable to the shareholders on the books of the company on July 8, 1891, and that the transfer books be closed during the said July 8. The allotment letters to be issued on the following day." A circular of unusual importance accompanies this intimation, in which the facts are recapitulated as we gave them last week, showing that 268 acres have been sold to Mysore Co. for 25,000 fully-paid shares, 114 acres to Ooregum for 20,000 fully-paid shares, and 110 acres to Nundydroog for 20,000 shares, the aggregate value of these sales being represented by present market prices at, approximately, 220,000/., a sum which represents exactly the total capital of the company. Balaghat will probably be the next purchaser.

As to the shares coming from the Ooregum and Nundydroog Cos., it is intended, as soon as practicable, to make a distribution to the shareholders of, approximately, 17,000 shares of each company, or one share in each company for every 13 held in the Goldfields Co. The remaining shares will, for the present, be retained by the company. It is not often that the shareholders of a company receive such good news as this.

THE ETHERIDGE TELEGRAM.

WE strangely misinterpret the spirit of the Etheridge meeting, if we are wrong in stating that the shareholders listened with a good deal of scepticism to the most recent telegram from their manager. After blowing hot some considerable time about Caledonian No. 1 South, he now very decidedly, not to say icily, blows cold. He says in his telegram "all hope abandoned;" but we can assure him that that is not the feeling of the shareholders who confirmed the re-construction resolutions, and who will not be satisfied to let their property pass

from them until its condition has been fully examined into and stated by an expert, to whose opinion they will be disposed to attach weight. This telegram came in the nature of a moral shock to the directors, who gladly accepted the offer of Messrs. John Taylor and Sons that one of their experts, who fortunately happens to be near the spot, should at once proceed to inspect the mine. Upon the receipt of his views, and the opinion that Messrs. Taylor may base upon them, the directors will decide what they will do. They will do nothing whatever upon the faith of the telegram which surprised them on Thursday last.

ROBURITE.

WE heartily congratulate directors and shareholders alike on the unanimity of spirit that prevailed at the meeting, held on Tuesday, to confirm the re-construction resolutions. At one time the opposition threatened to be serious, but thanks to the able and genial manner in which Sir John Stokes has presided over the different meetings, and to the fulness of the explanations he, his colleagues, and the members of the committee have given, as well as to the forbearance of the leading speakers of the opposition (if we may so term them), Mr. Spark, Mr. Newton, and others, all has ended as harmoniously as any wellwisher of the company could have desired. We do not hesitate to assert two things as the result of this unanimity—first that the re-construction will be a thorough success, and next that the market value of the property will be greatly enhanced.

WHEAL GRENVILLE.

THE exhaustive statement of Mr. Goold at the Wheal Grenville meeting showed that considerable progress has been made with the eastern section of the mine, and we refer our readers to the full text of his speech to see what has been done. The latter part of the meeting resolved itself into a sparring match between Mr. Goold and Mr. Strauss on the subject of the sales of tin by ticket, or by private treaty. On this, as on a former occasion, Mr. Goold a good deal more than held his own. There practically was no answer to his remark that he preferred to keep open two markets to one, and the combination of the tin smelters, to which we refer in our leader columns, points the moral to what he said even in the absence of any tale to adorn.

A NEW MODE OF TREATING IRON AND STEEL.

WE understand that a company will shortly be brought out under the title of the Stephanite Co., Limited, to acquire certain patents for the manufacture of a new flux called stephanite, which is said to be a valuable accessory in the manufacture of iron and steel. The flux, which was discovered by the late Mr. Stephan of Birmingham, is largely composed of alum and emery, and contains about 70 per cent. of alumina. It is claimed for stephanite that it acts as a clearing agent on the metal and draws every particle from the slag; that the molten metal comes from the furnace in a more liquid state than has hitherto been found possible, and, therefore, better castings are obtainable, and that, owing to the metal remaining at a high temperature for a considerable time, no blow holes are formed. The metal can also be hardened or softened at will. We believe the capital of the company will be 150,000/., in ordinary and preference shares.

THE MONEY MARKET.

CITY, FRIDAY EVENING.

FRESH REDUCTION IN THE BANK RATE.

THE collapse in the value of money, since the attempt to "corner" it, has been so rapid as to induce the directors of the Bank to again lower the *minimum* rate to 2½ per cent., no doubt in view of the release of the dividends on the Funds on Monday next, in order to keep within touch of the market, their 3 per cent. *minimum* having been left high and dry by the receding tide in the value of money in the open market. The abundance of capital offering—partly through the stagnation of all business—overcomes considerations of prudence, and the speculation for the fall in value which has been going on has been in the face of contingencies which may bring up money "sharp" later on, when the gold efflux commences, much to their surprise, in spite of warnings. Discount has fallen to 1½, ¼ per cent., and six months' bills are 2, ¼ per cent., while money at call, although 1 to 1½ per cent. at the close of the half-year, has fallen again to ½, 1 per cent. The Bank return, through increased circulation, usual at this season, shows, in spite of an influx of 382,000/., from abroad, a decrease of nearly a million in the reserve, to 18,245,000/., against 12,078,000/., last year, while as the liabilities under private deposits have increased the proportion is worse by 2½ at 43¼ per cent. The discount houses have reduced their terms for deposits to ¾ and 1 per cent.

There has been no great rift in the lute as regards speculation on the Stock Exchange. That venerable institution has been described by some versatile persons as a hawking wilderness, and, in truth, the attendance is becoming worse. There has been a little more sparkle about American railroads, on an ingenious story that a certain pool in New York were prepared to demonstrate that gold could be withdrawn from London to the other side when required, but as the imports would be at a loss, the brilliancy of the threat is dubious; therefore, prices, after a spell of buoyancy, relapsed, and are only moderately higher on balance. Consols have been exceptionally strong and active owing to scarcity of stock and public appreciation, which, combined, caused a recovery of about 1 per cent. Indian and

Colonial Securities have exhibited equal firmness, and the New Indian Scrip rose to 4½ premium. Argentine loans are unsaleable, for the constant occurrence of some form of disturbance in the Republic is eliminating all confidence, and not the least painful feature is the gradual default of the various provinces. Internationals are easier, owing to another monetary crisis in Portugal, and various unfavourable rumours, which, in effect, spoiled the possible influence the renewal of the triple alliance was calculated to have. However, the adverse movement forcibly demonstrates how gladly Paris would be to realise her enormous holding of stock. For Home Railways, there has been an unsettled market, but cheap money and fine weather, coupled to decent traffics, have sometimes exerted a favourable influence. Taken all in all, prices fluctuated a great deal, which, as unfavourable dividend estimates are rather confirmed, was no doubt accentuated thereby, but the heavy lines remain good, particularly North Western Ordinary. Canadian lines are firmer, Grand Trunk, despite terribly reduced traffics, while Mexican (Vera Cruz) have not appeared so strong. Banks tended easier on the dividends, and Miscellaneous showed activity. Bell's Asbestos have fallen sharply upon an astonishing reduction in dividend.

The discount market to-day was weak at 1½ per cent. for three months' bills, and money at call was only ½ per cent. Rumours have been current of the difficulties of the Russian Bank, and a fall in the rouble. Should this prove true, not only will the million and a half of gold be taken under the Treasury Bills now due, but the whole total held here will probably follow, as "necessity needs no law."

At the Bank 8,000*l.* in sovereigns were received from Spain. The silver market was steady, but Rupee Paper improved to 4 and 4½ per cent., being respectively 79 and 79½.

The Stock Markets were heavy to-day: only with this important reservation, Consols continued very buoyant, and English Railways were better. The feature of the latter was a rise of over 1 per cent. in North Western Ordinary, with a proportionate advance in Great Northern, North Eastern, and Great Western Stocks, but Midland appeared dull, and South Eastern "A" Caledonian and Brighton "A" subject to sales which caused the latter to fall from 141½ to below 140½. Consols for August delivery realised 96½, but close rather less; and Indian and Colonial securities also finished under their best points. Though all show a sensible improvement from public buying. A nominal advance occurred among Argentine Loans on a further fall in the gold premium to 248 per cent., and Egyptian and Greek Bonds remained firm and in demand, otherwise Internationals followed the Continent, and are weaker, especially Spanish, Portuguese, and Russian, the latter falling over 1 on poor harvest prospects and sales for Berlin account. American Railways were irregular, but Louisville and Milwaukee shares have appeared active, and sundry other descriptions are moderately better. Canadian lines opened weak, and close firmer, Canadian Pacific shares on a satisfactory dividend of 5 per cent. per annum. Mexican Railway securities slightly appreciated, and Bass's Brewery debentures, Eastmans' Meat, Gas Stocks, Ebbw Vale Iron, &c., and Rhymney Iron shares were also stronger.

Messrs. Alexander and Co., corn brokers on the Baltic, a firm in a large way of business and widely respected, has been compelled to stop payment through losses incurred by large dealing in maize. The amount of the liabilities at to-day's meeting of the creditors was put at 50,000*l.*, but a composition of 4*s.* in the *£* or more if possible was provisionally accepted.

Annexed are the final quotations to-day:—Consols Account, 96½, 95½; Egyptian Three-and-a-Half per Cent. Pref., 91½, 92; Egyptian Unified, 96½, 96½; French Four-and-a-Half per Cent., 104½, 104½; Hungarian, 89½, 89½; Italian, 90½, 90½; Mexican, 87½, 80; Peru Corporation, 84, 8½ per cent.; Peru Preference, 23½, 23½ per cent.; Russian, 1889, 96½, 97½; Portuguese, 42½, 42½; Spanish, 72½, 72½; Turkish, 1871, 95½, 96; Turkish Defence, 93½, 94; Caledonian Railway, 114½, 114½; Great Eastern, 91½, 91½; Great Western, 157½, 157½; Brighton "A," 140½, 140½; North Western, 173½, 173½; Metropolitan, 82½, 82½; Metropolitan District, 29½, 29½; Midland, 153½, 153½; North British, 38½, 38½; North Eastern, 155½, 155½; South Eastern "A," 83½, 83½; Mexican Railway, Ordinary, 38½, 39½; Grand Trunk, 8½, 8½; Grand Trunk First Preference, 60½, 61½; Grand Trunk Second, 40½, 41½; Grand Trunk Third, 22½, 22½; Canadian Pacific, 82½, 82½; Denver Preferred, 50½, 50½; Erie, 19½, 19½; Milwaukee 65½, 65½; Lake Shore, 112, 112½; Louisville, 74½, 75½; Atlantic First, 30½, 30½; Ontario, 16½, 16½; Ohio, 18½, 19; Norfolk and Western, 52½, 52½; Reading, 14½, 15; Reading Bonds, 79½, 80½; Union Pacific, 44½, 44½; Wabash Preference, 22½, 23½; Ottoman Bank, 12½, 12½; Anglo-Telegraph, 45½, 46½; National Telephone, 4½, 5½; Hudson's Bay, 16, 16½; Suez Canal, 107, 108; Guinness, 324, 326; Allsopp's Ordinary, 29, 31; Bryant and May, 13½, 14½.

REMOVAL.—The offices of the Criterion Gold Mining Co., Limited, have been removed to 30 and 31, St. Swin's Lane, E.C.

BIRKBECK BANK.—The 40th annual meeting of the Birkbeck Building Society was held this week at the Offices, 29 and 30, Southampton Buildings, Chancery Lane. The report adopted states that the receipts during the year, which ended Mar. 31 last, reached 9,519,070*l.*, making a total from the commencement of the Society of more than one hundred and forty millions (141,766,177*l.*). The deposits received were 7,993,047*l.*, and the subscriptions 244,927*l.*. The gross profits amounted to 284,315*l.*. The surplus funds have been augmented by 244,167*l.*, and now stand at 5,098,507*l.*, of which 1,628,240*l.* is invested in Consols, and other securities guaranteed by the British Government, and the cash in the hands of the bankers is 317,929*l.*. A further sum of 25,000*l.* has been added to the permanent guarantee fund, thus bringing up the amount to 150,000*l.*, and the balance 134,315*l.*, making together 284,315*l.* in excess of the liabilities, the whole amount being invested in Consols. The subscriptions and deposits withdrawable on demand amount to 5,247,712*l.*. The 13th triennial bonus on investing shares has been allotted, and the amount placed to the credit of all shares in existence at the close of the 40th year is 33,033*l.*. The surplus funds (which are invested in readily convertible securities) are sufficient to pay the depositors 114 per cent. on the amount of their deposits. The new accounts opened during the year were 10,051, and there are altogether 60,045 shareholders and depositors on the books. Since its establishment the society has returned to the shareholders and depositors more than one hundred millions (117,071,323), the whole amount having been repaid upon demand.

CORRESPONDENCE.

We do not hold ourselves responsible for the Opinions or Statements of our Correspondents.]

To the Editor of the MINING WORLD AND ENGINEERING RECORD.

THE FALL OF PRICES.

SIR,—I have read the letter of "Disgusted Shareholder" with interest, but without profit. It is all very well to malign re-constructions, but where would such mines as Frontino and Bolivia, which is paying such big dividends, have been without it. Some of the best companies on the market to-day have been re-constructed. Don Pedro is another case in point. My experience of secretaries and directors differs from that of "Disgusted Shareholder," for I have had almost invariably from them the greatest courtesy. But then I have been courteous myself—can "Disgusted Shareholder" truthfully say the same? As to disinterestedness in the newspapers—I read your paper regularly, and observe that there is not one that has such full reports of meetings, and I observe another thing, that the remarks of shareholders are given with a fullness equal to that of directors and managers. As to keeping straight with the companies, I think the statement is unwarrantable, and has no foundation in fact. The indignation which "Disgusted Shareholder" vents upon secretaries, directors, and newspapers, he should bestow upon himself, for he has, to quote his own list, made a most unwise selection of mining companies, and the merest tyro could have told him this.—I am, &c.,

A REASONABLE SHAREHOLDER.

THE FALL OF PRICES.

SIR,—I agree with "A Disgusted Shareholder" in his reasons as to the fall in prices of mining shares. Your paper and others I get are always speaking about "the coming boom," but my impression is there will be no more boom in mining shares.

Booms are as dead as a red herring, and the reasons are not far to seek: 1st. Dishonest directors; 2nd. Lying telegrams; 3rd. Dishonest newspapers. With regard to the first. Directors go on carrying on shareholders through first, second, and third re-constructions so long as they can get their fees of 100*l.* or 200*l.* a year each, and seeing their responsibility as directors in some companies is, that they take up 200*l.* in shares, it pays them well, whatever comes of poor shareholders. The only remedy for this is—pay no fees until the company is able to pay dividends, and soon there will be an end to a lot of rotten companies with their re-constructions.

With regard to the second point, viz., "Lying telegrams, reports, &c.," I have seen companies send telegrams of taking out 2 ozs. to 3 ozs. gold to large amounts for two or three months in succession, and then all of a sudden the lode breaks off, and then re-construction follows, and we never hear what has come of the money for these extraordinary crushings, which, however, only existed in the imagination of the directors, until they had worked off their shares on an unsuspecting public at advanced rates, leaving the public with the baby to hold. With regard to dishonest journalism, week by week I see companies adulterated that I (with a very short experience of mining) would not touch with a long pole, and even in the MINING WORLD, when I see companies such as Callao Bis, Bounie Dundee, Almadaz, Flagstaffs, Yuruaris, &c., &c., puffed up, and the part of the directors always being maintained against the shareholders, it makes me sick with disgust. In a recent number you said that the discovery of a lode was often followed by a fall of 3d. to 6d. on the shares. No wonder the public are beginning now to realise that the more discoveries that take place in mines, the more getting out of shares there is by those "in the swim."

In fact, shareholders are beginning to say, "Holloa! another lode found. Why, its time I was clearing out when the directors are falling back upon this." The fact is, mine working is becoming such a scandal that any friends to whom I speak of mining say, "What! put my money in mining shares? No, thank you. I am not altogether mad yet." My firm impression is, that between directors, journalists, and outside brokers (who ought to be guides to the public), the goose that laid the golden eggs is dead.

Hoping to see this in your first impression,—I am, &c.,

G. A. H. DOUGLAS.

21, Windsor Street, Glasgow,
June 30, 1891.

MR. HALLETT AND VICTORY MINE.

SIR,—I have been waiting to see Mr. Hallett's letter promised July 1, in connection with his proceedings anent the Victory Mine, but that date has come, and no report. I hope Mr. Reeves' circular has done much good, and that my fellow shareholders now see that that action of Mr. Hallett's is not in their interests, and will not pay for it or countenance him in any way. If, as I trust, this is so, would it not be well for shareholders now, at the present low price of the shares, to buy up as many more as they can, and rid the market of any, if there are such, lying in it? Such action on their part, with energetic working on the part of the directors, by re-opening the mine, would soon put a different face on their price.

Should the directors not have a meeting soon and get its board filled up and everything set going? I think they have got a lesson they will not forget, and they should take the shareholders now along with them and begin fresh. I think the directors offered to resign and leave last May. Should their places not now be filled, and with men who can and would see it rightly wrought? I see the Yuruari has appointed John Taylor and Sons their consulting engineers. Would it not be a good thing that Victory did so also?—I am, &c.,

A. B.

July 4, 1891.

MIDDLESBOROUGH WATER COMPANY.—The coupons due for payment on July 1, will be paid at the offices of the Atlantic Trust Company in New York, on and after that date.

MOUNT ALBION SILVER MINING AND SMELTING CO., LIMITED.

THE COMPANY IN WANT OF FUNDS—SHAREHOLDERS AUTHORISE AN ISSUE OF PREFERENCE SHARES.

AN extraordinary general meeting of the shareholders of the Mount Albion Silver Mining and Smelting Co., Limited, was held at Winchester House, Old Broad Street, E.C., on Wednesday, June 24, for the purpose of putting a statement before the shareholders, explaining the position of the company's affairs, and the result of the working since the month of Nov. last.

Mr. Gustaf Sichel

presided.

Mr. T. E. SMITH (secretary) having read the notice convening the meeting,

The CHAIRMAN said that the state of his health was such as to prevent him making a long speech, and, therefore, the directors had thought it best that what they had to say should be embodied in a written statement, which the secretary would read.

A DISCOURAGING STATEMENT.

The SECRETARY then read the document, which stated that the expenditure for the year ending Nov. 2, 1890, in Queensland and London, had amounted to 27,038*l.* 10*s.* 5*d.*, and the proceeds of sales, shipments afloat, and balances of produce on hand had amounted to 22,549*l.* 1*s.* 10*d.*, leaving a loss on the working of 4,489*l.* 8*s.* 7*d.* It went on to say:—From the foregoing statement it was quite apparent that the manager, Capt. Rogers, had been working unpayable ore for some time, and anxious as they were to acknowledge his energy and his goodwill, they could not find any excuse for such cruel loss as he had inflicted upon them by putting 28 and 30-oz. ore through the smelter, necessitating 8 or 9 tons of ore, for the purpose of obtaining 1 ton bullion, costing 56*l.* as a minimum at the mine, thus leaving a certainty of loss equal to the whole cost of land and sea transport. With

NO LIGHT TO GUIDE THEM,

the board could only read this telegram as a most severe, inexplicable, and unexpected strain upon the resources of the company, which the board in no way felt justified in meeting, even if they had had the means of doing so, for in no way could they account for the demands for money having risen from 2,000*l.* on the 3rd to 7,000*l.* on Mar. 24. At the meeting of Apr. 27 the difficulties of the company were fully explained to the shareholders who attended, and an expression of opinion was elicited in favour of re-construction of the company, subject to the opinion of an able, experienced expert, having the confidence of the shareholders, as to present position and future prospects of the mine, as well as the personal inspection of them by a member of the board, and Mr. Samuel Wilson had accepted this most ungrateful task. Before appealing to the shareholders with any proposal of re-construction, however, it was necessary to obtain the co-operation of the shareholders in the colony, holding about 78,000 shares, divided among about six shareholders. After much anxious consultation with them, they (the board) regretted to say that the majority had pleaded their inability to meet the call, and thus making the task almost impossible.

THE FINANCIAL POSITION.

The document then dealt with the financial position of the company, stating that the bank's claim of 5,500*l.* was not at present vouched by the cashier's figures, which only showed a deficit of 2,500*l.* However, taking the worst view, it could in no event exceed 7,000*l.* against which they had cash in hand, and assets, about 1,500*l.* Of this loss fully 1,500*l.* had been incurred owing to the stoppage of the smelters, from excessive rains, and a sinking of the platforms round the big smelter, causing a 15 days' cessation of all work, and involving a large outlay for bricks, iron work, and labour; so that the absolute loss on work reduced itself to something like 3,500*l.* to 4,000*l.* The board, as honest men and conscientious trustees of the shareholders' interests, had but one course to follow, unpalatable as it might be, and ruinous to their own very large interests in the company. They stopped the work, hoping for the assistance of the shareholders to put the undertaking, by means of further capital, on a better footing, and feeling confident that they were entitled to do so by the inherent value of the property, and by the phenomenal success of absolutely kindred mining works carried on under almost similar conditions as to richness or poverty of ore, but in possession of large and well-arranged concentrating plant, enabling them to make huge profits, while this company had been restricted to the comparative untutored employment of smelters only. Would the shareholders of this company allow their property to go under the hammer for the benefit of those who would be very quick to avail themselves of the experiences of this company, and build up thereby a brilliant future? The opinion of the board as to the value of the property had undergone no change. Far from it; they confidently believed that as they sank deeper they would get into more payable ore. The choice lay between providing the concentrating machinery or allowing the property

TO BE SACRIFICED AT SOME NOMINAL FIGURE,

for the benefit of wreckers. The directors perceived, from a number of proxies sent in in favour of Mr. C. Raphael, that that gentleman had endeavoured to obtain the support of the shareholders of the company to further his views in opposition of those of the directors. They understood that one of the objects aimed at was the appointment of a committee of investigation. As the directors had absolutely nothing whatever to withhold as to the management of the company's affairs, they were quite willing to fall in with this wish, if it was really the desire of the majority of the shareholders, and would give any committee of inquiry every assistance they might require. At the same time, the directors desired to point out that it would be most prejudicial to the interests of the company to delay the raising of further capital, as proposed, pending any such investigation. The position of affairs was such that, unless the further capital was raised forthwith, the property of the company in Queensland might be seized and sold.

SPECIAL RESOLUTION.

The CHAIRMAN: Having heard what has been read to you, I have only a very few words to make for the purpose of moving the special resolution for which this meeting has been called:—

"That the capital of the company be increased to 235,000*l.* by the creation of 35,000 new shares of 1*l.* each, to be called preference

shares, and to confer on the holders thereof the right to a fixed cumulative preferential dividend at the rate of 10 per cent. per annum on the amount for the time being paid up on such shares, and such preference shares to rank both as regards capital and dividend in priority to the other shares."

Mr. WRIGHT (director) seconded the motion.

After some further discussion, the resolution was carried, with one dissentient, a proposal for a committee falling through.

A vote of thanks to the chairman closed the proceedings.

AUSTRALIAN BROKEN HILL CONSOLS, LIMITED.

THE *Silver Age*, of Broken Hill, of May 19 last, contains the following leader on the good prospects of the Broken Hill field:—There is every sign that a new era of prosperity is dawning for Broken Hill. We do not mean to say that there was ever any doubt of the stability of the mines on the main line of lode, or of their phenomenal yield of silver continuing to increase for many years to come, but our range of operations is widening, and the period of lively speculations in the wonderful Broken Hill lode is gradually giving way to a period of solid practical mining over the whole district. It has always been known that good mining properties existed outside of the big lode, but the glamour of Broken Hill has prevented the systematic exploration of other mines. Everyone knows that apart from the Broken Hill lode we have one of the richest mining districts in the world. Almost every valuable metal has been found here, and indeed it would be difficult to mention a marketable mineral except coal, which is not known on the Barrier. People are now beginning to properly appreciate the value of the district, and the influx of London capital is helping to bring out of the ground some of our hidden riches which were never dreamed of three or four years ago. The discovery of the remarkably rich vein in the Australian Broken Hill Consols Mine was perhaps one of the principal causes of the present activity in mining outside the walls of the Broken Hill lode. The Consols Mine developed with London capital in a most expeditious and skilful manner, surprised Australia, and has shown to London what this district is capable of independently of the older mines. Another mine, the Consols East, has recently been floated in London with a large capital, while the Consols Extended has been divided amongst colonial investors. The Bonanza Mine has also gone to England, and some neighbouring mineral blocks have been floated in Sydney. But it is especially to London that we must look for the development of our best remaining mines. Colonials generally do not seem to properly understand mining (except in gold) as a business, for they seldom provide sufficient capital in great mines, and the result is that good properties often drag on for a very long while before turning profitable. In the case of the Consols for instance if the property had been in the hands of a colonial company it would certainly not be paying now. It is therefore gratifying to know that London capital is likely to be introduced into other of our good mines. The Great Eastern lode, for instance, which is the largest in the district outside the Broken Hill line, has gone to England, and we look to see a considerable body of men profitably employed there shortly in the extraction of silver. The Red Hill Asbestos Mine has just been put into a preliminary company preparatory, we hear, to floating in London, whence also capital is to be brought for working some of the tin mines of Euriswie. It is absolutely necessary in our own interests that London people should have undoubted properties to work, for we may rest assured there will be enough available capital in London to root up the whole of the Barrier if we can show speculators there that we have something well worth rooting up. So far, the London people have got two or three very good mines from this district. There has been some doubt expressed in England about the British Broken Hill Mine, but no one here who knows the property has any doubt whatever but that it will soon become a great and paying mine. Its bodies of ore are vast and good, carrying a higher average of silver than the 13 oz. material now being smelted, though from this a profit of no less than 350*l.* a week is being made with only one smelter. In a year or two's time, the shareholders in the British Mine will be heartily congratulating themselves on their property. Probably, when the eastern railway is completed, we shall find a demand spring up for minerals used in the arts and manufactures, of which we have a great variety. Thus there are two or three mountains of Freuch chalk, strong deposits of baryta and fluor spar, and large quantities of gypsum. In fact, we have at our hands all the ingredients for making every variety of chinaware, from the commonest clay pottery to the finest porcelain. We ought also to be an Australian depot for plaster of Paris and cement, and some of the principal bulk chemicals. Of course all these things are in the future, but if we keep on good terms with the London capitalists by giving them good mines, and only good mines to deal with, we shall form a connection which will later on be invaluable to us in developing our general resources.

NEWPORT ABERCARN BLACK VEIN STEAM COAL CO., LIMITED.

DIRECTORS PAY A DIVIDEND OF 10 PER CENT. FOR THE YEAR. REPORT and accounts for the year ending Mar. 31, 1891, show that the output (407,600) is about the same as last year, and the profit for the year is 40,095*l.* 8*s.* The sinking to the lower seams, and the extra plant necessary, have cost 9,983*l.*, and this amount the directors propose, instead of raising fresh capital, to place against profit and loss account, as well as 3,207*l.* 2*s.* 11*d.*, the cost of increased underground haulage, thus taking advantage of the good times to materially improve the value of the company's property. The amount to the credit of the reserve and other funds on Mar. 31, 1890, was about 30,000*l.*; about 24,000*l.* has been expended upon 222 cottages, and in acquiring 354 wagons, and the amount added to the reserve and other funds during the present year amounted to 1,834*l.* 14*s.* 3*d.*, of this 994*l.* 0*s.* 3*d.* has been used in the reduction of the mortgage on the cottages, and 518*l.* 16*s.* in redemption of the wagons. The amount available for dividend after deducting the interim dividend paid in Jan. last, the amount spent on sinking, &c., to the lower seams, and for underground haulage, will be 23,575*l.* 19*s.* 10*d.*, out of which the directors propose to pay a further dividend of 7 per cent. making 10 per cent. for the year, and carrying forward 7,825*l.* 19*s.* 10*d.* Arthur R. Mollett, secretary.

REPORTS OF MEETINGS.

BONNIE DUNDEE GOLD MINING CO.

IMPROVED STATE OF AFFAIRS—THE NEW DISCOVERY YIELDS SATISFACTORY RETURNS—GOOD PROSPECTS, BUT OPERATIONS HANDICAPPED FOR WANT OF WORKING CAPITAL.

THE ordinary general meeting was held at the City Terminus Hotel, Cannon Street, London, on Monday.

Mr. Geo. Hopkins, C.E.,

presided.

Mr. THOMAS WINDER (secretary) read the notice calling the meeting, and also the minutes of the last general meeting, which were duly confirmed.

THE NEW DISCOVERY LOOKS PROMISING.

The CHAIRMAN: You will, I presume, gentlemen, as usual, take the report as read; so I will proceed to make a few observations. Although the accounts which we submit to you to-day are not very unlike those we submitted at the last general meeting, it is my pleasure to inform you that the affairs of the company are in a very much improved state to what they were at the time of the last meeting. You know that towards the end of last year some of the tributors had struck what is called in the reports a new "make" of stone but what in reality is a part of the Queen reef running down into the western portion of our ground. The reef at that part has been opening up very well. In the accounts which we lay before you to-day we get the benefit of only the trial crushing of 24 tons, which yielded 65 ozs. of gold. Since that time, up to the end of May, 725 tons additional, yielding 1,152 ozs. of gold, has been raised from that part, and I may just mention in passing that 1,152 ozs. is nearly as much as we raised during the whole of the two previous years. (Cheers.) The result of this to the company has been that instead of being in debt to the bankers at Charters Towers, we have now a respectable sum of money there to our credit.

RESULT OF THE PAST YEAR'S WORKING.

The quantity of quartz raised is very much the same as it was in the previous year—very small—it yielded 512 ozs. of gold which realised on sale, 1,679*l.* The mill has earned 6,684*l.*—that is to say, it has received that amount for crushing outside stone, at an expenditure of 5,865*l.* for crushing that stone and also the stone belonging to the company, so that if the mill had been credited with the work done, the profit, instead of being 818*l.*, would have been somewhere about 1,200*l.* I find that during the four years we have been at work the mill has made a profit of between 10,000*l.* and 12,000*l.* That profit, unfortunately, we have not been able, as we ought to have done, to have divided amongst the shareholders; but we have been obliged to use it for the purposes of capital in opening up and developing the mine. The work done by the tributors during the year has been very good. We have received from them in the way of royalties 463*l.* as against 178*l.*

NECESSITY FOR MORE CAPITAL.

The next paragraph in the report is the one to which I wish more particularly to draw the attention of the shareholders, because in it is the very question of the life of this company—that is, the want of working capital. As we mention there, "the operations of the past year have, of necessity, been continued on a limited scale, consequent on the want of working capital." Now, I think it will be well just for a few moments to pass in review what has been the history of this company. It was brought out in Sept., 1886, with a capital of 120,000*l.*, 100,000*l.* of which, either in cash or shares, was paid to the owners of the mines and the mill, leaving the company the small sum of 20,000*l.* for working capital. That sum the promoters thought sufficient. Promoters are always sanguine—too sanguine—and as a rule they generally leave the directors with too small an amount of working capital. Quite true, as is stated in the prospectus, that sum was amply sufficient for carrying out certain before-mentioned developments—that is, the sinking and equipping of two new shafts. The 20,000*l.* was sufficient, or nearly sufficient, for that; but it has not been sufficient for carrying on the business of the company in the way in which it ought to be carried on, because I do not hesitate to say that the way we have been going on for the last two years has simply been

TRIFLING WITH THE PROPERTY.

We cannot do the exploration and development works that we ought to do, because we have not the means to do it. After working for two years, at the end of 1888 the directors called the attention of the company to the then state of affairs. We had at that time expended on the new underlie shaft 10,990*l.*; on the vertical shaft 9,922*l.*, and on the plant and machinery, fixed on the surface at the top of those two shafts, the sum of 3,355*l.*—making altogether a sum of 24,268*l.* That was 4,268*l.* more than the total of our working capital. Of course, that extra money had been obtained from the profit made by the mill. It became the duty of the directors then to consider the position very carefully, and to recommend to the shareholders what they thought best in their interests, and, rightly or wrongly, we came to the conclusion that we would recommend the issue of 20,000*l.* in preference shares. The board thought that shareholders would just as soon find 2*s.* or 3*s.* per share of additional capital in that way as they would if the company went into liquidation, and a re-construction was attempted. I am sorry to say that we have been grievously disappointed in the conclusion we arrived at. The directors took up their proportion of the preference shares, so did the vendors and so did some few of the shareholders; but, as a general rule, the great body of shareholders did nothing. They seemed to be content to let things take their chance, and let anybody who would find further capital for working the property. Now, that is not a satisfactory state of things. I have no doubt myself—and I have a reason for expressing the opinion—that the property is an exceedingly good one, and that if money were found to work it in a proper miner-like way

GOOD RESULTS WOULD BE OBTAINED.

I have here a long report from the underground manager. It is a most interesting report, a little technical perhaps in some parts, but of great length, and the directors thought it was too long to publish it with

their report. On going through it again, however, I have decided, with the consent of my co-directors, to have it printed after this meeting and sent to each shareholder. (Hear, hear.) It is an able document—not overdrawn—it gives reasons for every work that is proposed. It deals with what had been done on the reefs before they came into our possession, and what is being done at the present moment on the adjoining properties, and it is altogether a very exhaustive, and, as I said before, an able report. Under the circumstances, I do not think it is worth while to-day picking out any extracts to read to you, because in a few days you will have the whole of it before you; and I think, having read that report and studied it carefully, you will come to the same conclusion that I have—that our property ought not to be left unworked, or worked in the half-hearted way that it is now being worked, but that the right thing to do is to find additional capital to work it properly. Having urged the shareholders at the last meeting last year to take up the remainder of the preference shares, I am afraid it is of very little use my urging them again this year; but I think myself that it is a thousand pities that some portion of the money is not found for the purposes of development.

A LIKELY SPOT.

There is one particular place—No. 4 shaft—which you do not know much about, an old shaft, and the manager, in his report, gives figures and estimates, that with 3,000*l.* or 4,000*l.* spent there there is every prospect of finding quartz in payable quantities, and of a good quality. I, for one, should be very sorry to see the property left in this state without being further worked. Of course the new "find" of stone, which I mentioned just now, has done a good deal for us—that is to say, it has taken us out of debt and put us in funds, but the funds are not sufficiently large to warrant us in undertaking any of these important works which ought to be done. All our operations are obliged to be tentative. We are almost afraid to make any expenditure. The fact is that for want of capital we are handicapped in every possible way. Mr. McDonald is here, and perhaps he would like to say something about the mine, but I do not know whether it is worth while, because the whole case is contained in this report, which you shall have in a few days, and I think

WE SHALL MAKE ONE FINAL APPEAL

to the shareholders to take up the remainder of the preference shares. It is only right that they should do it—I am sure it is the best thing in their own interests. It only means finding a few shillings per share, and it is what they would have to do in the case of a re-construction—either that, or have their shares practically confiscated—a thing I have never advocated, and am not very fond of doing, but somehow or other shareholders prefer liquidation and re-construction to either preference shares or debentures, and, that being so, I cannot alter their views. As regards the accounts, I am sorry to say there is a clerical error on the credit side of the balance-sheet in the adding up of the three totals, showing what has been expended on capital account. It stands at 29,062*l.* 10*s.* 7*d.*, whereas it ought to stand at 26,562*l.* 10*s.* 7*d.* It really makes no difference in the accounts, because the next total of 124,284*l.* 11*s.* 1*d.* is quite correct.

EVERYTHING CHARGED TO REVENUE.

In the revenue account for the past year is included everything that has been spent on capital, with the exception of a small sum of 276*l.* 18*s.* 1*d.*, which has been expended on the new vertical shaft, and which is properly chargeable to it. If you cast your eye on to the item above, "Expenditure on the new underlie shaft," you will see that it stands at exactly the same figure as at Dec. 31, 1889—10,990*l.* 14*s.* 11*d.* Of the sum of 4,227*l.* 8*s.* 5*d.* charged to "mining expenditure" in the revenue account, at least 3,000*l.* ought to have been charged to capital as being spent on the new underlie shaft and the dead work in connection with it. In other words, the accounts are a little unfairly made out in favour of capital and against revenue. Now, we have been in this position ever since the beginning—that capital has always been borrowing or helping itself to money from revenue, because our working capital was too small from the first; and I will propose presently, in asking you to pass the accounts, that we shall be authorised to transfer a certain sum from revenue account which has been expended on this shaft, on the levels and deadwork in connection with it, and which is fairly chargeable to capital—that we shall be authorised to transfer that to capital account. It is not the first time that our revenue has had to suffer. If you refer to the previous year's accounts, I think there was a sum of 2,243*l.* 17*s.* 7*d.* taken from our revenue and applied to the purpose of capital; so that what we propose to do is to

ADJUST TO SOME EXTENT THE ACCOUNTS

as between revenue and capital. In our report we say that we shall ask the shareholders "to pass a resolution authorising them to transfer the debit balance of 2,452*l.* 7*s.* 1*d.*, on the year's working, from revenue account to capital account," but I think, instead of that sum, it will be better to say 2,400*l.* The expenditure comes to more than that, but if we put it at 2,400*l.* it will be only fair. Now, let me just refer you back to the report, where the directors express their regret—"That having, at great expense, sunk the new vertical and main underlie shafts, and having thoroughly equipped them with new and powerful machinery, they should be compelled, from want of capital, to discontinue work in connection with them." You will remember that in sinking the vertical shaft we passed through a reef, I think at 650 ft. deep—we bottomed on the reef at that depth—which there is every reason to believe is the reef known in the adjoining ground as St. Patrick's reef; and although when we struck it it was barren, there is very little doubt that if we could have run levels on it we should have very soon got out of barren and into paying ground.

WORK THAT SHOULD BE DONE.

That is one thing that ought to be done to develop this property thoroughly—to sink the vertical shaft further and to drive levels on the three formations already passed through. We have passed through what we believe to be the St. Patrick's reef and two others. Then we ought to sink the underlie shaft further for the purpose of working this new "find" of stone on the west side of it, and to resume the developments on another reef, which the shaft struck in its upper part, and which our underground manager refers to as very

great length in his report—the "Just-in-Time" reef. Then the third is a very important work. There is an old shaft sunk 240 ft., and that shaft ought to be enlarged and sunk deeper. We should, without doubt, at no great depth come across the Queen Cross reef and the Victory reef; and if we go deeper still we might possibly strike the Brilliant reef. I cannot, however, say whether we should or not—anyhow the shaft is in the right place and position to do it. Those works cannot be done without further capital.

NOT FAIR.

I do not think it is fair to the directors or to the property to go on in this trifling way, doing neither the one thing nor the other; and I wish, in as few words as possible, to impress upon the shareholders, those who are present and those who are absent, that it is a most desirable thing that sufficient capital should be found for completing these works of exploration in some way or another. With those remarks I beg to move this resolution: "Resolved, that subject to the sum of 2,400*l.*—part of the items of 3,565*l.* 11*s.* and 559*l.* 9*s.* 11*d.* charged to mining expenditure, and which has been expended on sinking the new underlie shaft, and on dead work connected therewith—being transferred from revenue account to capital account, and which the directors are hereby authorised and instructed to transfer, the report and accounts now presented be received and adopted."

Mr. JOHN MACFARLAN seconded the motion.

QUESTIONS.

Mr. CHATER: Do I understand that the amount of gold crushed in Feb. and May—1,152 ozs.—has been obtained by the tributors or by our own staff?

The CHAIRMAN: It has been raised by the company independently of tributors.

Mr. CHATER: And last year all that was raised independently of the tributors was 65 ozs.?

The CHAIRMAN: No; if you look at the second paragraph of the report you will see that the company got 512 ozs.

Mr. CHATER: Then up to the present time the company has raised rather more than twice as much as they raised in the whole of last year?

The CHAIRMAN: Yes.

Mr. CHATER: Have you received a report of any crushing since the crushing of May?

The CHAIRMAN: No.

Mr. CHATER: Do you expect one?

The CHAIRMAN: Yes; we expect one. Stone is being raised at this moment.

Mr. CHATER: Can you give us any idea as to how long this "make" of stone will last?

The CHAIRMAN: I cannot say.

Mr. CHATER: Is it a permanent reef?

The CHAIRMAN: It is on the main reef.

Mr. CHATER: Then there must be a prospect of its continuing. What amount of money would it be necessary to raise for the work you propose?

The CHAIRMAN: We said about 20,000*l.* would be required to carry out the whole of the three works referred to in the report.

Mr. CHATER went on to say that he thought the plaintive tone adopted by the directors in asking for more money was calculated to depress the shares in the market, and, moreover, he considered that in the face of the company's present prospects such a tone was unnecessary.

IMPORTANT TESTIMONY.

He knew a little about this mine, having lived some years in its immediate neighbourhood, and he believed their property to be a thoroughly good one. The amount of work that had been done, and the machinery that was on the mine, was worth a great deal more than the present market value of the whole of the shares.

Mr. VIBARS supported the directors in their proposal to raise more money, and expressed a hope that their efforts would be successful, as he was extremely anxious to see some return from the property.

Mr. PENN-GASKELL: Is the shaft you have referred to, Mr. Chairman, as being 240 ft. deep, the old shaft which the Bonnie Dundee used and continued the incline shaft beyond it? I imagine it is, but if you would say so it would enable us, in looking at our maps, to see where it is. At the last meeting I pointed out that I thought it would be desirable if some connection were made with the Dan O'Connell shaft, because if that connection were made we should know for certainty what reef it was that we struck at 650 ft., which you thought was in all probability the St. Patrick. It is only, I believe, a distance of 20 yds., to drive which I suppose would mean about 150*l.*

A GOOD REASON.

The CHAIRMAN: Mr. McDonald says that it would not be advisable to make the connection, because it would let all the water of the Dan O'Connell into our shaft, and we should have to pump it out.

Mr. PENN-GASKELL: Is the Dan O'Connell not at work?

The CHAIRMAN: Yes, they are at work, but on the western side of the mine near the boundary of the Patrick Extended.

Mr. PENN-GASKELL: They said some years ago that they were getting 3 ozs. to the ton on our boundary.

Mr. McDONALD: That was perfectly true at the time, but the good stone was got near the boundary by the Patrick Extended people.

Mr. PENN-GASKELL: I agree with you, Mr. Chairman, that we ought to do something with that shaft. We have spent between 10,000*l.* and 11,000*l.*, and we have no return. I cannot agree with the gentleman who spoke first, that it is undesirable to issue preference shares. If we can get

10 PER CENT.

I think we shall be very lucky. I am afraid the reason the preference shares did not go off was that the inducement was not sufficiently great. I took more than my proportion. I imagine, however, seeing that we only got 600*l.* subscribed last year, that it is very unlikely we shall get it now. I am sure if anybody can get it, it will be this board, because Mr. Hopkins is so universally known, and if anyone can inspire confidence on the part of the shareholders and the public generally it is he and his colleagues. (Hear, hear.)

The CHAIRMAN: With reference to the first question you asked—this shaft is not shown on the plan of the company's properties. I think you asked if it was the old vertical shaft. It is about 100 ft.

west, and it rejoices in the name of the Pig and Whistle, but I propose to drop that name—it is scarcely respectable—(laughter)—and to call it No. 4 shaft. It is down about 250 ft., and it wants to be widened out and sunk further. As regards the main shaft—it was calculated by experts that we ought to strike the St. Patrick at a depth of 712 ft. Speaking from memory, I think we went through a well-defined reef at a depth of 650 ft., which I think is almost certain to have been the St. Patrick. With reference to the remarks of Mr. Chater—he, being only a recent shareholder, has not perhaps been able to follow closely what has been done previously. At the end of 1888 we had spent all our money. Then it was that we asked for the preference shares, and although we only succeeded in placing between 6,000*l.* and 7,000*l.*, you must not forget this, that it was the placing of those preference shares that

SAVED YOUR ORDINARY SHARES.

We were in debt at the moment to the bank at Charters Towers, and by placing these few preference shares we were enabled to pay off the balance due to the bankers and to go on with the work, with the result that we found this new make of stone, from which we are making a profit.

Mr. CHATER: I quite acknowledge the necessity which you were under in 1883 for issuing the preference shares, but I say there does not appear to be the same necessity now.

The CHAIRMAN: We have a balance and we can go on, but not in the way that a large property like this should be worked.

A SHAREHOLDER: Why not re-construct?

The CHAIRMAN: Well, perhaps it would have been better if we had re-constructed then and there. I am afraid, as Mr. Penn-Gaskell says, that there is not much chance of the shareholders taking up preference shares.

THE NEW DISCOVERY.

Mr. CHATER: I should like to ask Mr. McDonald whether he thinks the new stone which has been discovered will be sufficient to enable the mine to go on working without additional capital?

The CHAIRMAN: Mr. McDonald has not been in Charters Towers since the discovery was made.

Mr. CHATER: Can we not go on for another year and see what this stone will do for us?

The CHAIRMAN: Speaking for myself, I should not be disposed to go on for an unlimited period, giving my time and attention to this property, unless it can be done in a more business-like way. When you have read this report I am sure you will all agree that the right thing to do is to get further capital. By a piece of luck we came upon this good reef in Oct., and our present accounts only get the benefit of about 65 ozs.; but it is quite impossible for anyone to say whether there will be sufficient ore there to place us in funds, and enable us to run the levels on our vertical shaft and to carry on the underlie shaft.

Mr. PENN-GASKELL: At what depth is it probable you will strike the Brilliant reef, supposing it to exist under this vertical shaft?

VIEWS OF THE QUEENSLAND MANAGER.

Mr. JOHN McDONALD: I have made a calculation, and I should think, supposing that it extends into our ground—and it is quite possible that it will do so—we might cut it at between 1,200 ft. and 1,500 ft. But the present workings on the reef are not sufficiently advanced to enable the true course of the vein to be clearly ascertained. When the mine is opened up more we shall be able to make a more accurate calculation.

Mr. PENN-GASKELL: At what angle does the reef run.

Mr. McDONALD: The Brilliant is at an angle of about 30; the Day Dawn and Wyndham at an angle of about 45; and the Queen reef commenced at about 30, and went down to an angle of about 45. In answer to Mr. Chater, I may say that the shoot of stone that we have discovered may continue for a long time, or it may not; but so far as we have got it in the 6th and 7th levels, there is every reason to expect that it will be payable. It is not, however, a wide shoot. It has not been cut in the No. 8 level, and until that level is in we are unable to say whether the shoot of stone will continue or not. We have no reason to think that it will cut out, but we are not justified at present in saying that it will continue. As regards the question of raising more capital—at present we are simply working on this western side of our underlie shaft, on this shoot of stone. The main shaft is lying idle; we have done no work there for upwards of a year. Unless we sink perpendicularly the shaft that the chairman has referred to as the Pig and Whistle, which is down 240 ft., we cannot hope to get any gold there. We are only working on the top of the Queen reef at the present time. Assuming that we shall make a profit on the one shoot of stone that we are working from the Queen, would it be advisable to go on and lose that profit for want of working capital? for I must remind you that we have certain labour conditions to fulfil in Queensland—that is to say, we have to employ one man to the acre in order to retain the title to our lease, and that entails a considerable expenditure, which we must be prepared to face in the event of our present shoot of stone giving out.

ONE OF THE LARGEST SHAREHOLDERS.

I may say that I hold 14,000 ordinary, and 2,350 preference shares, and I would be very glad indeed to see additional capital raised. I do not mind whether it is done by issuing more preference shares or by re-construction, but it is clear that funds must be raised if we are to develop our property in a proper manner. (Hear, hear.) I quite agree with the remark made by our chairman that it would have been better to have re-constructed in 1888, but I sympathise with his view of the matter—that he did not like re-construction if the capital could be raised in any other way.

The motion was then put to the vote, and carried unanimously.

Mr. JOHN MACFARLAN (director): I have great pleasure in proposing the re-election of our chairman, Mr. Hopkins. It would be superfluous on my part to say anything in commendation of that gentleman, but I consider the company extremely fortunate in having secured his services, and I am sure that the members of the board are equally fortunate in having him for a colleague.

Mr. PENN-GASKELL seconded the motion, which was carried unanimously.

The CHAIRMAN: Gentlemen, I am very much obliged to you for re-electing me, and for the kind way in which Mr. MacFarlan has

spoken of my services. I must say I should like to see this company very successful. I have always had a liking for it, believing that it is

A VERY FINE PROPERTY.

We know that there are two or three, if not more, reefs underlying the whole of it; and, seeing how it is surrounded by properties which are now doing well, and making good returns, I think it is a thousand pities that our property cannot be opened up and developed in a proper miner-like way, instead of trifling with it as we have been obliged to do during the last few years. (Cheers.)

The auditors, Messrs. Monkhouse, Goddard and Co., were then re-appointed.

Mr. COTTERILL proposed a vote of thanks to the chairman and directors, and said: It seems to me that our property has passed the stage of depression, and I think that under the management of our chairman and his colleagues there is a better prospect before us. (Hear, hear.)

Mr. VEARS: I beg to second the motion, and I do not know a better chairman than that of the Bonnie Dundee Co.

The motion was carried, and with the brief thanks of the CHAIRMAN, the meeting separated.

LATEST REPORT.

Mine manager's report for fortnight ending May 9, 1891:—We have continued stoping from the back of No. 7 south-west level. In the stope north-east of winze we have had about a foot of reef mixed through the formation, with about the same amount of stone in the face of stope at present. The stone should crush 1 oz. 10 dwts. per ton. In the stope south-west of this winze we have only had a small leader or two in from 8 to 10 ft. of formation. In the underground stope from this level the reef has been very patchy and small, and, for the amount of ground stoped, turning out a very small amount of stone. The reef is still small in every part of the stope. Some of the stone broken to-day from the bottom of the stope is showing good gold. Have sunk the winze from this level a further depth of 16 ft., making a total depth of 65 ft. from the level. We have had a few leaders of stone showing gold running from the hanging-wall back towards the footwall, which makes it look promising for a reef on the footwall. I might explain we are sinking the winze down to its present depth on the hanging-wall side of the formation, and I expect the formation to be about 20 ft. thick at the bottom of the winze. Should we get no improvement on the hanging-wall in another fortnight's sinking it will be advisable to continue the further sinking of the winze at a much steeper grade to get into the footwall as soon as possible. Have driven No. 8 south-west level a further distance of 19 ft. with four men, making total distance from the shaft 66 ft. The ground has been very much broken up, and we have had to timber it up to the face. Have a few leaders running through the formation, but nothing defined yet. The water is increasing a little. The new pumps will be here in a day or two. We have raised about 50 tons of stone for the fortnight. All machinery in good order.

THE AKANKOO GOLD MINING CO., LIMITED.

SHAREHOLDERS DECIDE TO GO INTO VOLUNTARY LIQUIDATION—AN ACrimonious DISCUSSION.

AN extraordinary general meeting of the Akankoo Gold Mining Co., Limited, was held at the Cannon Street Hotel, London, E.C., on Wednesday last, for the purpose of considering and, if deemed expedient, passing the following extraordinary resolution:—

"That it has been proved to the satisfaction of this meeting that the company cannot by reason of its liabilities continue its business, and that it is advisable to wind up the same, and accordingly that the company be wound up voluntarily."

Mr. Henry Tolputt

presided.

The SECRETARY having read the notice convening the meeting, The CHAIRMAN said: Gentlemen, I little thought when I last had the pleasure of meeting you, under very much more promising circumstances, that we should come to this pull up.

THE DIFFICULTIES OF THE DIRECTORS.

Circumstances utterly beyond the control of the directors have led to it. You will remember when we started we did so on a very moderate capital. The shareholders agreed with the directors that it was worth while running the risk. I wish you to understand this very clearly. We did not rush into expenditure in a careless manner. We made the most careful calculations where our money was to go to. We calculated that by Jan. 1 Mr. Doering would be able to crush enough quartz to give us about 4000 l. a month. Why that has not been carried out I must confess I find considerable difficulty in explaining to myself. Our estimated expenditure on this side was 2,200 l. for machinery, &c., but we have actually spent only 1,200 l.

THE MINE WAS UNDER WATER.

The first unfortunate mishap was Mr. Doering, when he arrived at the mine, finding it was under water, unknown to the directors. Some delay took place getting the pumps in order, the mine cleaned, the mud out of the bottom, and repairing the damages. It is only fair to Mr. Doering to say that he alleges that his predecessor had taken away a considerable quantity of quartz much too near the shaft. His desire was to send returns, and he had stoped much too near the bottom of the shaft, thereby necessitating timbering, &c. We went on expecting by Jan. 1 he would be able to start. Jan. 1 came, and nothing was done. We gave him to Feb. 1, but still nothing was done. Mar. 1, Apr. 1—still nothing was done. On Apr. 25 we heard crushing had been commenced, but was very soon stopped by coming to this belt of refractory ore. When antimony is found near quartz it floors the mercury, and is very difficult to extract. Mr. Doering writes us he is

BRINGING 2 CWT. HOME,

to treat it. For a whole month we were without any news whatever from the mine. When this last circular was printed, and just as it was going out, we received three mails in one day. I stopped the circular in order to give you the latest news. On the Monday we received a

fourth letter, and then came the astounding news to us of the discovery of this reef, and the most extraordinary thing is that Mr. Lane must have gone through it without knowing anything about it. Mr. Ross told me some years ago that he knew of another reef there, and I tried to get him to say where it was, but he would not; he wanted to go out and manage the thing himself. A telegram came yesterday, simply advising Mr. Doering's departure by the Niger.

HOSTILE PROCEEDINGS.

Well, gentlemen, our position lately has been complicated by proceedings which our solicitors advised could have no possible object but to file a hostile petition against the company, and under their advice, we thought it desirable, in the interest of all the shareholders, to resolve at once on a voluntary liquidation just to stop this hostile petition. If occasion should arise, we can easily get permission from the Court to abandon this liquidation, but with this resolution passed we are in a position to treat with any other company or set of persons who are willing to take the property over. For the last four years I have worked like a slave, and have got absolutely nothing for it, so that I can look you in the face and say, neither I nor two of my colleagues have taken a sixpence of your money. We have worked, believing that the mine was a good one, and that we should ultimately be repaid. If I could see that any blame attached to us as directors I should be the first to admit it. Honestly I cannot see that a 5 l. note has been wasted on this side. Mr. Doering is on his way home, and I have no doubt whatever he will be able to give a satisfactory explanation of all the delay that has taken place. Still there is the delay, and that delay has cost us all that money. One piece of news I have learnt, certainly to my great surprise, from Mr. McKenzie. He tells me that the last boiler sent out for the stamp mill was, when he left, lying on the bank where it was landed. Why it was not put up I cannot understand. There is this, however, to be said: I see from the reports of other companies that there has been a great scarcity of labour this year, on account of a war that has broken out on the Kroo coast. I have very little doubt about the richness of the property. We know very well that

MILLIONS OF GOLD

came from this Gold Coast in the last century. I believe it to be far richer than anything you will find in the Transvaal. So far as we know of the Transvaal Mines, they are not to be compared with the mines on the Gold Coast. There is no doubt whatever that those who follow us will reap a rich reward for their exertions. As I once said before, I decline to be responsible for the 50,000 l. Mr. Lane spent upon this mine. I had nothing whatever to do with it, and, so far as opening up the mine was concerned, Mr. Lane never opened it 20 ft. But I do accept the responsibility for the expenditure of 17,000 l., and good work can be shown for it. As regards the opening of the mine, I can find no fault with Mr. Doering. Through the kindness of Mr. Ferguson I was introduced to Mr. Bell Davies. Mr. Bell Davies went over our plans, and said, "I can suggest nothing. You are doing exactly what you ought to do, and you must go on in the same way." Well, gentlemen, we have no money.

WE HAVE COME TO THE END OF OUR TETHER.

I may tell you I went so far as to offer 10 per cent. out of my own pocket, if I could get these debentures placed. People have lost confidence apparently in everything. I asked one financier if he could place them at 40 per cent., and he said "No; I have got some better things that I cannot place at 60 per cent." I think the course we have suggested to you is the best we can possibly adopt. Our great anxiety is to get, if we can, a new company to take over this property. We have abandoned all hope of getting the present shareholders to go on, and I should not ask them. We hope to find some people, who have sufficient means themselves, to start a new company to take over the property, and give us shares equivalent, at least, to the last half-crown we have paid, and sufficient cash to pay off our liabilities. As far as the liquidation is concerned, we are willing to carry the thing through, and avoid appointing an Official Liquidator, who would not be in a position to treat as we should. The chairman concluded by moving the resolution as above.

Dr. LAWSON (director) seconded the motion.

QUESTIONS.

A SHAREHOLDER: What are the arrears of the last call?

The CHAIRMAN: About 600 l.

A SHAREHOLDER: What are the liabilities?

The CHAIRMAN: The liabilities at the present moment are 4,367 l. 17s. 6d., against which we have got this 600 l. to recover. The bulk of the money is due to the directors for advances.

The motion was carried unanimously.

APPOINTMENT OF LIQUIDATORS.

Mr. HARVEY proposed "That Messrs. Henry Tolputt and D. G. Sandeman be, and are hereby, appointed liquidators for the purpose of such winding-up."

Col. CHAMPION, who described himself as a dissenting director, opposed the motion. He thought these gentlemen should not be made judges of their own large and unscrutinised charges. He moved, as an amendment, that independent shareholders be appointed. The gallant colonel addressed the shareholders at some considerable length on the differences that had arisen between himself and his brother directors. He alleged that meetings of directors had been held of which he had received no notice.

Mr. TOLPUTT was sorry Col. Champion had not allowed this meeting to pass off peacefully. He was a man, unfortunately, of very peculiar temperament. He had been

A THORN IN THE SIDE OF THE DIRECTORS

from beginning to end. Col. Champion had made a great fuss because the directors had refused to pay his fees. The directors' objection was this—they absolutely refused to pay him his fees before the legitimate debts of the company. From that time to this there had not been a single thing done by the board which Col. Champion had not protested against. He (the chairman) was thankful to say he had never sat on a board with two abler or more courteous colleagues than Dr. Lawson and Mr. Sandeman, but they had been obliged for some little time to literally boycott the colonel.

A SHAREHOLDER asked the secretary whether the colonel's state-

ment was correct, that in issuing notices of the board meetings his name was left out?

The SECRETARY: No, sir; certainly not.

Mr. THEOBALD thought, as there was an issue between the directors, it would be better for all parties to have an independent liquidator.

The CHAIRMAN said he had no objection so far as the accounts were concerned, but it would deprive them of the right to dispose of the property, and on that ground he would oppose it.

Mr. RAIT seconded the amendment, which was then put to the meeting and carried.

A POLL.

A poll having been demanded it was decided to take it at once. The result was duly announced as follows:—For the amendment, 5,403 votes; against the amendment, 17,886 votes.

The CHAIRMAN then put the original resolution, which was carried.

The proceedings then terminated.

IMPORTANT TELEGRAM.

(July 2).—The following telegram has this day been received from the manager:—"Crushing new reef 12 tons daily; mill running well; plenty of wood; I consider prospects good."

THE ETHERIDGE UNITED GOLD MINING CO., LIMITED.

A TELEGRAM FROM MR. FERGUSON THAT CONTRASTS GREATLY WITH HIS LETTERS—SHAREHOLDERS ASK MESSRS. JOHN TAYLOR AND SONS TO SEND AN AGENT TO REPORT, AND MEANWHILE CONFIRM RE-CONSTRUCTION RESOLUTIONS.

An extraordinary general meeting was held at the City Terminus Hotel on Thursday, when the resolutions, which were passed at the extraordinary general meeting of the company, held on June 16, 1891, at the Terminus Hotel, Cannon Street, in the City of London, were submitted for confirmation as special resolutions. These resolutions—seven in number—have already appeared in the MINING WORLD.

Mr. Frederick Thorn

(a member of the board appointed at the last meeting) was asked to preside.

Mr. JOHN GARLAND (secretary) read the notice of meeting.

A DESPAIRING TELEGRAM FOLLOWS SANGUINE LETTERS.

The CHAIRMAN: Gentlemen, before I put any of these resolutions before you for confirmation I have to inform you that our managers, Messrs. John Taylor and Sons, have received a telegram which I think it only fair should first be read. I therefore call upon him to read you the telegram and give you his opinion.

Mr. JOHN TAYLOR: This is a telegram from our manager at the mine (Mr. Ferguson):—

"My advice is to suspend work Caledonian; all hope abandoned; expenses too great; crushed 35 tons; 18 ozs. gold. Will commence Canadian or Nelson. Wait your answer before proceeding."

Now, I explained to the meeting on May 28 how the ground which has had given to it the name of "Caledonian No. 1 South," came to be taken up, and that it was done on the very strong recommendation of Mr. Ferguson. He had written repeatedly in praise of this property, and impressed upon the directors his opinion of its value in consequence of the success undoubtedly of the neighbouring mines worked by a Mr. Prince and party, of whom you have heard. This writing on the part of Mr. Ferguson commenced as far back as June 18, 1890. I am not going to trouble you with long extracts from many of his letters, but merely wish to show you how this matter came before the late board, and how I am unable to reconcile the statement made in this telegram with those of letters previously received.

MR. FERGUSON'S TELEGRAMS COMPARED WITH HIS LETTERS.

On June 18, Mr. Ferguson wrote:—"We have one man working on this ground, and are on the reef, which will, I believe, be a very large one, and will be easy to work. The adjoining lease, the prospecting claim of 12 acres, belongs to Mr. J. Prince and party; this is a very good piece of ground. There appears to be a large shoot of ore averaging from 1 oz. to 4 ozs. per ton, and the reef is from 3 to 6 ft. in thickness, and easily worked. In one shaft they got 100 tons of stone, which gave them a yield of 430 ozs. of gold, and the reef was 6 ft. thick. They showed me 600 ozs. they got higher up on the lode. If it was possible for you to purchase this property I believe it would pay profitably from the start. If we had this ground in addition to the lease just applied for, the two would form, in my opinion, a very valuable property of 20 acres. I believe over 12,000 ozs. have been taken out of this mine."

On Aug. 23, Mr. Ferguson wrote:—"On the adjoining property (to which I formerly referred) they are now raising ore which they expect will yield 3 or 4 ozs. per ton, from a depth of 80 ft."

On Sept. 23:—"The shaft we are putting down is within 50 ft. of where good, payable ore was got on the adjoining lease from a very large reef, which has always been payable, and has been worked for a length of over 500 ft. and down to the water level, and averaging about 3 ozs. per ton."

On Sept. 30:—"I have been through the underground workings of the adjoining mine, and the workings are very large, and all taken out down to water level. This is a very good sign of its having been a payable one."

Now Mr. Ferguson has written a great deal more on this subject, but I do not think it necessary I should go more fully into it. I have merely read these extracts to show that the late board had strong grounds for approving Mr. Ferguson's action in taking up this lease and believing a good mine would be the result. It does not appear to me that we can possibly reconcile this telegram with former letters, or that we can all at once abandon the property after what Mr. Ferguson has said so repeatedly about it. The two things did not appear to run together; they are

TOTALLY AND ENTIRELY INCONSISTENT,

and I think it would be most desirable that further enquiries should

be made, and further explanations obtained as to the position of affairs before we arrive at any conclusion in regard to it. Now, in order to assist that, we have made the suggestion that a gentleman upon whom we can rely, and in whom we have confidence, who happens to be within no very great distance from your mines in Australia, should be sent there to report fully upon them, and that we should hear from him what his views are before the board commit you to any further expenditure of capital that you may raise under this re-construction scheme which we are proposing to carry through. We suggest that no more should be spent than is absolutely necessary to maintain possession of the property and keep the company in existence, and I hope that that suggestion will meet with the approval of the shareholders, as it has done with that of your directors. (Cheers.)

A SHAREHOLDER: About how long will it take to get your representative's opinion?

Mr. TAYLOR: We propose, with the sanction of the meeting, to cable out to this gentleman this afternoon. He will know to-morrow, and as it is a rough journey to Etheridge, he will take about a week to get there, and I should hope that

WITHIN THREE WEEKS WE SHOULD HAVE A CABLE FROM HIM, telling us roughly what his opinion is, and his full report would come in the course of post in about five or six weeks after.

Mr. EWER: As a member of the late committee, I quite agree with the proposal of Mr. Taylor, and am glad to find it meets the approval of the board.

The CHAIRMAN: I need hardly add anything to what Mr. Taylor has said. The main point that is in favour of this recommendation is that this gentleman (who is known to their firm) is almost on the spot, and although one of our friends and directors had intended, with your sanction, sending out someone from here, we immediately accepted Mr. Taylor's proposition to employ his representative on the spot, and in a very short time we shall get his answer. I shall now go to the business of the day, and propose "That the resolutions which were passed at the extraordinary general meeting of the company on June 16 last be and are hereby confirmed as special resolutions."

Mr. LANE (director): I second the motion.

Mr. DAMANT: I was absent from the last meeting, but the committee decided that only 3d. per share should be called up.

Mr. BENNETT (solicitor to the company): That is provided for in the articles.

Mr. EWER: What amount of outstanding calls have been collected? If we have sufficient money to go on as we are it would be better to adjourn the meeting, and await the news we are expecting. (No.)

The CHAIRMAN: There is no money in hand. You are aware there is an overdraft from the bankers, and also that the mining manager wanted money for the payment of the workpeople. There was no money, but I will tell you what has been done.

MR. LANE AND MYSELF HAVE MADE OURSELVES LIABLE FOR 500%.

for the use of a company. That will show you we are in earnest, but we did not intend to have stated it unless the question of money had been raised. Further than that we are asked again to send a further sum, and I daresay we shall manage it. We shall not let the property fall through, but if you delay confirming the resolutions I hardly know what the result will be.

Mr. BENNETT: Since the last meeting the collection of the calls has been in our hands, and I have applied to the shareholders. Some are paying up by instalments, and it will take some months before there will be a substantial sum in hand. It will be necessary to re-construct the company, and so get money to keep the concern going, and to do that it is necessary to confirm these resolutions to-day. The articles provide that no more than 3d. per share shall be called up without the consent of a general meeting.

The CHAIRMAN: You may fairly leave this matter to the directors, who will not ask you to make a second call of 3d. unless we are advised by the Messrs. Taylor that there is a good prospect of its being employed profitably in the development of the mine. The directors are very large holders themselves, and are not likely to mulct themselves in calls if they see there is no use in making them. In any case, if more than 3d. per share be required, the shareholders will be consulted, and that is provided for in the articles.

The motion was carried unanimously.

A vote of thanks to the chairman and the Messrs. Taylor closed the meeting.

COETZEESTROOM ESTATE AND GOLD MINING CO., LIMITED.

THE POSITION AND PROSPECTS—GOOD "BANKET" FORMATION—MACHINERY WORKING DAY AND NIGHT AND CRUSHING AT A PROFIT.

THE second annual meeting of shareholders was held at Winchester House, Old Broad Street, E.C., on Monday, June 29, to receive the directors' report and statement of accounts to Dec. 31, 1890, and to re-elect a director and auditors, and transact the ordinary business of the company.

Mr. N. J. West

presided

Mr. JOHN SMITH (the secretary) read the notice calling the meeting.

The CHAIRMAN said that the shareholders had heard the notice read, and he presumed they would all be willing to take the report and accounts, which had been circulated amongst them as read. (Agreed.) That being so, before he formally moved their adoption he would ask their attention for a short time while he tried to explain to them what had been done since they last met, and to give them some idea as to the future prospects of the company. They would remember—those of them who had perused the last report—that they had in the big estate

THREE KINDS OF GOLD FORMATION.

That was to say, they had the quartz reef, they had the blanket formation, and they had the alluvial gold. They would also, no doubt, bear in mind that their first idea, as mentioned in their first

report, was to work more particularly the quartz reef which was situated in the middle of the property. (The chairman here, by means of an excellent plan, indicated the exact position of the reef). They followed that reef down for a bit, but they found that it was not exactly so favourable as they anticipated would be the case. They prospected upon the banket formation, which lay a little to the north-west (indicating on map). Now, in working this banket formation, they found that it really turned out a little more favourable than they had expected, and they, therefore, continued the works in various directions, which he explained on the map. He thought it would be seen by this explanation that a great deal had been done on this banket formation. (Hear, hear.) Of course, they must bear in mind that whether they were working on the reef, or whether they were working on the banket, they had to consider the question of the location of the batteries and the stamps. It was some considerable time before they finally decided upon the best spots where to work and where they should fix up their stamps and battery. This was one of the reasons why they had not crushed sooner, but there were other reasons which had acted adversely to this property, and over which they had had no control. In the first place, there had been the great drought and the very dry season, which delayed very much the getting up the mills from Durban. This was followed by too much water—quite a plethora. It was satisfactory, however, that the stamps were now up and at work—(applause)—and they were

WORKING NIGHT AND DAY,

and passing through about 2½ tons per day of 24 hours per head, or, in other words, they had 20 stamps working, and they were passing through 45 to 50 tons per day. The chairman then explained upon the plan various drives and cross-cuts that they had worked and were working upon, and, continuing, said that the result of all this had gone to prove that they possessed a very valuable property, which it would take them 12 months to get through. They had got reefs in the banket of the value of 10 dwts. to the ton. They had been a long time before they got the water power all right. Two schemes were suggested to them, and they decided upon the scheme which they called No. 1 scheme, which was to work the mill in the manner that they were doing by water power. He thought he had given them a good explanation of what had been done, and now as to results. They commenced crushing in Apl., and for the month of Apl. the result was a yield of

47 OZS. OF GOLD.

Of course, the shareholders might say that this was very small, but it was a first crushing, and it was usual in the case of first crushings with new machinery to put through inferior stuff, in order that the interstices in the machinery, &c., might get filled up; the plates had not been sufficiently tempered at first by the amalgam to catch the gold in the quicksilver and to give the good results that were afterwards obtained. In May they crushed 1,070 tons, but this also came from the poor part of the mine (indicating the spot on the plan), and the ore there was found to be impregnated with iron pyrites. This ore was considered to be of the value of 6½ dwts. to the ton, but they only obtained from it 3 dwts., the balance going into the blankets, to be treated as tailings hereafter. They had received by telegram particulars as to the working for the present month—the month of June—which stated that they had been putting through a lot of ore of the assay value of 1 oz. 4 dwts. to the ton. He did not know that he could add much more. They had come upon a very favourable shoot of ore, and that, he thought, combined with the 10 dwt. banket, gave them

VERY CHEERING PROSPECTS FOR THE FUTURE,

and he was very hopeful that very great success would be attained. The only other point that he felt was left now was the question of the future. They would have learnt from his statement that they had a very favourable lot of banket, which they were passing through, and there were also other indications of very favourable ore shoots; the stamps were up and at full work, and the only question was whether they should be self-supporting or whether it would not be advisable to prospect their property a little bit quicker, and thereby get the results a little more rapidly and in a more expeditious manner. It was well known to the shareholders that the first capital of the company called up was insufficient, and the directors had, therefore, to ask the shareholders to allow them to issue further debentures, which was done, and up to the present amounted to 6,300%. Mr. Clemes, the expert, who made the report for the directors, was present that day, and he (the chairman) had no doubt would be happy to answer any questions. He also wished to refer to the concluding paragraphs in the report, having reference to the fact that their chairman (Mr. King) had had to retire in consequence of ill-health, and his son, Mr. King, jun., had kindly consented to come on the board in his place, and was so acting—as a director—at the present moment. (Cheers.) Another of the directors who had been with them from the first retired by rotation to-day, Lieut.-Col. Barnett, and offered himself for re-election. The auditors retired, and had to be re-elected. With these few remarks, and in view of any questions that any of the shareholders might desire to ask, and that were in his power to answer, which he would be happy to do, he begged to move the adoption of the report and statement of accounts. (Applause.)

Lieut.-Col. BARNETT seconded the motion.

THE EXPERT MAINTAINS HIS ORIGINAL OPINION.

Mr. H. P. CLEMES (the expert who reported on the property) then, at the CHAIRMAN'S desire, addressed the meeting: He said that he had but little to add to his previous report. His opinion now, as then, was that they could work the ore very economically. The small cost per ton would enable them to make a very fair profit. The results, so far, were not, he admitted, very large, but there still remained the tailings to be treated. The May returns were, roughly, equal to 11s. per ton (3 dwts.), and this, he thought, would pay working expenses. He had great confidence in the value of the mine and its future.

DISCUSSION.

Mr. LANE thought that 3 dwts. per ton was a very small yield, and he doubted that it would (even at the low rate they were able to work at) pay expenses. He thought the information given the shareholders was too meagre. He did not consider the report so satisfactory as he had expected to receive. He trusted whatever infor-

mation came to hand in the future would be communicated to the shareholders at once.

The CHAIRMAN, in reply, said that the 47 ozs. of ore in Apl. was, as he had already stated, from the very lowest grade ore they had. It was usual in new machinery (to get the plates in condition to catch gold) to use poor quality ore. The May stuff was also very poor—6½ dwts. to the ton, and they only got of free gold 3 dwts., leaving the blankets yet to be treated. The June report was that there was a profit on the run for that month; at least, so they construed the cablegram. He did not think it meant a profit for Apl., May and June. He could not say the amount of the profit for June; it was not stated in the telegram. The meeting had been delayed from Apl. to the present time to afford the shareholders the latest information. They were bound to hold it in June to comply with the company's articles of association. The machinery as reported on by their manager was working remarkably well, and 20 heads of stamps were crushing 45 to 50 tons a day.

Some further discussion on minor points having taken place,

Mr. LANE said that he wished to ask whether the ore was of a friable nature or not.

Mr. CLEMES said that it varied in different parts of the mine. In some places it was very friable, and in others very hard.

Mr. LANE said that he had heard it stated that the machinery that they had out there was unsuitable for its purpose, and not the proper sort for the work that it had to do. He would like the chairman to inform him if such were the case, because they had spent a lot of money on the purchase of that machinery.

The CHAIRMAN, in answer, said that he could only repeat that they had had nothing but very satisfactory reports upon the machines sent from their manager, but the question had never been put to him, whether they were or were not the very best machines for treating the particular kind of ore for which they were employed. He presumed they were found quite good enough, but he could only repeat that they had had no special report upon the point. The test after all was the work that the machines could do, and he did not think, as an engineer, that they could look to get more work out of a 20-stamp battery worked by water-power than 2½ tons of ore per stamp per diem. He was prepared to argue the point anywhere with Mr. Lane, and he really failed to know where that gentleman had got his adverse information from. The directors had piles of letters to the contrary opinion. Of course, it was possible that there might be lighter machinery to give equally good results.

Mr. CLEMES said that he did not see all the machinery when he was at the mine, but he saw the mill that was put up, and it was a Californian type of mill, and he believed that it was a well known fact that this class of machine was very economical. Their machinery had only been at work a short time, and all machinery was a little stiff at the start. He did not consider that pulverisers were needful, but felt that they were very well off as they were. He adhered to his view that he had formed from the cablegrams received by the board that 11s. per ton, or, in other words, 3 dwts. would pay expenses.

The resolution was then put and unanimously carried.

The CHAIRMAN said that it was necessary that they should confirm the appointment of Mr. Daniel King, jun., to a seat on the board. Mr. King was unfortunately not able to be present that day in consequence of ill-health. He had had a very severe attack of influenza. He was at the office that morning, but he had to go home again. He was a very valuable director. He begged to move the confirmation of his appointment.

Lieut.-Col. BARNETT seconded the motion, which was carried.

The CHAIRMAN said that he had now the pleasure to propose the re-election of Lieut.-Col. Barnett as a director of the company.

FORMAL BUSINESS.

Mr. LANE said that he would second the motion to show his confidence in the board. He had not asked the question that he had put in any antagonistic spirit, and having received the answer he had, he could only express the hope that the directors would have more satisfactory news to give the shareholders next time.

The motion was carried.

Lieut.-Col. BARNETT, in returning thanks for his re-election, said that, in regard to the point that had been raised by Mr. Lane in reference to the machinery, it must be borne in mind that the present machinery that they had out there was sent out to crush the reef ore long before they knew that they possessed so valuable a banket formation. He thought that perhaps this was not known to Mr. Lane, and it would clear the point if he gave him this explanation.

Mr. LANE said that he was unaware of the point, and the explanation was satisfactory.

Lieut.-Col. BARNETT said he also desired to refer to the point that had been raised by Mr. Lane on the question of the directors not affording fuller information. He assured the shareholders that they had only one desire, viz., to give every possible information in their power, and that was the reason that they had delayed the meeting till the present time. They had had no sinister motive, but their only desire had been to give the shareholders the latest information they could.

NAME.

The CHAIRMAN felt that it was due to the meeting to ask Mr. Lane to give the name of the gentleman who had said that the machinery was unsuited to its purpose. It was all very well for anyone to talk this and shield themselves behind a screen. The directors had plenty of evidence that the machinery was suitable. He hoped Mr. Lane would have the courage and straightforwardness to name his informant and not to bring forward an unsubstantiated statement.

A SHAREHOLDER said that had the fuller information that had since been elicited been given before they would not have had this disagreement. He thought the chairman and Lieut.-Col. Barnett might have given it unsolicited.

The CHAIRMAN said it was impossible to give categorical answers to what shareholders wanted to know until the questions had been put. The directors had given all the information really in their power, viz., that the mine was in good condition, the indications were favourable, the stamps were up, and they were working at a profit.

Mr. LANE proceeded to go into the question of details again, and declined to give any clearer indication of his informant than to say he had heard various rumours floating about to the effect that the machinery was unsuitable. He did not consider it lay within the chairman's right to ask the name. The chairman had asked if any

shareholders wish to put questions, and he (the speaker) had desired information on the machinery.

The CHAIRMAN said he did not desire to prolong this discussion, and he would now proceed to the next business, which was to ask some shareholder to move the re-election of the auditors of the company.

A SHAREHOLDER then moved that Messrs. Chatteris, Nichols and Atkins, 1, Queen Victoria Street, should be re-appointed auditors of the company, at the same remuneration as heretofore.

The motion was seconded and carried.

The proceedings closed with a vote of thanks to the chairman and directors.

NORTH TOLIMA SILVER MINES, LIMITED.

RE-CONSTRUCTION DECIDED UPON UNDER UNUSUALLY FAVOURABLE AUSPICES.

THE annual meeting of this company was held yesterday at the Offices in Blomfield Street.

Mr. B. L. Barrow

(chairman of the company) presided.

The notice of meeting was read by the SECRETARY (Mr. S. A. Cobbett).

RESULTS FOR THE FIRST FOUR MONTHS.

The CHAIRMAN, in moving the adoption of the report, said that for the first four months of this year, there were profits—Jan., 355%; Feb., 166%; Mar., 129%; and Apr., 291%, or nearly at the rate of 3,000% a year, or 7½ per cent. on the issued capital, 40,000%. One feature in their favour had been the improvement in the lode in the lowest level but one. Mr. Green was their superintendent, and also occupied a similar position in connection with Tolima adjoining, which was making returns at the rate of 60,000% a year. That mine was in as poor a condition as this at one time of its history, and he could not help thinking that, in course of time, similar results would be met with here.

Mr. C. O. ROGERS seconded the motion, and pointed out that the work done this year had produced just double what it did last year—in other words, 10,000% in gold, as against 5,000%, and the reserves in the mine had been fully maintained. The most important point had been the discovery of the lode mentioned by the chairman, to which Mr. Green would more particularly allude.

VIEWS OF THE MANAGER.

Mr. GREEN: The only unfortunate part of our report is that it does not show a profit, but there is a good reason for that. It is owing entirely to a lower grade of mineral than we expected. You will find the average per ton for 1888 was 38%, for 1889, 33%, and last year 32%, which, on the 300 tons produced would, allowing for a fall of 6% per ton in the produce, come to nearly 2,000%. At the same time, as Mr. Rogers has said, the amount of mineral produced in 1890 was exactly double the quantity produced in 1889. I promised 360 tons for the year, and calculated the value at about 40% per ton, which would have given a fair profit, but it fell off in quality, and we were not able to make up the quantity. We have kept our exploratory works well ahead, so that we have practically the same amount of reserves at the end of 1890 as at the end of 1889. The favourable point I have to report is the discovery in the No. 3 Esperanza level, on which we have done no stoping. The first ore we discovered was in the No. 2. The Spaniards had driven on a side vein, and the first thing I did was to put out a cross-cut where I find the mineral, and opened up stoping ground. We followed the same plan in No. 3, and a few weeks before I came away I suggested a cross-cut to the north, and a cable reports that

THERE IS VERY RICH ORE.

the assay value being nearly 6½ ozs. of gold to the ton, or nearly equal to the value of our export mineral at Frias, and the end is valued at \$350 per fm. Those who have read the reports from the beginning will find I have never estimated any drifage at more than \$150 or 30% per fm. and the 350 is more than double anything we have had before. The report for the year, though it does not show a profit, does not show a big loss, and yet a large amount of expensive exploratory work has been done. If the vein continues as at present there is no question of having a big mine very quickly. On the Fortuna side scarcely anything has been done and the Christo mine to the west is one of the richest in Colombia and I strongly advise that we should find money to work it, as we have plenty of rock-drills and air compressors to do it. We shall not want any pumping machinery for many years. A cross-cut cost \$10,000 to drive to cut the vein in the deeper section, but at the point where we cut it it was poor, though we have found stoping ground that is gradually improving, the latest news giving it at 10% per fathom.

The report was unanimously adopted, and the retiring auditors and directors re-elected.

EXTRAORDINARY MEETING.

The CHAIRMAN, in moving the re-construction resolutions, which are on the basis of a liability of 10s. a share, said that the financial position of the company was this. It owed about 13,000%, and had a debenture debt of 10,000%. If the proposed scheme were carried out there would be 20,000%, sufficient to liquidate the 13,000% debt, and leave 7,000% for working capital which would be sufficient to carry out the works as proposed by Mr. Green. He intended to take his share of the new capital.

Mr. GREEN: I am a holder of 2,000 shares, and am going to take my share. (Hear, hear.)

VIEWS OF ONE OF EXPERIENCE IN COLOMBIAN MINING.

Mr. THOMAS THOMPSON: Mr. Chairman and gentlemen, I should like to second the resolution for a variety of reasons. I do not think, in the first place, that such important resolutions as these should be allowed to go forth with only remarks from the other side of the table. If we look at the position of the mine, I think we will find that it is twice as good as it was last year, and three times as good as it was the year before; in other words, the reserves amount to something like 10,000% as compared with 6,000% the year before, and

3,000% the year before that. In view of the steady progress made at the mines, and withal of the richness at the bottom of the mine, there can be no doubt that we ought to put our hands in our pockets to support the concern, and bring about that success which we have all hoped for from the commencement. I would like to say a word or two with regard to Tolima. It is only some three or four years ago that that company was in very much the same position as this.

COLLATERAL TESTIMONY STRENGTHENS MR. THOMPSON'S ARGUMENT.

Mr. GREEN: It was in a worse position.

Mr. THOMPSON: That only makes my comparison the more striking.

Mr. ROGERS: There was not an ounce of mineral in the mine.

Mr. THOMPSON: That again strengthens my argument, for we have 10,000% worth in this mine at the present time, and Tolima itself is now making a profit of about 60,000% a year, and has reserves in sight to the extent and value of not far short of half a million sterling. That was all brought about by a small amount of money put down at the right time. Now I think there is every probability of this mine becoming in time quite as rich as Tolima itself. We ought to remember that North Tolima is within but a short distance from Tolima. In fact, I believe it may be almost said to be on the same estate. It is also close to the Christo Mine, which I think Mr. Green tells us was one of the richest in Colombia. It is considered to-day in that light, and there is no reason why it should not be equally good under our direction. There is one thing to which sufficient attention has not been directed, and that is that while the North Tolima has such prospects, and is so largely productive of silver, there are few mines that are producing so large a proportion of gold as 6½ ozs. to the ton. It is almost worthy to be called a gold and not a silver mine, and I think that is a point to which we cannot direct too much attention. We have heard that our indebtedness is 13,000% but I ask you, and I ask the public, is that the right position for a company like ours to be in, with such prospects? I do not think it is. I have friends in the company, and with them will only be too happy to support the directors to the best of our ability by putting down our proportion of the money that is required. I second the resolutions with great pleasure. (Cheers).

The motion was carried unanimously, as was also one cordially thanking the chairman and Mr. Green for their respective services.

WEST WHEAL GRENVILLE.

DIRECTORS AND SHAREHOLDERS DECIDE TO STOP THE MINE.

AN extraordinary general meeting was held at the Offices, 7, Union Court, Old Broad Street, yesterday, to receive a statement from the chairman and Mr. F. G. Lane upon their recent visit to the mine, and to authorise the directors to take such steps as they may think fit for the sale or disposal of the mine as a going concern.

Mr. Charles Clark

(chairman of the company) presided.

Mr. D. JULYAN (secretary) read the notice of meeting.

STEPS TAKEN SINCE THE LAST MEETING.

The CHAIRMAN: Gentleman, you will remember that the result of the meeting we held at the end of May was the request of the directors to go on as they had been doing cautiously for a little while longer, and to call the shareholders together before the end of July with some sort of definite information as to the course to be pursued. During the weeks that have since elapsed your directors have given much anxious consideration to this question. They have had the mine re-inspected by two of the best mineral agents in Cornwall—Captain Josiah Thomas and Captain Bishop. Mr. Lane and myself have also, in conformity with the request of the shareholders expressed at the meeting, paid a visit to the mine. We have had the advantage of a personal interview at Camborne with Captain Josiah Thomas, we had a long and exhaustive conference with the agents on the mine with Captain Francis Hodge; we also separately interviewed expert friends of our own and put the case before them, asking their advice and opinion in a general way. The result of the whole is the conclusion that in the interests of the shareholders it is

NOT EXPEDIENT THAT WE SHOULD CONTINUE THE OPERATIONS OF THIS COMPANY.

We came to that conclusion with very deep and sincere regret, but we feel that although it is a very unusual step to take in a company which has an uncalled capital of about 20,000%, the fact of its being unusual, ought not to deter us from doing promptly that which we believe to be right and proper. (Hear, hear). We took the opportunity of examining all the surface and pit work which have been carried out since the recent reports made by Messrs. Henderson. Now, in coming to this conclusion I ought to say there is no intention to speak in disparagement of the mine. It goes without saying that it would be useless to dream of disposing of it as a going concern if we did not believe it was worth going on with, but we have as directors a first duty to the shareholders, and that is to revert to the prospectus we issued in which we held out the expectation that after paying 6,000% to recoup the vendor for a portion of his expenditure to that time, and by expending the sum of 8,000% on draining the mine and fitting the pit work, the great flat lode could be proved, and the necessary stamping, crushing, and dressing machinery ordered for which the remaining capital would be found more than ample. In all our inquiries we

COULD NOT FIND ONE EXPERT

whose opinion could be given with firmness or confidence, that if we expended our remaining capital we should succeed in bringing the mine to a paying condition, and after that I do not see that the directors could adopt any other course than they submit to-day. What we submit to-day is to resolve that it is expedient to take the necessary steps for winding-up the company, to arrange for the sale or disposal of the mine as a going concern.

Mr. LANE (director) seconded the motion, and confirmed the views which the chairman had expressed. He pointed out that if the work which certain experts recommended should be done were undertaken, even when finished more capital would have to be raised for

the development of the mine from that point, and moreover they had the experience of former companies which had worked the mine unsuccessfully. On the whole they thought it better to come to the conclusion to ask the meeting to pass a resolution offering the mine as a going concern.

In the result the following resolution was carried:—"That it is not advisable to continue the operations of the company further, and it is desirable to wind up the same with a little delay as possible, and that a general meeting of the shareholders be called for this purpose."

INCANDESCENT LIGHT CO., LIMITED. A NEW INVENTION.

A NEW INVENTION, lately brought out by the Incandescent Gas Light Co., Limited, is likely to prove of the greatest benefit for use in mines (coal mines excepted) for lighting purposes. By running flexible tubes from the machine to any part of the mine, a brilliant and economical light can be procured.

We are very pleased to hear that lately the Incandescent Gas Light has been adapted to use with a gas making machine, in such a way that all mansions, houses, hotels, &c., where gas is not obtainable, can be lighted in the most effective way at a very cheap cost.

As regards lighting power, we have convinced ourselves that the incandescent lamps give from 25 to 30 candle power, whereas the electric incandescent lamps give only 15 to 18 candle power.

As this invention is, for the purpose stated, most important, we intend giving below a full description of the Gas Making Machine itself, and of the way the incandescent burners are used in connection with the gas made by the machine.

All of our readers know that a certain class of hydrocarbons are of a highly volatile nature, and that by passing a certain amount of air through them, this takes up a certain portion of the hydrocarbon, and thus forms a mixture which gives a very good illuminant flame, and which has been used as a lighting medium in conjunction with machines of various designs.

Most of these machines have used, for their light giving medium, gasoline, a highly inflammable hydrocarbon of a very light gravity, which can only be obtained in quantities of 1 ton at a time, that is to say, if it is required to light a house, say, with a 24-light machine, where only 1 or 2 gals. would be used each week for the production of gas, it is necessary to keep in store at one time about 1 ton or more of gasoline, which would be a most undesirable and dangerous stock.

In the "Helios" Gas Making Machine, which we are going to describe, the principal feature is, that instead of such a highly inflammable hydrocarbon as gasoline being used, benzoline is the medium for making gas. Though benzoline is dangerous if brought into contact with an open light, this liquid can be handled with impunity in daylight if an open light is not near.

Another advantage of benzoline as compared with gasoline is, that any oil shop in England has the right to keep a stock of 3 gals. of benzoline, and any householder can keep a stock of the same quantity on his premises without increasing his premium for fire insurance, whereas with gasoline this would not be allowed.

The "Helios" Machine is as simple as it is effective. There are two drums A and B, the top one holding an ordinary meter-wheel, being filled at (b) two-thirds with water, is driven by weights in such a way that in revolving it takes up at one side of the drum F a certain quantity of air which is forced through water, and at a certain pressure through pipe (a) passing the air into the second drum B containing the liquid hydrocarbon.

This second drum contains a revolving skeleton wheel, spun over with cotton, which revolves in certain proportions to the wheel of the first, as shown by E, F, A, and this second case being filled to a certain degree with benzoline, the plug (a) the skeleton wheel in revolving takes up the amount of benzoline, and the air forced by the meter-wheel through the carburettor evaporates such a quantity of benzoline, mixes thoroughly, and leaves the pipe (a), and passes as a hydrocarbon gas into the gasholder C, which is at the same time a regulator. The carburettor itself is fixed in tank A, so that 2½ to 4 ins. of water surrounds it, which has for its object to keep the liquid hydrocarbon at a certain temperature, and it ensures the safety of the machine against accidents.

The gas can be supplied through pipe (i) in the ordinary way, and is introduced into the burner.

The burners used with this hydrocarbon gas are of a special kind, and if used in connection with the incandescent mantles—Welsbach System—give a lighting power of 28 to 30 candles, and the beauty of the whole system is that, although such an enormous light is obtained,

the consumption of the gas is only 3 cubic ft. per hour, and with this system an atmospheric burner is used, which gives sufficient heat to make the mantle placed over the burner incandescent, and produces a splendid light.

Exact calculations have been made, and it has been found that out of 1 gal. of benzoline, costing about 1s. 2d., 1,000 cubic ft. of hydrocarbon gas can be made, and if we take a house lighted with 24 lights, the machine would have to be charged with 2 gals. of benzoline to start with; these 2 gals. would last six days; for 24 burners, burning at the rate of 3 ft. of gas per hour for five hours a day, for six days would come to about 2s. 4d.; whereas ordinary coal gas in England, at an average price of 3s. per 1,000 cubic ft., would come during the

same time to about 6s., and in small towns, coal gas is supplied at a much higher rate, to as much as double that amount.

The cost of the machine itself, with fittings, is very small, and the inventor, Mr. Moeller, manager of the Incandescent Gas Light Co., Westminster, states that the cost of putting up plant, fixtures, &c., would be saved in the first year.

We have seen the machine working, and we can strongly recommend it, as there is no doubt that this system of lighting, though not so convenient as lighting with electricity, gives just as good, if not better, results, is more reliable on account of the greater simplicity of the apparatus, and as regards cost, appears to be less not only than electricity, but compares favourably with coal gas or oil lamps.

We have seen this machine at work, and we have studied it in its details, and we have come to the conclusion that everybody who is outside the sphere of a coal gas company, wanting a good light, should put himself in communication with the inventor at once, and make himself acquainted with the system we have described.

When we say that it is effective, economical, gives no trouble, and requires the minimum of attention, we have stated most of what can be said for any mode of lighting, but do not think we have exaggerated the merits of the invention.

[ESTABLISHED 1871.

REPORTS OF MEETINGS.

THE MYSORE WEST GOLD CO., LIMITED.

IMPORTANCE OF THE TANK BLOCK PURCHASE—A CHEAP AND VALUABLE ACQUISITION—VIEWS OF THE CHAIRMAN AND MR. HODGSON.

THE third ordinary general meeting was held at Winchester House, on Monday.

Mr. Robert Walker, J.P.

(chairman of the company), presided.

Mr. L. J. WOODMAN (secretary) read the notice of meeting.

SHAREHOLDERS KEPT FULLY INFORMED.

The CHAIRMAN, who was heartily received, said: Gentlemen, before moving the adoption of the report and balance-sheet I should like to say that I will leave any items with regard to the latter to be explained hereafter in answer to questions, as, personally, I should like to take up your time principally by remarks upon the purchase of the Tank Block property, and the bearing it is likely to have upon the future of the company as a whole. (Hear, hear.) The map on the wall shows the Tank Block property, and the part coloured chocolate shows the purchases that have been made by other companies since we acquired the Tank Block. At our last meeting, or rather, I should say, when we received the report that the purchase was confirmed, it was arranged that the board of the Mysore Wynaad should convene a meeting of its shareholders, and it was also arranged that the full report of that meeting should be sent to the shareholders of Mysore West in order that they might be fully informed of what had been done. That being the case, we did not think it necessary to send to our shareholders more than a notice of the completion of the purchase and of the particulars of the cost. I am sure the Mysore West shareholders on seeing the report of that meeting (which was a very enthusiastic one) must have been equally gratified with the shareholders of the Wynaad when they saw it. It is the intention of our board to suggest that we should return the compliment, and that the report of this meeting should be sent to all the shareholders of the Wynaad Co., and after all, that will be doing no more than reciprocating what has been done on previous occasions. (Cheers.)

A WORD FOR THE "MINING WORLD" INDIAN MAP.

Along with that report it is our intention to send the latest map, and the most authoritative that has been published, and which appeared in the MINING WORLD of Saturday last. That map, emanating from the newspaper it does, and prepared by a leading draughtsman of Queen Street Place, may be regarded as distinctly authoritative and reliable as to the exact position of the whole of the mines in the Colar district, and the article that accompanies it, as well as the map itself, gives all the main facts concerning them. If there is any special information (and the reports shall be regularly published) you may rest assured that every shareholder in our company will get it, and I have not the least doubt that the same course will be pursued towards the Mysore Wynaad shareholders. I now come to

THE PURCHASE OF THE TANK BLOCK.

In securing that, in my opinion, we have been exceptionally fortunate taking into consideration the sales that took place some time afterwards, upon terms infinitely higher than we paid. I will not take up your time by going into the details of all these purchases, but I will only state the facts as to one made by the Mysore Co. You will observe it is marked on the map in chocolate colour, and is exactly to the west of the Mysore Mine. Well, gentlemen, that block, by the report which I hold in my hand of the Mysore Co. on Feb. 27, was purchased, by consent of the meeting, for 25,000 shares of the Mysore Gold Co., the market price of which was about 6 $\frac{1}{2}$ l., which makes the cost of that purchase equal to 150,000 $\frac{1}{2}$ l. That was on Feb. 27, while our purchase was completed in the Aug. of the previous year, although initiated some considerable time previously. The Mysore purchase consisted of 268 acres. I will mention that the Mysore Government enacted that all sub-sales should be subjected to a payment of 10 per cent. I do not add this in case the charge may not be retrospective, but taking the sum at actual market value (150,000 $\frac{1}{2}$ l.) for 268 acres—then our 164 acres would bring out 92,000 $\frac{1}{2}$ l. Our half comes to 46,000 $\frac{1}{2}$ l. at the market value, as shown by the price of purchases at similar, or near, localities. We have thus obtained a half interest in 164 acres for 3,000 $\frac{1}{2}$ l. in cash, and 2,500 $\frac{1}{2}$ l. of fully paid shares of the Wynaad Co., which were then at the market value of 2s. per share,

thus making our contribution 3,250 $\frac{1}{2}$ l. altogether, which, gentlemen, only comes to

A FIFTEENTH PART OF THE ESTIMATED VALUE OF OUR HALF in that property, marked yellow on the company's plan. (Cheers.) I think you will agree with me that that purchase was good business. (Renewed cheers.) You may think this a little personal, but it is necessary to set it forth. (Hear, hear.) What do you, as shareholders, and as sellers (because it is the sellers who make the market price of a thing, for if they do not sell at a price of course the commodity cannot be got) value your property at when you sell at a certain price? I have seen very lately some tape quotations putting our shares from 1s. to 2s., but I do know that actual sales have been made at 2s. 3d. Well, if you take 125,000 shares at 2s. 3d., that gives you 14,000 $\frac{1}{2}$ l.; but 14,000 $\frac{1}{2}$ l. is not the fourth part of the estimated value of your interest in that property, not taking into account the fact that you have ample machinery there of the latest and most approved kind, capable of carrying you down a great distance, and that you are down in one shaft 174 ft., and down another over 100 ft. You have a property of 100 acres in the case of Kaiser-i-Hind, marked red on our map. You have 11,050 fully paid shares of the Mysore-Wynaad Co. You have two shafts, the one down 400-ft., and the other above 100 ft. We do not know what ultimately will be the value of that property; and, in fact, it is impossible to put a value on it at the present moment, but still you have all that, and you value your property in the market at only a third of the value of the bed-rock price to another company of the Tank Block. I think it is well you should know that, because my impression is that a great number of the shareholders act from impulse, and sell without studying the history of the company in which they are interested, and I consider it my duty to point out all those matters to you. I conceive this to be my simple duty, and then after that you must judge for yourselves. There is another point I have endeavoured to give you an idea of—the present value of your property. Now

A WORD AS TO ITS PROSPECTIVE VALUE.

The original block of the Mysore was 733 acres. They have sold some of it to the Champion Reefs Co., but still, that was the original acreage. At a meeting held more than a year ago it was reported that Mr. John Taylor (and I think you will admit there cannot be any better authority on Indian mines, particularly in the Colar district, than he)—(hear, hear)—said they had only wrought practically a tenth part of their property, and had not even then got to what was believed to be the richer part. It has been proved hitherto that the deeper they go the richer becomes the quartz. They have 73 acres worked, but how much gold do you think they have extracted in that time? 150,000 ozs., equal to 600,000 $\frac{1}{2}$ l., because the gold there is pure. It is not like in some places, where there is a great proportion of silver; it is equal to 24 carats, and sometimes a little more, and a sovereign is only equal to 22 carats. Take it at 4 $\frac{1}{2}$ l. an oz.—that is 600,000 $\frac{1}{2}$ l., and the question is, as 73 is to 164 that gives 1,300,000 $\frac{1}{2}$ l. Take the half off that for our interest, and that is 650,000 $\frac{1}{2}$ l. Take a third of that for expenses. Mr. Rowse said at a meeting the other day, and I believe he is perfectly correct, for it is consistent with my own experience, that Indian mines do not cost more to work than 6 to 7 dwts., which is about one-third of the ounce. Take a third off that and you have 450,000 $\frac{1}{2}$ l. or 460,000 $\frac{1}{2}$ l. as the one-half of the prospective value of your property. Now, gentlemen, I think you have got about all the information I can give you. I have no intention to influence you in your dealings, whether in buying or in selling. My whole object is that

YOU SHOULD HAVE COMPLETE INFORMATION,

and digest it at your leisure and act accordingly. I think I have said as much as I can with regard to the mine. Mr. Hodgson, our general superintendent on the spot, by recommendation of his medical adviser, has taken a sea voyage, as most persons have to do who live long in a tropical country. He is present here to-day, and will be glad to give any information to gentlemen who ask him upon technical points should they desire it. His report is so full that he does not require to make any detailed statement.

FUNDS AMPLE.

All I can say is that at the mine everything is going on most favourably, and it must not be supposed that we have not sufficient funds to carry this venture forward, for we have. (Cheers.) We expect that the time is not far distant, perhaps it can be measured by months, when we shall be in a position to get returns from the mine, but in all these matters I do not like to be too sanguine, because, should I be so, and should the results not be borne out, you will be apt to come back and blame me, and say that my promises have fallen short of what they indicated. I know the difficulties with regard to mines. There is no man who can prophesy what will occur in a mine for a single month, and, therefore, it is best (particularly for the chairman) to be cautious in one's public utterances. (Hear, hear.) All I can say is this, that I think you have a good property, and that its prospects are not less bright than those of any other company in the field. I do not see why you should not realise those prospects. It is evident that the Champion Reef passes through your property, though between the Nundydroog and Balaghat Mines it has not been proved,

but it is certainly proved in the Balaghat Mysore. The vein there is small, but rich, and I do not see why you should not be as successful as Nundydroog, which is next door, and the two shafts are actually within 20 or 30 yds. of each other. It is evident at that portion of the field that the payable quartz is obtained at a very ordinary distance, and we expect, as soon as we unbottom the old workings, that we will get into the payable lode, the upper portion of which has been taken away by the ancient workers. With regard to the balance-sheet, I will answer any questions you please, and Mr. Hodgson will reply to those which have to do with the technical details of the mine. I conclude by moving the adoption of the report and accounts. (Cheers.)

Mr. SHAW KENNEDY (director) : I second the motion.

DISCUSSION.

A SHAREHOLDER : In the event of failing to find gold in sufficient quantities after a certain period—is the ground of such a nature that it can be utilised for cultivation ?

The CHAIRMAN : We have planted some casearna, or quick growing wood, for mining purposes, but the quantity of land is insufficient to make it of agricultural value. It is not large enough, for example, to plant either tea or coffee.

Mr. WINDUS : Would it be possible for this company to purchase the No. 5 Oriental Block, immediately to the north of our property ?

The CHAIRMAN : I do not expect ever to see the end of this mine, neither do I think that the youngest of those here will do so. We have a lease for 30 years, and do you think it would be worth while for us to spend money in buying further property at the large prices that are now being paid for it when we have all our present work ahead of us ?

Mr. WINDUS : It seems the most valuable in that direction.

Mr. SNELL (solicitor to the company) : We have about 2,000 ft. on the run of the lode.

The CHAIRMAN : It will be time enough to think of that when our coffers are so full of money, and your pockets are so full of dividends, that resources can be well spared for the purpose.

Major COTTON : When do you expect the lode to pass out of your sett? I have heard from people interested in other concerns that it may be expected to do so shortly. If that be so, I think there is a great deal in the remarks of the last speaker, but I should like to hear authoritatively from you what your idea is on this subject.

The CHAIRMAN : We can follow the lode, and as the Mysore Co. has stated they have only exhausted 73 acres in 10 years, and given so many hundred thousand pounds, we may reckon that we have 164 acres, which would last all the time of our lease.

Major COTTON : You do not quite catch my question. The lodes trend in a certain direction, and I want to know from the dip when you anticipate they will pass out of our properties into the No. 5 Oriental Block.

MR. WALKER NOT A MAGICIAN.

A SHAREHOLDER : How can the chairman answer such a question ? He is not a magician.

Major COTTON : I did not say he was or was not.

Mr. SNELL : I suggest that Mr. Hodgson should deal with that question.

VIEWS OF MR. HODGSON.

Mr. H. PERCIVAL HODGSON : I have come lately from the field, and have been connected with this mine for some time. We have worked this out carefully, and gone minutely into the whole business. You will see by the plan the position of the north shaft. You will see that the shaft is nearer to the western boundary, which is the important one, than the other boundary, as our western boundary has a westerly inclination as it goes south. The further we go south from the north shaft the greater the distance of the property between our lode and the western boundary, and taking it from the spot where you see the north shaft, we calculate that from there to the nearest point of the boundary we shall have 1,200 ft. to sink, that is taking the angle of the lode at 55 degs., which we find is about the inclination of the old workings. We have not seen the lode in extent. We cut it at 100 ft. We put out a cross-cut from the shaft, and came into old workings where the old men had still gone down, and there the inclination of the lode we found to be about 55 degs., which is about the angle of the lode all over the field. Taking that angle, we shall have 1,200 ft. to sink—going further south we shall have to go a greater distance.

A SHAREHOLDER : What is the angle in the Nundydroog ?

Mr. SHAW KENNEDY (a director of Nundydroog) : It is much the same as here.

A SHAREHOLDER asked that the chairman might explain the position of the original block, acquired by Mysore West, of 100 acres, coloured red on the plan.

The CHAIRMAN : We have given up all work there for the time. Mr. Brough Smyth, who was the first man who reported on the gold-fields of India, had a high opinion of the Wynaad district. Well, the Wynaad district is a long way from the Colar, and we are a good way from the Mysore itself, and it is impossible for us to say what are the prospects. If there is any prospect there, we would undoubtedly have to go considerably deeper, but I do not consider it is necessary to look so very far before us, seeing that we have 20 or perhaps 30 years' work ; but if the shareholders then living—(laughter)—choose to make a venture and go further in that district there is nothing to prevent them, but in the meantime the purchases made are always coming nearer and proving the value of our property. (Hear, hear.) The last purchases are not very far from us, as those who own them go down they are proving our property as well as their own, and it will be a question, when the time comes, how far you will have to go down in order to reach the pay-shoot or paying quartz in the original block. It may turn out to be a great depth, but they talk of 1,700 ft. in the Colar as nothing with rock-drills. I cannot hold out the prospect of our original acquisition proving valuable in the meantime. Practically, we are using the machinery that was put up there at the Tank Block.

Mr. SPENCER (to Mr. Hodgson) : I believe you have lately come from the mine, and that you advised the board to purchase the Tank Block. How long ago was that ?

Mr. G. HODGSON : About nine months.

VALUABLE EXPRESSION OF OPINION.

Mr. SPENCER : Is it your opinion that the Tank Block is as valuable now as you thought it to be some 12 months ago ?

Mr. HODGSON : I have had no reason to change my opinion—quite the reverse.

Mr. SPENCER : In your opinion it has improved in value since you first asked the directors to take it ?

Mr. HODGSON : Yes, in so far as we have done a certain amount of work, and have proved the existence of a long run of old workings, as you will have observed if you have read the reports. These are near the shaft, about 900 ft. in length. The surface map of the mine on the wall shows you the old workings. At the time I advised the board to purchase the land, we had no right to prospect upon it, but since then we have proved the old workings for a length of 900 ft., and that tends to strengthen my original views, that this is a valuable piece of ground. (Cheers.)

Mr. BROWNJOHN : Is the quartz auriferous at the deepest point to which we have gone ?

NATIVES WENT DOWN 200 FT.

The CHAIRMAN : The only quartz we have picked up is what has been left by the old miners. They have been worked down to about 200 ft., and the fact that they went down so far proves that they must have been in payable quartz. They are not the men to have thrown away their time and labour for nothing. Some of the quartz we have found has gone to 13 dwts., but we have not yet got on to the lode. Whenever we got on the lode you will get the earliest possible information, and a special circular will be sent to you.

A SHAREHOLDER : How deep is the north shaft of the Nundydroog, which is within 20 yds. of our property ?

Mr. KENNEDY (director) : It is down 120 ft., but we have been a good deal troubled by water—a good indication, as you know.

The report was unanimously adopted.

Mr. KENNEDY proposed the re-election, as a director, of the chairman.

Major COTTON seconded the motion, which was carried by acclamation.

The CHAIRMAN : I will do everything possible for you in the future, as in the past. I have had a great deal of anxiety connected with this company—(hear, hear)—but it has been very much relieved by the purchase of the Tank Block property.

Mr. SPENCER moved the re-election of the auditors at the same remuneration as last time—30 guineas.

Major COTTON seconded the motion, and said he thought this fee somewhat high.

The SECRETARY : They were nine days over the books, and it is the 6d. calls that cause a great deal of work.

MR. WOODMAN COMPLIMENTED.

Major COTTON (to the secretary) : You keep your books so admirably that I know the auditors can have very little to do. I second the motion, but do try and keep the expenses down as much as possible. (Hear, hear.)

The motion was carried.

The CHAIRMAN : I think we ought to pass a vote of thanks to Mr. Hodgson, as he is here, for his action in connection with the purchase of the Tank Block property, which has been most beneficial. When in India I found his advice of very great importance and value. I think that when he is here for the benefit of his health, and given all the information we require, the least we can do is to accord to him a vote of thanks, which I have great pleasure in moving.

MR. HODGSON'S SERVICES RECOGNISED.

Mr. SPENCER : I have great pleasure in seconding the motion. I am sure the explicit way in which Mr. Hodgson replied to my question shows he is master of the position out there, and I have very much pleasure in seconding this vote of thanks. (Cheers.) In reference to the company's map, I had been spoken to by several friends about it, who have said that this block of 100 acres of the Mysore West as originally acquired is shown as of almost the same size as the 164 acres of the Tank Block ; in fact, the latter occupies less space than the former. Is this a scale map ?

The CHAIRMAN : That matter will be put right. I do not suppose the map is positively correct, but the one that appeared in the MINING WORLD on Saturday last may be taken to be actually so. There is one thing I forgot to mention, for which I wish to give Mr. Hodgson credit. You observe a white mark to the east which is called "neutral ground." In our bargain with the Mysore Government our block is only 161½ acres, and the neutral point was extended to our boundary. When the plan was gone into Mr. Hodgson made an arrangement by which he had the boundary altered, so that it includes the neutral slip, 22 yds. of ground on the western boundary, which comes to 2½ acres, making the 164. Mr. Hodgson has deserved great credit for having added that to the original purchase. (Cheers.)

A SHAREHOLDER, in supporting the motion, said he would like Mr. Hodgson or the chairman to say whether the ancient workers would be likely to have cleared out if they had seen anything of value in front of them.

The CHAIRMAN : The truth of the matter is simply this—if these ancient workings had been confined to 20 or 30 ft. we should have come to the conclusion that the natives thought it not worth going any further, but when you speak of the natives clearing out only at a depth of 200 ft.—that was due to physical obstacles which they had no means of overcoming. In fact, they were cleared out by the water at 200 ft., because they could not go lower, as they had not the modern pumping appliances that we have. That is the actual reason they did not go further. (Cheers.) The fact that the old workings extended from 100 to 150 ft. shows that they had a good lode, and that they went down as far as they could, and that they would have gone further if the appliances had been at their command to have enabled them to have done so. In other words, they were cleared out by obstacles they could not overcome.

The motion was carried unanimously.

Mr. HODGSON briefly returned thanks, and the meeting closed with a cordial vote of thanks to Mr. Walker for presiding.

THE NAMAQUA COPPER CO., LIMITED.

MINE SHOWS IMPROVEMENT SINCE THE ISSUE OF THE REPORT—SATISFACTORY DIVIDENDS DURING THE COMPANY'S THREE YEARS' EXISTENCE—MR. WEIR ON THE SATISFACTORY POSITION OF THE COPPER TRADE.

THE fourth ordinary general meeting of the shareholders was held at the Terminus Hotel, Cannon Street, on Monday, "to receive the report of the directors and a statement of accounts made up to Dec. 31, 1890, and to transact such other business as may be incidental to the meeting."

Mr. Charles Howard

(chairman of the company) presided.

Mr. C. LEWIS BENNETT (secretary) read the notice of meeting.

THE YEAR'S CAMPAIGN.

The CHAIRMAN: Gentlemen, this is our third annual meeting, and it is our custom to ask you to take the report and accounts as read. There are very few observations for me to make on this occasion, because the plan we have adopted for several months past of issuing cards of the results of the mine puts you in possession of all the information of the proceedings on the other side. But I have to point out that in the past campaign we have extracted 4,700 tons of ore, which have yielded a nett profit of 21,703%. That nett profit is arrived at after making ample allowance for the depreciation on machinery and on buildings, from which we have deducted 10 per cent., and for movable plant 25 per cent.; and from the new railway, the upkeep being charged for maintenance, we deduct 5 per cent. This balance of profit of 21,703%, added to the sum of 2,598% carried forward from last year, gives us a total of 24,301%, and we propose to deal with that as stated in the report. We suggest, with your sanction, that 11,791% should be set aside for the payment of a further dividend of 2s. 6d., making, with the previous 1s. 6d., 10 per cent. for the year; that we increase our reserve fund by the sum of 3,000%, bringing it up to 18,000%; and that we carry forward 2,435% to the next account. We are very well satisfied with the year. There is, no doubt, a falling off in the yield of the mine, owing partly to shortness of labour, but it also indicates one of those vicissitudes to which all mines are more or less exposed. I shall speak further of this falling off presently, because we have later reports from our mine which are of a more satisfactory character. Naturally, the costs attending the production of this smaller quantity have slightly increased. They have reached 8% 15s., as against 7% 15s. the previous year. You will notice in the accounts there is rather a large item of legal expenses, 416%. That arose from the necessity we were under of prosecuting our claim against the Société des Metaux. We did that with rather half-heartedness, and in the but faint belief that something might be got out of it; but as I pointed out at the first meeting we held after the Société came to grief, we were never very hopeful of a favourable result, and our attempt has ended abortively.

DIVIDENDS ALREADY PAID.

We have already paid you dividends since the company started of 15 per cent. the first year, 12½ the succeeding year, and now 10 per cent. These are fair dividends. (Hear, hear.) But what we have to look forward to is the yield at the mine, and all interest naturally centres upon that. The report you have before you brings you up to the end of the year. Since that time our very excellent manager on the other side reports continuously in a more favourable manner. For instance, on Feb. 9 he writes:—

RECENT AND MORE FAVOURABLE REPORTS.

"There has been again an improvement, more especially in the 58 stope east. There is very good promise of a good lode being opened up, and if this continues it will be an important feature in this part of the mine. The 33 stope and the 43 driving are both improving. Upon the whole we are looking a little better. In Feb. report he writes: "The 58 east looks very likely to improve; the ground around is intersected with small veins of ore dipping east towards the point which is now producing the greatest quantity of ore. The stope west of the shaft in the bottom of the 33 is yielding satisfactorily just now, and we have never before seen the ground in this direction show such signs of permanency as it does just now." On Mar. 16 he writes:—

"The stopes are looking rather better than they were when the Feb. monthly report was written."

On Mar. 23 he writes:—

"We are rather pleased with the appearance of the stopes upon the whole. We are opening out another upon the south-east of the shaft at the 33-fm. level, and there appears every chance of its yielding a good quantity of fair quality ore when it is got into good working order."

In the Apl. report he says:—

April 20.—"We have resumed the sinking of the Tweefontein shaft below the 73-fm. level. The stopes are yielding a little better. The stope in the bottom of the 33 west of shaft appears to be opening up very satisfactorily, and there appears every indication at present that we shall have a large quantity of ore from the western part of the mine. The ore, however, is chiefly yellow, and, therefore, of somewhat lower percentage and more difficult to dress. The lode in the 73-fm. level west still retains its well-defined wall, near which at times we find small stones of very rich copper ore (assay value of over 60 per cent.) We have every reason to hope that we shall have an early improvement. I trust we may realise our expectations at this level, and if so, it is likely in the future the western part of the mine may be the most productive."

On May 11 he says:—

"The stope in the bottom of the 33 west is opening up satisfactorily. The 73 west is also promising, but of no present value. At the end of Apl. the depth sunk below the 73-fm. level was 27 ft."

On May 16 he says:—

"The 58 east shows a little improvement, and trust this may be lasting."

This comes from a sober-minded man, who never indulges in any brilliant anticipations; therefore, to reports of this kind we attach very considerable value. It appears to us that the prospects of the mine are very favourable. As you are aware, the price we obtained for this year's production was 10s. a unit, which was an advance on metallic copper of about 6% per ton over last year. I think I have very little to add, but will not put the resolution until any gentleman who may wish to ask a question has had the opportunity of doing so, and we shall do our best to answer him. (A pause.) I will now put the resolution:—"That the directors' report, together with the profit and loss account and balance-sheet at Dec. 31, 1890, be received and adopted, and that a final dividend of 2s. 6d. per share for the year 1890 be, and is hereby declared, and that the same be payable on July 8 next."

Sir JOHN H. MORRIS, K.C.S.I. (director): I beg to second the motion.

Carried unanimously.

DIRECTORS AND AUDITORS RE-ELECTED.

The CHAIRMAN: Our colleague, Mr. John Napier, retires from office, but being eligible, offers himself for re-election. I have great pleasure in proposing his re-election.

Mr. T. K. WEIR: I second the motion.

Carried unanimously.

Mr. JOHN NAPIER returned thanks for his re-election, and promised the company the renewal of his best services.

Mr. CADBY: I have much pleasure in moving the re-appointment as auditors of Messrs. Welton, Jones and Co., and that their remuneration be 40 guineas. I need not add any words by way of commendation to this resolution, because these gentlemen have already done us good service, and I imagine we shall all concur in their re-election.

Mr. MARSHALL seconded the motion, which was carried unanimously.

MANAGER'S SERVICES.

The CHAIRMAN: My colleague and friend, Mr. Mirrieles, has a few words to say upon the subject of our very excellent manager out at Namaqualand, on whose efforts and endeavours the company must mainly depend.

Mr. F. J. MIRRIELES (manager): I think, gentlemen, we should not separate this year without, by your approval, acknowledging the conduct of the company's affairs at the mine. The chairman has referred to Capt. Phillips as a sober-minded man. He calls him that as the result of an acquaintance with him during only three years, but this company, I may remind you, was not an altogether new one, even in Jan., 1888, when it was formed on its present basis. I have had the pleasure of knowing Mr. Phillips for 12 years or more. In fact, when the discoveries were first made in Namaqualand, Capt. Phillips undertook to work for us, and has acted in a thoroughly conscientious and reliable manner ever since. He is essentially a safe man, and we place great reliance, as a board, upon all he tells us. Therefore, I think, it is very satisfactory that the report shows, as the chairman has told you, a marked improvement in the condition of the mine. Capt. Phillips has from time to time had considerable difficulties to contend with, as that climate is not a very favourable one, and at times his health has somewhat broken down (he has only been home once all the time), but he has at all times fought against those difficulties successfully and well, and we have every reason to be satisfied with his services. I trust by your vote you will show that you appreciate them.

Mr. WEIR: As one who has had considerable experience in mining, I can say if you only knew the comfort of having such a man as Capt. Phillips to deal with instead of the general run of mining managers, you would understand our feelings on this subject. Men, not perhaps more clever than Capt. Phillips, are so terribly sanguine that they mislead you. They see a stone of ore, and think at once their fortunes are made. I second this resolution with very good heart.

Carried unanimously.

The CHAIRMAN: Our business has been very brief and pleasurable, and there is no reason to detain you further.

A SHAREHOLDER: Do the board think the present price of copper will be maintained?

The CHAIRMAN: What does Mr. Weir think, for we have in him an expert? (Cheers.)

VIEWS OF AN EXPERT IN COPPER.

Mr. WEIR: I did not come prepared to speak about copper, but I think I can say that the trade is in a very satisfactory condition. On May 31—that is, the end of last month—the visible supply of copper was 57,800 tons; on May 31, 1890, which would be about a year from the time I last addressed you, the visible supply was 82,000 tons, so that we have reduced stocks 25,000 tons. For the 12 months ending May 31 the deliveries for actual consumption have been 139,000 tons, against imports of rather under 115,000. That shows you the difference. At the present moment prices are very satisfactory. To-day the nearest cash price for Chili bars was 55% 17s. 6d. for good merchantable brands, and for three months, 56% 5s. As far as I can see,

I BELIEVE THE TRADE TO BE IN A VERY HEALTHY CONDITION.

There is one very important element, namely, this—the great Anaconda Mine has now been closed for some months. It is generally understood that that mine will be brought out here very shortly, but still nothing official is reported. The longer that mine continues closed the better will the position of copper become, because, undoubtedly, without it we are using more copper than is being produced, and in addition to that, the unfortunate state of affairs in Chili has also seriously restricted the production in that country. Of course, it is impossible to say why the Anaconda Mine is closed, and I do not pretend to offer any opinion on that point. Each person must form his own opinion, but I repeat that as long as it continues closed it must have a beneficial effect upon the price of copper as far as we miners are concerned. I do not think I need say more. (Cheers.)

A SHAREHOLDER: Perhaps Mr. Weir can tell us if he has any idea of the amount of invisible supplies held either in France or elsewhere.

Mr. WEIR: I do not consider at the moment that there are any invisible supplies except what are in the hands of smelters and manufacturers generally. I consider that all that stock that used to be

called the "invisible supplies" in France has either got into the statistics or been used up.

A SHAREHOLDER : You do not think it is being kept back—for speculative purposes?

Mr. WEIR : No, I do not think so. Of course, a certain amount of stocks are held by speculators undoubtedly, but I do not consider that there is any considerable amount of invisible supply. I may be wrong, but that is my opinion, and you may take it for what it is worth.

A SHAREHOLDER : I have great pleasure in proposing a vote of thanks to the chairman for the manner in which he has presided, and to the directors.

A SHAREHOLDER second the motion, and it was carried unanimously.

The CHAIRMAN : We beg to thank you for the confidence you have been kind enough to repose in us.

THE ROBURITE EXPLOSIVES CO., LIMITED.

RESOLUTIONS CARRIED—SHAREHOLDERS QUITE UNANIMOUS.

AN extraordinary general meeting was held at the Cannon Street Hotel, on Tuesday, to confirm as a special resolution the following resolutions passed at the extraordinary general meeting of the company, held on June 4 :—

(1.) "That it is desirable to re-construct the company, and accordingly that the company be wound up voluntarily, and that Herman Alexander Krohn be and he is hereby appointed liquidator for the purposes of such winding up." (2.) "That the said liquidator be and he is hereby authorised to consent to the registration of a new company under the name of the Roburite Explosives Co., Limited, or some other suitable title, to be formed and registered under the Companies Act, 1862, for the purpose of acquiring the undertaking of this company with a memorandum and articles of association, a draft whereof is now submitted and signed by the chairman of the meeting, for the purpose of indentification." (3.) "That the draft agreement submitted to this meeting and expressed to be made between this company and its liquidator of the one part, and the Roburite Explosives Co., Limited, of the other part (which draft is also signed by the chairman of this meeting for the purpose of identification), be and the same is hereby approved, and that the said liquidator be and he is hereby authorised, pursuant to section 161 of the Companies Act, 1862, to enter into an agreement with such new company (when incorporated) on the terms of the said draft, and to carry the same into effect, with such (if any) modifications as he thinks expedient." (4.) "That the said liquidator be, and he is hereby authorised to continue the business of this company pending the transfer to the new company."

Sir John Stokes, K.C.B.

(chairman of the company), presided.

Mr. H. A. KROHN (secretary) read the notice of meeting.

UNANIMITY OF SHAREHOLDERS.

The CHAIRMAN : Gentlemen, I am happy to be able to inform you that shareholders owning 19,126 shares, that is to say, 19-20ths of the issued capital, have signified their assent to the scheme of re-construction. (Cheers.) On the other side we have received formal notice of objection from two shareholders only, representing 246 shares, one of whom has withdrawn, and only one remains. The sole objector merely objects for a technical reason, as executor of a trust, but we are not likely to have any difficulty with him.

A SHAREHOLDER : How many shares has he?

The CHAIRMAN : 136. If, therefore, those gentlemen who have reserved their assent until this meeting will fall in with the views of the rest of the shareholders, we shall practically have the unanimous consent of all our shareholders, and at once take the necessary steps for re-construction. That is really all I have to say to you, or need say to-day. I move, therefore, "That the following special resolutions, passed at the extraordinary general meeting, held on June 4 last, be and are hereby confirmed." (See above.)

Gel. E. C. SIM : I shall be happy to second the resolution as one of the committee of shareholders appointed to confer with the directors. I think there is very little more to be said about it, except that it is the best arrangement that could be entered into.

The motion was put to the meeting, and carried unanimously.

The CHAIRMAN : That, gentlemen, is all the business I have to put before you to-day, and we shall now proceed with the formation of the new company.

NO FURTHER OBJECTION.

Mr. JOHN NEWTON : Although, perhaps, it is irregular, I think I may be allowed to congratulate you on the fact that you have practically secured unanimity for this scheme. I, myself, was in favour of it except on the one point of the voting rights. However, that is not so vital as to induce me or my friends to stand out. I think my friends will all agree to the scheme. In doing so, I really must say that I think it is a blemish, and I am quite sure of this, that if the board feel in years to come that they are merely the nominees of a large shareholder, that it will not be as effective or as independent, because I do not think that they would abuse their position and use the colossal vote of one shareholder for their own views. I do not think for a moment, although it has been suggested to me, that a body of gentlemen would do such a thing, but still there may be times in the history of a company like this when you will find that one shareholder, practically the vendor of this company or his successors, can at any time say to any director, "I do not want your services any longer, and you must send in your resignation, and if you do not I shall vote you out"—because he will have that power, and every one of you will know you are dependent upon the vote of that one shareholder; and, therefore, I repeat, it is a blemish. Table A does not indicate that such a line is beneficial to joint stock companies. The framers of Table A, although they had not the knowledge of the management of public companies that we have now, did require directors to have a certain amount

of independence which they do not possess if shareholders may, by purchasing a great number of shares, secure practically the control of a company. However, it is only an academic question as far as I am concerned, seeing so many have consented, and I will not stand out; neither will my friends.

The CHAIRMAN : I express the feeling of the board when I say we thank Mr. Newton for the kind way in which he has withdrawn his only objection. We must endeavour to preserve our independence in spite of his prediction, and I hope we shall do so. That is all the business of the meeting.

Mr. NEWTON : I beg to move a vote of thanks to the chairman for presiding on an occasion of this kind. It is a very perfunctory work we have had to do, but still we must congratulate the directors on the unanimity which has prevailed.

The motion was seconded and carried unanimously.

FOES ONCE BUT FRIENDS NOW.

The CHAIRMAN : In thanking you for the compliment you have paid me, I wish to say that we have had the most hearty co-operation of very many of those who were formerly our opponents, and I must specially refer to Mr. Spark, of whom I have had to speak perhaps somewhat warmly in the past, but who has really given most valuable assistance in bringing round the Lancashire shareholders to the unanimous adoption of the scheme. I mention that with great pleasure, because I think Mr. Spark has behaved very handsomely. (Cheers.)

THE SYDNEY AND LOUISBURG COAL AND RAILWAY CO., LIMITED.

A PROSPEROUS YEAR—GREAT AUGMENTATION OF COAL OUTPUT—OUTLAY ON PERMANENT WORKS—10 PER CENT. DIVIDEND ON THE FIRST PREFERENCE SHARES.

THE twelfth ordinary general meeting was held on Tuesday, "to receive the report and accounts of the board for the year ending Dec. 31, 1890; for the election of directors and the auditor for the ensuing year; and for the transaction of the general business of the company."

Mr. G. W. Medley

(chairman of the company) presided.

Mr. WM. ROWLAND HART (secretary) read the notice of meeting.

INCREASED OUTPUT.

The CHAIRMAN : Gentlemen, the board are very happy to again meet the proprietary with the account of a prosperous year. If you will turn to the report (which is a very short one) you will see in 1890 we mined 155,900 tons, against 121,600 tons in 1889 and 124,000 tons in 1888. I may just say here that if you go one year further back, namely, to 1887, we mined 88,870 tons, so that during these three years we have actually doubled our output. Under ordinary circumstances that would have been a mine of wealth for the year, but owing to the position into which the company got at the end of three or four years' depression, we found that that increase of business was in one or two directions an embarrassment to us. Our rolling stock and plant had gone down during those bad years. The Reserve Mine was giving out a little and cost more to work, and it was absolutely necessary for us to have more rolling stock, and to open up a new mine which we had, that is to say, open up a mine in a new direction. It was advisable also for us to purchase, if we could get it, an additional area. Well, gentlemen, the second paragraph in the report tells you

WE OPENED UP THE EMERY MINE.

We have bought mining rights over a large additional area; we are building a house at Sydney for the agent and manager, and from the photograph in the room you can see the state of progress it was in at the end of last year. We have also had to build several miners' houses to give increased accommodation to the *employés*. We had to buy one new engine and 50 new coal cars. We had to put the railway and pier at Sydney, and the general plant into good working order. Well, now, gentlemen, that is a great deal of work to do with the resources at our disposal, but, nevertheless, we did it, and I will just tell you the amount of cash that was actually disbursed under these several heads.

PARTICULARS OF OUTLAY.

In the first place, the new locomotive cost 1,656*l*. The old one, which we had taken over in 1879, was entirely worked out. We spent 560*l*. in putting the pier in thorough repair to the water's edge. We spent 510*l*. on pumps and 1,691*l*. on new coal cars. We paid 843*l*. towards the new area, and we bought a little water lot at the water's edge, which was stated to be necessary for us, for 15*l*. We spent on the Emery Mine 2,535*l*., making altogether 7,810*l*., in absolute cash disbursements out of the resources in hand. That is a very large sum for a company situated as ours is. Then it became a matter of great consequence to us to discover how this sum was to be found and from what funds we should draw it. There were, however, great objections to all courses, which depended upon either borrowing in various ways in which borrowing could be done, or in making a call on the preference shares. Speaking of this last, I believe it would have been very repugnant both to the directors and to the proprietary to have made a call. In the first place, a call made cannot be repaid when we get into better times. It must hang over the company, and the interest payable on these shares is very heavy, and cannot be got rid of except by the payment of 20*s*. in the *£*. Then again, as you know, there is one defect in the company's articles, which is this—that it does not give, in case of winding-up, any priority to the different sets of shares—that is, to the first preference. The division has to be *pro rata* on both the second preference and the ordinary shares with the first preference. As to borrowing—there are three modes of doing it. The first is to raise money by debentures; the second is to borrow on

unpaid calls; and the third is to borrow under the personal guarantee of the directors. Each of these courses is full of objections, and we have adopted none of them. Above all, when we sent in our accounts, the auditor, being the judge of these matters, relieved us of a great deal of anxiety in one sense, for, he insisted, the property having been allowed to run down so far, it was absolutely necessary to charge a great deal of this 7,810*l.* to revenue account. Well, we could not deny that, and as the best solution of the difficulty, and in justice to all classes of shareholders, we agreed to do so; and I will tell you what sum was charged to revenue account this year, that is to say, 1890.

CHARGES MADE TO REVENUE.

In the first place, the new locomotive—the whole of it, 1,656*l.*, has been so charged, and will not come in again. The next is the pier, 560*l.*, and for many years that will last, and the pumps the same, 510*l.*—the whole of these sums have been taken off the profit of the year. The next, coal cars, cost 1,691*l.*, and the new land area, 843*l.*, and the water edge lot, 15*l.*—altogether, 2,541*l.* During the bad times, what is called the stone drift, a hole driven at an angle with the ground, cost 2,735*l.*, and we were told that it would help us greatly in winning the coal from the Reserve Mine, and would be economical in the end. That did not turn out to be so. We are now told by a gentleman, whom we sent out to enquire into our new coal area, that it might be extremely useful presently in working the Emery Mine as a ventilator, among other things. Our auditor insists that that must be wiped off gradually. That came to 2,735*l.*, and 5,286*l.* is the total of these last four items, and one-third is 1,762*l.*, which, if you turn to the revenue account of the year, is charged as depreciation. Then we had to open the Emery Mine. We spent 2,535*l.* 11*s.* 8*d.*, which we are going to spread over three years, and one-third of that sum is 845*l.* 4*s.* If you add that to the other sums you will find revenue has been debited with 5,333*l.* 7*s.* 5*d.* Notwithstanding these debits to revenue account, a balance on the year's working was carried to profit and loss account of 1,715*l.* 9*s.* 6*d.*, so that our profit for 1890 is 7,000*l.*, or 1,900*l.* better than in 1889. That is exactly the position in which the company finds itself. I have given you the reason of this great expenditure—our plant was suffered to run down in the bad years, and we must set it up out of the good years. In a year or two none of these items will recur, and then we shall be able to reap the full reward of our temporary abstinence.

PROBABLE OUTPUT.

This year we expect, at least, 170,000 or 175,000 tons, and as time goes on there is nothing against our working up to 300,000 tons. I need not say that when that time arrives we shall be in a very proud position. That is really the pith of what I have to say, and now you will understand how it is that although we have made so much more money in 1890 than in 1889, yet there is not so much to the credit of profit and loss account, and, therefore, not so much divisible as we had at the end of 1889. But you will see that 1,715*l.* is carried to profit and loss account, and that the 1,839*l.* which remained undivided at the end of the year leaves an available balance of 3,554*l.* 14*s.* 8*d.*, out of which the directors recommend

A DIVIDEND OF 12*s.* ON THE FIRST PREFERENCE SHARES,

which is equal to 10 per cent. If the shareholders wish for information on any point, the best way is to ask questions to which I shall be happy to reply. We are told we have a very fine property, and there is no saying but that we may work up presently to still greater quantities. There is one consideration I have forgotten to mention, and it is an argument for our being very careful, namely, that possibly Canada and the United States may change their relations towards each other in fiscal matters, and that would be a movement of supreme importance one way or other to this company. At present I am not able to say in which way, but anyhow, if, for instance, Canada and the United States were to make a treaty of reciprocity, it might upset and dislocate our business for the first year or two, and, therefore, it behoves this company to be exceedingly careful and conservative in regard to the management of its finances. Our only embarrassment comes from our greatly increasing business, and the other reasons I have already named. We are strongly against raising money on capital account, being confident that in a year or two it will greatly redound to the credit of the company not to have done so. I move the adoption of the report and accounts.

POLICY OF THE BOARD ENDORSED.

Mr. BRYDONE: Being a little hard of hearing, and this room being particularly unsuited for a meeting of this kind, I have not heard anything that has been said to-day, and, therefore, I am speaking entirely upon the report. I am very much pleased with the policy which the board are pursuing. You seem to be husbanding this property until better days come, and that is what I have always wished you to do. Once there was a proposal to sell the whole concern for an old song to some other company, but I was against it; and I think the only policy we can pursue advantageously is that which we are doing now. Sooner or later, and especially with this railway made by the Dominion of Canada up to Sydney and with our line to Louisburg, a larger traffic will come, and I feel sure if you pursue the present policy, and husband the undertaking as you are doing, we shall, some of these days, emerge into dividends not only on the preference stock, but on the ordinary stock as well, in which I have a very large interest.

Mr. HAWKINS: Being an ordinary shareholder, and therefore anxious to have a dividend, would it be possible that the preference dividends should be funded in some shape or manner, and interest paid on them, as we are now approaching evidently a really dividend period. I may say from inquiries I have made that the holders of preference shares would not be likely to accede to any such proposal, so that I do not wish to press it. I suppose there is no difficulty about selling coal.

The CHAIRMAN: We have to refuse to sell coal from not being certain about delivering it.

Mr. HAWKINS: The coal works out at about 5*s.* 6*d.* or 5*s.* 9*d.* per ton.

The CHAIRMAN: It is more than that. With regard to funding, we have that in view, and one of these days may be able to put a scheme before the shareholders, which I think will satisfy all parties. My policy is to wipe out the first preference altogether if I can, but when we are earning more than now we can do many things that at

present are impossible. I would rather raise a bonded debt and pay it off, and there would be no difficulty in increasing or diminishing it, but at present there are great difficulties. We must keep to our original bargain, but the preference shareholders made this mistake—that they got no priority in the event of winding-up. At the proper moment a scheme will be brought before you. As regards this year's business, the shipments are 34,700 tons against last year 29,800, and the year before 16,000—considerably more than double that of two years ago. That means more plant and everything. We are not going to stop at 150,000 tons. I am told

WE OUGHT NOT TO BE SATISFIED UNTIL WE SELL 300,000 TONS.

There are reasons for this, which I do not go into, because they affect other interests in the island, and it would not be politic to do so.

Mr. MILLS seconded the motion for the adoption of the report, and it was carried unanimously.

The CHAIRMAN: I have now to move, "Resolved, that a dividend of 12*s.* per share on the 5,000 first preference shares be paid on or before Oct. 1 next, to such shareholders as are on the register at this date, June 30, 1891."

Mr. SCHRÖDER seconded the motion, which was carried.

The CHAIRMAN proposed, and Mr. MILLS seconded, "That Mr. C. J. Russell be and is hereby re-elected a director of the company."

Carried unanimously.

The CHAIRMAN proposed "That Mr. B. H. Schröder be and is hereby re-elected a director of the company."

Mr. RUSSELL returned thanks, and then seconded the motion.

Mr. BRYDONE proposed, and Mr. Hawkins seconded, "That Mr. John Paterson be and is hereby re-elected auditor to the company, and that his remuneration be 21*l.*"

Carried unanimously.

Mr. SATTERTHWAITHE: The only thing we can do on this side of the table is to offer to the gentlemen on the other side of the table our hearty thanks for the manner in which they have conducted our business. One shareholder has already expressed his thankfulness, and we are glad to have had the opportunity of doing so. We have every confidence in the policy the directors are pursuing.

The motion was carried unanimously, and the meeting closed with the chairman's brief reply.

WHEAL GRENVILLE MINING CO.

DIVIDEND OF 2*s.* 6*d.*—RAPID PROGRESS AT THE EASTERN SECTION—THE TIN-TICKETING QUESTION ONCE MORE.

A GENERAL MEETING was held at the Offices, 7, Union Court, Old Broad Street, on Wednesday.

Mr. R. W. Goold

(chairman of the company) presided.

Mr. D. JULYAN (secretary) read the notice of meeting.

MR. GOOLD VISITS THE MINE.

The CHAIRMAN: Gentlemen, I rise to move the adoption of the report and accounts. I am not altogether satisfied that we should meet here and have these accounts presented only at the meeting, and in future it shall be arranged that they shall be in your hands a week beforehand. We must arrange the meetings according to that, and not that according to the meetings. (Hear, hear.) Since we last met I have spent several days upon the mine, and at the outset I feel it only just and fair to your managing agent and the officers under him that I should express to you the great satisfaction I experienced with everything I saw going on in connection with the large work which you authorised to be done, and which we are now engaged in carrying out. Not only was I gratified with the progress being made on the new work, but also with the improvements and additions to the plant and machinery on the old floors. These improvements and additions have already resulted in a not insignificant increase of our fortnightly returns of tin. They have not told so much upon the figures of the past quarter as they will tell upon those of the current one, because some of them had only just commenced operations when I was there. As regards your

EASTERN SECTION,

I found great progress had been made both underground and above ground. I think we cannot feel too thankful that we have men of energy, who have got through the work as Capt. Bishop and his assistants have done. It was only in Oct. last you authorised this great work to be done. No doubt we had commenced the shaft before, but since that time as much work has been done, if not more, than on any mine I can point to in Cornwall. The eastern shaft has been sunk to the 150-fm. level, but to-day it is nearer the 165 than the 150, and I hope by the time we next meet it may be down to the 178. Immediately that is done we shall proceed to sink further to the 220-fm. level. We may expect to see that accomplished in another 18 months, and shall be fortunate if it is finished in that time. The two bottom levels, the 220 and 205, have been driven continuously during the past quarter, and although I am not yet perfectly satisfied with the rate of drive attained by the boring machinery in these two levels, I suppose I must not complain, because it is evident they have been making an effort to move a little faster than they did before, and during the past month they have got pretty nearly to what I think they ought to, 9½ fms. in the 220, and the outside that I could wish them to accomplish is 10, though in the 205 they have not done so much, but perhaps the ground may be harder. During the quarter the 220 has been driven 26 fms., and the 205, 22 fms. The 190 has been suspended because Capt. Bishop does not wish to go on with that further until he can get at it from the eastern shaft, when the stuff can be brought away cheaper. To communicate the three bottom levels we have to drive a considerable distance even yet. I am rather sorry he has seen fit to suspend the 190, because in that level we have no less than 85 fms. to drive before we get to the shaft. In the 205 we have, only reckoning from yesterday, or the completion last month, 39 fms. to drive, and, therefore, there can be no doubt at all that by the time the shaft is down that level will be up to it. In the bottom level we have still 148 fms. to drive, and we shall not see the communication between that level and the shaft for another 12 or 18 months. The new stamps engine house has

been completed, although only commenced when we last met. The roof is on, and it is now ready to receive the new engine. This engine has been put into first-rate condition, and is in every respect equal to new. I think they have commenced to put in that engine, or are about to do so; axes have been provided for it.

WE SHALL HAVE 112 HEADS OF STAMPS

—four of 16 and four of 12 each, and these have been all provided with the exception of three entirely new ones, which we thought preferable to second-hand, for we could see nothing strong enough for the purpose. They have been promised in two or three weeks from the present time, so that by the time of our next meeting (which probably may be on the mine itself in Cornwall) I shall hope to report that we have put in a new engine and completed it, have erected the stamps, and have the floors for the most part laid out. We shall not be able then to utilise the stamps engine so readily, because other matters have to be done as well, but I should like to make that much progress with them in order that the attention and efforts of the manager may be devoted to other things afterwards. We shall have 112 heads of new stamps, as I said—about the same number as we have upon the old floors. They will, however, do more work, being of improved construction, and behind them we shall have two powerful stone-breakers instead of one, which will feed the stamps with stuff, broken to a size which will enable the stamps to do at least 30 per cent. more work than they otherwise could. We are returning 50 tons of tin with our old stamps mainly from our old ground and the upper levels, but when all this great work is completed we shall return at least 100 tons of tin a month—always with that funny little word “if”—if we can succeed in bringing out the requisite quantity of tinstuff from the lode, as to which I am not going to say anything to-day. You may, however, be assured that we would not have entered upon this large work without good reasons for doing so.

A HIGH IDEAL.

I shall be very much disappointed if we do not have upon these new floors the most perfect, complete, and economical appliances and plant for crushing, stamping, dressing, and cleaning our tin of any to be found in Cornwall, and I am quite aware that that is saying a great deal. Capt. Bishop in this, as in all other respects, has had a pretty free hand given to him, and I happen to know his mind on the subject. He is determined that the whole of the work shall be of the most improved character possible, as well as the most modern and substantial, always bearing in mind the double aspect of permanency and economy in working. At the very outset of this work we saw a difficulty in our way in relation to water for dressing and cleaning the tin taken from the Eastern section. We have not more water on the mine than is sufficient for our present requirements. Capt. Bishop's attention was directed to this, and he got over the difficulty by using the water twice. The water after passing over our old floors will be turned into a shaft of some kind and pumped to the top of the new floors. In order to effect this, it was necessary to construct the lead 180 fms. in length, 7 ft. by 3, and a portion of it at a depth of 10 to 13 fms. from the surface. 120 fms. have been accomplished, but the work will not be very costly, for some of the ground has been driven as low as 30s., though the average will be more. The work was very necessary, and will render the whole of the floors complete when accomplished, which will not be long hence. Another engine house is to be built bigger, and more substantial than the one I have been speaking about, to receive

THE NEW 90-IN. CYLINDER ENGINE,

which we were fortunate enough to secure nine months ago. We purchased a very large amount of the machinery that was upon Tresavean property, and I consider we were extremely fortunate in having got it when we did, for otherwise third parties would have been mixed up in the sale, and we should have had to pay much more. We have paid for the whole of the machinery on that property 3,600*l.*, and I was always in the hope that we should reduce that sum, by the sale of materials not required in the development of the new section, to 2,600*l.* Thus we have this 90-in. cylinder engine on the property for 2,600*l.*, which I do not think at all bad. (Cheers.) We have something else as well. We have used at Wheal Grenville, in the shape of machinery of one kind and another, iron work, rails, boilers, and bobs, which we have had valued at the lowest price, and the amount we have used comes to 773*l.* 12s. 5d. We have sold by auction 200*l.* worth, including old materials, and have still more to sell. By the time these figures can be run out the amount will be lower than 2,600*l.* Now, gentlemen, let us see what we have done in actual work during the quarter.

THE QUARTER'S RESULTS.

We have sold 130 tons 2 cwt. 3 qrs. 16 lbs. of tin. That is less than the previous quarter, which was 135 tons 12 cwt. 3 qrs. You will remember I told you last time of the tremendous weather we had experienced just before our meeting, and that its effect must necessarily fall upon the present quarter. I thought at that time our loss would have been quite 15 tons of tin, but happily it was only about one half of that—(cheers)—so that I think we got out of those storms remarkably well. Our sales during the first month were 37 tons 14 cwt. 2 qrs., during the second month 44 tons 7 cwt. 3 qrs., and during the third month 48 tons 1 cwt. 13 qrs. Another month has passed, and we have got up to my coveted quantity of 50 tons. We sold 51½ tons last month. I think we have no reason for supposing that any special effort was made to increase the returns. It is the natural outcome of the improvements and additions made to the floors, as well as perhaps a little extra advantage from better produce. One or two of the stopes may have got better, and certainly the drivages have, which may have helped the rate of progress. We have gone from 37 to 44, 44 to 48 and 48 to 51 tons a month, so that I do not think we are going backwards. The rate of progress will be more forcibly realised if I put it in the shape of money—the first month realised 2,037*l.* 18s. 3d.; the second, 2,359*l.* 15s. 9d.; the third, 2,616*l.* 16s. 3d.; and the fourth, 2,906*l.* 18s. 5d. The average price for the tin was 53*l.* 18s. 2d., as against 53*l.* 7s. 6d. in the previous quarter, so that we received 10s. 8d. a ton more during the past quarter than the previous one. This 10s. 8d. does not amount to very much upon 103 tons, so it is clear the extra profit is to be accounted for partly, or rather largely, by a saving in the costs of getting the tin. The total sum we

received for our tin during the quarter, including carriage, was 7,013*l.* 17s.—less only than the previous quarter by 234*l.* 12s. 7d. The price we got during the last month was considerably higher than the average price of the quarter, and if we continue it in the current quarter the profits will be materially larger than those we are now dealing with. We received during the quarter out of the first moiety of the call, 767*l.* 10s., and out of the second 6,158*l.* 15s., or a total of 6,926*l.* 5s., leaving only due at the date of this statement 151*l.* 5s. on the first moiety and 583*l.* 15s. on the second, and the latter has been reduced still further by a payment of 50*l.* When you remember that the call made upon the shareholders was 15,000*l.*, you will agree with me that they have

RESPONDED WITH A REMARKABLE DEGREE OF PROMPTITUDE.

We thought it advisable to make it a heavy one instead of making small calls. We thereby provided for the whole of the work at once, so that we might go at it with spirit and heart, and I think we may say that our shareholders have behaved very well to us when the sum owing upon the whole of that 15,000*l.* is less than 700*l.* at the present moment. We shall not press for that balance unduly for the present. We have also received 291*l.* 3s. 7d. as the lord's contribution to our outlay on this work, paid away from our general account to the Eastern section account. These sums make 14,235*l.* 5s. 7d., to which must be added the balance of the working account, brought forward from the last quarter, 637*l.* 8s. 3d., and the balance of the Eastern section account, 1,011*l.* 4s. 10d., making altogether 1,648*l.* 13s. 1d., or a total sum received during the quarter of 15,879*l.* 18s. 8d. Now, what have we done with that? We have spent upon the Eastern section 2,294*l.* 7s. 3d.—1,875*l.* 5s. 10d. of which has been for labour, and 419*l.* 1s. 5d. for merchants' bills. On the ordinary working account we have spent for labour 3,371*l.* 5s. 4d.; merchants' bills, 2,204*l.* 3s. 7d.; total, 5,575*l.* 8s. 11d. We paid the dividend, declared at the last meeting, of 750*l.*; London expenses, 43*l.* 6s. 6d.; and committee's fees, 32*l.* 16s.; and transferred from ordinary cash account to Eastern section account 291*l.* 3s. 7d.; total, 8,987*l.* 2s. 3d.; after the payment of which

WE HAVE LEFT A BALANCE OF 6,892*l.* 16s. 5d.

Of the total of merchants' bills for the past quarter (2,200*l.*), no less than 1,600*l.* has been for coal. That has always been an expensive item at Wheal Grenville, but I have had my attention drawn most forcibly every time we have contracted for our coals in the locality to the quality delivered and the work done by it, and have come to the conclusion, with my brother directors, that we had better fall back upon a system we adopted some years ago and import our own coals. I know there is a division of opinion on that subject, but I am prepared to stake my reputation upon it, that when 12 months from to-day passes over I will show you distinctly that therein we have

SAVED AT THE LEAST FROM 1,200*l.* TO 1,500*l.*

odd by having made a contract to import our own coal. We have made a contract for 10,000 tons, which we shall not use in 12 months, and at such a price delivered to us at Portreath as would effect a saving in price alone of nearly 2s.—certainly over 1s. 6d. per ton.

Mr. JEFFERY: What price do you pay for it?

The CHAIRMAN: I do not know that I have any objection to stating it—13s. 7½d., delivered at Portreath.

Mr. JEFFERY: What is the cost to the mine?

The CHAIRMAN: I have concluded with the Great Western Railway to do it for 3s.—insurance to be paid not by us. We are paying 18s. 6d. at the present moment, and have done so during the whole of the year, but I hold that the 1s. 10d. or 1s. 11d. we shall save is not to be our big saving. (Hear, hear.)

THERE ARE COALS AND COALS

—(hear, hear)—and our big saving is going to be in the quality. I have been on our mine on various occasions since we went back to the local merchants, and in almost every instance have had to find fault with the appearance of the coal on the mine. Now I am not a novice on the question of coal, though our worthy manager tells me sometimes I am a theorist in mining more than a practical miner. My lifetime was spent in mining in connection principally with coal, so that I do know what it is, and I have seen such stuff delivered on to our mine as coal, that whoever sent it there

WOULD HAVE BEEN ASHAMED OF HIMSELF,

and I made up my mind, if I could only get my brother directors to agree, that as soon as our last contract was out we would try our old system again, and I maintain that we shall save as much in the quality as in the price. (Cheers.) I have seen coal on that mine that has not contained more than 5 or 7 per cent. of large. I have seen coal 40 per cent. rubbish, but now we have a guarantee that at least 40 per cent. shall be large, and I am told by the merchant from whom I have purchased it will be 50 rather than 40, but the written guarantee is 40.

Mr. JEFFERY: Is it less 2½ per cent. or net?

The CHAIRMAN: Net.

Mr. JEFFERY: From whom did you buy it?

The CHAIRMAN: From the Messrs. Radford, and we have bought Radford's through and through mining coal. Turning to the profit and loss account for the quarter, the total

NETT PROFIT MADE WAS 1,071*l.* 2s.,

and part of our business to-day will be to say what shall be done with that. In order to make up the dividend of 2s. 6d. last time we had to withdraw from ordinary account 112*l.* 11s. 9d., and I presume it would be your wish that that shall be paid back to-day. Then you must not forget that we are under a sort of obligation to the lord, who is going to give up, I hope, as much as 4,000*l.* or 5,000*l.* towards the new work, that the mine itself shall produce about a counterpart to that, and, therefore, we ask you now to set against the balance 208*l.* 10s. 3d., which will be left in hand after you declare the dividend to-day of 2s. 6d. per share. With these few observations, I beg to move the resolution with which I commenced. (Cheers.)

Mr. FRANCIS G. LANE: I second the motion, and will not make any remarks about the accounts or the report on the mine. Having visited the mine since our excellent chairman was there, I may as well say that the contract for our coal was completed upon the cargo being delivered and approved. I saw the coal at Camborne, and although not being well versed in the quality, I heard the opinions of those who are supposed to know, and their unanimous view was that there had been no coal brought to the wharves there for mining

purposes equal to that which is being supplied to us now. If that opinion is to be relied upon, the views of the chairman will certainly be carried out. (Cheers.)

The motion was unanimously adopted.

DIVIDEND OF 2s. 6d.

The CHAIRMAN: I propose "That a dividend of 2s. 6d. be and is hereby payable forthwith to the shareholders whose names stand on the register of members this day." I need not say that we are well able to pay this dividend. Some shareholders have thought that we might increase it, but I do not like making promises, and have never done so, though I am considered to be pretty sanguine. My impression is that during the coming quarter we shall do a great deal better than the past, and that the shareholders may look forward to better dividends than we are getting now, even whilst setting aside a fair sum to meet the lord in his contribution. I do not think there can be any doubt but that we shall sell a larger quantity of tin, and I think we shall have a much better price for it. At all events, we have begun the quarter very well, having received for 51½ tons 57l. 10s. per ton. When we have completed the work we are engaged upon, if we content ourselves with small dividends now, our dividends then will be

SUFFICIENT TO SATISFY THE HUNGRIEST SHAREHOLDER.

That I am quite clear about, and I hope, meantime, it will be your wish from time to time as much as is reasonable, not to press us to declare much heavier dividends than we are paying now.

Mr. STRAUSS seconded the motion, which was carried.

The CHAIRMAN: It will be necessary to pass this resolution—"That the sum of 208l. 10s. 3d. be carried from the ordinary account of the company, and placed to the credit of the Eastern section account." That takes it out of the power of the committee to deal with that in the future, and it must go to-day to the Eastern section account.

Mr. BRANWELL seconded the motion, which was carried unanimously.

The CHAIRMAN: Before we pass to the formal resolutions I have one more interesting subject to bring before you, because Mr. Strauss said when he came into the room,

"HERE I AM TO TACKLE YOU AGAIN."

(Laughter.) I am not sorry for it, although if he had not been here I do not know that I should have alluded to the subject, which is that of the selling of our tin. Mr. Strauss is a gentleman whom we all know. He is connected with smelting—he is a smelter. I do not hold myself that the smelters' interests and ours are at all identical. (Hear, hear, from Mr. STRAUSS.) Mr. Strauss has his motive as a merchant and man of business for everything he does. I, as your representative, have my motives and my reasons for everything I do and advise you to do. I hold myself purely and simply as a trustee in your interest and in what I do and advise to be done in this mine. I never forget that. Mr. Strauss told us at the last meeting that I was against ticketing, and wanted to know my reasons, but I have never been against ticketing. I hold that the establishment of ticketing was a very proper thing, and that we are under some kind of obligation to Mr. Strauss for having brought it about, and if I wanted a stronger proof in corroboration I think I could find it in the papers to-day. A combination amongst the smelters of Cornwall will certainly mean monopoly if it can be established, and it does appear to me that ticketing is the only plan, or one of the two, to counteract it. On the last occasion Mr. Strauss ventured to say that we had lost 1l. per ton during the previous quarter by not having ticketed our tin. I believe our friend is also the proprietor of a newspaper in Cornwall. (Mr. STRAUSS: No.) At all events he can influence it, and in that paper of Apl. 18 I find somewhat the same kind of assertions which Mr. Strauss made at this meeting. "We subjoin the particulars of the sales of Wheal Grenville tin for which Mr. Strauss asked at the last meeting." Those particulars could only have been got by Mr. Strauss himself, and, therefore, if I had no other reason, I should say I had a fair one in that for saying he was connected with the paper. "It will be seen that the mine sold its tin on the ticketing days; thus it becomes easy to compare the prices it received privately with those ruling at the ticketing. Wheal Grenville tin is superior common, and a very desirable ore for mixing, and generally obtains a standard of 2l. above ordinary common." I should like to ask Mr. Strauss whether this is his opinion, and if so, how it comes about that in the cases in which we have ticketed, so few parcels have fallen to Mr. Strauss, who is connected with the Penpoll Co? The price tendered in nearly every case has been about the smallest on the list. "The produce of Wheal Grenville during the last twelve months has varied from 13½ to 13½, and it is only reasonable to assume that, when the mine does not sell to the highest bidder but to their favourite friends, the produce was 13½." There I am at issue with Mr. Strauss. It is nothing of the kind, and I do venture to say that before anybody makes such

A REFLECTION ON THE COMMITTEE

he should be very cautious. We have sold our tin during the last quarter of which he was talking partly by ticket and partly by private treaty. He says the following is the result of our sale:—"At the tin ticketing of Jan. 7 Carn Brea obtained a standard of 93s. 6d., equal to 94s. 6d. for Wheal Grenville." Now I have taken a great deal of trouble to ascertain the actual facts in connection with all the sales during that quarter. Carn Brea, on Jan. 7, sold by ticket, and their produce was 11½.

Mr. STRAUSS: Who told you?

The CHAIRMAN: I am not going to tell you. They got 93s. 7d., or 50l. 7s. 6d. Wheal Grenville sold to Williams and Co., and got 55l. 12s. 6d. Mr. Strauss says we ought to have got 94s. 6d. We never got in this quarter a nett produce of 12 in more than one sale. Then, he says, on Jan. 20, Carn Brea obtained a standard of 92, 12½ at 93, equal to 57l., actual price paid 55l. He winds up by saying, "After this we hope we shall hear no more of the mysterious reasons why the committee prefer to sell tin privately; the reason is too palpable—favouritism, pure and simple."

Mr. STRAUSS: Hear, hear.

The CHAIRMAN: I am shocked to hear that. It covers an odious accusation. Do you mean to tell me that I, as trustee for the shareholders, sacrifice their interest and sell tin by favouritism?

IT IS A SHOCKING ACCUSATION,

and it calls for withdrawal and apology. We do not sell our tin out of pure favouritism, and I hold that no gentleman should have made such an attack upon us. About the same date, in another Cornish paper, Apl. 23, I read another just such a gross accusation, with just as little foundation for it. After reciting what had taken place during the previous quarter with regard to the prices we had realised for our tin, with a little more fairness than the *Cornish Post*, they admit that it really does appear we have benefited by selling by private treaty over ticketing, but say—"Our readers must form their own opinion as to whether the quality of the two parcels of Wheal Grenville sold at the ticketing were equal to that sold privately. Perhaps a more reliable basis of comparison would be between the price obtained by South Condurrow at the ticketings and by Wheal Grenville privately, the quality of the two being probably identical at the present time. You see again the insinuation in this paper (*West Briton*) that we could be guilty of favouritism for the sake of our friends. That is another thing I looked into, for I said "I am sure Capt. Bishop would never do such a thing, even if I were to tell him. Therefore, I will not mention it to him, but will go through the quarter and see how the figures work out." You will be astonished to hear that, as chance would have it, the reverse is the case for the whole of that quarter.

Mr. STRAUSS: On whose assay?

The CHAIRMAN: Our own, and that of the smelter. During the whole of the quarter the assay we sold upon by ticketing was 11½; whereas the assay of that sold by private treaty was 11½, or just one-eighth in favour of ticketing, and yet we are accused of dressing our ore higher for private sales and of favouritism. Dealing with the last point, of whether we have gained or lost during the quarter by ticketing—I have here the particulars of every sale made by Wheal Grenville during the quarter, and by Carn Brea. We sold by ticket Dec. 22, and received 2l. 17s. 6d. more than Carn Brea per ton; on Mar. 3 we had 3l. 10s. more than Carn Brea; an averaging on the two sales of 3l. 3s. 9d. As to the private sales, we received more for our tin than Carn Brea did by ticket by 3l. 8s. 9d. per ton. On Mar. 16 Carn Brea sold by ticket, and we received 3l. 7s. 6d. more than they did. On Feb. 2 we sold privately, and received 3l. 11s. 3d. more than Carn Brea, and on Feb. 16 4l. 2s. 6d. more; average of the four sales, 3l. 12s. 6d. more for Grenville by private treaty than Carn Brea, and 3l. 3s. 9d. more than Carn Brea, when we sold by ticket. We must take the one from the other, and it leaves us an advantage for the whole quarter of 8s. 9d., independent of produce per ton. You must add to that the difference in produce. We sold by ticket 11 15-16ths produce, and by private treaty 1 per cent., which equals 11s. 6d. per ton, and with the 8s. 9d. leaves a benefit to us on our mode of selling by private treaty of 1l. 0s. 3d. over what we sold by ticket per ton. (Cheers.) My figures are right, I maintain, to a fraction. It may be considered that I have gone a little beyond what I should have done in referring to Carn Brea, but it has simply been because Mr. Strauss instituted the comparison at the last meeting. It was my bounden duty either to admit that we had been wrong, or to bring forward a set of figures and ask Mr. Strauss to find fault with them in any way he can. (Cheers.)

MR. STRAUSS SAYS HIS QUESTIONS ARE UNANSWERED.

Mr. STRAUSS: I did not follow you closely in your last calculations, for the reason it is well-known that Carn Brea tin has fallen in produce lately, and any comparison at present would be misleading.

The CHAIRMAN: I did not wish to be forced into this at all, but the further Mr. Strauss goes the more I can beat him. He has now come up to figures after this quarter, and thinks Carn Brea an unfair comparison, but why did he make it at the last meeting? On June 8 we sold by private treaty 25 tons odd, and received 57l. 10s. per ton, and I will tell you what the other mines working on the Flat lode received by ticketing:—Wheal Basset, 56l. 15s.; Wheal Uny, 55l. 17s. 6d.; and South Frances, 51l. 15s.—Wheal Grenville at the head of the list.

Mr. STRAUSS: You have said I am here as a smelter, but I am honest enough in this room to be a shareholder, and not a smelter. You continued by saying that you were always in favour of ticketing, and that ticketing was the only way to destroy monopoly, and surely you should act up to your words, and you do not, for you sell by private treaty.

The CHAIRMAN: I have never said I am in favour of tin ticketing *wholly and solely*, and I do not say I am not going to ticket again, but will sell by ticket or private treaty just as it suits the company.

Mr. STRAUSS: The fact of my not having bought the tin as you say is a further proof that I am here as a shareholder, and not as a smelter. You have not answered one of the questions I put at the last meeting, and if you can do so I shall bow to your superior judgment. Will you now explain why a smelter should pay you a higher price privately than he would be willing to pay you at the ticketing?

SCENE AT REDRUTH STATION.

The CHAIRMAN: The last time I was in Cornwall I was at Redruth station with Capt. Bishop, and a smelter, not knowing me, touched him on the shoulder, and said, "I must have your next parcel of tin, mind; I want it particularly, and you know you have promised it to me." "Oh!" said Capt. Bishop, "I do not know that. I think this gentleman will have something to say about that." I said—"Capt. Bishop, you will ticket the next parcel of tin, if you please."

Mr. STRAUSS: That confirms my statement—if you want a good price you must ticket.

The CHAIRMAN: It does nothing of the sort. I want to keep two markets open, instead of one, and shall use the best.

Mr. STRAUSS: You have not answered my questions, and it is useless to continue this conversation.

The CHAIRMAN: I take that paragraph to be your answer. You say Wheal Grenville tin, for some purpose, is worth more than other tin, and you are right, for it is worth more for mixing purposes.

Mr. STRAUSS: I leave the public to judge what merit there is in your answer—I ask you to prove your sincerity in a positive manner. Will you allow an independent assayer to take a sample of your tin both when you sell it privately and when you sell it by ticket, and we will have his independent report, which shall be handed to you. I will pay the expense myself, and you can name the man, and both you, the public, and the shareholders will have the best proof as regards the assay. If there is really this positiveness in your mind, it would be satisfactory to the shareholders, and ought to be to you,

and to all who favour fair dealing in Cornish mining, to have this independent report, so that it may be seen

EVERYTHING IS DONE ABOVE-BOARD,

as I have not the least reason to doubt.

The CHAIRMAN: When we are asked to permit a thing of this kind in order to establish the fact that everything is done above-board, I positively refuse. I say our position is such as should command the respect even of Mr. Strauss, and he should be willing to allow that we know what we are about, and that we do act above-board. I, as the biggest shareholder, absolutely decline to place any information in Mr. Strauss's hands that I am not compelled to do, and consider I have good grounds for refusal.

Mr. STRAUSS: You separate in the accounts the productive from the unproductive part of the mine. When will you mix the accounts again?

The CHAIRMAN: Not until all the special work is done.

POLICY OF THE COMMITTEE ENDORSED.

Mr. BRANWELL: I am a large shareholder in East Pool and a small shareholder here. We have had a long but not unprofitable talk. The discretionary power reposed in the committee and Mr. Goold has not been abused, and I have had reason to remark the diligence Mr. Goold has displayed on the coal question, and entirely agree with his remarks and action in that respect. In regard to selling tin—when two Leviathans like Mr. Strauss and our chairman are in discussion, smaller men may well stand aside. So far as I can gather, the chairman is favourable to keeping open two markets, finding that at times there is an advantage in selling in each. That is the plan we adopt at East Pool with the concurrence of our shareholders. In days gone by, when the tin trade was a very close borough, the smelters used to make standards, and we used to know what they were. Mr. Goold is perfectly right in taking advantage of the new state of things that has arisen, and also of the mixing value of the produce which makes Wheal Grenville tin sought after at higher prices. I cordially agree with the executive in the way they are managing this mine, and would not join issue with Mr. Strauss in any attempt to upset the present mode of management.

The CHAIRMAN proposed, in very cordial terms, a vote of thanks to Capt. Bishop, and to all those working under him, for their devotion to the company's interests.

Mr. JEFFERY, as a frequent eye-witness of the work of Capt. Bishop and his staff, seconded the motion with great cordiality, and it was carried, as was also a vote of thanks to the chairman, which was proposed by Mr. BRANWELL, and seconded by Mr. SYDNEY W. JACKSON.

THE TOLIMA MINING CO., LIMITED.

REMARKABLE FACTS AS TO THE MINES—£60,000 PROFITS THIS YEAR, AND £400,000 RESERVES IN SIGHT—IMPORTANT SUGGESTIONS BY MR. THOMAS THOMPSON, AND SPEECH BY THE MANAGER.

The ordinary general meeting was held at Winchester House, on Thursday.

Mr. B. Langdale Barrow

(chairman of the company) presided.

Mr. W. W. HOLMES (secretary) read the notice of meeting.

The CHAIRMAN: Gentlemen, it is with great pleasure that for the third time I find myself addressing you as your chairman. I say "pleasure," because whatever is in the interest of the shareholders generally must of necessity be a pleasure and gratification to myself and my co-directors. During the 20 years I have been connected with this undertaking I think I may safely say that it has never been in a visibly better position than it is at the present moment. (Hear, hear.) I may remind you it has always been, and is still, and I hope so long as I am connected with it always will be, the aim and object of this board to

SINK YOUR MINE TO A GREAT DEPTH,

believing, as I do, that its prolonged existence depends upon that policy. I may say that instructions from time to time have been sent to the manager—I was going to say at times almost imperative instructions—to sink the shaft at almost any cost, with what result may now be seen. We have, fortunately, struck a rich and extensive body of ore in the engine shaft, which practically assures our prosperity for some time to come. I commend to your careful consideration the directors' report and balance-sheet, together with the able report of our superintendent, embodying therein the report of Capt. Johns. There is very little to call attention to in the directors' report unless it be about the first paragraph on the second page with regard to the sinking of the new shaft.

IT IS INTENDED TO SINK A NEW SHAFT,

14 ft. in diameter, to cut the present lode in the engine shaft, about 1,000 ft. deep. This shaft will be sunk to the north of the present engine shaft. With regard to the Santa Rosa ditch—this ditch will convey a body of water, which will be, I need hardly say, invaluable to this company. It is estimated that the water to be conveyed will be about 500 miner's ins., representing a nominal horse-power of about 400, with effective horse-power of at least 350, and the third paragraph on page 2 of the directors' report may be interesting, as it makes a statement which ought to put us all in good humour, and make the hearts of the shareholders rejoice.

DIVIDENDS.

It is this, that the board propose to pay on the 31st inst. a dividend of 10 per cent. on the capital of the company, which will clear off the back dividends to the end of 1886 (and possibly before the end of the year, the board will not bind themselves to an actual date), but they hope by Nov. that the back dividend to Dec. 31, 1890, will have been paid off. (Cheers.) If the returns continue as they have been the board hope to have sufficient in hand to pay a dividend of 10 per

cent. on both A and B shares for 1891. Our balance-sheet shows a profit for the year ending Dec. 31, 1890, of 29,833 $\frac{1}{2}$. Should Mr. Green's estimate for the year ending Dec. 31, 1891, come true, there will be a probable profit of 50,000 $\frac{1}{2}$. This, added to the balance now appearing, will produce 79,833 $\frac{1}{2}$, or an estimated

PROFIT OF SOMETHING LIKE 80 PER CENT. ON OUR TOTAL CAPITAL.

That profit of 50,000 $\frac{1}{2}$ is only estimated, but Mr. Green's estimate is tolerably correct, and will probably be to 1891 as low as it was for 1890, because the first five months of this year (Jan. 1 to May 31) made so far as we are advised, a profit of 22,466 $\frac{1}{2}$, or at the rate of 4,495 $\frac{1}{2}$ per month at the mines, which, multiplied by 12, will give us something like 54,000 $\frac{1}{2}$ for 1891. If we take these two sums together (the supposed profit for June), the result will be, for the six months of this year, a profit of 27,000 $\frac{1}{2}$, considerably more than half Mr. Green's estimate. (Cheers.) So that I believe we have, at the present time, invoiced and unrealised on the way something like 56,800 $\frac{1}{2}$ worth of ore, without any "estimating" or any "probable returns." For the information of shareholders not present I will read a

STATEMENT OF THE POSITION OF OUR FINANCES.

The company's balance-sheet shows, for 1890, 29,833 $\frac{1}{2}$ profit. The return of profit at the mine for the first five months of this year, as notified, show 22,476 $\frac{1}{2}$, to which we may add returns for June, estimated, at the average over the last five months, at 4,495 $\frac{1}{2}$. This produces 56,804 $\frac{1}{2}$. This company owes to its A share capital five and a half years' interest at 10 per cent. to Dec. 31, 1890, or 38,500 $\frac{1}{2}$, less dividends paid on May 2 last 3,500 $\frac{1}{2}$, leaving a balance of 35,000 $\frac{1}{2}$ to the good. Taking this 35,000 $\frac{1}{2}$ from the 56,804 $\frac{1}{2}$, that leaves 21,804 $\frac{1}{2}$ wherewith to pay, on realisation, your 10 per cent. on the A shares for 1891, or 7,000 $\frac{1}{2}$, and the like on the B shares, 3,000 $\frac{1}{2}$, making a total of 10,000 $\frac{1}{2}$, which will leave 11,804 $\frac{1}{2}$, added to which must be the probable returns of profit for the ensuing six months, according to Mr. Green's estimate—that is to the remainder of this year. Putting that at 25,000 $\frac{1}{2}$, there remains a balance on Dec. 31, 1891, of over 36,000 $\frac{1}{2}$ —(cheers)—being an estimated probable balance to meet all realisation, and the forming of a reserve fund, and for general purposes in 1891. This will be after payment (probably during the present year) of dividends amounting to 3 $\frac{1}{2}$ for every 5 $\frac{1}{2}$ A share, and 10 per cent on the B capital. Then from Jan. last, the company will have paid 70 per cent. on the A capital, and 10 per cent. on the B capital, and leaving a handsome estimated balance in hand. In addition to that estimated balance for 1891, it will be seen by the superintendent's report that he estimates the reserves for 1892 at 100,000 $\frac{1}{2}$. (Cheers.) The ore raised during 1891 shows a larger average value per ton than formerly, which I think is a most satisfactory feature. I most sincerely congratulate you all (and I speak feelingly) upon our very satisfactory financial position, and I beg to propose "That the directors' report and balance-sheet for the year ending Dec. 31 last be and are hereby adopted; and that, in conformity with the recommendation therein, a dividend of 10s. per share upon the A capital of the company, be and is hereby declared payable on the 31st inst." (Cheers.)

Mr. C. O. ROGERS (director): I second the motion, and generally on these occasions make a few remarks, but as Mr. Green is here to-day I will not take the words out of his mouth, but leave him to tell you the brilliant state in which the company now finds itself. Some of you may, perhaps, recollect that this company has been formed to-day 20 years, and we shall have paid at the end of the year, when we pay these big dividends, an average dividend of 10 per cent. since the company was formed. I do not think there are many mines that can say that, and at the end of the present year not only shall we have paid that dividend, but we shall have, according to what Mr. Green I have no doubt will tell you, 100,000 $\frac{1}{2}$ worth of profit in sight. (Cheers.)

VIEWS OF SHAREHOLDERS.

Mr. SHILLINGTON: I believe the state of the mine to be eminently satisfactory, and to cause universal gratification to us. I should like to have heard that the 4,000 $\frac{1}{2}$ debentures on the mine had been paid off. I hope the directors will take an early opportunity out of these immense reserves, out of cash and ore, to pay off that sum, and resume possession of the mine. There used to be written off plant 10 per cent. for depreciation, but since 1884 nothing has been written off. I suppose it is being maintained out of revenue. Are we to understand the profit telegraphed each month is net or less reserve for realisation? I find no account from the trustees of Organos Mine, and how they have applied the royalties. Although they put in the balance-sheet 542 $\frac{1}{2}$ 10s. 10d., received and applied in reduction of debentures, I do not find any have been redeemed, and the amount is the same as last year.

AN EYE-WITNESS SPEAKS.

Mr. R. G. WEBSTER, M.P.: The report is so eminently satisfactory that all the shareholders, including myself, fail to appreciate it. Since this time last year I have had the pleasure of visiting your mines, and think I may be allowed to testify to you how well cared for they are. They appear to be as well found as any mines I have ever visited in England or elsewhere. We have recently constructed admirable new offices suitable for the working of the mine, and since my return from Colombia, whenever any gentlemen has asked me if I could give him any advice or a tip, I have only whispered in his ear the word "Tolima." (Laughter.) I think that the report you have given us, with 70 per cent. dividend, which will be practically paid this year, that that advice was not bad. I would ask, however, one or two questions. It struck me in some way or other our ore was not sent so expeditiously to the river as it should be. At Frias there were from 30,000 $\frac{1}{2}$ to 40,000 $\frac{1}{2}$ of silver at the mine. If you were to allow your manager to transmit the silver to Honda or the river we should realise it even quicker and better than we are doing now. Is there any kind of possibility of smelting our own ore in Colombia instead of bringing it to Swansea? I can testify to the energy of the Welsh miners who are assisting Mr. Green in his work, and for the interest they take in the company. I hope that the club which was voted last year for their benefit will soon be constructed, as out there, in a far distant country, it is an advantage to the *employés* to have a place for recreation. I congratulate you on the eminently satisfactory position of the company's affairs.

The CHAIRMAN: The debentures are not on the Frias property, but on the New Organos Mine, and we hope by its sale we may be

able to pay them off, but in any case the 4,000% does not affect the statement I have made to-day.

Mr. SHILLINGTON: It is on the Frias Mine as well.

The CHAIRMAN: That is collaterally. The amounts telegraphed on the mines are subject, of course, to realisation. The debenture account is on the table. The amount of 1,397% is made up of a variety of items. I think our agents are sending off the ore to the coast as expeditiously as it can be done, and the club is in course of construction.

Mr. ROGERS: As to smelting the ore out there, we have had a great deal of experience in that matter. We had a large establishment at a neighbouring mine where we did so, and the result was that by reducing there, 300 ozs. of silver realised 29% 3s. 4d., whereas by shipping we got 46% 16s., owing to the immense loss made because of the refractory character of the ore. It is no common thing to send ore to this country. When I was in Mexico they were sending all their ore to Swansea, because it was of such a refractory character that they found by doing so they could get a better price for it. If we attempted to treat this ore on the spot we should have to lay out at least 40,000% on the plant, and there is no telling how long a mine can last, and should this one give out that, 40,000% would be practically thrown away on any experiment. We had hoped that some Americans in the neighbourhood would have put up a plant, and they may do so still for treating their ore, and we might send ours there and see how it will turn out. It is a question of mixing the different kinds of ore, but for treating ore like ours on the spot, it would be most injudicious to do anything of the kind, as we have experience of what the result would be.

IMPORTANT QUESTION.

Mr. THOMAS THOMPSON: I am not quite clear from the report we have before us about the reserves. From the reports, I glean that a bunch of ore is opened in the 100-fm. level for something like 70 fms. long, but from watching the reports and other documents, I have gathered the impression it is something like 90 fms. long. I would also like to ask the manager, whether any account of the reserves have been taken below the 100-fm. level, and also whether I am rightly estimating the average value of the lode between the two shafts, and, in fact, wherever, this bunch has been found at the 100-fm. level at about 300% per fm. Upon hearing the reply of Mr. Green I shall have one or two remarks to make.

IMPORTANT STATEMENT BY THE MANAGER.

Mr. GREEN, who was received with loud cheers, said: Mr. Chairman and gentlemen, I had anticipated to some extent the questions that have been put, and prepared a statement in reply. I think in what I have to say to you to-day I cannot do better than give you a short description of the change in the condition and prospects of your property during the last few years, and how said change has been effected. I will also describe in sufficient detail the underground workings and the mineral reserves they are now showing. It is just three years ago since I last had the honour of appearing before you. Up to that time, as most of you are aware, Frias Mine had been yielding indifferently well since the bonanza days of 1882-83, and when I took over the superintendence in Nov., 1886, I found everything at a very low ebb indeed. There was practically no mineral ground opened up and in reserve. The machinery and plant were in a ruinous state, and totally inadequate for the purposes of the mine, and, in short, there was a general appearance of bankruptcy about the whole establishment. At the time referred to the A shares of the company were down to 25s., 30s., and the B shares were not quotable. All these circumstances, gentlemen, did not constitute a very cheerful state of things to commence with, but the record of the Frias Mine had been so brilliant in the past, that it led me to be sanguine about the future, and at the last annual meeting which I attended (it was in 1888), I ventured to tell you that I had every confidence that we were on the eve of more prosperous times, and, gentlemen, we have now got them. I think it right to point out that when I took over the superintendence of the company's business in Colombia, I reported to the directors exactly the state in which I found your property; and I told them that I estimated that about 5,000% would be required to open up the new sections of mineral ground and to repair the machinery. The directors' reply to this was to the effect "That there was no money in hand, and if the mine could not be made to pay its way, it must be stopped." As you may imagine, gentlemen, I was very much discouraged at this answer, because Frias Mine itself at the time was wretchedly poor, and the costs were high. After some correspondence, I was allowed to draw for the full value of our monthly invoices of mineral, *i.e.*, nothing was deducted for freight and realisation charges.

MINE PAYS FOR ITSELF.

These latter were provided by the company's agent, Mr. W. D. Powles, to the extent of 2,700%, which sum, gentlemen, is all the money I have received, beyond the produce of the mine itself, to bring your property into its present flourishing condition. It also represents the loss shown by the mine books for the year 1887, or for the first year of my management of the business of the company. We worked very hard, and had an anxious time of it during that year of 1887. Every economy that it was possible to devise was practised, though we were sadly handicapped by repeated breakages to our pumping-gear. From June, 1887, to June, 1888, we were kept out of the bottom workings of the mine altogether, owing to these breakages, and to a short supply of water for our pumping wheel; but, notwithstanding, we commenced making profits within a few months of the time that I last had the pleasure of appearing before you, and we have gone on since then, gentlemen, steadily improving our position.

A FORECAST REALISED.

In concluding my annual report for 1887 I stated: "That it was my firm opinion that, with a liberal expenditure in exploratory work, especially in deepening the mine, Frias had a grand future before it—a future that would exceed the past as to the profit it would give." "It is a bad thing to prophesy unless you know," but the accuracy with which the forecasts (as given in the annual reports) as to returns and profits have been borne out is proof, gentlemen, that we at the mine did know pretty well what we were talking about, and that we were careful in not making promises that we could not fulfil. The current idea about mining is that it is a sort of gamble, and there are

not wanting those who make a good thing out of this popular opinion. I for one, gentlemen, do not concur in this opinion, but I am convinced that, if conducted on proper business lines, and with common sense, there are quite as many chances of success in mining as there are in any other class of enterprise, barring none. Gentlemen, it is on these lines that we at the mines, are endeavouring to conduct your business, and I wish you to take it from me that we have absolute knowledge that success is going to attend our efforts for a series of years, and, I may add, that it is going to be a brilliant success. In my annual report for 1889 I stated "that my mark for 1890 was to have the shaft fairly on its way to the 110-fm. level; profit 30,000% and reserves 10,000%," and, gentlemen, it is with some amount of self-congratulation that in my annual report for that year (1890) (the report now in your hands) I was in a position to state that the shaft had been sunk 30 ft. below the 100. The profits on the year's work amounted to 32,000%, and that the mineral reserves were 120,000%, thus more than fulfilling in every item my prognostications for the year. Now, gentlemen, I am sure that you will admit this to be a very satisfactory state of things. It is, however, a source of great pleasure to me to be able to state that good as this record is, there is better to follow. Our operations during this current year have been attended with success unprecedented in the history of the Tolima Co. I have within the last few days received a cablegram from Frias, conveying an account of the latest developments, and in order to make it clear to you, I have prepared the section on the wall, which I will proceed to explain. The ground opened up to end of Dec., and included in estimates contained in annual report for 1890, is coloured pink, and comprises the following sections:—No. 1, in 100 west, 92 ft. long by 30 ft., 186 tons, allowing for work to Dec.; No. 2, in 100 east up to Sankey's, 26 fms. long by 30 ft. high, 300 tons, allowing for work to Dec.; No. 3, in 100 east from Sankey's, 16 fms. long by 54 ft. high, 650 tons, intact Dec.; No. 4, in 100 east, north branch up to 90 winze, 9 fms. by 10, 136 tons, intact Dec.; No. 5, in back of 90-fm. level, 100 tons, intact Dec.; No. 6, in back of 50-fm. level, 20 tons, intact Dec.; No. 7, in back of 40-fm. level, 130 tons, intact Dec.; total, 1,522 tons, intact Dec.; estimated value, 120,000%. The mineral ground opened up since Dec., *i.e.*, during the current year, and partially proved to end of June, 1891, is coloured a darker shade of pink, and comprises the following sections:—No. 8, in 100-fm. level west, 15 fms. by 8, 480 tons (4 tons per fm.); No. 9, in 100-fm. level east, 15 fms. by 10, 300 tons (2 tons per fm.); No. 10, in 110-fm. level, entire length, 91 fms. by 10, 2,730 tons (3 tons per fm.); No. 11, around engine shaft below 110, 200 tons; total, 3,710 tons. Estimated value, 350,000%; add last year, 120,000%; grand total, 470,000%.

RESERVES.

Of this about 50,000% has been taken out during the half-year to date, leaving the total amount of mineral that we can assume to have actually in reserve at this date, in round numbers, at 400,000%; and bear in mind, please, gentlemen, that even this is not the whole story. You will observe that the shaft is sunk below the 110-fm. level to a depth of 40 ft., and it is valued at that point at 200% per fm. The shaft has produced (it is 17 ft. long) from the 100-fm. level down not less than 15,000% worth of mineral, or 1,000% per fm. So that in all probability we shall have a continuance of riches in depth below the 110-fm. level. My own opinion is that we are only just commencing, and that Frias eventually will prove to be one of the greatest of silver mines. I will not, however, enlarge on this matter, but will follow the safer course, and confine myself to actual knowledge, and simply state that we have at this date (not taking into account the 50,000% worth of mineral extracted during the year, and which does not figure in the accounts in the balance sheet now in your hands) 400,000% worth of reserves. These can be taken out and realised at about two-thirds profit, so that we have a quarter of a million worth of dividends assured, with every prospect of more—much more. What I have promised for this current year is 50,000% profit, but owing to the rich developments during the last few months, steps have been taken to increase the returns somewhat. For the five months ending May of this year, the profits have been about 23,000%, and for the half-year ending June they will be about 28,000%. I hope to make the profits for the whole year equal to 60,000%, or 60 per cent. on the total capital of the company, and this, gentlemen, without unduly encroaching on the reserves.

VALUE OF SHARES COMPARED.

I stated at the commencement, gentlemen, that when I took charge of your property in 1886 the A shares were quoted at 25s. to 30s., and the B's were not quoted at all. To-day, I believe the A's are at 9% 10s. and the B's, the despised B's, are at 5% 10s. This is a satisfactory rise, but it is nothing like their value. I consider the shares to be a safe investment at 20% per share, and I cannot understand why they should be a "sluggish stock," as the sage of Queen Anne's Gate puts it. There is one other matter, gentlemen, that I would like to say a word or two about, and that is the active and persistent development of the mine in depth. The present engine shaft is a very bad one, as you will see by the transverse section on the wall. It is totally inadequate for such a mine as the Frias is, and is likely to be, and I have submitted a scheme to your directors for sinking a new shaft from surface. It is intended to sink it vertically, so as to intersect the Frias vein 1,000 ft. from surface, as shown. It will intersect the Welton lode sooner. The cost of this shaft, with the necessary appliances and machinery for sinking and equipping it, will be about 14,000%, and this cost will be extended over a period of three years, so it will scarcely be felt. Some of you are aware that at the St. John del Rey Mine, in Brazil, two new shafts are being sunk at an estimated cost of, I believe, something like a quarter of a million sterling, and this money has to be provided by the shareholders or by the public. In an editorial, the MINING WORLD newspaper stated in January that in sinking these shafts the St. John del Rey people were going for a certainty, if there was such a thing in mining. I simply mention the fact for the sake of comparison. We at Frias, too, are going for a certainty, but we do not ask the shareholders for a red cent out of their pockets wherewith to do it. They will simply be asked to forego a small percentage of their profits. I should tell you that the machinery and equipment generally at Frias is first-rate. Some 12,000% has been spent on it since I have been in charge, all of which the mine has provided. In conclusion, gentlemen, we at the mines deplore the great distance at which we are situated, as it debars the shareholders and directors from visiting us, and seeing for themselves

the magnificent property they are possessed of, and the manner in which it is conducted. We have been favoured quite recently with a visit by Mr. R. G. Webster, M.P., one of our shareholders, who I am glad to see here to-day. I shall be glad to answer any questions that any honourable proprietor may wish to put. (Loud cheers.)

ADVANTAGE OF GOOD DIRECTION.

Mr. THOMAS THOMPSON: I am sure we have listened with a great deal of interest to the statement just made by Mr. Green. I do not think after that statement there can be the shadow of a doubt in our minds that we have a very valuable property indeed. But a valuable property I venture to say is of very little value indeed without the most effective management on the spot, and on this subject I dare to assert that it would be utterly impossible to have a better manager than Mr. Green has proved himself to be. (Cheers.) Once more I would like to say, that whilst sometimes we have good mines and good managers, those good mines and good managers are of very little use without a good executive, and in that respect also we have everything we could desire. We can under all the circumstances proceed to offer each other our mutual congratulations. But, gentlemen, I did not come here for the purpose of paying compliments. I came here as a business man for a business purpose. I am very glad indeed that I asked Mr. Green the one or two questions I did, because it led to a very satisfactory statement from him. I say I have come here for a business purpose, and with a view to leading up to that, you must forgive me if I recapitulate in a very small way what we have heard from Mr. Green. He tells us, to begin with, that we are to have a profit of 60,000*l.* this year, and he has also told us we have a reserve of ore in sight of the value of something over 400,000*l.* It was because the report only gave the reserves at 120,000*l.*, and because knowing something myself of the mine, I had reckoned the reserves out myself at 400,000*l.* that I asked the questions I did. Mr. Green remarked about our shares being at something like 10*l.* a share, and he said they would be

A SATISFACTORY INVESTMENT AT 20*l.*

In that view I quite concur. I do not know how he arrived at such a calculation, but I will tell you how any ordinary business man could do so. A mine producing 60,000*l.* per annum profit a great many people would reckon as being worth 10 years' purchase, and under any circumstances would do so, if there are reserves in hand, as there are here. Supposing, however, we take seven or eight years' purchase, or only seven years, the value of the mine then comes out at 420,000*l.*, or really 21*l.* per share. Under these circumstances our shares are selling at a ridiculous price compared with their actual value. But now, gentlemen, the question of business, to which I will address myself, is this—how are these shares to rise to 20*l.* each? We have heard of the cynic who tried to sell sovereigns on London Bridge at a shilling each and did not succeed. I do not mean to say for a moment that there is any one here who would wish to sell his shares. I take it we are firm holders waiting for dividends, but there are tides in the affairs of men when they are very glad indeed to realise some property which they may hold, either owing to misfortune, or to stress of business, or other circumstances. Now, assuming that wish to sell, it would be more satisfactory to see these shares quoted at 20*l.* than at the ridiculous price to which I have referred.

NOW, WILL THEY GO TO 20*l.* PER SHARE?

I think I may say, as representing in a very small degree the Stock Exchange, and in a very large degree the Mining Exchange, that under existing circumstances they will not rise to that figure—and why? For this reason, that for the purchase of shares you have to wait upon the demand from the million, and a 10*l.* or 20*l.* share is far beyond the means of the ordinary run of investors. I am not going to make a proposal to-day, but to offer a suggestion to the chairman and the directors for their consideration as to whether it would not be possible, if not now, at some future time, to sub-divide our shares, and make them 1*l.* instead of 5*l.* shares. (Hear, hear.) If that course were taken I do not see why our shares should not rise to 20*l.* each by practically a simple stroke of the pen, because you would largely—very largely indeed—increase the market value of our property by augmenting the number of purchasers. (Cheers.) I admit that in coming here to-day I have done so with somewhat selfish motives, but I am anxious to see my shares stand higher. I feel if they go up, as I hope they may do, that being of a smaller denomination, there will be a much more ready demand for them, and if I want to sell, I shall only have to walk into the market and do so, and I feel also that the members of the Stock Exchange and Mining Exchange will benefit by the largely increased business that will follow; so that while you may only have the rise in your shares to look to, I am regarding it from an all round point of view. I cannot help thinking it will be a great advantage to everybody concerned if we were to sub-divide these shares. (Cheers.) What is the case at the present moment? You go to the Stock Exchange and want to buy 100 shares. How long will it take you to get them? Ask one of the brokers to tell you. Ask me how long I have been trying to get 100 or 200 shares for clients from whom I have had orders, and then let me ask once more how long it will take you to sell your shares under present circumstances? If you were to walk into the market at the present time, I venture to say you would probably have to take less than the quoted price before you could effect a sale, and only because so few see their way to expending so much as 10*l.* per share. Now a great mine like ours should not be in a position such as that. I make no proposals; I merely offer a suggestion. Finally, I conclude by asking this question,—might it not be possible to bring the A and B shares under one common denomination? (Cheers.)

Mr. ROGERS: We have had some idea of that, but have found the B shareholders in the present prosperous state of the mine not in a frame of mind to listen to any reasonable proposition. We will, however, take into consideration the other question, for we quite see, Mr. Thompson, the force of your observations.

The motion for the adoption of the report was carried, and the retiring directors and auditors were re-elected.

A SHAREHOLDER proposed a vote of thanks to the chairman.

Mr. WEBSTER, M.P., in seconding the motion, said: I see that only 6*l.* 8*s.* has been received for transfer fees, thus showing how few trans-

fers there have been, and giving point to Mr. Thompson's remark. I quite agree with him that the shares would be much more easily dealt in if they were of a lower denomination.

The motion was carried unanimously.

THANKS TO THE MANAGER.

Mr. ROGERS: I should like to propose a vote of thanks to Mr. Green and the staff for their admirable services. I engaged almost every man amongst them, and it is entirely through me that Mr. Green was appointed. I think you must all see that we have in him a superintendent who combines what you do not generally find in one of his profession—thorough mining experience and a first-rate knowledge of mechanics, whilst he is also one well qualified to conduct the company's mercantile business. (Cheers.)

Mr. THOMPSON: With the exception of the gentleman on the other side of the table and Mr. Webster, there are few people in the City of London that have had more connection with Colombian mining than I have. From all I hear, and every evidence it is possible to get, I believe Tolima to be one of the grandest mines in the world.

THE NEW ORIENTAL BANK CORPORATION, LIMITED.

THE PAST YEAR HAS BEEN A DIFFICULT AND TRYING ONE FROM EXCEPTIONAL CAUSES—THE PRESENT POSITION AND PROSPECTS DETAILED BY THE NEW CHAIRMAN.

The ordinary general meeting of the New Oriental Bank Corporation, Limited, was held at the Offices of the Bank, 40, Threadneedle Street, on Thursday, July 2, to receive and consider the director's report and statement of accounts; to consider and to declare a dividend; to elect two directors; to appoint auditors and to transact the other ordinary business of the company.

And notice was also given that an extraordinary general meeting of the bank would be held at the above mentioned place and day at the conclusion of the business of the ordinary general meeting, for the purpose of considering and, if thought fit, passing the subjoined resolution. And notice was further given that on the resolution being passed by the required majority, it would be submitted for confirmation as a special resolution to a second extraordinary general meeting to be subsequently convened.

RESOLUTION.

"That article 106 in the company's articles of association be altered by omitting the words 'provided that no director shall be chairman for a longer period at any one time than one calendar month,' in the third, fourth and fifth lines thereof."

Mr. J. C. Shaw

presided.

Mr. ROBERT TURNER ROHDE (chief manager) read the notice calling the meeting, and the report of the directors was taken as read.

BUSINESS OF THE YEAR.

The CHAIRMAN: Gentlemen, as you all have had the report in your hands for some days, it will, I suppose, be agreeable to you that we take it as read, more especially as after the close of this meeting I will have to detain you for a further period at an extraordinary general meeting. Since you last met, the board have lost, by death, their esteemed colleague, Sir Benjamin Pine, one of the original directors of the bank. You will also miss, with regret, Mr. Cargill, who has, since the formation of this bank, taken the chair at your annual meetings, but he felt that advancing years, and he is now close on 80 years of age, necessitated his retiring from all active work. Mr. Cargill began his banking career over half a century ago, and may be said to have been the founder of Eastern exchange banking. Among our staff we have, I am sorry to say, to record the death of four officers, viz., Mr. Bewsher, at Mauritius, and Messrs. Harrower, Douglas, and Renny, at Zanzibar, the deaths of the three last officers occurring within the short period of a month. Immediate steps were taken by the board to ascertain if these three deaths were in any way attributable to the condition of the premises in Zanzibar, and the directors were pleased to learn from the medical report that such was not the case, but were attributable to a severe wave of fever which passed over the island. You will, I am sure, share with us in our great regret at the loss of these officers. I will now ask you to turn to the balance-sheet, where you will see we have placed, as a special provision for contingencies, 165,000*l.* Of this sum 70,000*l.* is to meet the collapse of the native bankers, or chetties, at Singapore. Until lately these native bankers stood on high credit, but they elected to leave their legitimate business as bankers to Chinese and Arab traders, and embarked in other ventures, resulting in money being locked up, and in some cases lost. On the top of these troubles came the Baring crisis, when all banks in the desire to strengthen themselves drew in their advances, thus making the position of the chetties more difficult. At Melbourne we have thought it right to provide for a loss of 80,000*l.*, caused by the injudicious advances by the former manager, Mr. Hepburn. Mr. Hepburn was an old and trusted officer, his connection with the old and new bank extending over a period of 34 years, and he was, prior to his illness, the embodiment of caution.

MR. HEPBURN'S CASE.

I cannot do better than read to you the report we received on Mr. Hepburn's case from Dr. Fishbourne, the great specialist at Melbourne, on diseases of the brain. The report is as follows:—

"Nov. 21, 1890.—In answer to your inquiry, I beg to inform you that I saw Mr. Hepburn in consultation with Dr. Harricks, on Oct. 2 last, and found that he was suffering from that most insidious of maladies, general paralysis of the brain. This disease is generally characterised by three distinct and well marked stages. In the first, the mind usually becomes affected by ideas of exaltation or ambition, under the influence of which persons, imagining that they have vast resources at their command, frequently get themselves into serious financial troubles before the disease is recognised. During this stage there is also loquacity and defective memory. In the second stage, paralysis is manifested, showing itself first in the muscles of articulation. This loss of power gradually extends to the extremities, exalted delusions being still present, and the memory

more impaired. In the third stage, the patient becomes completely demented and paralysed, till at length death terminates his wretched existence. At the time of my visit, Mr. Hepburn was already in the second stage of the disease, which must have existed a considerable time prior to the accident, which he is said to have suffered in the lift. On Oct. 25, I again visited him and verified my previous opinion. The duration of life of a person suffering from this most distressing and hopeless malady, with good nursing, is from three to five years. I regret that my opinion of Mr. Hepburn's case should be so hopeless."

SAD FACTS.

Gentlemen, as soon as the mental condition of Mr. Hepburn was recognised, our Sydney manager at once arranged for the management of the business, and our inspector, who was at the time at Singapore, sailed for Melbourne the very day he got our wire. Deplorable as the loss is, we feel sure you will concur with us that it was a loss which no human being could guard against—a misfortune without precedent in the annals of any bank, and which, I think, I may reasonably say no one in this room is likely to live long enough to see again. The year we have gone through has been one of the most trying and anxious of years. We have had not only the Baring crisis, with its far-reaching consequences, but we have had a time of most violent fluctuations in Eastern exchanges, rates having ranged between $\frac{1}{2}$, $\frac{3}{4}$, and $\frac{1}{2}$, or say 25 per cent., thus gravely affecting trade and the safety with which it is desirable to conduct business. I wish I could say that I believe we are approaching a period of rest in regard to the silver market, but I fear such is not the case, and it looks as if in the coming Presidential campaign in America, each party will for a time utilise the silver question in such a manner as they think will conduce to the success of their party, leading possibly to violent fluctuations, and the general disturbance of business. The New Oriental Bank, like other institutions, has had to bear its share of the troubles, and I think it speaks largely for the stability and the value of the business we possess, that it has not only come out successfully from such a year, but a year in which such an unprecedented misfortune as that at Melbourne had to be added. This bank has had, during its existence of seven years, wonderful exemption from heavy loss, and such exemption could not, looking to the history of older institutions, continue for ever. At certain distances of time some exceptional loss seems to fall on every bank, and having in the year under review had our turn, it is not, I think, unreasonable to expect a period of exemption.

INCREASE OF SILVER CAPITAL.

Our silver capital has increased by considerably over a quarter of a million rupees, and it is in silver we should prefer to see our capital account grow, thus avoiding the ever recurring fluctuations in exchange. The debentures we have paid off to the extent of 71,924l. 0s. 7d., and we hope to see them paid off altogether. On the assets side you will see we had a larger sum in cash and securities than it is customary to hold, a precaution, looking to the troubles then existing in the financial world, we thought it prudent to take. We joined the Baring guarantee to the extent of 100,000l., our interests being bound up with the rest of the banking world in avoiding a catastrophe, the bounds of which it was impossible to foresee. We have the public assurance of the Bank of England that the guarantors are not likely to have to pay anything, and I think, gentlemen, you will concur with me in considering such assurance ample. In conclusion, I would point out that the endeavours of your directors, and they are most earnest endeavours, to make the bank a continued and growing success, must be supplemented by the hearty co-operation of the shareholders in bringing all the business they can to the bank, and by the loyal and intelligent co-operation of the staff here and abroad. I now beg to move, "That the directors' report and statement of accounts to Mar. 31 last, submitted herewith, be and they are hereby adopted." I shall be happy to reply to any questions that any of the shareholders desire to ask.

Mr. TOD HEATLEY seconded the motion.

DISCUSSION.

Mr. LAMONT wished to know why the company embarked at all in a concern like the Gatling Gun, which showed a loss in the accounts of 12,000l. They were an Oriental Bank, and he failed to see what they had to do with an English company of that character. As to the other companies, he hoped the most energetic steps would be taken to prevent a recurrence of any such thing. (Hear, hear.)

Mr. MORLIN WOOD while expressing regret that the losses had been sustained, thought that a more efficient check was possible, now that the telegraph was in full operation. He thought that it was a matter for congratulation that they had an increase in their silver capital. He hoped further steps would be taken to explain the system to the Eastern people, that if they paid for their shares in silver, the payments to them would also be in silver.

Mr. CUFF admitted that they had had a disastrous year from exceptional circumstances, but he strongly denied that the general position was disastrous and that the company was in a serious way at the present time. (Hear, hear, and applause.) He did not consider that the permanent interest of the bank and its strength and solidity had been affected. (Hear, hear.)

Mr. BIRCH desired to offer a suggestion in regard to greater supervision in the colonies. He advocated the system in vogue at the time of the existence of the old Oriental Bank, with which he was interested, of having inspectors to make, periodically, visits to the various branches at unexpected times, and that these inspectors should be changed from time to time, so that any possibility of arrangement or collusion would be obviated. He did not for a moment impute any want of honesty or integrity to their officials—(cheers)—but he simply argued that these things were within the bounds of possibility.

The CHAIRMAN: Quite so.

Mr. BIRCH said that he had had much experience in this matter in New South Wales, and had found it a system adopted by such banks as the Bank of New South Wales, the English, Scottish and Australian Chartered Bank, and other institutions. He thought that these inspectors had peremptory instructions to go into every detail, and to see all securities, &c., &c.

Mr. MACKIE caused some laughter by suggesting that there should be telegraph information conveyed to the London office of every transaction that took place every day in the Colony.

A SHAREHOLDER: With that expense the capital would come to an end in a year.

Mr. POPE asked what steps had been taken to prevent a recurrence of such misfortunes. He also deprecated the running down of their property, and expressed the view that the future of the bank would be very brilliant indeed if the affairs were conducted with honesty, ability, and integrity. (Cheers.)

THE CHAIRMAN REPLIES.

The CHAIRMAN rose to reply, and said that the directors felt very much the consideration shown in the speeches that had been made and the tone of all of them except one. (Hear, hear.) Mr. Bransom was a barrister, a gentleman of legal mind—(laughter)—and it was his idea apparently that it was wise to decry his own property. The directors had been in correspondence with that gentleman, and they had suggested to him that the much wiser course would be to come quietly to the bank and obtain, what they were only too ready to afford, every information in a quiet manner—(hear, hear)—which they afforded day after day to some of the largest shareholders who were reasonable enough to call. He wished to draw the attention of Mr. Bransom to the fact that in addressing that meeting he was not speaking to a private meeting, but to a much larger audience—through the medium of the Press—than were gathered together there, yet, somehow, Mr. Bransom seemed to deem it to his interest to run down his own property—to come and say: "Look here; actually you have made a loss. Now we are actually sinking." If they excepted the loss through the unfortunate insanity of their manager, they had not in the past seven years made losses worth naming. It was difficult enough now to find reliable men as managers; and how much more difficult it would be if they were to be hampered with further conditions in regard to the sanity of those gentlemen, and this point applied to further checks. The great difficulty was that they could not expect an insane man to act sanely, and they could not keep a system of espionage over trusted officials and say: "We think you may become insane, and you had better go." Nothing could be more discouraging or disheartening to these trustworthy servants of the bank than the remarks and reflections made that day. (Hear, hear.) Now, as to the point of the retirement of directors; and first as to Mr. W. W. Cargill. Mr. Cargill was getting more feeble, and he elected to say the time when his health had broken, and he should sever his connection with that company. He (the speaker) saw Mr. Cargill leave that room in the feeble way of an old man. At 80 years of age he presumed that they would allow Mr. Cargill was able to judge for himself whether he would retire, and he had chosen to do so. (Hear, hear.) As to Mr. Boyle, that gentleman had very large business interests of his own in Canada, and that private business requiring increased attention from him, he gave up his duty as a director of that bank, and he (the speaker) thought that any of the shareholders would do the same when their private business was concerned. He trusted that these matters would be considered to have been satisfactorily explained. As to the new item in the accounts of "rest" instead of "profit and loss," it was the more correct term, and the term employed by the Bank of England. If the desire of the shareholders generally was to call it profit and loss it could be done, but it would not make them a penny the richer. He had to thank Mr. Birch for this suggestion as to inspectors, and to point out that some similar system of check—indeed, a three-man and not a one-man check—was adopted by them.

The resolution for the adoption of the report was then put to the meeting and carried.

DIVIDEND.

It was then proposed by the CHAIRMAN, and seconded by Sir WILLIAM MARSH, K.C.M.G., "That, in accordance with the recommendation of the directors, a dividend, at the rate of 6 per cent. per annum, free of income tax, upon the capital of the corporation for the year ended Mar. 31 last, be now declared, and accordingly that the sum of 6s. per share (being such dividend less the interim dividend already paid) be paid to the shareholders on and after July 16 upon all the shares upon the London register on Mar. 31, and that an equivalent dividend in the local currency be paid upon all the shares issued in local currency, such last-mentioned dividend to be paid at the corporation's branches, in accordance with the conditions of issue of such shares, and free of local income tax."

Mr. LAMONT suggested that under the circumstances the shareholders should be contented with no dividend at all this time, and in the most friendly spirit he would move as an amendment, "That no dividend be declared for the past half-year."

The CHAIRMAN said that the matter of the dividend had had the most careful and serious consideration of the board, and they had felt that the shareholders were entitled to receive it, because in former years they had not divided profits up to the hilt (profits that were made, and that they were legitimately entitled to), but had put by sums to reserve, and he recollected on a former occasion their chairman distinctly saying—"We do put it to rest for the purpose." That had now happened. He (the speaker) asked Mr. Lamont, in the best interests of the bank, to accept the directors' resolution, and not to press his amendment.

Mr. LAMONT said he would be willing to withdraw it.

The motion was then carried unanimously.

FORMAL BUSINESS.

The CHAIRMAN then moved—"That the two retiring directors, Mr. G. H. Tod Heatley and Major-Geul. Henry Beville, C.B., be and they are hereby re-elected."

Mr. P. G. SPENCER seconded, and the motion was carried.

Mr. ELESON moved—"That Messrs. Welton, Jones and Co. be and they are hereby appointed auditors to the corporation for the financial year ending Mar. 31 next, and that their remuneration be fixed at the sum of 100 guineas."

A SHAREHOLDER seconded the motion, which was carried.

EXTRAORDINARY GENERAL MEETING.

The meeting was then made special. The notice having been read, The CHAIRMAN said: Gentlemen, I must detain you a short time longer to obtain your sanction to an alteration in article 106 of the company's articles of association. That article, as it now stands, viz., "That no director shall be chairman for a longer period at any one

time than one calendar month," is based on the principle accepted by some of the London banks, and is, no doubt, well suited to banking in England, where every branch is within a few hours' rail, but with us weeks have to elapse before a letter can reach, or an officer be sent to inspect, a branch. From this it results that the letters addressed during the tenure of office by a chairman often do not reach the branches until the chairman has vacated office. We understand that the other banks trading with the East have their chairmen appointed for a longer period, and have not the restriction we have in article 106, and which we are desirous of having changed. The change we ask you to make will, we believe, lead to the better working of the bank, and will, we trust, meet with your sanction. I beg to move "That article 106 in the company's articles of association be altered by omitting the words 'provided that no director shall be chairman for a longer period at any one time than one calendar month,' in the third, fourth and fifth lines thereof."

Mr. J. A. FERGUSON seconded, and the motion was carried.

THANKS.

Mr. W. B. LIDDELL moved "That the thanks of the shareholders be given to the board of directors and to the chairman of the meeting."

This was seconded by Mr. F. BIRCH and carried.

The CHAIRMAN, in response, thanked the shareholders for their vote and confidence, and while expressing great confidence in the future, urged them at all times to stand by the bank.

The meeting then separated.

THE TASMANIAN LAND AND EXPLORATION CO., LIMITED.

LATEST NEWS FROM THE COLONY.

AN extraordinary general meeting of the Tasmanian Land and Exploration Co., Limited, was held at the Offices of the company, 80, Coleman Street, on Tuesday, June 30, in order that the resolution, which was passed at the extraordinary general meeting of the company, held on June 12, 1891, and reported in our columns, might be submitted for confirmation as a special resolution.

Mr. E. J. Walford

presided.

Mr. F. A. ABRAHAM (secretary) read the notice calling the meeting.

Mr. C. KING SMITH proposed the confirmation of the resolution.

Mr. D. C. BARTON seconded the motion, which was carried.

The CHAIRMAN then said: I may tell you, gentlemen, that our news from Tasmania as to our properties since the last meeting is of almost satisfactory description. In fact, one of our silver properties

is so rich and so easily worked that we are about to work it ourselves, and I expect before a few weeks are over we shall receive weekly shipments of silver from this mine. I hope that it will turn out as well as we expect, and that we shall be able to pay to the proprietors a good dividend upon it.

On the motion of Mr. DUDLEY WOULFE, seconded by Mr. ERNEST WALFORD, a vote of thanks was accorded to the chairman, and the proceedings terminated.

will be payable on Wednesday, the 8th day of
July next.

The Warrants for the Dividend on the
Registered Shares will be forwarded by post
on the evening of the 7th July.

Holders of Share Warrants to bearer will
receive payment of the dividend upon
presentation of Coupon No. 7, either at the
Company's Offices in London, or at the Credit
Lyonnais in Paris.

Coupons for payment in London must be
left two clear days previously for examination,
and must be listed upon the printed forms
obtainable at the Company's offices. They
can be deposited on and after Wednesday
next, the 1st July.

Coupons presented in Paris will be paid at
the current rate of exchange.

By order of the Board,
C. LEWIS BENNETT,
Secretary.

TELEGRAPHIC ADDRESS—

QUINLAND—LONDON.

MINING MARKET.

CITY, FRIDAY EVENING.

CATS GO TO LOOK AT AN EMPEROR, AND MICE PLAY WITH PRICES—FEATURES OF THE WEEK—SPECIAL NOTES UPON CALLAO BIS, MYSORE WEST, MYSORE REEFS, DAY DAWN BLOCK, &c.—NOTES OF THE MEETINGS.

THE week has been a much busier one than was expected, but to-day prices have been nominally knocked down like ninepins, so that they simply indicate what certain persons would feign make the public believe. The truth is that the cats being away to look at a King (or rather an Emperor) the mice have been playing with current quotations. It cannot, however, be too much insisted upon that these do not represent actual values. They represent rather the holiday of the cats, making an opportunity for the frolicsomeness of the mice. As the chairman of Mysore Reefs said at the meeting to-day—"the value of no mining share now is indicated by its quoted price."

To-day has furnished a really golden opportunity of advantageously closing bear accounts. The ordinary brokers who had no invitation to join the gourmandisers at the Guildhall went away for a few days' holiday, and, of course, the bears knew it. Equally, of course, they knew that to-morrow the Mining Exchange and Stock Exchange will be closed, and that business will not be resumed until Monday. It would not have been resumed even then were it not that it is the first day of the account, when, Emperor or no Emperor, each man must be in his place to give an account for the deeds done on the market.

Amongst the features of a week, characterised by rather more business than was expected, has been, in its earlier part, a rapid advance in Mysore West shares, which occurred after the satisfactory statements made at the meeting had had time to percolate through the country. The rise was not sustained, but the sensitive character of Mysore West shares is thus indicated. The crushings from the Indian mines are fairly favourable and up to the rate of progress to which we are accustomed. Dealings in these descriptions have, however, been without much permanent change of price. The map we published a fortnight ago, showing the relative

position of what may be called the struggling mines to those that have won their spurs, has had a good effect upon the holders of certain shares as showing the distinct position in relation to the already successful mines. There is no doubt that the re-construction of Mysore Reefs will be a great success. Promises of support to that effect are already to hand, but shareholders must exercise their option within 30 days from to-day. The telegraphic news from the mine is good, and follows as a natural sequence upon the recent reports to which we have more than once called attention.

Another feature of the week has been the enquiry that has existed for Callao Bis shares, of which some thousands have changed hands during the present week. They are still dealt in, call not paid. The call is 1s. 6d., and the general opinion is that cheap purchases are made at present prices. In that opinion a correspondent seems to concur.

Referring to what we said of Callao Bis last week, an old Gold Digger, who has been watching the mine for years, writes:—"I am buying shares now, relying on the telegram that they have struck a north and south lode bearing visible gold. A north and south lode generally is payable, and may usually be depended upon. East and west lodes in gold never are reliable for continuity." The last crushing is thought highly of in mining circles.

Generally, there has been rather more life in the Miscellaneous market.

The fall in Australian Broken Hills to-day has been caused by the advantage the "bears" took of the cablegram from the mine, to the effect that there would be no output for the fortnight ending this day. No explanation has been given, but it will, doubtless, be forthcoming at the meeting on Monday, of which we shall publish a *verbatim* report.

Some interesting meetings have been held this week. There is Palmarejo, for example, respecting which the shareholders will be glad to hear that both mill and railway are on the point of completion. The meeting almost ended in a storm owing to the tone adopted towards the shareholders by Mr. Hart, a director of the Mexican Mineral Railway, who, in almost as many words, told Palmarejoites that they had no right to enquire about the progress of this work, a right which they hotly contended they had. As everything depends upon the completion of the railway, it was funny to hear Mr. Hart telling the shareholders they had no business to enquire about it. The meeting of the Transvaal Exploration and Land Co. was satisfactory, because only was a good record given of the progress of the mine, but a proof of it was forthcoming in the shape of a dividend of 6d. a share. Then, too, the Valley Gold meeting was not without interest. The shareholders here seem really to have a good property, and they should aid the board by subscribing for the preference shares so as to profit by it. The Burma Ruby meeting was disagreeable. Shareholders manifested their dislike of the too ornamental board, which at present directs affairs, by refusing to re-elect the retiring directors. If a fresh body of directors were obtained possessing mining experience, it is probable that the last state of this company would be better than its first. Those who bought at a premium have doubtless sworn under the blue canopy of Heaven that they will never follow the big names connected with this concern again unless they come in at the bed-rock price. The shares are now quoted at a discount on the 15s. already paid upon the 17. shares, which at one time were quoted as high as 37. The New Gordon Mining Co. meeting calls for no remark, for its shares excite but little interest on the market. Neither does that of the North Mexican and Milling Co., the mouths of whose directors seem always to be full of promises, but the metallic issue of which never finds its way into the pockets of the shareholders. The Wentworth, originally started as a Wynaad Mining Co., is now carrying on purely agricultural operations. The Murchison Crown Reef Co. held a satisfactory meeting yesterday, and the Champs D'Or an equally satisfactory one to-day. East Pool dividend of 8s. is a glimmer of light amidst the prevailing darkness of Cornish mining.

The dealings of the week generally have not left prices where it found them. In addition to the mines specially referred to already, De Beers and New Jagersfontein are quoted up along with a few of the laud and gold descriptions, but, generally speaking,

Kaffirs have shown a staggering market. Silatis fell fractionally on the best report that has been received from the mine. In the general market Pinos Altos shares have been dealt in at better prices, but the American market has been woefully depressed. So also has that for Cornish shares, though the record is not so discouraging as it has been of late. There are some rises at least to set against the falls. For weeks past the falls have had it all to themselves. New Kitty (a J. B. Reynolds mine) has been advertised for sale.

Palmarejo fell substantially on the meeting. To quote the words of a broker on returning to the Exchange after attending it, "There was no life in the meeting, and the Hart incident did not give it a pleasant flavour." Everybody appears to have been deceived—the directors who employed engineers, the engineers who made the estimates, and the shareholders who subscribed upon the faith of what they said. The cost of both railway and mill has been horribly exceeded, and also the time taken to complete. We now heartily wish the company a happy issue out of all its troubles.

The state of the market is well illustrated by what has occurred in the Australian section. Three mines have declared dividends this week. Day Dawn Block, Gympie Great Eastern, and New Queen, and one would suppose that a substantial rise would have occurred in the shares, but no! These shares only rose fractionally. Gympies are very good to buy, and what we say of Day Dawn Block is to be found lower down.

Many of our readers may not be aware of the greatly improved position of the Day Dawn Block and Wyndham Gold Mining Co., but the following facts and figures not only give the course of the company since its issue in September, 1886, but to the present time.

	Tons crushed.	Yield of Gold. Ozs. dwts. grs.	Value. £	Net Revenue. £
Sept. 11 to Mar.				
31, 1886-7 ...	13,663 ...	21,984 16 0 ...	75,047 18 3 ...	42,899 4 9
Mar. 31, 1888 ...	24,120 ...	36,805 16 4 ...	128,295 8 3 ...	72,297 2 8
Mar. 31, 1889 ...	17,326 ...	17,374 12 18 ...	60,270 16 9 ...	17,502 2 1
Mar. 31, 1890 ...	31,216 ...	23,427 16 0 ...	82,340 13 0 ...	29,911 12 2
Mar. 31, 1891 ...	9,318 ...	7,191 5 0 ...	25,996 4 1 ...	10,790 13 5
	95,643	106,784 5 22	371,951 0 6	173,400 15 1
Add crushings Apl., May, June ...	2,802 ...	4,362 0 0 ...	15,010 0 0 ...	10,000 0 0
	98,445	111,146 5 22	386,961 0 6	184,400 15 1

From the above figures it will be seen that during the five years, nearly, of the company's life in London, nearly 100,000 tons of quartz have been treated, yielding 111,000 ozs. of gold, of a value of upwards of 385,000£ sterling. The application of the net revenue acquired during that period is satisfactory, as well as interesting. It amounted to 173,400£. down to the date of the report now issued, Mar. 31 last, and with the net amount since obtained of 10,000£, it stands at present at 184,400£. Out of this dividends paid in Dec., 1886, Mar., June, Sept. and Dec., 1887, and Mar., 1888, amounted to 108,780£. The new mine, railways, and new shaft, &c., absorb 47,882£. 19s. 6d. The dividend now about to be paid, 12,460£.—169,122£. 19s. 6d.; leaving in hand at the present date no less than 15,277£. 0s. 6d. towards a further dividend, so soon as the directors think it well to make the distribution. The present workings show a block of ground 177 ft. deep, by about 200 ft. broad, and levels above and below are about being driven, which should give a further depth of 200 ft. on the lode, thus doubling in effect the estimate of 10,000 tons formed by the general manager in his report. In addition to this the company is prospecting its unworked ground, of which there remain some 40 acres, at more than one point, and it is quite possible that within a very short time a further extension of the pay ore may be discovered to swell the present encouraging returns. Of course, with a splendid mill, having, as the directors state in their report, a capacity of 35,000 tons per annum, the company can treat an increased output from the mine up to, say 1,500 tons per fortnight. The company's position appears to be a very strong one. The management is unquestionably in good hands, and the future of the undertaking should inspire confidence in any one desiring a mining investment. Looking at all these facts, we have a sort of inner consciousness that the directors might declare an interim dividend in addition to the dividend of 6d. per share to be declared at the forthcoming meeting. The price of the shares at 8s. 6d., with 1s. for dividends in hand, is, we think, worth the attention of those who are seeking for a good speculation at a moderate outlay.

The East Pool dividend of 8s. we have already mentioned, but against this comes the call of 5s. 6d. on South Crofty shareholders, and of 2s. 6d. on those of New Cook's Kitchen, whilst 4s. is expected to be the penalty reserved for those of Wheal Agar.

KAFFIRS.

The market has been flabby, and even in the best shares it has

been very difficult to deal. Spes Bona have receded, also Crown Reef, Ferreira, Jubilee, Jumpers, Langlaagte, Royal, and Simmer and Jack, while there is not a single rise to call for notice.

Business:—A rise is to be noted in Bantjes of 6d.; Bothas Reef, 2d.; Glencairn, 2s.; Luipaards Vlei 1s.; and Witwatersrandt Knight, 6d.

The following have fallen:—Piggs Peak, 6d.; City and Suburban, 1/8; Crown Reef, 1/8; Durban Roodepoort, 1/8; Ferreira, 20s.; Forbes Reef, 6d.; Henry Nourse, 1/8; Jubilee, 1/8; Jumpers, 1/8; Kleinfontein, 1/8; Langlaagte, 1/8; Ditto Block B, 6d.; Main Reef, 6d.; Moss Rose, 6d.; Robinson, 1/8; Salisbury, 1s.; Simmer and Jack, 1/8; Spes Bona, 1/8; and Vogelstruis, 6d.

DIAMONDS.

Dealings on a limited scale have taken place in a few shares of this class, and on Paris purchases De Beers and New Jagersfontein are slightly firmer. The market, however, closes weak generally.

Business.—A rise has taken place in De Beers of 1/8; New Jagersfontein, 1/8; and Burma Ruby, 1/8; whilst a fall is shown in Bultfontein Consolidated, 3d.; and Ottos Kopje, 3d.

SOUTH AFRICAN LAND COMPANIES.

There has been but very little doing, and prices generally are lower at the close. The meeting of Bechuanaland yesterday was not viewed favourably, and the shares close lower. Moodies are also lower, while the only rises to note are in Oceana and British South African Chartered.

Business.—A rise is to be noted in British South African Chartered of $\frac{1}{8}$, and Oceana, $\frac{1}{8}$; whilst a fall has taken place in Bechuanaland, $\frac{1}{8}$; Gold Fields of South Africa, $\frac{1}{8}$; Moodies, $\frac{1}{8}$; New Grahamstown, 6d.; Ophir, 3d.; Silati River, 6d.; and Transvaal Estates, 6d.

AUSTRALIANS.

Again there has been important business in this class, especially in Australian Broken Hill Consols, which have been dealt in as high as $\frac{1}{16}$, and then receded to $\frac{1}{16}$, but close this evening at $\frac{1}{16}$ to $\frac{1}{16}$. Other shares have been in demand, such as Day Dawn Block, Day Dawn P.C., Gympie Great Eastern, and New Queen. Gympie Great Eastern changed hands freely at one time at 10s.

Business.—A rise is shown in Day Dawn Block of 1s.; ditto P.C., 3d.; Gympie Great Eastern, 1s.; Kapanga, 6d.; and New Queen, 3d.; whilst a fall has taken place in Australian Broken Hill shares of $\frac{1}{2}$; and British Broken Hill, $\frac{1}{4}$.

INDIANS.

These shares again opened firmer at the beginning of the week, and things generally looked brighter, but prices have since receded. Goldfields of Mysore had a good rise, and at one period changed hands at 39s., but do not close quite so good, although with a firm market. Mysore Wests have also been in demand, and rose to 3s. 6d. buyers, but do not close quite so good. Mysore and Ooregum are a shade lower on the assumption that the new shares given to Goldfields Co. will be placed on the market.

Business.—A rise is to be noted in Balaghat of 3d.; Goldfields of Mysore, 2s. 6d.; Mysore West, 9d.; and Mysore Wynaad, 3d. (now call paid). The falls are in Mysore Gold of $\frac{1}{8}$; Mysore Harnhalli, 3d.; Nine Reefs, 3d.; Ooregum Ordinary, $\frac{1}{8}$; and Ooregum Preference, $\frac{1}{8}$.

COPPER.

The market has been almost lifeless, and although in Rio Tintos there have been a few changes of price, the market has not much altered. Tharsis has fallen and markets close dull.

Business.—The only change on the week is in Tharsis which has receded, $\frac{1}{8}$. Others remain stationary at last week's quotation.

GENERAL FOREIGN SHARES.

A fairly large amount of business has been done, but in several cases prices have not been maintained. American Belles receded on selling from the north, and from the same direction Montanas have been pressed for sale and close at lower prices. Callao Bis are a shade firmer. New Gustons have been offered, but leave off fairly firm at quoted prices. Tolima shares have been in demand, and a scarcity of shares caused prices of both A and B to improve.

There appears to be a disposition to put Yankee Girls on the market, and so far the bears have been successful, for they close this evening 6s. to 7s. premium, a somewhat severe fall. It is expected they will see much higher prices ere long.

Business.—A rise is shown in Callao Bis of 9d.; Pinos Altos, 6d.; Tolima "A," $\frac{1}{2}$; and Tolima "B," 2; whilst a fall has taken place in American Belle of 2s.; Balkis, 3d.; Colorado, 3d.; De Lamar, $\frac{1}{8}$; Elkhorn, $\frac{1}{8}$; Flagstaff, 3d.; Frontino, 1s.; Golden Feather, 6d.; Golden Gate, $\frac{1}{4}$; Montana, 2s. 6d.; New Guston, $\frac{1}{4}$; Pahang Corporation, $\frac{1}{8}$; Palmarejo, $\frac{1}{8}$; St. Augustine, 6d.; Tesoro, 1s.; Tetuan, 6d.; and Yankee Girl, 3s.; Yuruaris are slightly easier.

The following list shows the principal changes which have taken place:—

LATEST FROM THE MINES.

INDIAN MINES.

BALAGHAT-MYSORE.—The directors have sold through Messrs. Johnson, Matthey and Co., Limited, the gold obtained in May, which realised 1,001l. 3s. 5d.

MYSORE.—A telegram, dated July 6, gives last month's return of gold as follows:—"3,546 tons of quartz produced 5,070 ozs., also 490 ozs. were obtained from tailings; together, 5,560 ozs. The tailings machinery has been idle since 24th ult. owing to scarcity of water." The company have sold, through Messrs. Johnson, Matthey and Co., Limited, the gold obtained in the month of May, which realised 22,456l. 17s. 2d.

NUNDYDROOG.—The directors have sold through Messrs. Johnson, Matthey and Co., Limited, the gold obtained in May, which realised 6,188l. 1s. 2d.

OOREGUM.—This company has sold the gold produced in May for 11,037l. 7s. 7d.

COLONIAL MINES.

AUSTRALIAN BROKEN HILL CONSOLS.—The board of directors have received a telegram from the managing director resident at Broken Hill, to the effect that there will be no output for the fortnight ending this day.

BRITISH BROKEN HILL PROPRIETARY.—During the week ending 9th inst., 673 tons of ore were treated, including 256 tons of iron ore, yielding 114 tons of lead, containing 6,057 ozs. silver.

BROKEN HILL PROPRIETARY.—During the week ending 9th inst. there were 4,810 tons of ore treated, yielding 673 tons of lead, containing 177,970 ozs. silver.

DAY DAWN BLOCK.—A cable from the general manager gives the result of the crushing for the fortnight ending the 4th inst.:—"700 tons crushed; yield of gold, 870 ozs.; approximate value, 3,000l.; fortnight's expenses, 1,100l."

DAY DAWN P.C.—An interim dividend of 6d. per share (free of dividend and income tax) has been declared, payable on and after

Monday, Aug. 10, to all shareholders on the register on Tuesday, the 21st inst. A cablegram gives the result of this company's crushing for the fortnight ending July 4, viz.:—"1,120 tons, 1,137 ozs." (Estimated value, 3,865*l*.) "1,137 ozs. shipped per s.s. Merkara." The cable adds: "The reef in No. 12 level east from main shaft is 10 ft. thick, of good quality."

HARRIETVILLE.—A telegram from the mine dated July 9, is as follows: "We have struck two shoots ore of fair grade, north and south Gnerdon tunnel J. Has the appearance of good body of ore; pieces of quartz very rich in free gold, 450 ft. backs. A part of mill is running on ore from here. This is a great improvement in general prospects. Government granted 730*l*. to sink. Have secured new lease adjoining Guerdon."

KAPANGA.—Telegram from the manager, viz.: "Have crushed 100 tons of quartz, yielding 35 ozs. of gold."

MOUNT LEYSHON.—The manager at Charters Towers gives the fortnightly crushing thus:—"480 tons crushed; 240 ozs. gold; 20 stamps mill ran 162 hours (6 days 18 hours); stopped same for boiler to be cleaned and repaired; new 10-stamp mill running."

NEW QUEEN GOLD.—The directors have declared a dividend of 6*d*. per share for the year ending 30th ult., payable on 17th inst.

SUNBURST.—A cablegram from Charters Towers reports that the company crushed for the past fortnight 210 tons for 871 ozs. gold; value 3,050*l*. A dividend of 1*s*. per 48,000ths share is declared.

VICTORY (CHARTERS TOWERS).—The company crushed during Apr. and May 1,618 tons for 1,962 ozs. gold; value 6,850*l*. This came from the Victory reefs in No. 1 shaft.

FOREIGN MINES.

ALMADA AND TIRITO.—Cable from the superintendent at the mine: "Month's profit for June, \$3,000."

AMERICAN BELLE.—Capt. Harvey cables: "There have been 26 cars shipped during the June month of an estimated value of \$5,000." N.B.—Until the Silver Bell shaft is fitted with new apparatus for hoisting ore the output must be very limited, but Capt. Harvey reports that the mines are all right and looking well, and as soon as the above work is completed the output will materially increase.

CASTILLON (PYRENEES).—The company has sold 50 tons silver-lead ore to Messrs. Nevill, Druce and Co. at 9*l*. 2*s*. 6*d*. per ton f.o.b. Bordeaux.

DE LAMAR.—Cable:—"During the month of June 1,200 tons were crushed, producing \$37,000 bullion; estimated value of shipping ore, \$12,300; miscellaneous receipts, \$800; total revenue, \$50,100; total expenses, \$23,100. During the second week of the month various milling experiments were made, thereby decreasing the amount of ore milled."

DICKENS CUSTER.—A cable from Mr. Axford, the managing director, states:—"Shipped bullion amounting to 4,335*l*. during the month of June. Expenses for the month of June are cash 1,720*l*.; milling and mining supplies, 870*l*."

EBERHARDT.—Mine prospects remain unchanged. Weekly output quantity 35 tons. The average is \$36 per ton. I am making all progress possible at Eberhardt. All expenses during June will be about \$4,000*l*.

ELKHORN.—Bullion produced for week ending July 4, \$8,650. Mill shut down one day for repairs. The breast of the 1,150 level south assays 70 ozs. to the ton.

GOLDEN GATE ALLUVIAL SYNDICATE.—Col. McLaughlin, the company's general manager at Oroville, cables: "Main flume completed. Am closing wing of dam (preparatory to turning river."

GOLDEN GATE.—Cablegram from Charters Towers, July 3, reports that the company cleaned up from past fortnight's crushing, "780 tons, yielding 1,169 ozs. gold; value, 4,000*l*." A dividend of 1*s*. per share is declared in addition to a similar amount declared on June 15.

GOLDEN FEATHER CHANNEL.—Col. McLaughlin, the company's general manager at Oroville, cables: "5,000 ft. sub-flume laid. Preliminary test of pipe line (conveying Miocene water for sluicing gravels) very satisfactory."

MESQUITAL DEL ORO.—The following cablegram gives the result of the June mill-run:—"50 stamps run 660 hours (27½ days); quantity of ore crushed, 3,154 tons; bullion produced at clean up 1,638 ozs.; value about 6,200*l*."

NEW PIERREFITTE.—The company has declared an interim dividend of 2*s*. per share or 10 per cent. on the capital for the quarter ending June 30, 1891.

NEW VISO.—The company sold on July 6 a small parcel of tin at 52*l*. 7*s*. 6*d*. per ton to Messrs. Williams, Harvey and Co.

PESTARENA UNITED.—The mine produced in June 445 ozs. 5 dwts. of gold from 439 tons of ore, equal to 1 oz. 0 dwts. 6 grs. per ton.

PITTSBURGH CONSOLIDATED.—Cable from the mines:—"Total cost for the preceding month at the mine and the mill, \$9,400. Estimated yield, \$11,400."

RUBY.—Cable:—"No tribute ore either shipped or smelted. 21 tons ore on company's account shipped and smelted, realising \$800."

SAN LUIS.—The following cablegram has been received from the company's manager at San Luis, Nicaragua:—"Bullion shipped, June 27, 940*l*."

ST. JOHN DEL REY.—The directors have received the following telegram from the mines:—"27 fms. sunk; 4 fms. driven, during June."

TOLIMA.—Cable from the superintendent respecting the estimated June returns:—"The gross returns are 8,000*l*. The nett profit is 4,500*l*. Shaft sunk 18 ft."

HOME MINES.

DRAKEWALLS.—The manager says he sold on 3rd inst. 330*l*. 7*s*. 9*d*. worth of black tin.

NEW COOK'S KITCHEN.—The adventurers held a four-months' meeting on the mine on Thursday. The accounts showed the labour costs to have been 744*l*.; merchants' bills, 246*l*.; Illogan parish rates, 7*l*.; total debits, 998*l*. The tin-stone sold produced 843*l*., leaving a loss on the sixteen weeks' working of 454*l*. and a balance against the mine of 465*l*. A call of 2*s*. 6*d*. per share was made to clear the books.

SOUTH CROFTY.—A call of 5*s*. 6*d*. per share was made at the meeting on Thursday. According to the statement of accounts, the labour costs had been 2,995*l*. 7*s*. 6*d*.; merchants' bills, 1,716*l*. 18*s*. 7*d*.; minimum rent (Mrs. Freake), 25*l*.; interest and commission, 7*l*. 5*s*. 3*d*.; total debit, 4,744*l*. 11*s*. 4*d*. Arsenic sold, 7 tons 3 cwt., for 60*l*. 19*s*. 7*d*.; tin, 61 tons 6 cwt., for 3,306*l*. 16*s*.; extra carriage, 10*l*. 13*s*. 5*d*.; sundries, 1*l*. 11*s*. 5*d*.; total credits, 3,380*l*. 0*s*. 5*d*. This left a loss of 1,364*l*. 10*s*. 11*d*., and a balance against the mine of 1,609*l*. 8*s*. 4*d*.

WEST CARZISE.—The indebtedness of the mine is 460*l*. 15*s*. 10*d*. The mine has called up from commencement 10*s*. per share, and the had arrears, some of which dates back many calls, average a little over 3 per cent. The call to be made must be sufficient to cover the liabilities shown in the accounts. The plant and materials were sold by public auction, on the mine, on Apr. 15 last, in lots, and realised 184*l*. 17*s*. 9*d*., all of which has been paid.

AFRICA.

LATEST FROM THE GOLD AND DIAMOND MINES.

SALISBURY.—The crushing for last month was 1,150 ozs.

SIMMER AND JACK.—Cable: "Profit for last month, 4,500*l*."

STANHOPE.—The result of last month's crushing yielded 934 ozs. of gold.

KIMBERLEY WATERWORKS.—Sold during June 9,400,000 gals. of water.

FERREIRA.—Crushings for last month 4,261 tons, yielding 4,001 ozs.

JUMPERS.—Quartz crushed during June, 3,500 tons, obtained 1,659 ozs. of gold.

JUBILEE.—The result of last month's crushing is 521 ozs. of gold; will not pay a dividend.

CITY AND SUBURBAN.—The result of last month's crushing yielded 952 ozs. of gold.

FORBES REEF.—The yield of gold for the month of June is 46 ozs., obtained from surface soil only.

AKANKOO.—Telegram received 9th inst. from manager: "All going on well; 10 heads at work."

GELDENHUIS MAIN REEF.—The result of June crushing produced 485 ozs. of retorted gold from 800 tons.

WEMMER.—Cablegram:—"1,200 tons crushed; 1,100 ozs. gold won; 15 stamps working 21 days; and 152 ozs. of gold from tailings."

ROBINSON.—Forty stamps, at work 28 days, crushed 4,571 tons; yielded 5,007 ozs. smelted gold; tailings, 1,600 ozs.; total, 6,607 ozs.

CENTRAL MONTROSE ESTATE.—June crushing with a 10-stamp battery was 476 tons, yielding 311 ozs.; expense on revenue account, 590*l*.

MAY CONSOLIDATED.—Cablegram:—"The yield of gold during the past month (June) was 2,000 ozs. from 5,200 tons. Mill running 25 days."

NEW CHIMES.—Mill running well; return for the month, 335 ozs. of gold, and 5½ tons concentrates, averaging 11 ozs. per ton from 775 tons of ore.

NEW PRIMROSE.—The cost of working for the month, including 756*l*. 8*s*. 2*d*. spent in development, has been 4,072*l*. 17*s*., leaving a profit of 2,635*l*. 3*s*.

MAY DEEP LEVEL.—Cable: "24 days milling, 544 tons crushed, yielding 654 ozs. gold; estimated value of concentrates, 875*l*. Every-thing working well."

GELDENHUIS ESTATE.—The company crushed during 20 days last month 2,356 tons, which yielded 1,888 ozs. of gold; the profit for the month was 3,250*l*.

WITWATERSRANDT (KNIGHT'S).—A cable gives the results of work ing for the month of June, viz.:—"3,400 tons crushed 685 ozs. of gold won; 25 working days."

NORTH-EASTERN BULTFOUNTEIN.—Telegraphic advice received announces for last week 5,000 loads washed, producing 1,050 carats of diamonds; machinery overhauled. Blue deposited 7,000 loads.

VOGELSTRAIS.—A cablegram from Johannesburg, July 8:—"Total amount crushed 900 tons, gross yield being 309 ozs. South drift: total amount crushed 710 tons. Struben leaves for England by Mexican."

COETZEESTROOM.—The manager telegraphs on July 3, that he had "crushed since last message, 760 tons, giving 3½ dwts. per ton free gold. It must be remembered that the principal part of the gold is in the pyrites, which remains to be concentrated."

CROWN REEF.—The crushing for the month of June during 27½-24th days of 24 hours was 5,392 tons, yielding 3,434 ozs. of smelted gold. The revenue for the month was 12,276*l*. 11*s*., and the working expenditure was 6,570*l*., leaving a balance of profit for the month of 5,706*l*. 11*s*. The expenditure on capital account for the month was 3,018*l*., making a total expenditure for the month of 9,588*l*.

JOHANNESBURG WATERWORKS.—Cablegram :—"A dividend has been declared of 5 per cent., payable to holders registered on July 13. Share register closed here from July 13 to 20. Col. Aubone, George Fife, Dr. Septimus Gibbon, Thomas Honey, William Garland Soper, and Septimus Wooler Watson have been officially appointed London directors. Powers by next mail. Have made a net profit of 20,000l."

LISBON-BERLYN.—Mr. Wylie writes June 7 :—"Frankfort—Bevitt's reef : The first drive is now in 40 ft.; reef from 2 ft. to 2 ft. 6 ins. wide, and looking as well as ever. I enclose you two assays made this week, which I think you will find satisfactory. Main drive, Frankfort : 20 ft. in, gold, 15 dwts. per ton; 30 ft. in, gold 2 ozs. per ton. This makes the reef average 1 oz. 3 dwts. as far as we have gone."

BARRETT.—The mine manager reports a return of 143 ozs. for the month of May. A re-arrangement of cuttings, so as to get the ore supply to points connected with the tram line, has caused some loss of time, and not quite as much ore has been sent down to the mill as could have been put through. Alluvial finds are rather better. Mr. Acutt reports the gravel as looking splendid, and adds, "I feel confident we shall get on the run again soon."

SILATI RIVER.—Advices from Burgersdorp report that 679 tons have been crushed during the months of May and June, producing 308 ozs. of bullion. The greater part of the stuff put through the mill consisted of *débris*, alluvial, and stone from the various shafts and outcrops of the Swiss reef. The work of sinking the main and other shaft, which had been partially suspended during the late heavy rains, was being again actively carried on.

POTSDAM REEFS.—The total amount expended on this property has been 10,237l. 7s. 2d., of which 5,593l. 7s. 10d. is for working expenses at the mine, 813l. 9s. 6d. is debited to buildings, 276l. 18s. 9d. to live stock, and 219l. 17s. 10d. to preliminary expenses, which includes the charges for registering the company. Negotiations have for some time been in progress between this board and that of the Sutherland Reef Co., Limited, with the object of bringing about the amalgamation of the two companies, and a provisional agreement has been entered into.

PIGG'S PEAK ESTATE.—Report for week ending June 6 :—"Devil's reef, No. 2 drive : Drove for the week 23 ft.; total, 65 ft. Shows no gold in panning. Prospecting drives : Drove for the week, 38 ft. Open cuttings : 60 ft. Shows a few colours in panning. Two boys wheeling away dump, remaining boys cutting wood. Tamblyn reef, drive : Drove for the week, 5 ft.; total, 28 ft. Shaft : Sunk for the week, 5 ft.; total, 28 ft. No change to report. No. 1 works, drive : The timbering was finished on Friday, and driving will now be resumed. Have sunk 10 ft. on the lode, getting colours in the pan. Peak, Pigg's drive : Drove for the week, 7 ft.; total, 182 ft. The ground is getting harder and still gives colours in the pan. Boundary B : Still putting in cutting to determine the best place to sink. Cuttings, 50 ft."

HORO CONCESSION (June 3).—Report from the manager :—"I beg to send you below the report of the work done here during the month of May last :—Intermediate tunnel : This tunnel has been connected with the winze from No. 2 tunnel, and a short distance has been driven to the east of the winze to facilitate tramming. The rock to the east of the winze contains a little free gold. The winze from No. 2 tunnel has been divided into an air and ladder way and an ore shoot. The tramways from mine to battery and ore trucks have been completed. No. 1 tunnel : Starting from No. 1 tunnel, a distance of 14 ft. has been driven along the reef to the east; the rock carries a little gold all through. A length of ground by No. 1 shaft on the surface has been uncovered, showing the reef a width of 40 ft., more or less, carrying a fair prospect of gold. Ore will be quarried here. Pipe line : The pipe line is being constructed as fast as the pipes come forward. About 1,000 yds. of pipes are in place. The transport riders have lost a great many oxen, hence the delay in the arrival of the pipes."

CERRO DE PASCO.—The following report has been received from the mine, dated Barberton, June 8 :—"There is no great change to report in the various exploration works now in progress. At the east end we are driving through the fault, which cut off the west reef in the lowest level, which fault was apparently the cause of that work being abandoned, and we expect to pick up the reef again at no great distance, as the formation in the upper level is not affected by the dislocation. Main shaft : We have been a good deal troubled by water lately, and have had to keep eight natives constantly employed at the windlass hauling water. To obviate this, I am having a pipe line laid from the shaft some 1,000 ft. to the creek, by which the water can be syphoned out. This will save 25l. per month in Kaffir labour and maintenance, besides wear and tear of material, &c."

—The following telegram has been received from the mine manager, dated Barberton, July 10 :—"Have struck large body of ore in the cross-cut. Have commenced driving; 8 dwts. per ton; very good indications."

COMMERCIAL NOTES.

METALS.

THE Metal Market has been fairly active during the current week. Bank rate remains $2\frac{1}{2}$ per cent. Bar silver declined to 46d., recovering to 46½d., and closes at 45½d. per oz.

COPPER has been quiet. G.M.B. Warrants have declined from 55l. 7s. 6d. to 54l. 10s., improving to 54l. 12s. 6d. cash, and closing at 54l. 15s. cash, and 55l. 5s. three months buyers. We quote English tough, 58l. to 60l.; best selected, 60l. to 61l.; strong sheets, 62l.; India sheets, 62l. 10s. to 63l.; yellow metal, 5½d. to 6d.; ore, 10s. to 10s. 9d. per unit.

TIN has been rather irregular. Straits on the spot declined from 92l. 12s. 6d. to 91l. 7s. 6d., improving to 92l., and closing at 92l. 5s. cash. Three months commands about 5s. premium over cash, and Australian about 10s. premium over Straits.

The Dutch Market has been quiet. Banca, 55½fl.; Billiton, 54½fl. The Dutch Trading Co. will sell about 28,400 slabs Banca on the 30th inst. at Amsterdam. English ingots, 95l. 10s.

TINPLATES.—About 250 mills have stopped, and about 150 more are engaged to do so. Prices are almost nominal. We quote 13s. 6d. for ordinary coke Liverpool.

SPELTER is steady at 23l. 15s. for ordinary brands ex ship here.

LEAD is dull. We quote soft Spanish, 12l. 7s. 6d.; soft English, 12l. 10s. to 12l. 15s.; L. B. China Pigs, 13l.; sheets, 13l. 10s. to 13l. 15s.

QUICKSILVER steady. Rothschild's price is 7l. 15s.; seconds about the same.

ANTIMONY flat. Hallett quotes 48l. for shipment to America. Ordinary brands and delivery about 46l.

DIVIDENDS DECLARED AND ANNOUNCED FOR WEEK ENDING JULY 11.

Atlas Investment Trust...	4½ per cent.
Alliance Bank ...	8 per cent.
A. and S. Henry ...	8 per cent.
Aberdeen Tram ...	5 per cent.
Bank of Madras ...	10 per cent.
Bank of Bengal ...	8 per cent.

Temperley Steam ...	10 per cent.
Union Discount of London ...	8 per cent.
Wilts and Dorset Banking ...	17 per share.

HARRIETVILLE GOLD MINING CO., LIMITED.

THE DIRECTORS ISSUE A REPORT WHICH SHOWS A SMALL PROFIT.

THE report of this company is satisfactory. It shows that the sales of gold produced during the year realised the sum of 20,143l. 9s. 4d.; in addition to this 289l. 9s. 3d. was received from other sources, thus bringing up the total receipts to 20,433l. 8s. 7d.; the expenditure was 20,153l. 6s. 7d., leaving a net profit on the year's work of 280l. 2s. The following are the comparative results of the past and the preceding years' operations. During the 12 months ending Mar. 31, 1890, the number of tons crushed was 3,071, the gold produced 3,814 ozs. 8 dwts. 19 grs., the average yield being 1 oz. 5 dwts. per ton. For the year ending Mar. 31, 1891, the number of tons crushed was 10,561, the gold produced 4,660 ozs. 11 dwts. 3 grs., the average yield being 8 dwts. 19 grs. per ton. It will be seen that a much larger quantity of ore was treated, but, unfortunately, the grade was lower, hence the comparatively small profit realised. The superintendent's report describes fully the nature, extent and results of the mining, prospecting and milling work accomplished during the year. The board have the belief that the new company's shares will be a very valuable asset to the parent company. The directors congratulate the shareholders, as well they may do, upon the "eminently satisfactory results which have attended the operations at the mines, and on the prospects of still greater prosperity in the near future." The manager takes up the tale and says :—"I consider your company has one of the best mining properties in the Australian Colonies, and our developments are rapidly proving this. Ore is showing at almost every point west of the engine shaft, and the rich ore being a sulphide is of a permanent character, and may be expected from the experience of other mines containing the same class of minerals to carry to considerable depth."

HOLLOWAY'S PILLS.—Indigestion.—How much thought has been bestowed, and what voluminous treatises have been written upon this universal and distressing disease, which is with certainty and safety dispelled without fear of relapse by a course of this purifying, soothing and tonic medicine? It acts directly on the stomach, liver, and bowels—then indirectly, though no less effectively, on the brain, nerves, vessels, and glands, introducing such order throughout the entire system that harmony dwells between each organ and its functions. Dyspepsia need no longer be the bugbear of the public, since Holloway's Pills are fully competent to subdue the most chronic and distressing cases of impaired digestion, and to restore the miserable sufferer to health, strength, and cheerfulness.

BRITISH MINING INTELLIGENCE.

DERESBY AND GWYDYR (July 8).—No. 10 level south: The rise in south end of this level on the footwall lode is up 2 fms. 3 ft. 6 ins. from back of level, and for this length the lode has averaged fully $1\frac{1}{2}$ tons of lead to a fm. The ventilation here is not sufficient for rising further at present, and I have now placed these men to cross-cut for this lode up at the No. 9. No. 9 level south: We are now further opening the lode at No. 1 cross-cut by sinking in it. We have a very kindly and productive lode for the length we have opened out from cross-cut, worth about $\frac{1}{2}$ ton of lead to a fm., which should have further trial. No. 2 cross-cut: As stated above I have placed four men in this cross-cut to drive it through to the footwall lode we have at the No. 10 below this. The ground is hard rhyder to begin with, but we have been encouraged to-day by cutting into a vugh and joint with very nice lead in it. I expect to cross other feeders before reaching the footwall lode. Other places without change for the week.—H. NOTTINGHAM.

DEVON CONSOLS (July 9).—In the 172-fm. level west the lode is of large size, 5 ft. wide, and composed of capel and quartz, with small quantities of copper and mundic ores. In the 160-fm. level east, the lode is also 5 ft. wide, very promising, and yields 4 tons of copper and mundic ores per fm. In the 160-fm. level west, the lode is 4 ft. wide, and yields small quantities of copper and mundic ores.—I. RICHARDS.

DEVON UNITED (July 9).—Willesford's shaft: During the past month the 144-fm. level east has been driven 2 fms. 2 ft. 6 ins., the lode varying in width from 1 to 2 ft. wide, composed of capel, quartz and peach, with killas, and some good quality arsenical mundic. The 144-fm. level west has been driven 2 fms. 2 ft. 6 ins., the lode proving $1\frac{1}{2}$ to $2\frac{1}{2}$ ft. wide, composed of capel and quartz with peach and a little mundic. Judging from present appearances an early improvement here may be expected. The winze in the bottom of the 132-fm. level west has been sunk 1 fm. 2 ft., making the total depth 2 fms. 1 ft., the lode proving from 2 to $2\frac{1}{2}$ ft. wide, very promising, and yielding for the greater part of the depth sunk 3 tons of good quality copper ore per fm. At present it is not quite so good; it is, however, yielding 3 tons of copper and mundic ores per fm. for length of winze —9 ft. Having had an influx of water, which retarded progress in sinking, we have put down a small lift of pumps in the winze for draining it, the rods working the lift being attached to our pumping main rods in Willesford's shaft, and the drainage is now being very satisfactorily and economically effected. The lode in the stope in the back of the 132-fm. level west has yielded on an average 2 tons of good quality per fm., and it continues of equal value. The machinery throughout the mine is in good condition, and working well. Our sale of copper ore on the 10th ult. realised 252½ ds.—I. RICHARDS.

EAST GRASSINGTON.—The following report, dated July 8, has been received from the manager:—Hammond shaft: The 47-fm. level west continues in a strong, masterly, and well-defined lode, 2 ft. wide, the filling matter being chiefly lime, spar, and gossan, mixed with branches of lead ore, worth 20 cwt. per fm. A stope in back of level, in a lode 18 ins. wide, worth 10 cwt. of lead ore per fm. No. 3 sump is down 31 ft. below the 47. Judging from the acute dip of the vein we are close to the horizontal bed, beneath which the lode invariably increases in size and value, and is to-day 2 ft. wide, and producing 22 cwt. of lead ore per fm. Stopes in intermediate and 37 levels east have slightly increased in value, worth together 20 cwt. of lead ore per fm. Harris main engine shaft: Excellent progress is being made in deepening this part of the mine below the 47. We have overhauled the pitwork, casing and dividing of the shaft, put in penthouse, cistern, &c., and all the pumping arrangements are working with clockwork regularity. I have also ordered of Messrs. Robey and Co. several new additions to the pumping and hoisting engine, which will be placed in position as soon as delivered. In the 47 east the lode is $2\frac{1}{2}$ ft. wide, yielding 12 cwt. of lead ore per fm. Stopes in back of level worth respectively 10 and 11 cwt. of lead ore per fm. In the 37 east the lode is 15 ins. wide, and producing good quality-saving work for dressing. Surface, dressing, and smelting operations vigorously proceeded with.

LEADHILLS (July 6).—Brown's vein: The 145-fm. level north of Jeffrey's shaft is in a vein 4 ft. wide, nicely mixed with quartz and wet, but without ore to value. The stope above the 145 north of Jeffrey's shaft is worth 25 cwt. of ore per fm. The two stopes above the 145 south of Wilson's shaft are worth 15 and 120 cwt. of ore per fm. respectively. The stope above the 145 north of Wilson's shaft is worth 15 cwt. of ore per fm. The 130 men are out doing certain pressing surface work. The stopes above the 130 north of Jeffrey's shaft are worth 30, 15, and 20 cwt. of ore per fm. respectively. The stope above the 130 south of Jeffrey's shaft is worth 15 cwt. of ore per fm. The 115-fm. level north of Jeffrey's shaft is in a vein above 4 ft. wide, charged with quartz and spar with spots of ore not to value. The stope above the 115 north of Jeffrey's shaft is worth 15 cwt. of ore per fm. The 100-fm. level north of Jeffrey's shaft is in a vein above 4 ft. wide, well mixed with nice looking quartz, and spar with ore worth 5 cwt. per fm. The stope above the 100 south of Wilson's shaft is worth 20 cwt. of ore per fm. The 85-fm. level north of Jeffrey's shaft shows a vein $4\frac{1}{2}$ ft. wide, charged with quartz and occasional bits of ore not to value. The 70-fm. level south of Wilson's shaft is in a promising vein above 4 ft. wide, charged with quartz and small specks of ore. The two stopes above the 35 south of Flat Rod shaft are worth 25 and 20 cwt. of ore per fm. respectively. Sarrowcole vein: Gripp's adit north of George's Roust vein shows a promising vein $3\frac{3}{4}$ ft. wide, charged with quartz and ore worth 10 cwt. per fm.—T. NEWBIGGING.

NEW MINERA.—Report for two weeks ending July 3: The 275-yd. level: No. 2 rise and stope still good. Lode 4 ft. wide, and worth 5 tons lead ore per fm. Some rich stopes have been commenced from this level. The 255-yd. level west of rise No. 1: Total distance from rise 18 yds.; driven this fortnight 5 yds. A small fault has been intersected within the last day or two, and the lode does not look so well. The 295-yd. level west of winze No. 2: Total distance from winze 20 yds.; driven this fortnight 4 yds.; lode 4 ft. wide; worth 4 tons of blende per fm. Winze below the 295: Down 13 yds. The lode has not been so rich, and is now worth 1 ton blende per fm. The 315-yd. level: Driven this fortnight 9 yds. In good ground with some cherty beds, and worth 2 tons blende and a little lead ore per fm. Dressing: The very heavy rains have much interfered with dressing, but sheds are being put up to cover the floors.

PRINCE OF WALES (July 8).—During the past week we have

been driving the 180-fm. level both east and west by the side of the lode, consequently we have no change to report in it since our last. The lode in the 166 west is $3\frac{1}{2}$ ft. wide, in tinny capel and copper ore, and worth 12½ per fm. In the cross-cut south at this level there is a large increase of water, which, we think, evidently shows a near approach to the lode.—S. ROBERTS, J. PROWSE.

ROMAN GRAVELS (July 9).—The 155 north is driven 7 fms. 5 ft. and the forebreast has to day reached a nice rib of lead ore, which, however, at present only extends half way down the end, and a further great improvement will undoubtedly take place during the next few days. We do not hesitate to state that the vein is looking infinitely better to day than it has done hitherto. The 155 south east is driven 7 fms. 1 ft., the division of the vein in present forebreast being nearly 18 in., quite producing 1 ton of blende to the fm.; this is also an improvement which augurs well for the coming in of the hanging division, which we hope to intersect very shortly. The 140 south-east is not looking quite so well to day, its value being 2 tons per fm. We have no doubt, however, but that this is only a temporary falling off, the end just having passed through the cavity, and reached a rib of stone which separates the divisions of the vein. It is our opinion that this stone will soon be cut out, and that the vein will resume, if it does not exceed, its recent productiveness. The 140 south is driven 102 fms. $4\frac{1}{2}$ ft., lode at present 3 ft. wide, composed of carbonate of lime and stones of lead ore. We are pushing this level forward as fast as possible to the ore ground which we know is in front. The vein at the 125 south is 2 ft. wide of a promising character, and producing saving stuff for the dressing floors. The three stopes in back of the 140 north average $1\frac{1}{2}$ tons of lead ore to the fm. The two stopes at Lewis' winze in back of the 125 average 1 ton each per fm. The four stopes in back of the 100 south average $1\frac{1}{2}$ tons each per fm. The three stopes in back of the 80 average $1\frac{1}{2}$ tons per fm. The two stopes in back of the 80 on east lode are each worth 1 ton per fm.—A. WATERS.

SOUTH CONDURROW (July 8).—The ground is rather easier for driving in the 138 east of Marshall's going towards the cross-course. The lode in the winze below the 123 is worth 12½ per fm. The stope in the back is worth 12½ per fm. There is no new feature to notice in the eastern part of the mine. We are putting up a new shaft tackle in King's shaft, which will hinder the hauling for a few days.—W. RICH, W. THOMAS.

SOUTH DARREN (July 9).—The shaft is 47 ft. under the 142 level; $3\frac{1}{2}$ ft. sunk this week. The lode has been broken down, and is looking strong and healthy, and is worth 12 cwt. of silver-lead ore, and 10 cwt. of copper ore per fm., i.e., for 6 ft. long. This improvement is encouraging for the next level. The 130 end west is worth 15 cwt. of silver-lead ore per fm., having again improved a little.—J. MITCHELL.

VAN (July 9).—The cross-cut going south at the 150-fm. level (towards the south lode) is being driven by six men, the end continues in hard ground, with faces of lead ore occasionally in the joints crossing the forebreast, fair progress is being made. The two stopes over this level on the old lode continue to yield 18 cwt. of lead ore per fm. The stope over the 135-fm. lead on the south lode is worth 25 cwt. of lead ore per fm. The 120-fm. level east of Seaham's shaft is driving by six men, the lode being large and spotted with lead ore of a promising character. The cross-cut south of this level (several fathoms behind the forebreast) is still in a strong lode composed of quartz, blende and spots of lead ore, with no sign of the hanging wall of the vein. At the 150, at Seaham's winze, the cross-cut south is now into the lode 4 fms. Some nice stones of lead ore have been broken, and the lode is not yet cut through to the south side. The (three) stopes over the 105, 90, and 75-fm. levels are producing each 1 ton of lead ore per fm. We have now 50 tons of dressed lead ore in the bin, samples of which will be sent to the various lead smelters by to-morrow's post, the tenders to be received on Saturday, the 18th inst.—J. PAULL.

WHEEL CREBOR (July 7).—We have not yet intersected the footwall of the lode in the cross-cut at the 156 east. The part of the lode that has been cross-cutted during the past week is composed mostly of capels and spar, producing a little mundic. The cross-cut has now reached a distance of 11 ft. The end driving west at the 132 on the south part of the lode is yielding 3 tons of good quality mundic per fm. The stopes and pitches throughout the mine are yielding their usual quantities of ore.—P. D. HOLMAN.

WHEEL UNY (July 8).—We are forcing on the sinking of Hind's engine shaft as fast as possible. Our men, although in bottom of shaft every day, are not making their usual speed. The ground has changed, and is at present hard. No change in the lode since last week. All other points without change.—J. WHITE.

FOREIGN MINING INTELLIGENCE.

ALMADA AND TIRITO (June 18).—Extract from letter from the superintendent at the mine:—Mine: The west cross-cut at 12-fm. level north of No. 5 winze cut the 100 lode at a distance of about 57 ft.; it was found very narrow, about $3\frac{1}{2}$ ft. wide, and partly mineralised. We immediately commenced to drive north on the lode, and it is widening out and becoming more mineralized, carrying about $1\frac{1}{2}$ ft. of high-grade ore. In the other parts of the mine there is no change to report. Reduction: The labour crisis becomes worse every day, and I fear we shall be compelled to stop the work entirely for a few days through absolute lack of hands. The mill is idle this week, we have no men at the drying floor; two of the chlorination furnaces are stopped, and we have great difficulty in keeping the smelter running. The few Indians we have been able to retain talk of leaving at the end of the present week, in which case a suspension of reduction for at least a fortnight would be unavoidable. The smelter has thus far run very well, and has produced in 37 days 1,393 tons of pig lead, worth in silver about \$6,350, or an average of 107 bars, worth \$488 per day. The refinery will produce 5 or 6 bars silver at the end of the week.

ARGENTELLA (July 2).—No. 1 marine: Driving 45 degs. west of south, driven during the past month 11.40 metres (37 ft.) passing through very kindly quartz and carbonate of lime, containing a quantity of pyrites. Every metre forward takes us further from surface disturbances, and increases our chances considerably; the ground at present is more porous, and better for driving. Quartz reef, cross-cut south: Advanced for the month 9.50 metres (31 ft.) The ground passed through produced more quartz and iron pyrites. The forebreast is harder, and contains more quartz; we are some distance

yet from the perpendicular of the large outcrop. I gather from the lay of the ground that the lode dips very much to the north. Oglis-trone Valley: Driving 45 degs. east of south, under pyrites bed, down 5 metres (16 ft. 3 ins.) The forebreast has passed through some strong leaders of quartz and iron pyrites, containing copper ore. I have put on a full party of men for the next month. The indications lead us to expect successful results here. No. 3 Rowse workings, cross-cut south: This cross-cut has advanced 3.60 metres (about 11 ft. 10 ins.), when we cut the east and west quartz lode. As before reported, we took advantage of a small north and south lode to drive on. At the junction we cut the body of which we found going down. I thought it advisable to start a small winze to prove its continuation. We sunk 4 square metres, and found it maintained the same value. As we had water to deal with, I have suspended this to push on east, as the reef is very favourable. The quartz is hard, containing some very good silver-lead.—Capt. ROBERTS.

ASIA MINOR (June 27).—Araheere: The lode in the winze has materially improved, and has every appearance of better results. Chief mine: The lode in the intermediate air shaft is worth 16 cwt. The winze in Union, 20 cwt., and the rise in Michael 10 cwt. The stopes east of Savalan Pass and in back of Union are looking exceedingly well, and producing rich silver-lead. Production to June 26, 6,693 tons crushed, yielding 438 tons rich silver-lead ore.

AUSTRALIAN BROKEN HILL CONSOLS.—The mining manager reports by mail for fortnight ending May 14.—Engine shaft, 520 level: Chamber completed all but squaring up. 280 level rise on rich vein. Vein stronger; yield for fortnight, 6 tons of sulphide of silver, chlorides, fahlerz, and native silver, containing, in all, 46,326 ozs. of silver, to which must be added 25 tons of ore raised from other workings in vicinity of rise and containing 7,685 ozs. silver, making a total for fortnight of 54,011 ozs. of silver, now in course of shipment to London. Intermediate level west of rise: Driven 8 ft.; started to open out portion of rich shoot; good carbonate and galena showing. Incline following rich shoot: Driven 14 ft.; total, 64 ft.; water increasing very largely, and other signs, indicating close proximity to a body of ore getting more distinct. Winze to intersect incline sunk 11 ft.; total, 24 ft.; lode same, but water now making. Intermediate level east of incline, 6½ ft.; started to open out eastern portion of rich shoot. Block 95: Shaft on underlay of lode, 15 ft.; no change in lode, but water making from Proprietary side of shaft. Block 97, north shaft: Sunk 12 ft.; total 77 ft.; lode enlarging and improving.

BRATSBURG.—Report for week ending June 27.—Hoffnung Mine: No. 2 adit level is still yielding 1 ton per fm., carrying a lode of medium size, and the matrix composing the lode is of a congenial nature. No. 1 rise in the back of this level is worth 1 ton per fm. We hope soon to be able to resume No. 2 rise again. At No. 3 adit level the lode is of an average width, but is not yielding ore to value, although there is every indication of a speedy improvement taking place. The rise in the back of this level is worth ¾ ton per fm. No. 4 level is still developing a very strong lode containing ore worth saving, but not enough to value. The rise here is worth fully 1 ton per fm. The trial level at Murchison's section is producing ¾ ton per fm. 46 miners employed in this mine during this month. Johannes Mine: Both of the levels on Howard lode have been producing about ½ ton per fm. The rise in the back will be resumed at once, where the lode is worth 1 ton per fm. During June 12 miners have been engaged here. Surface work and remarks: Progress in dressing, although delayed somewhat by the non-arrival of the crusher rolls, has by running extra time nevertheless been fairly satisfactory, and we have now cut so far into the winter piles of ore as to be able to charge the machines as we find most desirable. The dressed ore produced has been forwarded to Skien with regularity, and more ore than is necessary for the second cargo is now available for loading. The vessel chartered we expect to arrive every day. I estimate the amount of 20 per cent. ore mined during June at 100 tons. Following on our advertising our better terms, we obtained a few more hands, but nothing near what we could have hoped for; several inquiries have been made, and we sincerely trust that during August and the coming autumn months, that we shall be able to augment our staff of men so as to make a very much increased output.—J. D. HOLMAN.

BRATSBURG SMELTING AND REFINING.—Report for week ending June 27:—Smelting was continued on Monday, Tuesday and Wednesday, with varied success, and we have found it undesirable to do any more in this direction until we can (with the assistance of a thoroughly efficient bessemer operator whom we hope will soon arrive) keep the operation going night and day, as the furnace takes such a long time heating up to the proper pitch. In all about 4½ tons of copper were produced, and this has been sent up to the electro depositing works, where it will be treated right away. We have been engaged building a mill to mix the clay used in lining the converters, and this was finished and working when it was found necessary to effect an alteration, but we hope it will be going again to-day. This will be a saving both of time and money, besides giving better results than when the clay was treated by hand. All the machinery, &c., ran well, and gave every satisfaction during the recent trial, and we found the various alterations we made in the arrangement of the building to completely answer all our expectations from a mechanical point of view.—T. F. SMITH.

EAST BROKEN HILL CONSOLS.—The mining manager reports by mail for fortnight ending May 14:—Block 98: Shaft enlarged, and timbered in three compartments for a depth of 34 ft. Erection of poppet-heads well forward. Engines fixed on bed, and boiler placed in position. Iron chimney stack on ground; smith's shop completed, and smith in full work. Excavation of dam proceeding satisfactorily. Block 99: West cross-cut towards cross lode 18 ft.; ground getting harder.

ELMORE (June 21).—Since writing you on the 14th good progress has been made. The west drift from 540 level has been advanced during the past week 30 ft.; total distance now in from main cross-cut, 160 ft. The east drift from same level has been extended 25 ft.; total distance in from cross-cut, 175 ft. Both drifts are looking better, and if the quality of the ore keeps improving we will be able to mill at least a portion of the quartz in the vein.—G. A. MCCORMICK.

ETHERIDGE UNITED.—(May 13).—My last report was dated May 7. Caledonian No. 1 South Mine: During the last fortnight the western cross-cut at the 130 ft. has been advanced 6 ft. 6 ins., and the reef was cut at the distance named in my last. We cannot get working

here yet to advantage, owing to the large stream of water, but will start driving on the lode as soon as practicable. At the 80-ft. level the stopes have been taken out 26 ft. by 6 ft. We have not broken down the reef this week. There are about 15 tons on the dumps from the last breaking down.—M. FERGUSON.

FLAGSTAFF (June 20).—Report from the mine:—I have the pleasure of again reporting to you the progress made in the mine during the past week. The main sixth is now in 148 ft.; the rock is still very hard here, and the progress made is very slow. I do not think that it can continue in this way very much longer. The incline above sixth is now up 42½ ft.; the ore here is mostly second-class, but there is some first-class mixed throughout the entire body. The ore is 20 ins. wide, and full height of the incline. The incline below sixth is now down 63 ft.; we are getting very fine ore out of here; it averages 16 ins. wide. The work here is slow, as we have to pack the ore out in sacks, as I do not want to put in a windlass, for we are driving seven in to cut this seam, and then raise on it in going this distance; we are about 25 ft. below the sixth level. Seventh level is now in 78 ft.; we have cut several bunches of iron in driving this distance; I hope to soon come upon pay ore here. The weather, since my last, has been stormy and windy, with 3 ins. of show at one time on the ground. The bad weather has made it difficult to get on with surface work, but the storm seems now to be pretty well over. Number of tons of ore mined the past week, 16, being 6 of first-class and 10 of second-class.

FLAGSTAFF (June 27).—I have the pleasure of again reporting to you the progress made in the mine during the past week:—Main 6th level: This is now in 155 ft., there is no change in the rocks to amount to anything; breaks a little better than it did last week. The incline above 6th is now up 45 ft. on an incline, and then 10 ft. straight up. The ore at present is 2 ft. wide, and full height of the incline and all first-class ore. The incline below 6th is now down 71 ft., there is a large body of ore here, but most of it is second-class. We get out of here from 100 lbs. to 500 lbs. of first-class ore a day. 7th level: This is now in 90 ft., we have cut several small seams of iron, but nothing to amount to anything yet, it will take somewhere near 50 ft. more to be direct under where we are now on 6th. The grading for the compressors is nearing completion. I have commenced sacking the ore for shipment. Number of tons of ore mined the past week, 16: 10 of second-class and 6 of first-class.

HARRIETVILLE.—The returns for four weeks to end of May are as follows:—Mons Meg, 554 tons ore; ditto, 80 tons sand; total, 634 tons, yielding 267 ozs. 5 dwts. gold. New Lease, 283 tons ore, yielding 36 ozs.; total, 917 tons. Pyrites, &c., 35 tons pyrites, yielding 84 ozs. 2 dwts. gold; total, 387 ozs. 7 dwts.

KANGARILLA PROPRIETARY.—Manager's report to June:—Kangarilla Aclare: No. 1 winze sunk to a depth of 43 ft. This winze will become the main outlet for the northern portion of the mine. No. 2 winze is making excellent progress, and is now down 34 ft. It is in the heart of our main block. No. 4 winze is now 50 ft. below the adit level, and is still carrying fair ore. Machinery: The boilers are now in position. The engines, Castelnau concentrator and a large portion of the other machinery delivered. All works are now sufficiently advanced to ensure starting by Aug. 1. After that we shall be able to continue regular output and good returns of ore.

LEEDS COPPER (June 25).—Kent's shaft: The 20-fm. level driving west of shaft is continuing in bed vein 3 ft. 6 ins. wide, and producing 2 tons 20 per cent. ore per fm. No. 1 stope in the bottom of this level (called Henwood's stope in my last) continues much the same as when last reported, viz., producing 2½ tons 40 per cent. ore per fm. Since my last report we have started No. 2 stope in the bottom of the level, this is in bed vein 3 ft. 6 ins. wide, with rich bands of copper running through it, and producing 3 tons of 15 per cent. ore per fm. No. 1 stope in the back of this level is not producing quite as much ore, but will, I hope, shortly improve, producing 1½ tons of 15 per cent. ore per fm. No. 2 stope in the back of this level continues as reported last week, producing 3 tons 20 per cent. ore per fm. The 15-fm. level driving west of shaft is without change, producing 1½ tons 15 per cent. ore per fm. No. 1 stope in the back of this level has somewhat improved; a cross-vein junctioned with the bed vein, and enriched it, producing 3 tons 20 per cent. ore per fm. No. 2 stope in the back of this level is not quite as good as last reported, producing 1½ tons 15 per cent. ore per fm. McGee's shaft: In the drift in this shaft we have met with a vein of quartz 8 ins. wide, producing some good stones of ore; am hoping, as we advance, this will improve. Have started a stope here also in vein quartz; vein 2 ft. wide, producing 1½ tons 25 per cent. ore per fm. Adit: I have removed the men from here to Kent's shaft in No. 2 bottom stope. Kent's bed: Since my last we have continued sinking to get the bed vein; from appearance we are just on the top of it; small branches of ore are visible. Surface: The erection of concentrating plant is pushed on rapidly. Drums for gravitation tramway near completion; all the work is in a forward state.—T. R. DAVEY.

MAMMOTH.—The manager, Capt. Johnston, reports that in order to liberate the timbers in an old stope for use elsewhere, considerable quantities of ore of a low grade, but too valuable to be thrown on waste dump, have been milled during June, reducing the bullion output for that month to \$17,300. No change in the character of the mine. Everything looks well.

MESQUITAL DEL ORO.—The mine manager reports as follows for the week ending June 13:—San Miguel east: Driven 7 ft.; total, 285 ft. 6 ins.; width, 6 ft.; assay value, 0.43 ozs.; continues to hold its good appearance. San Miguel West: Driven 4 ft.; total, 308 ft.; width, 5 ft.; assay value, 0.05 ozs. San Miguel, east drive: Risen 3 ft. 6 ins.; total, 17 ft.; assay value, 0.95 ozs.; all lode. The 256 level east, winze A (sinking to meet rise from San Miguel), sunk 4 ft.; assay value, 1.85 ozs.; all lode. Prospecting in San Carlos claim (Don Pedro shaft): South drift advanced 2 ft. 6 ins.; total 27 ft.; assay value, 1.30 ozs. Last week reported 4 in. vein; now 12 ins.; 2 ft. from this cut another 4 ins. in width. Will continue the cross-cut until we have all the small strings, then drive on the course east and west. In Fortuna claim we have three men prospecting; have struck a small vein some 3 ins. in width, showing traces of silver.

MOUNT MORGAN EXTENDED.—The directors have received the following from their local committee (per Mr. R. Ballard, M.L.C.E.) dated Rockhampton, Queensland, May 18:—During the past fortnight we have driven 24 ft. in the east drive from No. 3 shaft Immanuel at the 86-ft. level. We are now in 182 ft. There is no change in the nature of the rock during the fortnight, nor have we passed through any auriferous strata. I have decided to carry this drive in for a total

distance of 260 ft., which will be 78 ft. further; this will take us seven weeks longer. At 230 ft., which is 48 ft. further, we shall be close under Classon's shaft, the bottom of which will be 56 ft. above our heads. The miners during the fortnight have been 12, other men 7. Rock-drills have been used during the whole period.

MYSORE (June 16).—Mining operations for the fortnight ending June 15:—The progress made in the different bargains with the rock-drills continues to be very satisfactory. The 780 north of Rowse's shaft has been driven 37 ft.; total distance, 330 ft.; the lode is 4½ ft. wide, and assaying 5 ozs. 6 dwts. 8 grs.; this level is opening up a very valuable section of stoping ground. The 620 south of incline shaft on the west lode has been driven 24 ft., in a lode 2 ft. wide, and assaying 1 dw. 12 grs. The 550 south of incline shaft on the west lode has been driven 19 ft. 4 ins.; total distance, 74 ft. 4 ins.; in a lode 1 ft. 6 ins. wide, and assaying 3 dwts. 6 grs. Glen's shaft: The 250 north of this shaft has been driven 28 ft. 10 ins.; total distance, 261 ft. 8 ins., in a lode 1 ft. 6 ins. wide, and assaying 3 dwts. The 250 cross-cut east of the shaft has been driven 13 ft. 5 ins.; total distance, 69 ft. 9 ins.; the ground is interspersed with small veins of carbonate of lime, but very hard and spare for progress. Tennant's shaft: The 360 north of shaft has been driven 33 ft. 6 ins.; total distance, 496 ft. 11 ins.; the lode is 1 ft. wide, and assaying 2 dwts. The 360 south of shaft has been driven 24 ft. 6 ins.; the lode is 6 ins. wide, yielding a little quartz, but nothing to value. The 290 north of shaft has been driven 30 ft. 6 ins.; total distance, 814 ft. 6 ins.; the lode is 9 ins. wide, and estimated to be worth 10 dwts. The 290 south of shaft has been driven 21 ft. 6 ins.; total distance, 445 ft.; the lode is 6 ins. wide, and showing a trace of gold, but I think it will improve again very soon. The 180 north has been cleaned through the old men's workings as far as Gilbert's shaft, and is suspended until the shaft is down and communicated to this level. Schaw's shaft: The 450 north of shaft has been driven 29 ft. 6 ins.; total distance, 408 ft.; the lode is small and unproductive. The 450 south of shaft has been driven 4 ft.; total distance, 92 ft.; the lode is 1 ft. wide, and assaying 3 dwts. 6 grs. The 320 north of shaft has been driven 3 ft. 3 ins.; total distance, 169 ft.; the lode is 6 ins. wide, yielding occasional stones of quartz. The 320 south of shaft has been driven 5 ft.; total distance, 222 ft. 6 ins.; the lode is 9 ins. wide, and assaying 2 dwts. Rising: The rise in back of the 780 north of Rowse's shaft has been put up 12 ft. 2 ins., in a lode 4 ft. wide, and assaying 5 ozs.; this rise will communicate with the winze in bottom of the 700, which has been suspended in consequence of an increase of water. The rise in back of the 400 north of Rowse's has been put up 7 ft., in a lode 2 ft. 6 ins. wide, assaying 14 dwts. 13 grs. The rise in back of the 450 north of Schaw's shaft has been put up 3 ft., in a lode 2 ft. wide, assaying 1 dw. 23 grs. Stopes: The lode in stope in back of 700 south of incline shaft (on wide lode) is 2 ft. wide, assaying 5 dwts. 5 grs. The lode in stope in back of 700 south of Rowse's shaft is 2½ ft. wide, assaying 7 dwts. 19 grs. The lode in stope in bottom of this level south of shaft is 2 ft. wide, assaying 6 dwts. 12 grs. The lode in stope in back of the 700 north of Rowse's shaft is 2 ft. wide, assaying 1 oz. 16 dwts. The lode in No. 2 stope in back of this level is 3 ft. wide, assaying 2 ozs. 8 dwts. The lode in stope in back of the 620 south of incline shaft (on wide lode) is 3 ft. wide, computed 1 oz. The lode in stope in back of the 620 north of Rowse's shaft is 1½ ft. wide, computed 1 oz. 10 dwts. The lode in No. 2 stope in back of this level is 2 ft. wide, and assaying 1 oz. 7 dwts. The lode in stope in back of the 600 north of Rowse's shaft is 1½ ft. wide, and assaying 9 dwts. 16 grs. The lode in stope in bottom of the 550 south of Rowse's shaft is 2 ft. wide, and assaying 1 oz. 18 dwts. 19 grs. The lode in stope in back of the 550 north of Rowse's shaft is 3 ft. wide, assaying 2 ozs. 5 dwts. 17 grs. The lode in stope in bottom of this level is 2 ft. wide, and assaying 1 oz. 19 dwts. The lode in stope in back of the 400 north of Taylor's shaft is 3 ft. wide, assaying 9 dwts. 15 grs. The lode in stope in back of the 360 north of Plummer's is 1½ ft. wide, and assaying 5 dwts. 17 grs. The lode in stope in back of this level south of shaft is 2 ft. wide, and assaying 9 dwts. 15 grs. The lode in stope in back of the 296 north of Rowse's is 4 ft. wide, assaying 4 dwts. 18 grs. The lode in stope in back of the 290 north of Tennant's shaft is 2 ft. wide, assaying 1 oz. 10 dwts. The lode in No. 2 stope in back of this level is 3½ ft. wide, assaying 1 oz. 12 dwts. 16 grs. The lode in stope in back of the 180 north of shaft is 3 ft. wide, and assaying 2 ozs. 5 dwts. 6 grs. The lode in No. 2 stope in back of this level is 2½ ft. wide, assaying 2 ozs. 10 dwts. The lode in No. 3 stope in back of this level is 3½ ft. wide, assaying 1 oz. 16 dwts. 8 grs. Sinking: Rowse's shaft has been sunk 10 ft.; total distance, 116 ft. below the 780; these men have also been engaged cutting plat, &c., preparatory to driving the 890-ft. level. Gilbert's shaft has been sunk 9 ft.; total distance from surface, 118 ft. We have erected a small winding engine, put down skip road, &c., as the shaft was getting deeper for hoisting the stuff with a windlass. All our surface operations are going on in a very satisfactory manner, except at the new tailings works where we are suffering from a scarcity of water on account of the long drought there has been this year. Mill samples: New mill quartz, 2 ozs. 18 dwts. 16 grs.; old mill quartz, 1 oz. 19 dwts. 6 grs.; new mill tailings, 7 dwts. 18 grs.; old mill tailings, 5 dwts. 5 grs.—J. GILBERT.

MYSORE REEFS (June 16).—Fortnightly report:—Harvey's shaft: The 520-ft. level north has been advanced 7 ft. 6 ins.; now 33 ft. 6 ins. from shaft. We have had a hindrance with the water. The boiler of the pumping engine had to be attended to, which left the water in the bottom of the mine for several days. The rock is extremely hard, with small stringers of quartz crossing it. Cross-cut west at the 520-ft. level has been extended 10 ft.; now 20 ft. from level; the rock is very hard and close, and difficult to blast. The 400-ft. level north has been advanced 16 ft.; now 185 ft. 10 ins. from shaft; the end is very hard, with a few stringers of quartz crossing it, showing a little gold by washing. Driving and stoping south of the cross-out between the 320 and 400-ft. levels: The part of the lode we are taking away is 6 ft. wide, and worth, according to assay, 6 dwts. 12 grs. of gold to the ton. Air shaft—Stopes in the bottom of the 140-ft. level: The part of the lode we are carrying is 10 ft. wide, and worth, according to assay, 3 dwts. 6 grs. of gold to the ton. The machinery throughout the mine is working well.—M. SCANTLEBURY.

MYSORE-WYNAAD CONSOLIDATED.—The mining manager reports by mail for fortnight ending June 16:—Tank Mine—North shaft: This shaft has been squared down to 175 ft., and driving commenced, according to your instructions. It was a great struggle to sink this shaft with the quantity of water we have to contend with. As

we are now below the source of the water we shall, by driving at this point, be able to fix a cistern and plunger, and take up the whole of it, having a comparatively dry shaft to sink below. The rock in the bottom is quite dry, and all the water comes down from the floor above. The driving is at 173 ft.; it has been commenced in the north end of the shaft, and an advance of 3 ft. has been made. I hope to cut the lode within two weeks. I shall continue the sinking of the shaft by hand labour in a week or so. It will have to be sunk about 20 ft. before the cistern and plunger can be put in. South shaft: This shaft has been sunk 6 ft. 6 ins., making a total depth of 102 ft. from surface; there is no change here. Surface: The larger part of the compressor has now been delivered on the mine; the masons are building the loadings, and we are now pushing on with the erection of it as quickly as possible.

NEW DEVALA-MOYAR (June 16).—Main shaft: This has been sunk 5 ft.; total depth, 43 ft.; we are still in clay and decomposed rock. The shaft has been timbered for 38 ft. No. 1 winze: We have been interfered with in our sinking owing to the opening out of the new level, and we have only 2 ft. to report; total, 72 ft.; a band of quartz is still carried in the footwall. The 186-ft. level: We are engaged opening out this level and shaping the drive. The 116-ft. level, Drive west: Work has been stopped here; total length, 201 ft. Battery crushing regularly, and a fair amount of amalgam being obtained. During the week 90 tons of quartz have been sent to the mill.—R. B. JOHNSTON.

NEW EBERHARDT (June 20th).—Eberhardt: As stated in my letter of last week we have been putting in new ladders in our No. 2 upraise. This has been done, and we are now putting in the new timber and dividing for the shoot, and I have great hopes of finishing the repairs on this the No. 2 by the latter part of the coming week. As soon as it is through or finished I shall put men at work driving along the footwall of the brake upon which the ore was discovered below. There was a seam of quartz upon the footwall all the way up this upraise, with occasional spots and bunches of good ore, but, generally speaking, it was low grade. The quartz was, to the best of my recollection, worth from \$9 to \$15 per ton. Some of it may have gone more and some less than the figures given above. In some places going up we had 10 ft. of this low-grade ore, and I firmly believe that somewhere upon this brake or footwall we shall yet come upon large ore bodies that will pay the company dollar for dollar for every one that has been spent. It is true I do not know this for a positive fact, but such is my opinion, and I trust that ere another annual general meeting be called our prospects here at Eberhardt will have improved a thousand fold. It would be useless to add that everything in my power that can be done will be done to bring about, if it be possible, this so much-desired result.—CAPT. READ.

—(June 21).—Monitor: Total weight of ore extracted and assorted during the past two weeks, 64 tons; assay value of the same, as per mine samples, \$36 per ton. The general appearance of the mine has not materially changed since last reported. The quartz team commenced hauling Wednesday last after a lay off of five days, occasioned by the severe rain and snow storms which we had during the first part of last week. Total number of tons of ore delivered at the mill dump for the past two weeks, 82 tons.

NEW GOLD HILL (June 20).—I have the pleasure to report that everything is progressing as well as can be expected in the mine. From present indications we must not look for any important news for the next two months, as we have about passed through the shoot of ore in the winze, and do not expect to encounter any more until after we have made the connection with the 300 level.—R. EAMES, jun.

NEW VISO (June 30).—Manager's report.—The California adit north is being continued in a wide and very kindly lode. In the past month its yield has been somewhat irregular, but on the whole it has produced sufficient tin to pay the cost of working, and at present it looks promising for the future. There is no change worthy of note at either of the deep adit levels, both of which points continue unproductive. The alluvial working, recently started at Mi Amor, is being continued by about a dozen men, and shows a satisfactory result. I have not yet cleaned up the tin they have got out this month, but have no doubt of its value covering their wages and the other incidental expenses. I would increase the number of hands on this work, but find we have as many as can advantageously, in consequence of the tin-bearing alluvion being hitherto comparatively narrow, about 30 ft. wide.

NUNDYDROOG (June 16).—Report of work done for the fortnight ending yesterday:—The 520 north: Driven 19 ft., by two Italians with a rock-drill; total length of level 131 ft.; the lode is improving in width, being now 2 ft. wide, while the assay value is 1 oz. 8 dwts. 6 grs. The 520 south: Driven 18 ft. 6 ins., by one Englishman with a rock-drill; total length of level, 132 ft. 6 ins. We have struck the cross-course, and have now put this machine to sink a winze in the bottom of the level. The lode for the last few feet of driving was 1½ ft. wide, and worth 1 oz. 18 dwts. The 520 south—Winze in bottom: Sunk 7 ft., by one Englishman with a rock-drill; the lode is a fine one, 4 ft. wide, and worth 3 ozs. 8 dwts. 6 grs. The 520 south—Rise in back: Risen 8 ft., by one Englishman with a rock-drill; the lode is a strong one here, 4 ft. in width, and assaying 2 ozs. 4 dwts. 12 grs. per ton. The 450 south—Winze in bottom: Sunk 18 ft., by one Englishman with a rock-drill; total depth, 29 ft.; the lode looks very well, being 3½ ft. wide, and worth 2 ozs. 8 dwts. 18 grs. The 450 north—No. 1 stope south: Ground stoped 8 fms., by one Englishman with a rock-drill; the lode is 2½ ft. wide, and worth 2 ozs. per ton. The 480 north-east from Webb's: Distance driven, 17 ft., by two Italians with a rock-drill. We also holed to the shaft in the early part of the month. We hope to connect this level with the winze in the bottom of the 450 south early next month. The stopes working by hand are as follows:—The 450 north—No. 1 stope north: Lode 3 ft.; assay value, 1 oz. 5 dwts. The 450 north—Intermediate drive: Lode 6 ft.; assay value, 17 dwts. 6 grs. The 450 north—No. 2 stope north: Lode 1½ ft.; assay value, 1 oz. 13 dwts. 18 grs. The 450 north—No. 2 stope south: Lode 5 ft.; assay value, 1 oz. 10 dwts. 12 grs. The 370 north—Stope in bottom: Lode 2½ ft.; assay value, 1 oz. 3 dwts. The 370 north—Stope in back: Lode 2½ ft.; assay value, 1 oz. 9 dwts. 6 grs. The 370 south—Stope in back: Lode 2 ft.; assay value, 2 ozs. 17 dwts. 12 grs. The 300 north—Stope in back: Lode 1½ ft.; assay value, 2 ozs. 11 dwts. 18 grs. Taylor's shaft: Distance sunk, 14 ft., by three Italians with a rock-drill; total depth of shaft, 576 ft. We hope to commence driving at the 600 in July. Kennedy's shaft: Distance sunk, 6 ft., by three Italians with a rock-drill; total depth,

139 ft. 6 ins. The water has increased here, and it hinders us greatly. Health: Two Italians off duty; all the rest at work. There is a good deal of fever among the coolies, but none among the Europeans. Mill samples:—Rough quartz (through stonebreaker), 3 ozs. 0 dwts. 12 grs.: smalls, 2 ozs. 13 dwts.—F. W. GREY.

PINOS ALTOS (June 12).—The company's manager writes as follows:—The work done in the mine during the last two weeks is as under: The main shaft was sunk 4½ ft. during the week ended May 30, but no work was done last week, as the water increased very much at the bottom, and our water supply on surface was not sufficient to keep the compressor going. The 17th west winze was sunk 4 ft., and 4½ ft. in the two weeks; it is still in very poor ore. The 17th east winze was sunk 12 ft.; it also continues in poor ground. The 17th east drift was run 15 ft.; there has been no improvement in the ore, and I am now pointing the drift towards the hanging-wall. The 16½ level was driven 8 ft.; this is now running diagonally towards the hanging-wall, and I think in time will cut the same ore that is being found in the tunnel. The 13th drift east in the hanging-wall was run 24 ft. I have now removed all the men who were working below the 16 and 16½ west levels as the ore was so poor, and have got them evenly divided between the 16th east stope No. 2, and the 14th west stope, and the battery samples are now going up to over \$20, and will probably go higher. In about the middle of the 16th east stope we have very good ore indeed, though not very much of it. During the week ended 30th May the following is the estimated result of work done in the mill. Lost time on batteries: Engine, ½ hour; general repairs, 7½ hours: total, 8½ hours. Ore worked. 656 tons crushed at \$15.70, \$10,299.20; 39 tons slimes overflow at \$10.49, \$409.11; 617 tons tailings at \$4.89, \$3,017.13; total, \$3,426.24; week's product, \$6,872.96; and during the week ended 6th June. Lost time on batteries: Clean up, 10 hours; no shoes, 11 hours; general repairs, 4½ hours; total, 25½ hours. No shoes is the result of our being able to get no freighters from Guerrero where our shoes and dies have been lying for over two months. Ore worked: 500 tons crushed at \$19.98, \$9,990.; 27 tons slimes at \$9.79, \$264.33; 473 tons tailings at \$3.78, \$1,787.94; total, \$2,052.27; week's product, \$7,937.73. Since the date of the above letter the directors have received an important telegram from the manager, stating that in driving west on the tunnel level he has driven through 20 ft. of good ore, averaging about \$80 per ton. The telegram adds that the ground in face of the drift is now somewhat broken, but the manager thinks this will be only temporary.

REPORT OF MEETING.

AFRICAN GOLD RECOVERY, LIMITED.

ALL SHARES ALLOTTED—SUCCESS PREDICTED.

THE statutory meeting was held, on Thursday, at Winchester House. Mr. C. McCulloch (chairman of the company) presided.

THE CHAIRMAN, in addressing the shareholders, said he was able to report that the 80,000% of shares offered in the prospectus had been allotted. That amount had enabled the board to pay the vendors the 55,000% they were entitled to in cash and thus left the company when the July and Sept. calls were due, and paid a working capital of 25,000%. The various transfers by the vendors had all been finished except so far as regarding certain matters, such as the handing over of the plant and stocks in South Africa, but which he expected would have been completed by this time. Mr. McArthur had been appointed to proceed to South Africa for the purpose of taking over the effects from the syndicate belonging to the company, and also with the more important object of pushing the company's business in South Africa. They had also appointed Mr. Webster as general manager.

SUCCESS PREDICTED.

He had had a great deal to do with the working of the process in South Africa, and he ventured to predict, as the result of his short experience there already, a brilliant future for the company. At the suggestion of Mr. Webster they had despatched three young men to South Africa who were possessed of a good technical knowledge of the working of the process. Their operations hitherto had been chiefly confined to the Robinsou and Sheba Mines. In the former mine during the three months of Mar., Apl., and May, they had treated 5,496 tons, which had yielded 4,306 ozs. of bullion, giving an average for each month of fully 1,800 tons, and yielding for each month between 1,400 and 1,500 ozs. of bullion.

RETURNS.

That gave an average yield of 15 6-10ths dwts. per ton, which, judging from the general rate of the assays, showed about 80 per cent. of the whole of the gold there. The expense naturally varied a little with the circumstances, but, roughly speaking, the expense of working their process had been proved to be about 10s. per oz. At the Sheba Mine their workings had only been for a short period. They were only in receipt of the returns for Apl., May, and perhaps for a portion of Mar., but in that mine during that time they had dealt with 2,300 tons, and which had given a yield of about 2 ozs. to the ton. In other words, as near as possible the yield for the 2,300 tons was about 4,600 ozs. They were now in treaty for the use of their process in at least six other establishments.

NOT WISE TO MENTION PROFITS.

He did not think it wise, in the interests of the shareholders, to say what their profits had been hitherto, or what they were likely to be, on any of these contracts, but the directors were now perfectly well aware of what line was most suitable to go upon, and that policy they intended to pursue. The extent of the field open for the use of their process was implied by the numerous applications which Mr. McArthur, their manager, said he had had from all parts of the country from men who were desirous of adopting their process at their mines. So far they had only been dealing with tailings, but another very important point in connection with the extension of the process was the facility it afforded for the treatment of refractory ores.

A vote of thanks terminated the proceedings.

GOLDEN LEAF, LIMITED.

THE MANAGER SENDS A GOOD REPORT.

THE secretary of Golden Leaf, Limited, announces the following telegram received from Mr. F. Henry Longmaid, the company's general manager:—During June the mill at Empire worked 60 stamps for 28 days, crushed 5,000 tons, and the yield was as follows:—Bullion, \$10,600; sundries, \$1,300; total, \$11,900. The working expenses for the month were, \$8,500—\$3,400; expended on capital account, \$2,000. The manager cabled on 26th ult.:—Tailings mill running well. Empire bottom drift last 5 ft. wide, assays gold \$9. In his last cable he says:—One foot against the hanging wall Empire bottom drift \$18.

GYMPIE GREAT EASTERN GOLD MINING CO. LIMITED.

A DIVIDEND OF 1s. IS ACCOMPANIED BY GOOD NEWS FROM THE MINE.

IN sending the shareholders a dividend of 1s. per share the directors say that according to recent advices from Gympie the prospects of the mine have considerably improved of late. The Orient reef is opening up in a satisfactory manner, and is likely to turn out large quantities of gold. Another reef to the west of the Orient reef was intersected in the cross-cut some time ago, and presents a very promising appearance. In the adjoining mine—the No. 1 North Glamire—this reef is reported to be opening up well, and instructions have been given to commence work upon it in this company's ground. The local secretary states that "never since the old workings on the Great Eastern reef, even in full swing, has the mine looked so promising. As far as one can anticipate in mining there seems years of profitable work ahead."

DAY DAWN BLOCK AND WYNDHAM GOLD MINING CO., LIMITED.

A DIVIDEND DECLARED AFTER BIG OUTLAY OUT OF REVENUE ON CAPITAL ACCOUNT.

THE net revenue of the year, as shown by the report of the directors, amounts to 10,790l. 13s. 5d., which, added to the balance brought forward from last account, gives a total of 64,620l. 15s. 1d. standing to credit of revenue on Mar. 31 last. Out of this sum the directors have paid towards the erection of the new mill, branch railways, and No. 3 shaft a sum of 47,882l. 19s. 6d., representing the excess of the total cost of those works over and above the capital available for the purpose, leaving a balance at credit of revenue account of 16,737l. 15s. 7d. Out of this sum the directors recommend the payment of a dividend of 6d. per share, free of income tax, which will absorb 12,460l. Many interesting details in connection with this company will be found in our "Mining Market."

MOUNT LEYSHON (QUEENSLAND), LIMITED.

TWO DIVIDENDS OF 6D. EACH PAID, AND 30,000 TONS OF ORE IN SIGHT.

THE directors are able in their report for 1890 to refer to the fact that the anticipations held out at the last general meeting have been fully verified. Since the company's 20-stamp battery was completed in May, 1888, the quantity of ore crushed has been steadily increasing, the figures being:—1888—1,806 tons, yielding 957 ozs.; value, 2,997l. 4s. 1d. 1889—6,726 tons, yielding 3,837 ozs.; value, 10,292l. 18s. 10d. 1890—16,640 tons, yielding 9,154 ozs.; value, 23,320l. 19s. 8d. While for the current year the output has fully kept pace with that of 1890. Recent advices estimate the quantity of ore in sight at 30,000 tons, an amount which should increase as developments progress. Out of the profits of the year 1890 two dividends, each of 6d. per share, have been paid, and a further sum amounting on Dec. 31 to 1,091l. 15s. 6d. has been provided on account of new plant.

THE CENTRIC PENS.—Apart from the Remington Standard Type-writer, which long experience has shown us to be the easiest of known methods of conveying thoughts to paper, we have not the least hesitation in awarding the first place amongst pens of the usual kind to the Centric. The manufacturers are Messrs. John Walker and Co., of Farringdon House, Warwick Lane, London, whose object has been to study the styles of writing adopted by different writers, and then to produce a pen, or rather a series of pens, from which a proper selection may be made. The writer may, then, flatter himself that he has been provided with a pen that will write as easily as a lead pencil, and one which, whilst possessing all the qualities of the quill, excels that implement in most respects. The Centric pens and penholders (the latter are specially provided) will not ink the fingers, and may be laid down without risk of blotting, due to the complete isolation of the bulb, or ink-holding portion of the pen, from the fingers in the act of writing, and from the paper when laid in a horizontal position. Neither will it cramp the fingers, for in the Centric pen the point is in a line with the central axis of the holder. It is, therefore, lower by half the diameter of the end of the holder than that of the ordinary or Eccentric Pen, which is in a line with the upper surface of the holder. Hence, in writing with the Centric pen, the upper (first and second) fingers have not to be so much depressed in order to bring the point to the paper, and there is therefore more room for the free movement of the under (third and fourth) fingers. Further, there is a mechanical advantage in writing with the Centric pen, since, at whatever angle the pen be held, its point is nearer to the ends of the thumb and first and second fingers, at which the motive power is concentrated, than is the case with the ordinary or Eccentric pen. Again, in writing with the Eccentric pen, the constant lateral movement to the right has a tendency to turn the point to the left, to counteract which the fingers are cramped by holding the pen more firmly than is compatible with rapid and easy writing. So far as we have tried Centric pens, they seem also to excel in durability, and certainly in flexibility.

THOMAS THOMPSON,

STOCK AND SHARE DEALER
ESTABLISHED 1862.

84, ANGEL COURT, LONDON, E.C.,
And MINING EXCHANGE, LONDON.

Bankers:—THE CITY BANK, LIMITED, and METROPOLITAN
and BIRMINGHAM BANK, LIMITED.

INVESTORS in all classes of Stocks and Shares should read
Mr. THOS. THOMPSON'S MINING AND INVESTMENT CIRCULAR,
free on Application.

Shares sold at Special Prices for forward delivery (One,
Two or Three Months) on deposit of 20 per cent.

Orders by Letter or Telegram promptly attended to.

Telegraphic Address:—"REMEMBRANCE," LONDON.

NOTE ADVANTAGES WE OFFER TO INVESTORS AND SPECULATORS.

LOCKWOOD, WHITLARK AND CO.,

5, THROGMORTON AVENUE, LONDON, E.C.

We make Mines a special study, and invite correspondence, whether
business results or not. We can always give reliable information.

We open any number of all classes of Mining Shares at close
market price of the day on 10 per cent. deposit, and carry them over
as long as clients wish at low contango rates.

We close speculative accounts at any time, and pay profits instantly,
irrespective of account day. We sell shares at current prices for for-
ward delivery at one, two, or three months on 15 per cent. deposit.
We are members of the Mining Exchange, and subject to the rules and
regulations of that institution.

Send for our prices before dealing elsewhere.

Options at low rates for account, one, two, or three months in
Mining, Land, and Miscellaneous Shares.

We deal in every description of Miscellaneous Shares.

We publish a South African Share List daily at 4.15 p.m., containing
useful information as to claims held, dividends paid, &c., post free.

Telegraphic Address: "PERSONIFY," LONDON.

NOTICE TO READERS.

Replies to Annual Subscribers will be sent by wire or letter, as
may be necessary.

South Wales.—It is a highly speculative stock, but the recent fall is not due to
bad news from the mine. An improvement in price is most probable after the
meeting next week.

Indian Consolidated.—Belfast—Certainly. We are of opinion you have done
right in averaging. Capt. Plummer has a very high opinion of this mine and so
has Mr. Malcolm Low, M.P., who has just visited it.

Jessie, L. T.—Buying such a small number of each as you suggest is useless.
We advise you to buy in fifties or hundreds. All the companies named are in a
fairly good position.

Atlantic.—It certainly shows the good opinion held by the market. You do
right to hold.

W. B. Fraser.—Cannot recommend a purchase for various reasons.

Undecided.—Keep them, and if possible purchase more, and so average. You
then have, as we have before pointed out, a better chance to realise with a profit.

Thomas Phillips.—You should hold on. We consider the shares are worth
double their present price.

J. W. S. A.—No. 1 sell. Nos. 2, 4, 5 and 6 are expected to go higher. Nos. 3
and 7, cannot advise purchase.

Helmley.—Your shares are fully paid. The alternative would only be in the
event of a re-construction being decided upon by the shareholders.

Quarterly Subscriber.—We recommend them in spite of your friend's letter. The
management we know is sound and respectable, and everything is going well at
the mines.

Barrow (K. K.).—You could not do better than invest your money in them.

Rookery.—The market is purely nominal. You should, therefore, hold on.

R. S. Lovegrove.—Simply promises that are never likely to be fulfilled. Have
nothing to do with it.

Geologist.—Weak holders have sold, but if you take our advice you will keep
your shares.

Windfall.—Your broker is well-known here, and we feel sure the matter will be
put right if you explain matters to him.

M. C.—Sell.

Tired Shareholder.—They will perhaps enlighten you at the company's offices.

R. Darley (Manchester).—On the merits of the mines the shares in both com-
panies are worth holding. Other shares have suffered in a like manner from
the "bears."

Martyr.—The call is not yet due; therefore you, having purchased recently,
must pay it or sell out at once.

S. W. Snyers (Tiptree).—Unduly depressed we consider, but likely to have a
good rise very shortly.

Watchful Reader.—Not as you expected, but delayed for reasons that will, no
doubt, be explained by the directorate. We are informed by those who should
know that the company has a very fine property.

SOUTH AFRICAN TRUST AND FINANCE COMPANY, LIMITED.

SUBSCRIBED CAPITAL, £255,000.

BOARD.

B. B. TRENCH, Esq., Chairman.

Sir CHARLES METCALFE, Bart.

L. BALFOUR BURNS, Esq.

Sir STUART S. HOGG.

Major J. W. M. COTTON.

RICHARD SMITH, Esq.

EDWARD DICEY, Esq., C.B.

HEAD OFFICE.—19, ST. SWITHIN'S LANE, LONDON, E.C.

SOUTH AFRICAN OFFICE.

NATAL CHAMBERS, JOHANNESBURG.

GENERAL MANAGERS IN SOUTH AFRICA.

W. Y. CAMPBELL, F.G.S., and E. W. EVANS.

BANKERS.—THE MANCHESTER AND LIVERPOOL DISTRICT
BANKING COMPANY, LIMITED.

THE STANDARD BANK OF SOUTH AFRICA, LIMITED.

The Company undertakes the following business:—

The skilled investment in South African Mining, Land, or other
securities for European investors.

Professional and confidential reporting upon companies, mines,
mineral properties, lands, and generally advising European share-
holders and others in South African ventures.

To act as agents on behalf of principals interested in South
African investments, and for the protection of their interests, and
where desired, to register shares in such undertakings, and to issue
certificates in exchange for same, thereby enabling European holders
to co-operate for their mutual protection.

Financing or advancing moneys to corporations, companies, syndi-
cates, or persons in South Africa.

The receiving of money on deposit.

The purchase and sale of properties, and all classes of South
African securities or interests.

A Mining Circular containing special information will be posted
weekly from the South African Office to all subscribers.

A SPECIAL CABLE CODE FOR PROMPT AND ECONOMICAL COMMUNI-
CATION BETWEEN THE SOUTH AFRICAN AND LONDON OFFICES.

Further information can be obtained at the Head Office of the
Company.

The Mining World.

LONDON: SATURDAY, JULY 11, 1891.

The "MINING WORLD" is not the property of a Mining
Speculator nor under the control of any clique.

RANDT CRUSHINGS.

AS we write the total output of gold from the Witwatersrandt district
last month has not been stated; but so far as can be judged from
individual returns it is not likely to exceed, at all events by much,
the preceding month's aggregate of 54,672 ozs. We do not suggest
that this is an unsatisfactory yield in itself for an industry which is
even now barely out of the infantile stage; but it is very much below
what has been foreshadowed by many of the experts who have visited
the district, and it is certainly smaller than the returns made
a couple of years ago seemed to indicate. But the point of
most importance to the shareholders in the Randt companies
is the percentage of gold obtained from the quartz, and in that
respect the returns are decidedly disappointing. The average does
not exceed 8 dwts. or 10 dwts. of gold to the ton, often falling
as low as 4 dwts. or 5 dwts., and in only one case that we have
noticed, the Robinson, exceeding 1 oz. of gold to the ton. The
Robinson percentage is about 1½ oz.; but that contrasts with an
average of nearly 3 ozs. in 1889. It may be that deeper sinking will
discover richer deposits, and that the Randt will justify all the glow-
ing predictions which have been made with regard to it; but it must
be admitted that the recent course of events is not promising. In
the following table we compare the yields of gold obtained by the
leading mines in the past four months:—

	Mar.	Apl.	May	June.
	ozs.	ozs.	ozs.	ozs.
City and Suburban ...	652	690	811	952
Durban-Roodepoort...	1,540	1,863	2,025	2,125
Ferreira ...	4,124	4,038	4,011	4,001
Geldenhuis ...	55	—	—	1,888
Geldenhuis Main Reef	410	365	400	485
Jubilee...	862	831	708	521
Jumpers ...	2,771	2,685	2,396	1,659
Knight's ...	750	790	790	865
Langlaagte ...	4,001	4,270	4,350	4,375
Langlaagte Block "B"	1,570	2,075	1,409	930
May Consolidated ...	1,700	2,250	2,100	2,000
May Deep Level ...	312	433	713	654
Meyer and Charlton	1,273	1,621	1,465	1,562

	Mar.		Apl.		May		June.
	ozs.		ozs.		ozs.		ozs.
Robinson	6,805	...	6,904	...	6,084	...	6,607
Salisbury	950	...	1,100	...	1,300	...	1,150
Simmer and Jack ...	3,218	...	3,275	...	3,300	...	3,306
Stanhope	773	...	867	...	956	...	934
Wemmer	964	...	900	...	1,160	...	1,252

It is satisfactory to observe that the English company, Durban Roodepoort, has shown a steady improvement, and that the Geldenhuis, Ferreira, Robinson, and Meyer and Charlton mines, shares in all of which are largely held in this country, have done well. On the other hand the Jubilee Co., which used to return over 1,000 ozs. a month regularly, has got down to about half that total, and has ceased to pay dividends; while its next-door neighbour, alphabetically, Jumpers, seems to be drifting back again after its recent pull-up.

THE THREE STAGES OF MINING.

A SHORT HOMILY ON AN OLD INDUSTRY.

It is orthodox to divide a subject into three headings. The preachers in the pulpit set the example, and the laymen out of it cannot do better than follow it. The Methodist preacher of the olden time, it is said, used to adopt a similar practice. When he chose his text he always considered it from three points of view, of which the first two were negative and the third sometimes positive. He occupied two-thirds of an hour in telling you what the text did *not* mean, and you might consider yourselves fortunate if in the remainder of the time he told you what it did mean. Now, mining in a new field almost always passes through three distinct phases. You have first of all the booming period; then the period of deep depression; and, finally, the period of steady and remunerative work.

India was a case in point 10 years ago, just as Africa furnishes the object lesson of to-day. Ten years ago few persons connected with mining considered themselves fortunate who did not possess Wynaad or Colar shares. The industry was totally new, but there were the glowing predictions of that bright and particular mining star, Brough Smyth, followed by those numerous satellites who afterwards took up the tale. Devala-Moyar shares, for example, were, if we mistake not, at one time 200 per cent. premium, and there was not the slightest difficulty in floating Rhodes Reef, Glenrock (it had not then commenced its Childe Harold pilgrimage), and other companies, and on the faith of these respectable ones there were started sundry gross swindles of the purest (or impurest) type. Shares were bought at high prices, particularly those of the Wynaad companies—the Colar Goldfield at that time not being held in so much esteem. The froth from the Wynaad pot soon disappeared, leaving the stale liquor beneath—in other words, the period of inflation was succeeded by that of gloom and despair. The Wynaad companies that are living to-day may not only be described as the survival of the fittest, but as those which came of legitimate parentage, for the management, if not successful, has always been respectable, and has merited the confidence of the public in its courageous effort to bring success out of failure. At the time the Wynaad had passed completely into the second period—that of depression, the various companies in the Colar district had either wound up, suspended operations, or were in the last throes of a seemingly hopeless struggle. In their case, to this period there succeeded the third—namely, that of steady and remunerative work. Gold mining in the Colar Field is not now a spasmodic sensation or a forlorn hope, but an established industry. It has taken almost 10 years to bring this about. Now, take the South African Mines. They have passed through the first, or booming, stage, and goodness only knows that they are deep into the second—that of hopeless depression. How long they are likely to remain there this deponent knoweth not, but it is quite to be believed that they will emerge therefrom, as the Indian mines have done, and pass into the third stage—that of an established industry. It may possibly take 10 years to do it, and some of the mines have been at work quite two-thirds of that period, so that, perchance, the hour of their redemption draweth nigh.

It comes to this—that 10 years seem really to be about the time for any new goldfield worth the name to establish itself in the eyes of the public by the actual results produced, and to entitle the shares of the companies that work in it to be spoken of as an investment. It must be owned that against this theory there is the experience of the English companies in Venezuela, which have taken much longer to reach the third stage, towards which even now they only seem to be approaching by slow and painful steps, and by a path strewn not so much with thorns as with re-constructions. After all, then, there seems no settled time that can be fixed for a new goldfield to prove itself worth the money spent upon it; but looking at the ones we have named, as well as at some others, to which reference might be made, a decade is about the time that it takes to work a new goldfield into a pronounced, or even tolerable, success.

RUBY MINES OF BURMA.

AN UNPLEASANT MEETING FOR DIRECTORS.

THIS company was described, at the unpleasant meeting held on Wednesday, as being still in the expectant state. The chairman, in

his speech, admitted that the results were "not very brilliant." Indeed they are not, and from more points of view than one. In the first place, there has been a quarrel between the directors and their late manager, and, in the next, there has been a pretty decided dispute between the shareholders and their directors—the former having adopted the quite unusual course of refusing to elect those retiring in the ordinary course by a large majority. In regard to quarrel No. 1, it is very strange to hear Sir Lepel H. Griffin, the chairman, saying that the company would have been in a state of bankruptcy had it remained under the direction of the former superintendent, when that gentleman (who was present) declared that he had in his pocket a letter from the chairman, written a short time before he left, stating that the directors were very well satisfied with the way in which the work was going on, and foreshadowing his remaining with the company. Shareholders will remember the complimentary way in which Sir Lepel Griffin previously spoke of the late manager—in fact, he then used language similar to that which he now employs with regard to Major Kunhardt.

The chairman tried to put as fair a face on the matter as he could. We do not, however, gather that the position of the company is at all satisfactory. Turn which way they will the shareholders cannot find comfort. If they look to the mines they see that the out-turn of rubies is described by the otherwise enthusiastic chairman as trifling. If they turn to the share market they see the enormous premium most of them gave for their shares reduced to the vanishing point, and a lamentable discount instead. If they turn to the directors at home, they see them at loggerheads with the former manager, and, most painful spectacle of all, they see nine gentlemen receiving fat fees for managing a concern that three or four business-men of the ordinary type would direct much better. To bring about drastic reforms shareholders were powerless; but there was one thing at least they could do, which they did with great heart, and that was to refuse to re-elect the two directors who happened to retire by rotation. In this way Burma Ruby Mines, thanks to the initiation of the shareholders, took the first step in the direction of much needed reform.

PALMAREJO.

AFTER an interval of 14 months (far too long, as all the shareholders will say), Palmarejo held a meeting on Thursday last. The desire to obtain information was so great, that the room hired for the occasion was far too small for those who wished to be present. The chairman, Mr. Pigou, adopted the original course of first getting the report and accounts passed, and then giving his explanation of the position of the company. It is scarcely worth while, as a shareholder pointed out, to depart from the plan adopted by every other body of directors (except the sages who preside over the destinies of Palmarejo) of considering the whole position of the concern on the first resolution, which is the reception and adoption of the report and accounts. By the singular method adopted, the chairman, during the greater part of the proceedings, found himself speaking with no resolution whatever before the meeting. Shareholders will be delighted to know that the mill and the railway are both on the point of completion, after having cost an infinitely larger expenditure of money and time than was ever dreamed of in the wildest philosophy of anyone who has now the control of affairs. The only person who really seems to have grasped the position of Palmarejo was the late lamented Mr. Bladon, who told the shareholders at a meeting, at which in a rash moment they dispensed with his invaluable services, the true nature of the campaign upon which they were entering, but great credit is due to the present board for having raised the, we may say, unexpected sums the works have cost the accurate amount of which none of the engineers have come within miles of properly estimating. However, the mill and the railway are about completed, and the mines are looking well in every respect. The statement of Mr. Pigou was businesslike and satisfactory. This gentleman carried the sympathies of the meeting with him, and all would have ended happily, as in a three volume novel, but for the advent upon the scene of Mr. Hart, a director of the Mexican Mineral Railway.

This gentleman fairly succeeded in setting the meeting by the ears. Assuming the character of a schoolmaster talking to naughty boys, he was persistent in again and again reminding his hearers that they had not subscribed anything like the capital towards the railway that might have been expected from Palmarejo shareholders, but the reply of some he addressed was that they had done their share, and the reply of the others would have been that their outlay in the former enterprise had been quite sufficient without a further one in the latter. One shareholder very properly reminded Mr. Hart that without the Palmarejo Mine there would have been no railway, and that gentleman could retort that without the railway something like *nil* was the value of the mine. It was satisfactory to hear Mr. Hart say that the railway was on the point of completion, but he might have conveyed the information in a more urbane manner, and not have been too persistent in reminding shareholders of other facts they already knew. It is to be presumed that if the shareholders in the railway company had not thought the speculation a good one they would not have entered into it.

Certainly Palmarejo shareholders are not so simple as to think they did so out of philanthropic motives towards them.

THE HALF-YEAR'S TRADE.

THE returns for June last, issued this week, complete the first half of 1891, and are fairly satisfactory considering the trying ordeal through which all business has been carried since the crisis, and collapse in Nov. last, and which has been further aggravated by a long period of dear money. The figures for the past month represent Home exports of 21,434,000*l.*, being merely a fraction under those for the corresponding period, or practically stationary, although allowance has to be made, for there having been one more working day this year in the month of June. The imports were 36,850,000*l.*, or an augmentation of nearly 12 per cent., while the re-shipments reached 4,612,000*l.*, or a decrease of nearly 10 per cent. For the six months, however, there is a falling off of almost 3 per cent. in our exports and an increase of only 2½ per cent. in our imports, while average in respect of the re-shipments shows a loss of only 3½ per cent. The results for the month as regards exports are decidedly good, except for a heavy falling off of nearly a million in the shipments of yarns and textile fabrics against a reduction in all classes for the six months, apart from raw materials and chemicals. Of imports, the month exhibits a pretty general increase, any falling off being slight, while the six months' summary gives an augmentation for all but cattle, sheep, &c.; metals, chemicals, and raw materials. As regards metals, the imports for the month were valued at 2,195,000*l.*, and for the half-year at 11,525,000*l.*, while the shipments of metal and metal manufactures reached 4,225,000*l.* for the month, and 21,439,000*l.* for the half-year. Although there was an increase for the month of 450,000*l.*, the total for the whole period indicates a loss of over a million. Machinery likewise, while giving an increase for the month, has decreased over 100,000*l.* for the six months, the total being 7,874,000*l.* The imports of copper and lead have been larger during the past month, but the arrivals of tin were less, and the exports fell off. On the half-year generally both arrivals and shipments have been smaller, the exception being in regulus and precipitate and the export of wrought copper. Coal shows an increase as well for the month as six months, and iron and steel recovered in June a part of the loss on the previous five months.

The following table in our usual form shows the results for the month in regard to the imports and exports of metals, &c.:—

Article.	IMPORTS.				EXPORTS.			
	Month.		Increase or decrease per cent.		Six months.

ARSENIC PRODUCTION.

THERE are now in Cornwall 15 mines engaged in the production of crude and refined arsenic, of which the greatest is Callington United, a property owned by the limited company of that name, and a bad second is East Pool, which, of course, is largely productive of tin, with which we are not now dealing. Callington United produced in 1890 1,117 tons, of the value of 12,283*l.*, and the latter 612 tons, of the value of 4,278*l.* Drakewalls also produces a fair quantity, namely, 502 tons, of the value of 4,256*l.* The production of crude and refined arsenic in Devonshire is much larger than in Cornwall, being 4,133 tons, of the value of 34,224*l.* There are but three mines producing crude and refined arsenic—Devon Consols heading the list with 2,615 tons, of the value of 28,523*l.*; Bertha Consols (of which little has been heard since the management was changed), 964 tons, of the value of 1,271*l.*; and Gawton, 554 tons, of the value of 4,430*l.* The total production for 1890 was 7,276 tons, of the value of 60,727*l.*, which compares favourably with the previous year, namely, 4,758 tons, of the value of 38,260*l.* Of arsenical pyrites the production was 5,114 tons, of the value of 4,414*l.*, but the total for the preceding year was much larger, namely, 7,688 tons, of the value of 7,317*l.*

THE LATE, BUT NOT LAMENTED, GREAT KRUGER.

Now that Great Kruger has departed from the scene of its earthly troubles, an episode of its by no means happy existence may be recalled, though there is not much moral to point or no very blood-curdling tale to adorn. In March, 1890, we were able to expose an attempted "bogus" boom in these shares. The boom was got up at the expense of the dealers, and amongst the number sought to be victimised were Mr. Thomas Thompson, Messrs. Turner, Lupton and Co., Mr. W. H. Bumpus, the Messrs. Tallentire, Messrs. Lockwood Whitlark and Co., and others. These gentlemen, on a certain Monday morning in March, 1890, were the recipients of orders to buy Great Krugers to the maximum number of 5,000 in one case and to the minimum number of 700 in another. The orders purported to come from what looked enticing and certainly most respectable addresses, as, for example, the "Rectory, Petersfield," the "Vicarage, Doncaster," "Saltergate House, Chesterfield," and the like. It was from the latter address that Mr. Thompson received an order from an unknown client, calling himself "B. Bruce," to buy 5,000 Krugers. Now, Mr. Thompson was something like Mr. Micawber, who, before entering into the Medway coal trade, thought it desirable to go and see the Medway. Mr. Thompson telegraphed to "Saltergate House" asking for a reply, and this duly came, though not from "B. Bruce," but from the postal authorities in Chesterfield, to say that this gentleman, so far as that town was concerned, had neither a local habitation, nor a name. Through the means of the Mining Exchange, the whole of the plot was discovered, and the mining Pigott who, it was discovered, had written one and all the letters, was defeated. We now learn that the last scene of all has come which ends Great Kruger's strange eventful history. The title to the property has been allowed to lapse. The winding-up order was made on Apl. 1. The summary of assets and liabilities shows unsecured debts 1,183*l.* and assets 2*l.* 3s. 2d. The deficiency to the contributories is 135,962*l.*, and is largely made up of amount of purchase money, to represent which there is now no asset, 130,000*l.* It is such concerns as these that are the curse of legitimate mining and its history shows that from the first this was a mendacious attempt, not so much to develop mines in the Transvaal, as to exploit the gullible investor in England.

VALLEY GOLD.

THE moderate demand made upon the shareholders of this company at the meeting on Thursday last for the sum of 5,000*l.* will no doubt be responded to. The position of the company was clearly set forth by Mr. Meates (the chairman) in a speech which could not fail to impress the shareholders with the necessity for raising the money asked for. When the company was re-constructed about the middle of last year it was left to the shareholders to decide whether they would subscribe 40,000*l.*, which would enable the directors to have pumping machinery put down to get water from a neighbouring lake, or whether they would subscribe 10,000*l.*, and be entirely dependent upon the rainfall for their supply. The latter alternative was adopted. At the statutory meeting in November the chairman said the success of the company would depend upon the season and the nature of the soil met with. They were then in gravel, mixed with cement, and it was confidently believed, and, indeed, it is practically a certainty that at 2,000 ft. from where they then were they would get out of the cement and reach payable soil. An exceptionally dry season ensued varied by a flood which did harm rather than good, and the result is the manager only got through 350 ft., and is still in cement. The fresh capital will enable operations to be carried on for at least another season, when it is confidently believed the cement will be got through, and the company will be in a position to make profits. It was very satisfactory to hear that the gravel met with so far has never yet been of a lower value than 3s., which is twice the amount given in the prospectus. We need hardly point out to the shareholders the necessity of supporting the company by subscribing for the preference shares about to be issued, especially seeing that the amount is so small and the chances are so great. If every shareholder subscribes to the extent of 2 per cent. on his present holding, the thing is done.

TRANSVAAL GOLD EXPLORATION AND LAND CO.

WE congratulate the directors of this company alike on the dividends they have paid and the highly satisfactory position of the mine. It is true the dividend is only 2½ per cent., but in view of what was said as to the position of the mine, shareholders can only regard it as the earnest of better things to come. The results of prospecting and development work have been most encouraging, and some of the ore extracted has been exceptionally rich in the precious metal. The operations have been conducted in a manner that reflects credit upon the management, for the gold produced from Oct. 1 to Mar. 31 was 7,205 ozs., against 3,235 ozs. in 1889-90, and from Apl. 1 to June 30, 3,420 ozs., against 2,405 ozs. in 1889-90; total, 10,625 ozs., against 5,640 ozs. in 1889-90. This large increase is due to the greater tonnage crushed by the battery, the augmentation of the pan plant, and the

very high yields from rich ore treated in the pans. Of the above 10,625 ozs. of gold produced, 8,195 ozs. have been received in London and have realised 29,203l. 6s. 3d., or about 3l. 10s. 4d. per oz. net. The directors have made arrangements for increased crushing power, as the output from the mine fully warrants it.

THE MONEY MARKET.

CITY, FRIDAY EVENING.

AFTER a most complete and rapid fall rates in the Discount Market at length appear to have touched their lowest, for there has been a distinctly firmer tendency observable. This has been in spite of the release of the dividends on the Funds, and does not seem to have been due to the export of gold to Russia, which has been so long expected and discounted, but it may be partly due to the German demand for the metal, which, setting in under present conditions, may develop into some importance before it could be checked. At any rate, the banks have shown a disposition to support the market, and this they have so far done successfully, for rates from being under 1 per cent. are now $1\frac{1}{2}$, $\frac{1}{4}$; they first refused to take bills under 1 per cent., and now require $1\frac{1}{8}$ per cent., so that they keep the market up. Money, however, is all at sixes and sevens still, not being worth more than $\frac{1}{2}$, $\frac{3}{4}$ per cent. for day-to-day advances, or loans for a week or 10 days. Some thought the Bank would this week reduce the rate to 2 per cent., but the directors are loth to take a step which might—for such is the uncertainty—have to be immediately retraced, causing disturbance in monetary and business circles. Loans to the Stock Exchange for the new account are likely not to exceed $1\frac{1}{2}$, 2 per cent., and some loans have been negotiated for six months as low as 2 per cent. The Bank return has been affected by the export of gold to Russia, as well as by the distribution of the dividends, and is adverse. A million and a quarter was taken for that country, but the loss on balance was reduced to 830,000l., yet the reserve was 1,255,000l. worse at 17 millions against 11,170,000l. at this time last year. The public deposits have fallen off 2,674,000l. due to the dividends, but the private deposits have been swelled by a nearly equal amount, viz., 2,630,000l., showing that they had not been anticipated, and that there is no demand for money. The result, therefore, is that the proportion of reserve has relapsed 3, to $40\frac{1}{2}$ per cent. The Government securities have increased 2,480,000l., apparently due to Exchequer borrowing, while the private securities are 1,044,000l. less, which is difficult to account for unless it is due to the liquidation of the Baring estate.

Notwithstanding the essentially holiday character of the Share markets, accentuated by the German Emperor's visit and Henley Regatta, the tendency this week has not been unsatisfactory. Rather the contrary we think, and any improvement discernible is attributable to a greater degree of confidence in the financial situation and prospect of cheap money, but nevertheless, no permanent recovery is possible yet awhile, even though a better feeling may expand. Consols have with other first-class investment securities shown activity, and it is gratifying to observe that stock has been absorbed in a liberal and wholesale manner, partly in anticipation of the release of the July dividends increasing the public appetite for stocks of this healthy order. Home Railways have fluctuated a good deal and are stronger, upheld by decent traffics, the Board of Trade returns, and modest buying for investment of the leading lines. The Scotch lines have found favour, and the Southern passenger stocks are distinctly higher as well; however, the damaging report upon bridges on the Brighton system, and the inevitable outlay during the years to come in restoring the same, and which is fancifully estimated from 100,000l. to 750,000l., deters much speculation. In Foreign Bonds there is dulness, and Spanish and Portuguese have suffered from Continental sales. The financial situation at Lisbon is precarious, and the agricultural outlook in Russia gloomy. Argentine have drooped, excepting the Funding Loan, and Uruguay have fallen heavily in connection with a mission to raise more money. Canadian Railways were good, notably Grand Trunk, whose weekly return was a surprise, but the company is over 115,000l. to the bad for six months. Mexican Rails were utterly neglected, while American improved in response to Wall Street, and Louisville have been the centre of operations on dividend considerations. Banks and Telegraphs are better, likewise Suez Canal, and the leading Brewery descriptions advanced. Eastmann's Meat rallied to 6 $\frac{1}{2}$, and then relapsed. Salt Union rose, also Ebbw Vale Steel, but Bell's Asbestos and Produce Clearing House shares declined.

Money continued to-day a veritable "drug" at $\frac{1}{2}$, $\frac{3}{4}$ per cent., while discount quotations were nominally unaltered at $1\frac{1}{2}$, $1\frac{1}{4}$ for three months' bills. The Bank of England received 157,000l. in gold from Lisbon and Melbourne and Sydney, while 40,000l. in bar gold was sold presumably for Berlin. Bar silver receded to 45 $\frac{1}{2}$ d., and Mexican dollars to 44 $\frac{1}{2}$ d., and Rupee loans likewise were distinctly flatter.

The visit of the German Emperor to the City to-day has brought business to a standstill in the Stock Exchange, as to-morrow the House will be closed, and the settlement commences on Monday. In the absence of support, prices, including the Funds, have mostly given way, but Home Rails are firm, and Grand Trunks further advanced. Consols have receded $\frac{1}{4}$ to 95 $\frac{1}{2}$, 96 for money, and $\frac{1}{8}$ to 96 middle for account. India Three per Cent. were weaker at 96 $\frac{1}{2}$, $\frac{3}{4}$, and the scrip declined to $\frac{1}{2}$ premium. In Foreign Stocks both Spanish and Portuguese were supported, the former closing $\frac{1}{8}$ better, and Italian were firmer. Uruguay rallied $\frac{1}{2}$ to 1 per cent., but Russian relapsed $\frac{1}{4}$. Mexican fell $\frac{1}{2}$ to 1 per cent., and Argentine $\frac{1}{4}$ to $\frac{1}{2}$. Home Rails were mostly $\frac{1}{4}$ to $\frac{1}{2}$ higher, North British $\frac{1}{2}$ to $\frac{3}{4}$, and Great Northern Deferred 1 per cent., the heavy lines being bought by small investors, and the fine weather benefited Brighton "A" and the other southern lines. The American market was dull on the Louisville dividend at the rate of

5 per cent., holders having the option of taking 10 per cent. of their holding in the new stock. Prices in most cases were $\frac{1}{4}$ to $\frac{1}{2}$ lower, but Milwaukee improved $\frac{3}{4}$. Canada Pacific were firm, and Grand Trunk Stocks rose $\frac{1}{4}$ to $1\frac{1}{4}$, but Mexican issues gave way $\frac{1}{4}$. The Miscellaneous Markets were generally featureless. Breweries were dull, and in Banks London and County further advanced $\frac{1}{2}$. Cables were easier, and Peruvian Corporation Preferences recovered $\frac{1}{2}$.

Annexed are the final quotations to-day:—Consols Account, 96 $\frac{1}{2}$, 95 $\frac{1}{2}$; Egyptian Three-and-a-Half per Cent., 91 $\frac{1}{2}$, 92; Egyptian Unified, 96 $\frac{1}{2}$, 93 $\frac{1}{2}$; French Four-and-a-Half per Cents., 104 $\frac{1}{2}$, 104 $\frac{1}{2}$; Hungarian, 89 $\frac{1}{2}$, 89 $\frac{1}{2}$ xd.; Italian, 90 $\frac{1}{2}$, 90 $\frac{1}{2}$ xd.; Mexican, 29 $\frac{1}{2}$, 29 $\frac{1}{2}$ xd.; Peru Corporation, 8 $\frac{1}{2}$, 9 $\frac{1}{2}$ per cent.; Peru Preference, 22 $\frac{1}{2}$, 23 $\frac{1}{2}$ per cent.; Russian, 1889, 97, 97 $\frac{1}{2}$ xd.; Portuguese, 42 $\frac{1}{2}$, 43xd.; Spanish, 73, 73xd.; Turkish, 1871, 95 $\frac{1}{2}$, 96 $\frac{1}{2}$; Turkish Defence, 93 $\frac{1}{2}$, 94; Caledonian Railway, 116, 116 $\frac{1}{2}$; Great Eastern, 91 $\frac{1}{2}$, 91 $\frac{1}{2}$; Great Western, 158 $\frac{1}{2}$, 158 $\frac{1}{2}$; Brighton "A," 141 $\frac{1}{2}$, 141 $\frac{1}{2}$; North Western, 174 $\frac{1}{2}$, 174 $\frac{1}{2}$; Metropolitan, 82 $\frac{1}{2}$, 83 $\frac{1}{2}$; Metropolitan District, 29 $\frac{1}{2}$, 29 $\frac{1}{2}$; Midland, 154 $\frac{1}{2}$, 154 $\frac{1}{2}$; North British, 40, 40 $\frac{1}{2}$; North Eastern, 156 $\frac{1}{2}$, 156 $\frac{1}{2}$; South Eastern "A," 83 $\frac{1}{2}$, 83 $\frac{1}{2}$; Mexican Railway, Ordinary, 37 $\frac{1}{2}$, 37 $\frac{1}{2}$; Grand Trunk, 9 $\frac{1}{2}$, 9 $\frac{1}{2}$; Grand Trunk First Preference, 62 $\frac{1}{2}$, 63 $\frac{1}{2}$; Grand Trunk Second, 42 $\frac{1}{2}$, 43 $\frac{1}{2}$; Grand Trunk Third, 23 $\frac{1}{2}$, 23 $\frac{1}{2}$; Canadian Pacific, 82 $\frac{1}{2}$, 83 $\frac{1}{2}$; Denver, 16 $\frac{1}{2}$, 16 $\frac{1}{2}$; Erie, 19 $\frac{1}{2}$, 19 $\frac{1}{2}$; Milwaukee 66 $\frac{1}{2}$, 66 $\frac{1}{2}$; Lake Shore, 113, 113 $\frac{1}{2}$; Louisville, 76 $\frac{1}{2}$, 76 $\frac{1}{2}$; Atlantic First, 30 $\frac{1}{2}$, 30 $\frac{1}{2}$ xd.; Ontario, 16 $\frac{1}{2}$, 16 $\frac{1}{2}$; Ohio, 18 $\frac{1}{2}$, 18 $\frac{1}{2}$; Norfolk and Western, 52, 52 $\frac{1}{2}$; Reading, 14 $\frac{1}{2}$, 15; Reading Bonds, 79 $\frac{1}{2}$, 80 $\frac{1}{2}$; Union Pacific, 44 $\frac{1}{2}$, 45; Wabash Preference, 23, 23 $\frac{1}{2}$; Ottoman Bank, 12 $\frac{1}{2}$, 13xd.; Anglo-Telegraph, 45 $\frac{1}{2}$, 46 $\frac{1}{2}$; National Telephone, 5, 5 $\frac{1}{2}$; Hudson's Bay, 15 $\frac{1}{2}$, 16; Suez Canal, 110, 111xd.; Guinness, 325, 327; Allsopp's Ordinary, 27, 29; Bryant and May, 13 $\frac{1}{2}$, 14 $\frac{1}{2}$; Eastman's Meat, 5 $\frac{1}{2}$, 6 $\frac{1}{2}$; Salt Union, 5 $\frac{1}{2}$, 6.

Following the recent very satisfactory report upon the liquidation of the liabilities of the old firm to which we have previously referred. A meeting of shareholders took place this week of Baring Brothers, Limited. The first balance-sheet was presented, and a good position was exhibited. The total assets were 6,967,000l., including 2,157,254l., cash in hand or at call, and the liabilities were 2,356,000l. on current accounts, and 3,291,000l. on acceptances. Mr. Francis Baring stated that nearly the whole of their former commercial credit has been retained, also the accounts of the chief Foreign Governments and the great mass of dividend accounts. Though the business was not fully transferred until Easter, the prospect, he added, is very satisfactory at present, and full of promise for the future.

THE AUSTRALIAN BROKEN HILL CONSOLS, LIMITED.

DIRECTORS ISSUE A REPORT WHICH SHOWS THAT 50,000l. HAS BEEN PAID IN DIVIDENDS IN SIX MONTHS, AND THAT THE COMPANY IS ONLY ON THE THRESHOLD OF ITS PROSPERITY.

The report of the board, as might have been expected from the recent returns, will prove encouraging reading to the shareholders. Realisation of the extraordinary rich ore shipped regularly as advised by telegram, has placed the company in a strong financial position. At present after payment of two *interim* dividends equalling 10 per cent. for the six months ending June 30, 1891, absorbing 50,000l., and after having written off the whole of the development and general expenses up to Dec. 31, 1890, previously referred to, all surplus arising from further realisations of ore in hand and in transit, together with all other future net profits, will be available for payment of dividends. In April last, the East Broken Hill Consols, Limited, was successfully floated with a fully subscribed working capital of 50,000l. This will be an answer to those who are walking about the city and saying the company did not "go." The company purchased two blocks of land of 40 acres each for 10,000l. in cash, and 440,000l. in fully-paid shares of the new company. In the new shoot met with in the drive north of tunnel "J," the superintendent reckons that the reserves of ore amount to upwards of 20,000 tons, but of low grade, a trial crushing of 125 tons, yielding at the rate 2 dwts. 5 grs. of gold per ton. The directors believe that other and richer ore shoots will, from time to time, be discovered, and think the prospects at present justify the hope of a successful future for the company. They say that Mr. Davey is to be commended for his treatment of the pyrites contained in the ores. Already 379 ozs. 3 dwts. 17 grs. of gold have been extracted, and the directors anticipate a continuance of satisfactory results from this source.

AMMONITE.

EXPERIMENTS AT THE WORKS.

GREAT success attended the experiments of the explosive Ammonite, which took place on Thursday at the Curry Marsh Explosive Factory, Stanford-le-Hope, Essex. In compliance with an invitation sent out by the chairman (Sir George Elliott, Bart., M.P.), and the directors of the Miners' Safety Explosive Co., Limited, a large party of gentlemen journeyed by special train from Fenchurch Street station to the factory, where the trials were carried out on a large space of ground close to. The day was delightfully fine, the journey pleasant, and the experiments thoroughly conclusive and interesting to the influential company that assembled.

It is claimed for Ammonite that it cannot be fired by concussion, as in the case of dynamite; that it contains no nitroglycerine, picric acid, gun-cotton, or chlorate of potassium; that it contains no explosive liquid, leaving nothing to exude, that there is no free acid present in the mixture, or any body liable to spontaneous decomposition, it being made from the finest material obtainable, and in strict accordance with the chemical tests laid down by the Home Office Inspectors; that it is quite dissimilar in composition to gunpowder, and contains none of its ingredients; that it cannot be frozen like dynamite or blasting gelatine, and thus become more liable to explosion by concussion; that it cannot be exploded by direct application of heat; that the only method of exploding the material is by the insertion of a detonator containing fulminite of mercury, and which is not contained in the cartridge, as

sent out by the company, but is only inserted by the person who is about to employ the explosive at the moment of firing; that when exploded it gives off no flame and but little smoke, so that when properly tamped it can be employed in collieries where gas is present, and that neither are there any deleterious fumes produced as in the case of other explosives.

The experiments, which were carried out with complete success and without a hitch, were as follows:—No. 1 was to test the comparative strength of various explosives in a mortar by throwing a cylindrical shot weighing 29 lbs., and with a charge of 5 grammes. The results were:—Ammonite, 320 ft.; dynamite, 289 ft.; roburite, 320 ft.; stonite, 255 ft.; carbonite, 180 ft.; securite, 197 ft.; tonite, 219 ft.; and gunpowder, 136 ft. No. 2 showed the safety of ammonite in comparison with other explosives by means of falling weights. A steel block, weighing 59 lbs., was allowed to fall from a height of 5 ft. upon dynamite, blasting gelatine, tonite, gunpowder, stonite, carbonite, gelignite, and gun cotton, with the result that they all exploded; but in the case of ammonite, and on which the weight was allowed to fall 23 ft., no explosion occurred, thus proving its safety by concussion. Other trials showed that ammonite could not be frozen; that, unlike frozen dynamite, chilled ammonite can easily be detonated; and that it is in no way affected by variation of temperature. A cartridge of ammonite immersed for several hours in a freezing mixture was cut in halves, one half was detonated and exploded, whilst the other half was thrown into a brazier of red hot coke, without exploding. No. 4 experiment showed that no explosion would ensue by firing a bullet into a number of cartridges of ammonite, which was not the case with dynamite; and also that no explosion would ensue by firing a 1lb. canister of gunpowder into a case of ammonite cartridges. Wrought iron plates, $\frac{3}{8}$ in. thick and $\frac{1}{2}$ in. thick respectively, about 12 ins. by 12 ins. were broken by 6-oz. and 8-oz. cartridges; after which an extemporised section of a railway was destroyed in a few minutes by four 6-oz. cartridges of ammonite, placed on rails and fired with instantaneous fuse. Two stockades of sleepers, each 12 ft. long, with an intervening space of 20 ft., were then cut down by a line of unopened cartridges placed along the base, the whole of the cartridges being exploded by a single detonator. No. 9 experiment was the exploding of a bundle of six cartridges under water with a sub-marine fuse, and to prove the instantaneous detonation of ammonite and the continuity of explosive wave through the unbroken cartridges, a line of cartridges, 80 ft. long, was fired by one detonator.

The great feature of the explosive which it was intended the experiments should prove, and which they did prove conclusively, was the perfect safety of the explosive, and the absence of obnoxious fumes which would enable the miners to resume work immediately after the explosion had taken place. This feature was much commented upon at the luncheon which followed, and the chairman and directors of the company were congratulated upon the success of the day's proceedings.

CORRESPONDENCE.

We do not hold ourselves responsible for the Opinions or Statements of our Correspondents.]

To the Editor of the MINING WORLD AND ENGINEERING RECORD.

HORO CONCESSIONS.

SIR,—Can any of your readers inform me when crushing will start at this mine?

Can any of them tell me when the next meeting of the company will be held?

I see fortnightly reports in the mining papers, but they only appear to relate to developments of the property and to preparations (which seem endless) for crushing on a large scale, and to the causes of delay after delay.

Last Dec., in your valuable paper, you called attention to this property, so perhaps you or some of your readers could now enlighten me on this most important point.

Shareholders like to have plain reports, but, best of all, to have steady monthly returns of ore.—I am, &c.,

A WEARY HOLDER.

July 7.

THE FALL IN PRICES.

SIR,—As a quiet shareholder in the Victory Mine, I have been much disgusted at the number of circulars I have been pestered with, all of which I shall, in future, throw unopened into my waste paper basket unless they emanate from the management itself. I see, however, in to-day's MINING WORLD a suggestion of a fellow-shareholder, under signature "A. B.," which I think well worthy of the attention of the board, viz., that Messrs. John Taylor and Sons should be asked to take over the management of the mine. I think no board of any company need feel hurt at such a suggestion, as the eminence and success of Messrs. Taylor as mine managers are household words among all shareholders in mines, except, perhaps, of your correspondents, "Disgusted Shareholder" and "Mr. Douglas," both of whom, I think, might do worse than carry out their intention of not investing any more in mines.

I, myself, am in receipt of an annual average of about 12 per cent. interest on the capital I have invested in mines, good, bad, and indifferent, and I have further to say that my experience is that the MINING WORLD and *Truth* are excellent guides to the mining investor, if intelligently and regularly read. I am greatly indebted to both journals, and should have done still better if I had not on some particular occasions disregarded warning hints they gave.

Of course, a speculative and uncertain investment like mines cannot be successful unless conducted on the principle of average in every sense. I speak as a simple investor, not as a speculator on market turns.

The latter method is a simple gamble, and advice thereon must necessarily be of little value, as both you and *Truth* are never tired of pointing out.—I am, &c.,

A CONTENTED SHAREHOLDER IN 16 MINES.

July 4, 1891.

THE FALL IN PRICES.

SIR,—I am glad that the letter of mine, which you were good enough to publish, under the above heading, has elicited some further remarks from others. Your correspondent, Mr. Douglas, corroborates my views as to the situation, and adds more facts which drive the contention home more fully. Your other scribe, "A Reasonable Shareholder," seems quite satisfied to let things go on as they are, but I do not think much of his argument in favour of *statu quo*, and unless he can produce a better I will suspect that he is only interested in mining companies as an "honorary" shareholder.

The short list of companies which I gave is not, I am sorry to say, the whole of those in which I have, unfortunately, at different times, taken shares; but I mentioned them as instances of *bad ones*, where also the officers were, to put it mildly, discourteous, and ones of which I had tried to get some reliable information (without success) from the nominally advising mining and financial papers. I have taken a *bona fide* interest in mining matters for the last 10 years or so—not an interest only from a stock-broking point of view, but with a real desire to watch the developments of the mines themselves, and with only so much speculative concern as was natural when one's judgment was put on trial. My knowledge of the concerns in which I risked my money was, of course, entirely derived from what I read in the mining papers, prospectuses, brokers' circulars, &c., and I would like to ask "A Reasonable Shareholder" if he thinks it *reasonable* to suppose that I would have made so bad a selection had these published authorities openly and distinctly warned me and others against them?

In conclusion, I will, with your permission, give a full list of the mining companies with which I have been connected, and alongside each will remark as to whether they have been re-constructed or not during my experience of them. I think you will agree that it is a pretty representative list from all the mining centres, but if it is not so, then my mining experience has been very unfortunate indeed. But do the really good companies require ever to re-construct? I do not think so; and point to Mysore, Montana, Colombian Hydraulic, Morgan Gold, Rio Tinto, Cape Copper, Tharsis, &c., &c., as examples.

Hoping you will allow this subject to be well ventilated,—I am, &c.,

"A DISGUSTED SHAREHOLDER."

July 7.

Callao Bis, re-constructed two or three times; Chile, ditto (last time into Yuruari); Potosi, Balkis, Bratsberg Copper, Oscar, ditto; Indian Consolidated, re-constructed; Nouveau Monde, taken by new company, "Tarryall Creek"—no information to be got; United States Placers, re-constructed, and worse!—no information to be got; Central Transvaal Gold, bad, and no information; Waterberg (Transvaal) Syndicate, ditto; La Trinidad Silver, issued preference shares—then shareholders were thrown overboard; Kapanga, paid once a dividend! shares have gradually declined; Mysore, good; Colombian Hydraulic, ditto; Morgan Gold (Wales), re-constructed; Nine Reefs, re-constructed and preference shares; Glenrock, re-constructed.

THE FALL OF PRICES.

SIR,—I have read with interest the letter of "A Disgusted Shareholder," as well as the rejoinder of "A Reasonable Shareholder." I judge the former to be a man who is unwise in his choice of speculations, and who, instead of blaming himself, seeks to throw the blame on every person and everything else he can. I judge the latter to be what he describes himself, "A Reasonable Shareholder," who looks at matters as a sound man of business, able to discriminate between the false and the true, and to give an unprejudiced version of his experience, and not one that is soured by losses he has brought upon himself. Perhaps you may care to know my experience. I was principally interested in mining shares during the Australian boom of some five years ago. I bought Queensland shares right and left, knowing full well that I was doing so in the midst of a boom, and that the inevitable reaction was certain to set in. My object, therefore, was, as far as possible, to clear out of one speculation before going into another; but the famous Queensland telegram from the Premier caught me in the backwash, and I was landed with more shares than I cared to own; but the result of a great deal of trouble, not a little anxiety, and an infinitude of bookkeeping, cheque signing, and cheque receiving was this—that I made about 300% profit, some of which is invested in mining shares to-day. In some cases I could not realise what I paid for them, in other cases I could sell at a small profit; but I hold the shares still, because the chances are that they will emerge from the deep gloom which has depressed the spirits as well as soured the temper of "A Disgusted Shareholder," for even he cannot hold mining responsible for the swindles perpetrated in its name or for the fall of prices common to every description of enterprise. Let him hunt up his other investments and tell us about them.—I am, &c.,

ANOTHER REASONABLE SHAREHOLDER.

July 8.

TASMANIAN LAND AND EXPLORATION CO., LIMITED.

RECENT DISCOVERIES.

IN a letter just received from the company's consulting engineer, Mr. R. Provis, dated Comstock, Tasmania, May 21, 1891, referring to the recent discoveries by the company's prospecting party, he writes:—"I now have to report a discovery which, judging by samples and Mr. Moore's description, I believe to be the best thing yet found by the prospecting party. They came across a lode lying east of Mount Tyndall and west of Lake Dora, and pegged out four 80 acre sections upon it. The lode is a large one, and runs through the entire length of the four sections, but until some of the scrub is cleared no idea of its width (except that it is more than 10 ft. wide where seen) can be arrived at. The samples of capping brought in showed fine galena through it, and it is not usual for the capping to carry any galena. I am highly pleased at the appearance of the stuff." The directors have also received very favourable accounts of the sections near Waratah and elsewhere, in which the company is interested.

MESSRS. M. B. FOSTER AND SONS, LIMITED, announce that their home-trade sales of Bass and Guinness for the half-year ended June 30 show an increase of 30 per cent., as compared with the same period last year.

REPORTS OF MEETINGS.

TRANSVAAL GOLD EXPLORATION AND LAND CO.

A DIVIDEND OF 2½ PER CENT. IS DECLARED, AND A SATISFACTORY STATEMENT MADE AS TO THE CONDITION OF THE MINE.

AN extraordinary general meeting was held at the City Terminus Hotel on Monday.

Mr. William Mortimer Farmer, (chairman of the company) presided.

The SECRETARY (Mr. Charles Edmund Wells) read the notice of meeting.

The CHAIRMAN: Gentlemen, I find, either by instruction from, or request of shareholders in general meeting assembled, and acquiesced in by a complaisant board, we have the pleasure of having to meet you twice a year. Now, I can enter into the feelings of the board in the matter of meeting you; it is very pleasant to see old faces, and to know that there are many that are at one with us in our policy; that have been with us since we started, and perhaps were with the old company. But when it comes to a personal matter, I think, as chairman, that to bring a lot of gentlemen together from the chance of coining sovereigns on the Stock Exchange, to really hear nothing more than what has been detailed during the period under review in the weekly papers, merits neither thanks nor enthusiasm, and I would suggest that next July the shareholders should be satisfied with an elaborate circular. However, whatsoever may be decided on as to future action we are really very pleased at the number who have come to hear what we have to say. Shall I sum up, before I begin, by saying, we all, directors, manager, and staff, have done our best, and that the result is satisfactory. Since I had the pleasure of laying before you the position of the company in Feb. when I met you, nothing has occurred that was not forecast. We have no news of fresh auriferous beds or fields to lay before your mental or imaginative vision. The continuity of the deposit from Theta, Zeta, Pi and Nu, has not yet been determined; indeed, it is a point that requires to be proved by experience. At present we are not quite agreed as to results of our theories; the board consider it ought to be, and I have no doubt the shareholders will endorse the views of the board. Our practical manager, however, wants to be convinced by facts before he joins the ranks of prophets, and there is no doubt he is wise; for he says it would be the easiest thing going to prospect for gold, if you were certain where you would find it, and it would simplify everything so much; but somehow if you sink a shaft or dig a trench, where, by theory, the deposit ought to be (according to the board or shareholders' view), the deposit has moved its position and is not there; and the more work that is done on your property seems to me, as a layman, to indicate most clearly the advisability of not prophesying until we know, and you will even then find the experience gained in parallel of 27 south is of no use to you in Africa in parallel 28 or 26 north. Well, I find by notice I have to make some statement. Now, in Feb. we presented accounts, supplemented by a statement. Please place that statement on one side, and think that what I am saying relates only to from Oct. 1 to latest date from mines, but for the purpose of comparison the weights are only brought down to Mar. 31, which ends the financial half-year.

PROSPECTING

is the first duty of your company, and (here refer to No. 1) you will note that on home farms, where we have been searching during summer, nothing sensational has been struck, but as the grass dies down in winter there is a chance of some of our prospectors finding something on some of our outlying properties, where they will be employed. The six months ending Mar. 31 embrace the summer, or wet, season, which is not suitable for prospecting, and, therefore, the work done has not been so extensive as it will be for the other six months of the year. The following figures will give some idea of this work, as compared with previous summers. Tunnels or drives made, 1890-91, 52 ft.; 1889-90, 1,811 ft.; shafts sunk, 1890-91, 59 ft.; 1889-90, 15 ft.; trenches cut, 1890-91, 4,027 ft.; 1889-90, 384 ft. In the corresponding half-year of 1889-90 a great deal of underground exploratory work was done at Beta and Theta Mines, whilst during the present half-year most of the prospecting was surface work. Many places have been tried, but only a few small deposits of ore were discovered. At Brown's Hill (Omicron deposit) 85 tons of ore, with an average assay of 1 oz. 4 dwts. per ton, were collected, but at no place was the deposit well-defined or continuous, and after having proved the ground well, work was stopped. On Ophir Hill (about 250 yds. south-east of Theta workings) a deposit, which was named the Pi vein, was found. It averaged 2 ft. in thickness, and from its appearance a considerable quantity of ore was expected, but it soon pinched out in every direction. Ore extracted, 71 tons; average assay, 2 ozs. 15 dwts. per ton. Writing on June 1, the manager reports regarding Edin Hill, where prospecting has been going on:—

"In four of the trenches a deposit of ore has been cut, extending 66 ft., with an average thickness of 4 ft., and assaying 16 dwts. per ton. Under present conditions it is not a very valuable find, but it may improve. A shaft is being sunk upon it."

At same date also:—

"The old main drive at Zeta vein, Ophir Hill, is being opened up and extended, and the ore body has been again picked up, though only 4 ins. thick at present."

MINING.

Mining operations were continued at Jubilee Hill, Ophir Hill and Brown's Hill. Work on the Mu deposit (Jubilee Hill) was carried on in Oct. and Nov., and 512 tons of ore extracted with an average assay value of 1 oz. 4 dwts. per ton. As announced in last report, this deposit is worked out. At Ophir Hill, the work on Theta deposit has consisted chiefly in the removal of overburden, and the reward of such

work should all be obtained during the current half-year. During the six months, we have broken down and removed to the waste dumps 80,275 truck-loads of overburden, equal to 1,284,400 cubic ft. In the course of this work we have extracted 325 tons of ore, with an average assay value of 6 ozs. 12 dwts. per ton. The greater part of this ore (which we might not have touched, had we simply driven in a tunnel) has been taken—not from Theta proper, but from a deposit overlying it. This overlying deposit was formerly very small and poor, but it has greatly improved in our recent workings both in size and quality. We are now beginning to get at the bulk of the ore. It is gratifying to be able to say that we have cut the Theta deposit on our lowest floor, at a point where it was previously supposed to have pinched out, so above and below the original Theta we seem to have got ore. Operations in the Theta Mine have been much hampered by frequent falls of rotten trap rock from the side walls of the working, brought about by the prolonged incessant rains of a most unusually wet season. At the Nu Mine, Brown's Hill, the main development, during the six months, has been in the eastern workings known as 1,209. Here the ore deposit has been followed into the hill by stripping the overburden. At some parts the ore body was very thick, but taken all over it would average about 4 ft. The ore from this portion of the workings has given a high average yield, but almost along the whole face the ore body has become very small, and is much mixed with cherty quartz, which greatly reduces the grade. There are, however, a few small bunches showing, and it is possible some of them may make again into a fair-sized body. I anticipate we will yet get a considerable quantity of ore here, but it will not only be of a lower grade, but also at a greater expenditure of labour. Writing June 1 the manager says:—

"At the south-east end of 1,209 we have come on another bunch of ore of a good grade, with a streak, about 6 ins. wide, of very rich ore running through it."

In the lower workings (styled No. 1,211), which are 300 yds. to the west of No. 1,209, I also look to get out a quantity of ore, as we do not appear to have got to the end of the large bunches, which are found at this part of the mine. The total weight of ore extracted from Nu in the six months was 1,824 tons, average assay 5 ozs. 17 dwts. per ton.

FROM GENERAL MANAGER'S ADVICES DATED JUNE 1, 1891.

Mining.—Brown's Hill, Nu vein: Ore extracted at Nos. 1,211 and 1,220, 20 tons, assay value 1 oz. 4 dwts. per ton, and at No. 1,209, 50 tons, assay value 4 ozs. 9 dwts. per ton. During the month 17 tons of rich ore, assaying 41 ozs. 11 dwts. gold per ton, were collected at No. 1,209 and sent to the mill. Ophir Hill, Theta vein: Ore extracted, 6 tons, assay value 3 ozs. 4 dwts. per ton. Stripping work in the main working was proceeding. The small deposit referred to last week was making towards the west, but the ore was rather low grade.

TRANSPORT.

This work has been carried on in a satisfactory manner all the season, notwithstanding the unusual wetness of the summer. A large stock of ore has been accumulated at the mill against the winter, when hauling by oxen will be entirely suspended, so that we are not likely to have to shut down at all through want of ore. Considerable repairs and improvements to roads have been necessary, and about 150*l.* has been spent on this work. The total weight of ore hauled to the battery during the six months was 4,812 tons.

MILLING.

The battery has been at work 2,708 hours during the six months, and crushed 3,319 tons, comprising the following ores:—Beta, 67 tons; Omicron, 85 tons; Theta, 730 tons; and Nu, 2,437 tons. The aggregate yield from these ores was 4,771 ozs. 19 dwts. retorted gold. As already announced, the pans belonging to the dismantled battery at Ophir Hill were removed and re-erected at Brown's Hill last year, alongside the pans already there. The increased pan plant started on Nov. 11, and since then has worked in a most satisfactory manner, and without the slightest hitch. Total time at work, 1,972½ hours; material treated, 620 tons, as follows:—Mixed blanketings, 79 tons; mixed tailings, 445½ tons; Nu tailings, 95½ tons. The aggregate yield of gold from the above was 710 ozs., equal to 1 oz. 2 dwts. 22 grs. per ton of material treated; and the yields per ton were as follow:—Mixed blanketings, 3 ozs. 16 dwts. 6 grs. per ton; mixed tailings, 13 dwts. 18 grs. per ton; Nu tailings, 1 oz. 1 dwts. 11 grs. per ton. In addition to the above, 88½ tons of Nu sieved ore were treated in the pans, and yielded 1,720½ ozs. of retorted gold, or 19 ozs. 7 dwts. per ton. Work in connection with the fitting up of the additional pan plant was continued in Oct. and Nov., and the sum expended under this head, that falls into the half-year now under review, was about 420*l.* The machinery has been kept in order, fair wear and tear excepted. The water supply has continued excellent, and more than sufficient for all our requirements. The turbine gives satisfaction, and has proved quite equal to the additional work of driving the extra set of pans. The directors have made arrangements, and the crushing power will be increased—indeed, a couple of months may be at work.

TONNAGE AND COSTS.

The tonnage of ore handled compares very favourably with corresponding period in 1889-90, as the following figures for six months will show:—Mined this year, 2,817 tons; last year, 1,958 tons; increase, 859 tons. Carted—Balance of last year, 2,771 tons; this season's mining, 2,041 tons; total this year, 4,812 tons; last year, 1,878 tons; increase, 2,934 tons. Milled—Battery, 3,318 tons; pans, 89 tons; total this year, 3,408 tons; last year, 1,939 tons; increase, 1,419 tons. The following are the working costs per ton for the corresponding six months in 1890-91 and 1889-90:—Mining, this year, 20s. 5½d. per ton; last year, 17s. 8½d. per ton. Transport, this year, 6s. 5½d. per ton; last year, 6s. 7½d. per ton. Milling, this year, 8s. 6½d. per ton; last year, 10s. per ton. Total this year, 35s. 5½d. per ton; total last year, 34s. 3½d. per ton. Cost of running the pans was 20s. 5½d. per ton of material treated, as compared with 15s. 0½d. per ton in previous years. This increase is largely due to initial charges in starting the new pans, and also to the extra time bestowed on the treatment of parcels of very rich ore.

RESULTS.

The gold produced from Oct. 1 to Mar. 31 was 7,205 ozs., against 3,235 ozs. in 1889-90, and from Apl. 1 to June 30, 3,420 ozs., against 2,405 ozs. in 1889-90; total, 10,625 ozs., against 5,640 ozs. in 1889-90.

This large increase is due to the greater tonnage crushed by the battery, the augmentation of the pan plant, and the very high yields from rich ore treated in the pans. Of the above 10,625 ozs. of gold produced, 8,195 ozs. have been received in London and have realised 29,203*l.* 6*s.* 3*d.*, or about 3*l.* 10*s.* 4*d.* per oz. net.

TREE PLANTING.

A sum of 211*l.* 15*s.* has been spent on this work, making the total expenditure incurred since the commencement of operations, 271*l.* 19*s.* 4*d.* Up to Mar. 31, 3,827 trees have been planted, chiefly blue gum (*Eucalyptus globulus*), a nursery established, and ground fenced and prepared for further planting. Of the trees planted, about 20 per cent. have died or been destroyed by insects and vermin. The remainder are growing fairly well. The present plantations are all on the farms, Ponieskrantz and Grootfontein.

LABOUR.

The supply all through the half-year has been fairly steady, and we have had no trouble in keeping up our forces. This change has been brought about, I think, partly as the result of lowering the wages of a certain portion of the Kaffirs at the Johannesburg mines, and partly by the advent of a new tribe in the labour market, viz., the Gungunyans. Portable ground tramways, with side-tipping trucks, have been adopted at the battery, and at Theta and Nu Mines, which will greatly economise labour. The sum of 500*l.* has been expended on this account. A small grinding mill has been sent out and will shortly be erected. It is capable of grinding 10 tons to 12 tons per diem, and is intended for treating parcels of the richer ores in conjunction with the pans. The cost in England, including shafting, pulleys, &c., was 500*l.* The accumulation of tailings at the battery may be estimated at 10,000 to 12,000 tons. The stock of ore on the battery dump at May 30 was as under:—Theta, 84 tons; Nu, 179 tons; Mu, 1,686 tons; total, 1,949 tons. Manager expected to haul a further quantity of Nu ore in June, before transport was entirely stopped. These extracts comprise all I can tell you definitely about the work of the mine. The quantity of ore placed on dump during the transport season will enable us to keep the mill going till next season commences, and work with tailings will help to keep the "boys" and pans employed. Meanwhile, the peculiar manner in which we find the gold deposited is engaging careful and scientific attention; and there are indications of some discoveries that may prove of great interest as well as of value. The expectations expressed at our last meeting have been fully realised, and I have the pleasure in reading a cablegram showing the result of June crushing, viz.:—

"Mined during June, 425 tons; battery working 21 days, old shift, crushed 525 tons of ore, yielding 540 ozs.; pans, 390 ozs.; sundries, 150 ozs.; total, 1,080 ozs.; expenses for month, 1,380*l.*," which for a 10-stamp mill compares favourably with most of the Randt companies. The remaining debenture debt was paid off on May 1, and all other debts are provided for. Your directors have resolved to pay an interim dividend on the 20th inst. of 6*d.* per share, which I have now much pleasure in declaring, payable to all shareholders on the register this day, and I am only expressing the hope of your board that this declaration may be followed by many others, during the time they have control of your affairs. Gentlemen, we thank you for attendance, and trust mutual confidence may be felt by both board and shareholders in each other.

CERTIFICATES.

A SHAREHOLDER: Why is there so much difficulty experienced in getting certificates from the office? I bought shares on May 11, and have not received my certificates yet, and the only answer I can get from my brokers is "that they are such an awfully slow company that we cannot get them." Certain of my friends are in the same position.

The CHAIRMAN: I am very sorry you should have been put to this inconvenience. I was not aware that we were "slower than most other gold mining companies." (Cheers.)

The SHAREHOLDER: That is not my opinion.

The CHAIRMAN: The shares come in regular rotation, and I do not think the directors have been absent one week from the board, and every Thursday we have all the shares passed that have been lodged up to the Wednesday evening previously, and the certificates put before us for signing.

A SHAREHOLDER: In justice to the office I must say that I sent my transfer in, and had my certificate back in 14 days.

DIRECTORS CONGRATULATED.

Mr. EWER: I do not think we should part without expressing our confidence in the board, who are to be congratulated upon the way they have extricated the company from debt, and placed it in a dividend paying position. At the last meeting, held here, it was my pleasure to compliment the board on the way in which they had made up their minds to relieve us of the debenture debt, and I am glad that long prior to this meeting we have had the announcement that the whole of it has been cleared off. We have also the pleasure of hearing (a pleasure I had anticipated) that the company is dividend paying. I hope in the future our dividends may be (and they must if we go on as we have been) largely increased. During the past six months we have done wonders in paying off this enormous debt. I would like to ask an explanation of the increase in the mining charges, and is it owing to the expensive system of stripping or removing the overburden instead of mining in the ordinary way, which, I fancy, would be the cheaper way of working?

A SHAREHOLDER: What is the greatest depth of our mine?

The CHAIRMAN: We have no shafts, and the deepest part is 70 to 80 ft.

The SHAREHOLDER: I had supposed that, having made a discovery of a large mass of ore giving 16 dwts. to the ton, you would have developed it, for I have always understood that 8 dwts. will pay expenses, so that half of that ought to have been profit. The papers sometimes speak of the managers putting the rich and poor quartz together, but in my early experience of mining we used to put the rich on one side for special treatment, and put as little of the poorer quartz into the stamps with it as possible. If the rich ore was stamped separately I think it would give a better report.

THE DIVIDEND.

Mr. R. P. EVANS: Although it affords me great pleasure to compliment you on the payment of this first dividend, yet, I think that instead of one of 2½ you could pay 5 per cent. The ore, you say,

realised 29,000*l.* since the end of the last financial year, and as there is a balance of 6,000*l.* brought forward, after paying off 9,000*l.* or 10,000*l.* of debentures, it leaves a sum of about 33,000*l.* Out of that there has been another 9,000*l.* or 10,000*l.* paid off in debentures, leaving 23,000*l.*, and it only requires 12,000*l.* to pay a 5 per cent. dividend, which, I think, might have been declared, and still have left you a good margin for prospecting. I agreed to the conservative policy of the board, but think the larger dividend would make the company appear better and the shares of higher value.

Mr. P. R. SMITH: I do venture to hope that considering the debentures have been paid off, and everything is so satisfactory, that we might have a larger dividend, but, of course, I leave that to the discretion of the board, as we have not the figures fully before us. I am sure we should like to come to a unanimous resolve with regard to the statement of the chairman, and it will assist us in doing so if we have a few figures showing the working account, with the estimated value of ore on hand, cash at bank, and the probable expenses. This would help us to know our position, and heartily and intelligently to vote for any resolutions that might be declared. As to the delay in getting certificates of stock, I am sorry to say I can substantiate the statement made, as I bought some stock in March, and about a month afterwards I had a circular sent to me, addressed to the company, showing the company was aware of the purchase, but I did not get my certificate until June. I shall be happy to send all the dates to the company so that this matter may be traced.

The CHAIRMAN: It was the fault of your stockbrokers.

Mr. SMITH: Not at all; the dates on the certificates guide me in what I am saying. I do not know the previous speaker either by sight or by name.

Mr. COULTER: Is there any intention of increasing the stamps?

VIEWS OF A STOCKBROKER.

Mr. JOHN SCHOFIELD: What will be the amount of cash in hand, including any gold that you are anticipating the arrival of, which may be included in the estimate of cash assets, which amount to about 7,000*l.*? (Cheers.) I think that will meet the enquiry that has been made. It is impossible for you to take in the value of the ore on the mine undressed, as to the contents of which you have not positive knowledge, and for which you have not the money. All you can do is to tell the cash you have, and the gold you are going to receive, before you pay a dividend, or can tell us the balance. I think 14 days much too long a period to take in which to get transfers. I have been a director of companies for 40 years, and we never take more than a week or 10 days. Stockbrokers and dealers are obliged to put shares into their names on the account days, which they have to take out of their names within the next 14 days, and if the company keeps those transfers 14 days or a month unregistered, it causes the seller great inconvenience. Some companies will not certify until the transfer is actually registered; therefore, I think the period allowed for registration of shares should be lessened.

CHAIRMAN'S REPLY.

The CHAIRMAN: The expense this year of mining has been increased considerably by the removal of the overburden, by which we now hope to benefit in the next six months. As soon as we can get a face to drive a tunnel through, the manager informs us he is going to mine in that way; but the ground is so shifty, that you cannot get the Kaffirs to work on it, and to close timber is very expensive. Up to a certain point it is less expense to remove the overburden. With regard to the Veta vein—if we had gone in by a tunnel we should have lost the 325 ozs. of gold, which are above it, and which recouped the expense we have been put to. The expenses were 35*s.* 5*d.* per ton this year, as compared with 34*s.* 3*d.* last year. We saved on milling what we lost on mining. The distance of the 16 dwts. deposit from the machinery is such that it would cost more to cart there than it was worth. 16 dwts. is the assay value; if we mill it you are only likely to get 10 dwts., which would hardly pay when it costs 35*s.* a ton, and when besides there would be the extra expense of carting. Your working capital is not more than 6,000*l.*, if so much.

WHAT HAS BEEN DONE WITH SLENDER RESOURCES.

It was 1*s.* a share on 248,000 shares, and with that 11,000*l.* or 12,000*l.* we had to pay debts 4,000*l.* or 5,000*l.*, and expenses in connection with the old company, and the balance was the only amount that this company had ever to work the mine with. You are getting a good return for the 6,000*l.* It is absolutely necessary to keep money in hand in case of accident, for you would be very much annoyed with us if we did not, and if we had to come upon you for a call of 1*s.* There is not a gentleman here present who is now advocating larger dividends who would not then be present to blame us, and to say we did not know our business. (Cheers and laughter.)

Mr. P. R. SMITH: That statement will be quite satisfactory if you tell us the amount of our resources.

The CHAIRMAN: One gentleman said there was 23,000*l.* over, and I only wish it were true, for you would have had 5 per cent.

Mr. EVANS: The amount of gold realised was 29,203*l.*, and with the 6,000*l.* brought forward makes 35,000*l.*

The CHAIRMAN: The accounts made up to date show that after this payment, irrespective of this month's returns, there will not be much more than 5,000*l.* left. I am not one to advocate dividends on gold unmilled. I shall get my gold in London first. (Cheers.)

Mr. SCHOFIELD: That balance does not include gold in transit or gold won?

The CHAIRMAN: It is a benefit to us to declare large dividends, for we are large holders, and I am one at 2*l.* 17*s.* 6*d.* per share. Mr. Evans must not mix up the profit and loss with the cash account.

Mr. EVANS: I repeat—I agree with the conservative policy of the board, in whose members I have great confidence, but I want them to deal with my figures, and explain why they do not pay 5 per cent.

The CHAIRMAN: The amount we have paid, and, with the dividend, will have to pay, comes to 24,900*l.* With 18,725*l.* we have paid off debentures; dividends absorb 6,217*l.*, which is 25,000*l.* we shall have spent this half-year, besides the expenses at the mine and in London, and many other things. When we resolved to declare the dividend we had 5,700*l.* left.

Mr. EVANS: Exclusive of 6,000*l.* brought forward?

The CHAIRMAN: It is all we have in hand, and I shall be glad to give you further explanations at the offices. As to stamps, we shall

be glad to put up extra ones when we feel that policy justified by the development of the mine.

After a further discussion on the same point,

Mr. EVANS said that his question had not been answered to his satisfaction. They should have had a general account showing their expenses and gross returns, and then how the balance had been dealt with—so much in paying off debentures, so much for the dividend declared now, and the balance to be carried to reserve account. That would have put the facts definitely before them, whereas at present that could not be said.

Mr. WILLIAMS: The explanation is very simple—this is not the annual meeting at which accounts are presented. It is in the power of the directors to declare an interim dividend whenever they like, and having done so now, the shareholders are not called upon to endorse their action.

Mr. R. P. EVANS moved a hearty vote of thanks to, and confidence in, the directors, which, he said, the state of the company fully justified. (Cheers.)

Mr. WELLS seconded the motion, and it was carried by acclamation.

The CHAIRMAN, in returning thanks, said to Mr. Evans: I shall look into the facts and make a little statement to send to the shareholders—a statement which I hope will satisfy you.

VALLEY GOLD, LIMITED.

SHAREHOLDERS DECIDE TO RAISE ADDITIONAL CAPITAL BY AN ISSUE OF PREFERENCE SHARES.

AN extraordinary general meeting of Valley Gold, Limited, was held at Cannon Street Hotel, London, E.C., on Thursday, July 9, for the purpose of considering and, if thought expedient, passing the following resolutions:—

1. "That the capital of the company be increased to 120,000*l.* by the creation of 20,000 preference shares of 5*s.* each, carrying a preferential dividend of 10 per cent. per annum, and subject to such preference, ranking with the ordinary shares for dividend." 2. "That such new shares shall be issued to such persons, at such times, in such manner, and upon such terms and conditions as the directors shall from time to time determine."

Mr. T. A. Meates

presided.

Mr. A. E. S. OLIVIERI having read the notice convening the meeting,

The CHAIRMAN said: Gentlemen, you will remember that at the statutory meeting of this company held on Nov. 29 last, speaking in a room in this hotel, I said that the success or failure of this property would depend very much upon the nature of the season and the nature of the ground we met with 2,000 ft. from where we were then working.

A BAD SEASON.

I will, with your permission, read you the summary Mr. Pedley gives of the weather we have met with. He says:—

"We have advanced a small distance compared with what could be accomplished in most seasons. Until the middle of Feb. the weather was abnormally dry, and we did nothing. But terrific storms burst over the whole Pacific coast, and with difficulty the works were saved, the volume of water filling the entire tunnel and flowing through the canyon besides. When this subsided to manageable limits some little work was done, and then another heavy flood came on owing to very warm weather melting the snow very quickly. The second flood, though lasting a very short time, did some damage, as it lifted about 2,000 ft. of the steel flume, and carried gravel in underneath it, so that some days of good water were lost before it could be put right. There were no spring rains. The season may be shortly described as a terribly dry winter. One terrific flood in Feb. and nothing else in the way of rainfall. An exceedingly bad season for us. A moderate shower is far better for us than a flood. Had the same quantity of rain been divided into ordinary showers we could have done quite ten times as much work. I think more."

Well, gentlemen, the result of the weather and of the soil combined has been that instead of getting through that 2,000 ft. we have got through as near as possible only 350 ft., and

WE ARE STILL IN THIS CEMENT.

Of the gravel we have taken out something like 650 cubic yds., and that has maintained all through the average which has been met with hitherto, somewhere about 3*s.* a yard, a penny or two more or less. As a matter of fact, there have been only 650 yds. taken out, and the rest of the cut has passed through cement. Within 2,000 ft. of where we commenced this season, we know there is gravel free from cement, or rather we have every reason to believe it, for the shafts there disclose it. The problem is, however, to reach it. When we laid the estimates before you last year, we said that the rejection of the proposal that the board had made for erecting pumping machinery from the Bear Lake would involve our coming to you again in the event of the progress during this winter not being satisfactory. The estimate we then made has been carried out fairly accurately, but we now find ourselves compelled to come to you again and say if we are to carry on the works for another season we must have permission to raise some

SMALL SUM OF MONEY

for the purpose. The debenture-holders were asked to meet us, and they had the whole position laid thoroughly before them. I may say that the debenture-holders are also large shareholders, and they have consented to the issue of 5,000*l.* of fresh capital in 10 per cent. preference shares, and it is for the purpose of passing that resolution that you have been asked to meet to-day. I need not point out to you, gentlemen, that if that money is not raised the property will fall into the hands of the debenture-holders, a property upon which has been spent close upon 100,000*l.*, and a property which everybody who has been connected with it, or has had an opportunity of forming a judgment upon it, has been spoken of as exceedingly rich. The debenture-holders, it is true, could make no profit out of the property if they were to foreclose, but they could, nevertheless, sell it and the chances of the ordinary shareholders recovering anything of

the money they have spent upon it would be very remote. I can say, on behalf of the board, that we regret, perhaps too late, that we did not make the Bear Lake scheme a question of confidence and left upon others the responsibility of carrying out works upon the present diminished scale, but, as you are aware, a very influential body of shareholders thought it better to limit the scheme to the comparatively modest dimensions that were adopted, and the result has been an unfortunate season, which compels us to ask you to pass this resolution. I may say that Col. Carey, who is by far the largest shareholder in the company, was asked by us to take a seat on the board, and after going through all the papers of this company since the commencement, expressed himself perfectly ready to take a seat on the board and

CONVINCED OF THE VALUE OF THE PROPERTY.

I cannot see that anyone can object to passing this resolution, and I trust it will not only be passed but that the shareholders will be prepared to take something like 2 per cent. upon their holdings, and so provide the means for carrying on the works for another 12 months. The chairman concluded by moving the first resolution as above.

Sir CHAS. CLIFFORD (director) seconded the motion.

QUESTIONS.

Mr. GARLAND: How do we stand financially? What is the amount of the debentures? When was the last balance-sheet drawn up? I think the shareholders have not been treated very well. You have kept us in ignorance for the last nine months. We have not had any intimation of what was going on either through the newspapers or by circular. I think we ought to have been informed of what was going on at the mine.

Mr. SIMMONS asked how much the re-construction scheme realised, how the money had been expended, and whether anything more could be done at the mine until next winter. It seemed to him they could only work at the mine during the winter months.

A SHAREHOLDER: You say you have already spent 100,000*l.* on this property. Is it worth while spending any more? I am inclined to wind the thing up altogether.

THE CHAIRMAN'S REPLY.

The CHAIRMAN: With regard to the question of the last gentleman as to whether it is worth while spending more money on the property I may say it has been our endeavour to explain for some time past that when we once get through what is called the cement, and which is, in fact, partially barren ground interspersed with pockets, we have every reason to believe we shall get very rich ground. That is the opinion of Mr. Pedley and the opinion of everybody who has gone carefully into the matter. I may say there is

NO MAN AT THIS BOARD WHO HAS DRAWN ANY FEES

since the inception of this company. (Hear, hear.) With regard to Mr. Simmons' question as to what re-construction realised—it realised 10,000*l.*, of which 2,500*l.* has been remitted to the mine, about 1,000*l.*, or, perhaps, a little more, I am not exactly certain, has been sent to Mr. Pedley for salary, about 4,600*l.* has been paid to the liquidator in payment of our debts, and about 1,000*l.* has been paid by way of debenture interest, and there is owing on calls in arrear and cash in hand about 200*l.* There is also a sum of 600*l.*, which has gone in a variety of ways, but is not included under any of the heads I have named. A sum of 28*l.* of that amount has been paid to a director who was upon this board, but who has since left it. That is the only director's fee that has been paid to any director of this company. Financially, we stand then in this position—we have in hand, or to come in somewhere, about 200*l.* That is not sufficient to carry us through another season, but in Mr. Pedley's estimate 500*l.* is regarded as a sufficient sum to carry on the works for another winter. The last balance-sheet of the company it is impossible to give, because there has been no balance-sheet yet. This company was only formed the latter end of last year, and held its statutory meeting on Nov. 29, so that there has not been time for a balance-sheet. With regard to Mr. Garland's remarks, that the shareholders have been kept in ignorance for the last nine months, I am sorry to hear that the reports, both by circular and also inserted in the financial papers, have not been brought to his notice; but it is a fact that every item of news of any particular interest has been sent to the financial papers. I can also say that one or two circulars certainly have been addressed to the shareholders giving latest information from the property. There is, however, very little to say, beyond that the water is running, and that the hydraulic is going on, or that we are still in cement, or the cement is dipping. I may say that

THE DIRECTORS OF THIS COMPANY ARE LARGE SHAREHOLDERS.

I think at the board we hold 55,000 shares, and we are most of us debenture-holders to the extent of, in the aggregate, 6,000*l.* In addition to this, I believe most of us are creditors to the company in respect of loans. We have, therefore, got a substantial stake in the company, and whatever has been done has been that which, in our judgment, was best in the interests of the company. It is unfortunate our efforts have not been more successful, but, at the same time, with a valuable property like this, the only thing to be done is retrench as far as possible the expenses, and press on to get into the gravel which we know to exist.

Mr. GARLAND asked what was the result of the trial in the law Courts, and what did the costs come to.

Mr. VERDEN (the solicitor): The action to which reference has been made was a personal action against the directors, and the Court of Appeal held that they were not guilty of the offences charged against them. No part of the expenses has fallen upon this company, the directors have borne the whole expense themselves. (Cheers.)

A SHAREHOLDER: Am I right in thinking that when the re-construction was resolved upon last it was determined to erect pumping machinery for pumping water from a neighbouring lake? Has that been done, or are we dependent upon the rains of the season for our water?

The CHAIRMAN: That was the scheme I referred to just now. The alternative before the old company was whether we should raise 40,000*l.* or 10,000*l.* 40,000*l.* would have been sufficient to put down pumping machinery, but some shareholders thought 2*s.* a share was too much liability, and they insisted on carrying on the property with 10,000*l.* We are, therefore, still dependent upon the season for our supplies of water. The pumping from the Bear Lake would have

supplied abundant water. We have our own reservoirs, but they are not sufficient to give us more than a few days' supply.

The motion was then put to the meeting, and carried unanimously.

The CHAIRMAN then moved the second resolution, as above, and said: I may say with regard to this resolution, that we hope the shareholders generally will support us. I cannot expect it from everybody, but I think that, seeing the interests we have at stake, a subscription of something like

2 PER CENT. BY THE WHOLE OF THE SHAREHOLDERS

will be sufficient for carrying us on, at all events, for another 12 months. I believe the whole of this money will be spent upon the works, so that whether the company is successful or unsuccessful, you will get value for your money.

Sir CHAS. CLIFFORD seconded the motion, which was carried.

Mr. SIMMONS asked whether they had still 2,000 ft. to go through before getting to the gravel?

The CHAIRMAN: On Nov. 29 I said 2,000 ft. would certainly see us through our difficulties, and what lay between us and the 2,000 ft. we could not tell. We know at the upper end of the valley, shafts sunk go through gravel with no cement at all. I may point out that in the original prospectus the value of the gravel was said to be 1s. 6d., but we have never yet found it of lower value than 3s. These properties all over America are of the same nature, the most successful of them having been disappointing in the first instance. Many of them have turned out extremely successful, and I have every reason to hope that will be our case.

Col. CAREY (director): I rise to support the chairman. There is no doubt in my mind that

THE VALLEY CONTAINS ENORMOUS VALUE OF GOLD.

A SHAREHOLDER: What is the depth of the shaft?

Col. CAREY: 30 ft. I think with this money subscribed, and the arrangements that will be made about working the mine, we will find we are into the gravel in a very short time.

A SHAREHOLDER suggested it would be advisable to bore the ground so as to save the possibility of coming against some obstacle.

The CHAIRMAN said that boring would be exceedingly costly, but that the suggestion would be communicated to Mr. Pedley.

Mr. McIVOR, in proposing a vote of thanks to the chairman, urged his brother shareholders to support the board in this attempt to find additional capital. This was not a case of shareholders being asked again and again in order to carry on an expensive establishment in the City of London, but an honest attempt to get at the gravel, which people who knew the property were convinced was there.

The CHAIRMAN having returned thanks, the proceedings closed.

CALLINGTON UNITED MINES, LIMITED.

THREE EXTENSIVE MINES BEING WORKED WITH ENCOURAGING RESULTS.

The third ordinary general meeting was held on Thursday, July 2, at the Offices of the company, 15, St. Helen's Place.

Mr. James Macandrew

(the chairman of the company) presided.

The report having been taken as read,

The CHAIRMAN stated that work had been going on very steadily at the mines, to which he had paid a visit, when he was greatly pleased with what he saw there. Progress was restricted chiefly by the limited supply of miners, the younger men being apt to leave for America or elsewhere, when it was often difficult to supply their places. However, some increase in their numbers had been obtained, and the houses built for them, and now almost ready, would help in retaining them. The principal event of the year had been the opening of Kelly Bray Mine, which caused some considerable preliminary expense.

THE RETURNS FROM THE UPPER LEVELS

worked have been very encouraging, both for arsenic and copper, but to work down to 70 fms. only is but the beginning of a mine. There seemed, however, every probability that the outlay necessary for going to a greater depth would repay the company. At Holmbush and Redmoor they had not yet been able to increase materially the output, either of arsenic or tin, having been working in a stretch of rather poor ore. Now that this was got through the appearance of the stopes was decidedly improving, and with the increased number of men engaged, he expected that the last six months of 1891 would show a considerable increase in the output over the first six months.

THE PURCHASE OF THE GREENHILL WORKS

is a matter of some consequence. They are extensive and convenient for us, and have been acquired at a moderate price. They can do all our work at present, but with a larger output we should require to add to the furnaces and chambers, while repairs, which have been quite neglected by the late owners, would also have to be taken in hand. This was having the attention of the board, who would be in full possession of the property this month, some slight difficulties connected with the title having been got over. The accounts for the year were in their hands, and were so fully detailed as hardly to call for special explanation. With respect to the recent issue of debentures, if they had got the whole amount taken that was asked for, they would have been able to impart additional vigour to every department of the business; but they could not accomplish very great things with the amount subscribed. Some shareholders had given good support, but many had hung back, and as they could not rely on the general market in the prevailing condition of financial distrust, they had to rely all the more on what the shareholders would do for them. A certain amount of money had been provided from other sources; but what he desired specially to impress upon them was that in their own interests it was not advisable to let the control of this important property pass into the hands of debenture-holders who were not shareholders also. If asked what he proposed doing

with the additional money, he replied they had to prosecute the thorough development of the 190-fm. level at Holmbush, which they had recently reached, and to connect it with the main lode of mundic. Then they were most desirous to go down at least 30 fms. in the Redmoor main shaft, which was much needed to prove its value as an important tin mine, and they wanted to get nearer to the junction of the two lodes, where there ought to be a valuable deposit of metal. At Kelly Bray they had much work to do, and the erection of pumping machinery would be required as soon as they went any deeper. They had likewise the necessary repairs and extensions to effect at Greenhill. In short,

THE WORKING OF THREE EXTENSIVE MINES AND A REFINING PLANT

could not be conducted without an adequate supply of working capital, as realising the returns from the mineral could only be effected after the lapse of some time. This capital the board had done their best to provide, and they now asked the shareholders to do their part. He urged all those who had not already subscribed to the debentures to lose no time in communicating with the secretary, who would supply them with any information required. He concluded by moving the adoption of the report and accounts for the past year.

MANAGER'S REPORT.

Capt. H. BENNETT, the manager at the mines, seconded the motion, and said, with regard to the three mines which were worked by the company, that Kelly Bray, which had lately been taken in hand, had been worked for copper 30 years ago, when arsenic was of little value, so that many thousands of tons of arsenic were now in sight. This mine was drained as far as the 70-fm. level by the Redmoor pumping engine, but the mine was sunk to the 110-fm. level. It should be drained to the bottom either by a new level through to Redmoor or by new pumping machinery. At the Holmbush Mine the bottom of the shaft had now been deepened to the 190-fm. level, and the cross-cut to the Flap Jack lode was nearly completed. This lode, in the 175-fm. level above, was worth from 30% to 40% per fm. for arsenic and copper ore. The cross-cut should also be continued to the north to intersect the Holmbush lode at the 190, from which lode, in the 175-fm. level, thousands of tons of copper ore, varying from 14 to 21 per cent., had been taken. This cross-cut would cost about 500%. Also, by extending the 190 level in the Flap Jack lode west a very valuable silver-lead lode would be reached. The Redmoor Mine was being worked for tin. From Johnson's lode 10 tons of tin were obtained monthly. A cross-cut in the 125-fm. level was almost completed to reach the Great South Tin lode, which had been worked 300 years ago on the surface, but which had never been seen at any distance below ground. The engine shaft should be sunk 30 fms., at which depth would be the junction of Johnson's lode and the Great South Tin lode, and at this point there would be a very large deposit of mineral. The silver-lead lode would also be cut when 15 fms. in depth had been reached, and much fresh ground laid open for tin.

INVITATION TO SHAREHOLDERS.

The CHAIRMAN observed that if any shareholder would like to visit the mines during the summer holidays, every facility would be afforded him, and he could hardly fail to be impressed with the extent and capabilities of the property.

After one or two questions had been asked and answered, one SHAREHOLDER expressed his readiness to take an interest in the debentures provided other shareholders did so likewise. He hoped, however, that the board would not undertake any costly developments unless they had the means to carry them through.

The CHAIRMAN replied that they could not stand still, and he counted on the assistance of the shareholders in enabling them to prove the riches which the mines were believed to contain.

The motion was then carried unanimously, as also motions re-appointing Mr. J. W. Birkett as a director, and Messrs. Theobald Bros. and Miall as auditors.

BURMA RUBY MINES.

A STORMY MEETING—THE RETIRING DIRECTORS NOT RE-ELECTED.

The third ordinary general meeting of the Burma Ruby Mines, Limited, was held on Wednesday, at Cannon Street Hotel.

Sir Lepel H. Griffin, K.C.S.I.,

presided.

The CHAIRMAN, in moving the adoption of the report and statement of accounts, thought that although they had

NOT ANY VERY BRILLIANT RESULTS

to show at the present time, yet the prospects of the company were exceedingly satisfactory and re-assuring. Some of the stones which had been mined had been shown to a great many shareholders that afternoon, and, although they had not yet obtained stones of a quantity and quality which they hoped to obtain, yet a very large number of stones were still in store, and many of them were of excellent quality. Every month the returns were distinctly better, both in quantity and quality, and their chief engineer (Major Kunhardt) was exceedingly confident of the eventual success of the company. In the final paragraph of his last report, which was received about a fortnight ago, he said: I look upon our first year as having been one of exploration and experimenting; the present, our second year, is one of development, and as far as I can judge our third and subsequent years will be years of success." The opinion of Major Kunhardt was one which was really deserving of the fullest confidence by them all. There were a good many present who knew Major Kunhardt as one of the most distinguished engineers who had of late years been in the service of the Government of India. He left that service to go to them, giving up what was certainly within his grasp—the Secretaryship of the Government of India itself, with the chief direction of all its railways, so confident was he, after having thoroughly gone into their concern, of its eventual success. Major Kunhardt had been at the ruby mines for about six months, and, having changed the system of

working, he had month by month sent home an ever increasing quantity of rubies. The

OUT-TURN AT THE PRESENT TIME, HE ADMITTED, WAS TRIFLING,

but when they took figures like the following, which showed the value of the out-turn in Feb. to be Rs 746, in Mar. Rs 1,418, in Apl. Rs 2,096, and in May Rs 4,445, which was the last return, he thought they would see there was a steady increase, which they hoped might be very largely increased when certain conditions, not at present favourable, were removed, namely, the facility for the transport of the ruby-bearing earth to their washing machines at the central stations. After referring to the mistake which had been made in sending out hydraulic machinery, the chairman said that the work they had carried out during the past 18 months was distinctly of a character preparatory to profitable work.

THEY HAD ALL EXERCISED CONSIDERABLE PATIENCE,

and he did not think it would eventually be unrewarded. If they had been connected with mining operations, they would know that, in a good many cases, they did not succeed in the first, second, or third year. The way in which their shares were held in the market showed that the public had confidence in the management of the affair. That hope he for one most fully shared, nor would he remain chairman of the board if he did not believe honestly that their company would be eventually a lucrative concern. He would not stand there and say soft things if he did not believe them, and he believed they would believe that of him. If by that time next year they were not able to tell the shareholders better things than they could that day he should begin to doubt the success of their undertaking. He did not think there was any one present who did not personally believe that the corner had at length been turned, and that the era of prosperity would be shortly dawning.

Mr. F. H. KIRBY, M.I.C.E., who has visited the mines and reported upon them, said he thought he might say that Major Kunhardt during the four months he had been at the mines had worked wonders. The whole country had been opened up in a way not hitherto done, and the prospects of the company were to his mind most satisfactory. He was quite sure from what he had seen that the whole of the machinery would produce such an income as they scarcely could expect themselves.

SUPERFLUOUS DIRECTORS.

Mr. E. K. BURSTAL inquired if Major Kunhardt had had any experience in mining engineering. Referring to the directors, he said that he did not think the services of so many as nine gentlemen on the board were necessary. (Loud applause.) Seeing they were not a dividend-paying concern he also thought that the directors' fees should be reduced, and if such a reduction was not forthcoming from the directors themselves he should move, "That considering the unsatisfactory character of the accounts the shareholders are of opinion that it is advisable to reduce the number of directors and the amount of their fees." (Applause.)

The CHAIRMAN, in reply, said that Major Kunhardt was not a mining engineer in the technical sense of the word, but then their mines were not mines in the technical sense of the word. He was, however, a man of all-round ability, and those who had been in any way connected with the Government of India, or with public works, would know his reputation as the most economical of workers. If their late engineer (Mr. Lockhart) had remained in charge, he believed

THEY WOULD HAVE BEEN A BANKRUPT CONCERN

within six months. (Oh, oh.) That was his reply to Mr. Burstal, if his information had been derived from Mr. Lockhart. Continuing, he said they were now in negotiation with the Government of India to reduce the rent as much as they could. The question of the directors' fees was one that he did not intend to enter upon. It was not reasonable to expect them to do their work for nothing. (Hear, hear.) If the shareholders were dissatisfied with them they could get rid of them or express their displeasure in any way they wished.

PROSPECTS NOT SATISFACTORY.

Mr. LOCKHART (who was received with mingled cries of "Sit down" and "Go on") said he had no wish to enter into any disputes, and he would simply touch upon the chairman's remarks that if he (Mr. Lockhart) had remained where he was the company would have been in bankruptcy. He would undertake to say that Major Kunhardt had been spending at a higher rate than was done before. ("No, no," from several of the directors.) He was inclined to think so. But, apart from that, he thought the statement should not have been made—(hear, hear)—because he had a letter from the chairman written a short time before he left, in which he said that the directors were very well satisfied with the way in which the work was going on, and foreshadowing his remaining with the company. After pointing out several things in the management which he considered to be wrong, he said that he could not agree with the chairman's observation about the prospects of the company being satisfactory and reassuring.

The re-election of the retiring directors—Sir John H. Morris and Mr. F. A. Gillam—having been moved and seconded,

Mr. GRIBBON moved that Sir John Morris be not re-elected on the ground that he (Sir John) was on the board of no less than 10 companies.

STRANGE DICTUM.

The SOLICITOR said that, according to the articles of association, if the retiring directors were not re-elected, they would continue to act till the next meeting. (Cries of "Nonsense," and interruption.)

Major JOSEPH and several other SHAREHOLDERS continued a prolonged and excited discussion, which terminated by the proposition for the re-election of Sir J. Morris and Mr. Gillam being negatived by a large majority.

Major JOSEPH asked that, as these gentlemen had not been re-elected, and as by the articles of association they were still directors for a twelvemonth, what would be the proceedings of the chairman and his colleagues—what advice would they give those gentlemen as to what their conduct should be? (Cries of "Order" and uproar.)

The retiring auditors (Messrs. Chatteris, Nichols and Atkins) were re-elected.

THE MYSORE REEFS CO., LIMITED.

RE-CONSTRUCTION RESOLUTIONS CONFIRMED—BETTER NEWS FROM THE MINE.

AN extraordinary general meeting was held at No. 6, Queen Street Place, yesterday, when the subjoined resolutions which were passed on June 25 were submitted for confirmation as special resolutions:—

RESOLUTIONS.

(1.) "That the company be wound up voluntarily, under the provisions of the Companies Acts, 1862 to 1890, and that John Harvey, Esq., and Lewis Henry Evans, Esq., be, and they are hereby, appointed liquidators for the purposes of such winding-up." (2.) "That the said liquidators be, and they are hereby, authorised to consent to the registration of a new company to be named the Mysore Reefs, Limited or other suitable name, the memorandum and articles of association having been previously approved by the members of this company at an extraordinary general meeting. 3. That the draft agreement submitted to this meeting and expressed to be made between the liquidators of the first part, this company of the second part, and the new company of the third part (the draft being also signed by the chairman of the meeting for the purpose of identification) be and the same is hereby approved, and that the liquidators be and they are hereby authorised in accordance with Section 161 of the Companies' Act, 1862, to enter into an agreement in accordance with such draft or as near thereto as may be."

Mr. Charles James Harvey, J.P.,

in the absence of the chairman, Mr. John Harvey, presided.

Mr. JOHN GARLAND (secretary), read the notice of meeting.

The CHAIRMAN: As this is a purely confirmatory meeting I will immediately proceed to propose the confirmation of the first resolution.

Mr. EVANS seconded the motion, which was carried.

Mr. FRANCIS (Francis and Johnson, solicitors to the company) said: This (holding it up), gentlemen, is the proof of the memorandum and articles of association referred to in the notice, which has to be submitted to the shareholders at this meeting. The memorandum and articles are framed on the bases and lines of those of the old company, that is now about to be liquidated in order that there may be an absolute continuity, and that the new company may be carried on from the point where the old left off. The document is formal in its character, and I do not think the meeting will require me to go through it, but if shareholders have any point upon which they wish to ask a question, I shall be happy to answer them.

Mr. SWAFFIELD: I move this resolution with great pleasure, "That the memorandum and articles of the proposed new company, submitted to this meeting and signed by the chairman, be and they are hereby approved and adopted." I thought it encouraging at the last meeting that the resolutions were carried as they were so unanimously, and it is very remarkable that important news from the mine has come just as the old company has passed into liquidation. But still I think we may look forward with some hopefulness to the newly-formed company, and I trust we shall all support it very heartily.

The resolution was carried.

The CHAIRMAN then proposed, and Mr. D. K. PRICE seconded, the second resolution, which was carried unanimously.

The CHAIRMAN proposed the third resolution, which Mr. WARD seconded, and it also was carried unanimously.

SUCCESSFUL RE-CONSTRUCTION ASSURED.

The CHAIRMAN: This is all the business before the meeting. I am glad to say we have sufficient proxies to establish the success of the re-construction. We have received no news subsequent to that to which reference has been made.

In reply to questions by Mr. Price, the CHAIRMAN said that forms of application for the new shares would be sent to the shareholders, and that the period within which application must be made for them was 30 days from this date (July 10).

Mr. SWAFFIELD: Anyone reading the last few reports will see that they convey indications leading up to the news we received by telegram of an improvement in the mine; therefore, to diligent observers of the progress of operations, the later news has not come with any great surprise.

The CHAIRMAN: Small stringers of quartz were spoken of in the former reports, and there was an improvement in the drivages north and south.

Mr. PRICE: Shares seem low on the news.

The CHAIRMAN: Yes; but scarcely any mining share is now quoted on its intrinsic merits.

Mr. PRICE: Who are to be the solicitors of the new company?

The CHAIRMAN: Messrs. Francis and Johnson, of Austin Friars. On the motion of Mr. PRICE, seconded by Mr. SWAFFIELD, the meeting closed with a vote of thanks to the chairman.

LE CHAMP D'OR GOLD MINING CO., LIMITED.

A VALUABLE PROPERTY—VAST QUANTITY OF ORE IN SIGHT—DIVIDEND PROSPECTS.

AN extraordinary general meeting of this company was held yesterday at Winchester House, Old Broad Street.

Mr. Chas. Eschwege

presided.

The meeting being duly constituted,

The CHAIRMAN said: Gentlemen, this meeting is called

TO GIVE THE LONDON SHAREHOLDERS AN OPPORTUNITY

of knowing what has been done at the mine. There are very few London shareholders, but there may be some shareholders in the old King Solomon property, because the majority of our shares are held in Paris. I will read you a little statement, which will explain to you the position of the property at the present time. This company was registered with a capital of 100,000*l.*, in 100,000 shares of 1*l.* each, of which 80,000 have been issued and paid up. The

company issues its shares either in bearer warrants or in share certificates at the option of the holders. Although the shares are owned principally in Paris, it is an English company, with its registered office at 8, Old Jewry. This company purchased in Aug., 1890, the property formerly possessed by the King Solomon's Gold Mining Co., situated on the farm of Witportjie, about 14 miles to the west of Johannesburg. It consists of 31 claims, of which 19 are on the line of Botha's Reef and 12 dip claims. Included in the purchase of the property, this company got possession of a 10-stamp (Sandycroft) battery, a 20 h.p. Davey, Paxman hauling engine, with battery house, manager's house, workshops, &c.

THE BOTHA'S REEF,

which is now being worked, averages from 4 ft. to 6 ft. in thickness, and is intersected by two rich leaders. There is also being opened out the main reef south leader, which, although at present only 4 ins. wide, assays 12 ozs. per ton. A shaft has been sunk 100 ft. on this leader, and at that depth four incline shafts are being sunk, and connections have also been made with Botha's Reef. The reef has been developed by the sinking of a main shaft 150 ft. Several other shafts to the east are being sunk, and when they have reached the depth of the main shaft a cross-cut will be driven to connect same. A very large body of ore will then be ready for stoping. The company expended a considerable amount in putting the battery and machinery into good order, and also repairing the shafts and development of the mine, so as to ensure a regular output of ore. The manager entrusted with this work is M. Chouan, who has had good mining experience in South Africa, and is giving every satisfaction to the board. As to

THE RESERVES OF ORE.

The company for their own satisfaction had the property examined by Mr. Porchason, M.E., Johannesburg, who reported that, in his opinion, the estimated quantity might be taken at 2½ millions tons. The 10-stamp mill commenced crushing about the beginning of Mar., and the returns have been as follows:—

Days.	Month.	Tons Crushed.	Yielding.	Value. £	Value. £
24	Mar.	635	615 ozs. and 50 ozs. in plates.	2,250	1,250
26½	Apl.	655	634	2,370	1,172
25	May	595	655	2,455	1,240

The company has purchased an additional 10 stamps, which are now in course of erection. From latest advices it is anticipated these will be finished and in operation early in Sept. A tramway is also being built between the battery and the mine, which should likewise be finished in Sept., and will minimise the working expenses, so that the estimated monthly profit with 20 stamps may be reckoned on the present returns at 2,800£. In conclusion, the company, besides having paid for the additional 10 stamps now being erected, has

16,800£. IN THE BANK

available for working capital, and a reserve issue of 20,000 shares. (Cheers.)

In reply to a Shareholder,

The CHAIRMAN stated that he had no resolution to propose that day, but he would be happy to answer any questions that any of the shareholders desired to ask.

After a brief pause,

The CHAIRMAN said that he thought that they might regard it as a very gratifying position that the first month's crushing of that company had given them a yield of over 1 oz. of gold to the ton of ore. (Hear, hear.) He must also tell the shareholders that the expenses of working were at first very heavy, and for this reason they found that the battery that they took over was at least 1,000 yds. from their mine, and consequently they had to carry everything from the mine to the mill in carts. The new battery had been put up near the mine, and a great saving would be arrived at thereby. Instead of carting the ore in, it would be sent by tramway from the mill to the battery, and they would not lose any on the way. They calculated that they would effect altogether a saving of 5s. per ton of ore milled. He was glad to say that in regard to their manager M. Chouan, they had a man who was second to none in South Africa. (Cheers.) He (M. Chouan) had had a great deal of experience in South Africa, being previously the manager of the French Diamond Co. for eight years. Proceeding, the Chairman alluded to the profits that they were already making. It was estimated that with their present stamping power of 20 stamps they would make a monthly profit of 2,800£. He thought that, if anything, this was rather under than over the mark. It was their intention to increase their stamping power from the present amount of 20 to 40 stamps. They had very strong reefs, and felt that they could keep a battery of 40 to 50 stamps always going. (Cheers.) He thought that the shareholders in the old King Solomon's Mines and the Champ d'Or Co. might congratulate themselves upon having one of the most valuable mines in South Africa and one of the best managements. (Cheers.)

DIVIDEND.

Mr. J. DALGLEISH: Have you any idea whether the board will declare a dividend soon?

The CHAIRMAN: The board intend to declare a dividend as early as possible.

Replying to a further remark the CHAIRMAN stated that it must be borne in mind that they had only been crushing for four months, and the last crushing (the crushing for the month of June) was not yet to hand. The crushings that they had got yet for the first six months had yielded a profit of some 3,600£. So soon as the company was in the full working order, with the whole 20 stamps, he had no doubt that the profits would be found to be ample to pay a dividend. He believed that the directors would be able in the future to pay regular quarterly dividends. (Cheers.)

WATER SUPPLY.

A SHAREHOLDER: Have you ample water supply?

The CHAIRMAN: Splendid water supply. Continuing, the Chairman stated that when this company first took the property over they had great difficulties to contend with, arising from the fact that prior to their acquisition of the concern it had been lying idle for two years, and the machinery was, in consequence, not in a very satisfactory condition. The shafts, too, were very bad, and the air very impure, and they had the greatest possible difficulty in getting white or black men to go down for fear of their lives. But

he was happy to say that everything had been changed now, and was in perfect working order. He did not think that there were many companies in the Johannesburg district, or indeed any other district of South Africa, that was in a much better position than this company was (Hear, hear.) There was one other point to which he wished to allude, amongst the difficulties that they had had to meet, and that was the high price that they had had to pay for coal. All the coal had had to be brought from Broxburgh which was 12 miles from Johannesburg, and the company's property being 14 miles from Johannesburg up to the west, it made a total distance of 26 miles that the coal had to be carted in waggons, and that, of course, was a very expensive item.

RAILWAY FACILITIES.

But now they had the railway right up there, and the coal was delivered right at the very door of the mine. They had a station on the farm Witportjie called the Witportjie station, so that in future the cost of coal would be much reduced.

No further question being asked, and there being no resolution to propose,

Mr. WEBER moved a

VOTE OF THANKS

to the chairman.

Mr. WALKER seconded it.

The motion was carried.

The CHAIRMAN: I am very much obliged to you, gentlemen, for this vote of thanks, and I hope that the next time I meet the shareholders I shall be able to come before them with something better in the shape of a dividend. (Cheers.)

The meeting then separated.

EAST POOL.

DIVIDEND OF 8s. PER SHARE.

A TWELVE WEEKS' MEETING of the adventurers in East Pool was held on the mine on Monday, when Major Haye, the purser, presided.

THE ACCOUNTS

showed that during the three months the labour costs had been 7,136£. 15s. 11d.; merchants' bills, 3,290£. 9s. 3d.; Wheal Agar water charges, 75£.; stannary assessment, 15£. 12s. 9d.; Illogan rates, 128£. 11s. 8d.; dues, 796£. 11s. 7d.; total; debits, 11,444£. 1s. 2d. Tin sold, 237 tons 7 cwt. for 11,697£. 6s. 6d.; wolfram, 750£.; arsenic, 1,084£. 19s. 11d.; copper and halvans, 365£. 19s. 2d.; other items making up the total credit to 14,071£. 10s. 3d. This left a profit of 2,627£. 9s. 1d. The average price obtained for tin was 49£. 5s. 7d., an increase of over 2% a ton on the price obtained in the previous quarter. The Telfer Co. had paid 60£. on account. It was stated by the chairman that the final trial of the system would have to be made in the next fortnight or so, and the question of success or failure decided yes or no. The company had recently imported bigger machinery into the mine, and every facility was being offered to them by the management.

In answer to Mr. Hosking,

Capt. BISHOP stated that what was reported as the middle lode was what had been called the new north lode. The latter appellation was not correct. The average produce of the lode was over 2 qrs., so that it was a good paying lode. It was about 13 fms. to the north of the old north lode.

Replying to another question,

The MANAGER said they got most of their rich copper ore along the line of junction of the killas and granite, and they were carrying an end along the junction. The great lode had not got a head, but seemed to make along on the junction. There were many theories about that which he need not explain. The junction was rising, and so they were following it up. The killas ran up in the eastern point to the 33-fm. level, whereas in the western point it dipped down to the 160, and they were driving right up with the junction, and taking away stopes as they went.

The CHAIRMAN proposed, and Mr. WOOLCOCK seconded, a dividend of 8s. per share, which was carried, and the meeting closed.

NEW GORDON DIAMOND CO., LIMITED.

WORK DONE SINCE RE-CONSTRUCTION.

The statutory meeting was held on Wednesday, at Winchester House.

Sir Robert P. Harding

(chairman of the company) presided.

The CHAIRMAN said that on May 4 their colleague, Mr. Lockhart, who undertook to go out and arrange with the manager as to the mode of working, arrived at the mines. That was the date at which the operations commenced, because between Apl. 18 and May 4 Mr. McLelland, with Mr. Lockhart's assistance, began to put the place in order. From May 4 to July 4 were two months, and they would hardly expect that very great progress had been made in that time, but from a report obtained by the mail which had just arrived they learnt that everything seemed to be proceeding in the most satisfactory way.

RE-CONSTRUCTION.

He would here inform them that the re-construction of the company had been as gratifying as he thought anyone could have desired, and far more so than he believed would be the case when the committee undertook the work. Out of a total of 410,250 shares, no fewer than 404,144 shares had been taken up by the old shareholders and paid for. He thought that was an instance in connection with re-construction which was without parallel. Of the 6,106 shares not yet taken up, and which the liquidator was applying to the Court for an order to declare forfeited, 2,000 shares stood in the books of the old company in the name of one, who was

DESCRIBED AS A BANKRUPT.

The debenture stock which had been applied for amounted to 51,000£. Now Mr. Lockhart, when he went out, did so with a knowledge that the funds of the company were not inexhaustible, and that great

economy would be necessary, but that at the same time money would be available for the operations, which, in his judgment and that of the manager, would be productive. And the directors were gratified to find that, up to the present time, there had been sent over by those gentlemen between 5,000 and 6,000 carats of diamonds. This appeared to be an indication that they would now have larger funds. At the present time he might say that they had, by results, practically paid the expenses of the working and of the alterations that were necessary. After reading extracts from a report from the manager of an encouraging nature, the chairman concluded by expressing his confidence in the prospects of the company.

CABLEGRAM.

Mr. THORNE inquired if the company had been registered in Cape Town as a limited liability company.

The CHAIRMAN replied in the affirmative. He then read the following cablegram received on the previous day, and dated July 6:—"Start washing central blue on floors to-day. Loads of blue hauled, 2,800; loads of blue washed, 9,127; and diamonds produced, 1,234 carats."

Mr. C. J. POSNO proposed a vote of thanks to the chairman.

The CHAIRMAN, in acknowledging the compliment, said that it was no easy task that the committee had to perform, and he had no doubt that they would on some future occasion have more reason to express their thanks for the results than they had that day.

The proceedings then terminated.

THE BATTERY REEF GOLD MINING CO., LIMITED.

THREE MEETINGS IN ONE—AN AMALGAMATION SCHEME AGREED TO.

AN extraordinary general meeting of the Battery Reef Gold Mining Co., Limited, was held at No. 8, Old Jewry, yesterday, for the purpose of considering and, if thought fit, passing the following resolution, that is to say:—

"That the company be wound up voluntarily under the provisions of the Companies Acts, 1862, 1867 and 1890."

Mr. P. Tarbutt

presided.

Mr. HENRY D. BOYLE (secretary) read the notice.

The CHAIRMAN: Gentlemen, this is a formal meeting called in order to effect the arrangement which has been arrived at for the amalgamation of this company with the Luipaards Vlei Co. It will be necessary that another meeting shall be held if you pass this resolution to-day, to confirm it, and to appoint a liquidator, whose business it will be to receive the shares of the Luipaards Vlei Co., and to distribute them amongst the shareholders of this company. I beg to move the resolution.

Mr. KING seconded the motion, which was carried, and the meeting separated.

THE WEST BATTERY REEF GOLD MINING CO., LIMITED.

AN extraordinary general meeting of the above-named company was next held at the offices, No. 8, Old Jewry, yesterday, for the purpose of considering and, if thought fit, passing the following resolution, that is to say:—"That the company be wound up voluntarily under the provisions of the Companies' Acts, 1862, 1867 and 1890."

CHARLES S. C. WATKINS, the secretary, explained that the object of the resolution was to enable the liquidator, who would have to be appointed at the confirmatory meeting, to carry out the provisions of the resolution which was carried at the last meeting of the company on Mar. 24.

In reply to Mr. Bright, he stated that the liquidator would have to deliver the shares of the Luipaard's Vlei Co. to the shareholders in this company.

Mr. QUENTIN moved the resolution as above.

Mr. BOYLE seconded the motion, which was carried. The proceedings closed with a vote of thanks to the chairman.

THE MYNPACT (LUIPAARD'S VLEI) GOLD MINING CO., LIMITED.

AN extraordinary general meeting of the Mynpact (Luipaard's Vlei) Gold Mining Co., Limited, was held at the Offices, No. 8, Old Jewry, yesterday, for the purpose of considering and, if thought fit, passing the following resolution, that is to say:—"That the company be wound up voluntarily under the provisions of the Companies' Acts, 1862, 1867 and 1890."

Mr. Quentin

presided.

Mr. CHARLES S. C. WATKINS (secretary) read the notice.

The CHAIRMAN moved the resolution, and said that he had to announce that the object of the same was to carry into effect the decision arrived at at the last meeting. Since that meeting they had had news from the mine that the reef that they had been sinking for had been cut, and it was found to yield 3 ozs. 6 dwts. to the ton of ore. This was not so interesting to them now as it would have been a little while ago, but they still held shares in the company which owned that reef, and they could only hope that it would prove the turning point, and lead to very great success. He concluded by moving the resolution, which was seconded by Mr. G. E. KEITH, and carried.

NEW MORGAN.—Mill report and clean-up from June 1 to June 13:—Chidlaw lode: Average number of heads working, 35; time mill running, 232 hours; number of tons crushed, 700; average speed per minute, 87 blows; labour cost per ton, 7½d.; fuel and material, 10½d. per ton; tramming cost, per ton, 6d.; estimated cost tramming and milling, 1s. 11½d. per ton. Clean-up: Tons crushed, 700; yield, amalgam, 497; sponge, gold, 139½; bullion, yield, 186; yield per ton, 5 dwts. 7 grs. The cost of miniug quartz was 3s. 6d. per ton, which includes explosives and estimated proportion of mine tramming, timbering, &c.

THE NEW GUSTON CO., LIMITED.

MINE REPORTED NEVER TO HAVE LOOKED SO WELL.

TOTAL output for June month:—Ore shipped, 1,200 tons; value (estimated), 18,595£; mine expenses (estimated), 2,561£; railway freight (estimated), 744£—3,305£; estimated profit for the month, 15,290£.

Mr. HARVEY, the mine superintendent, under date of June 17, reports on the mine, viz.:—No. 3 level—south drift: Drift extended 21 ft. No. 5 level—raise over Midway drift: This raise has been continued, in good shipping ore, and communicated to No. 4 level. Boundary stope: Length of stope, 75 ft.; height 63 ft. Average width of ore throughout the stope 4 ft.; value of ore from 70 to 250 ozs. silver per ton. From the north end of stope we have driven north 21 ft. through ore 4 ft. thick, worth from 70 to 150 ozs. silver per ton. No. 6 level—new stope: Length of stope, 34 ft.; height, 27 ft.; average thickness of ore, 14 ft.; value from 70 to 350 ozs. silver per ton. Gold from ¼ to 1 oz. per ton; copper from 4 to 9 per cent. The stope looks well. Stope on No. 6 ore body: Height of stope 54 ft.; length, 48 ft.; width of ore, 12 ft.; value of ore from 90 to 3,000 ozs. silver per ton; gold from ¼ to ¾ oz. per ton; copper 3 per cent. to 6 per cent.; the appearance of this stope is remarkably fine. North drift: Height raised 20 ft. 6 ins.; length, 15 ft.; width of ore from 3 to 5 ft.; value from 30 to 75 ozs. silver per ton. No. 7 level—No. 7 ore body: Length of ore body opened on 29 ft.; width, 14 ft.; value of ore from 35 to 350 ozs. silver per ton; gold, ¼ oz.; copper, 3 per cent. There is ore standing on the west portion of ore body. As soon as stoping is commenced we shall at once start drifting south. Remarks—Pioneer level: Before commencing at No. 6 level north, a pioneer level, I am desirous first of communicating the raise with No. 1 winze at No. 5 level north. When this work is done it will lay open a good piece of stoping ground and also give good ventilation. Shaft: I anticipate we shall re-commence sinking the shaft during the coming week. The mine continues to look well throughout. I might say, never in its history has it looked so well as it does now.—B. MCNEILL, Secretary.

P.S.—Cable just received from Mr. Harvey states that the new ore body (found in No. 5 level and raised to from No. 6 level) has greatly improved, valuing from 90 to 700 ozs. of silver per ton; also that he has re-commenced sinking the main shaft.

YANKEE GIRL SILVER MINES, LIMITED.

MINE REPORTED TO LOOK WELL THROUGHOUT.

MR. HARVEY, the mine superintendent, under date June 17, reports on the mines, viz.:—Yankee Girl Mine—No. 2 level: Drift driven 16 ft., total length extended 35 ft. The drift has been driven on ore 1 ft. thick for 16 ft. in length. Value of ore from 20 ozs. to 200 ozs. silver per ton. The sinking of winze from No. 1 level on this ore has been discontinued in order to stope from No. 2 level. No. 4 level—North ore body: This stope has been communicated with the stope on the Yankee Girl ore body. This proves the north ore body to have been a spur from the main Yankee Girl chimney. Orphan Boy: Length of stope, 60 ft.; height over back of level, 78 ft.; ore scattered, from 3 to 8 ft. thick; value from 30 to 155 ozs. silver per ton. No. 5 level: Operations have been suspended here during the past fortnight. No. 6 level—North-east drift: A raise has been put up 24 ft., for the purpose of proving the slip met with in the winze sunk in the south level. This slip was carried in the drift for 106 ft., then passed over the roof about 180 ft. back from the present face. Stope: Length of stope, 67 ft.; height, 52 ft.; width of ore, 15 ft.; value from 40 to 1,250 ozs. silver per ton. Six and half level—Winze stope: Length of stope, 18 ft.; width of ore, 10 ft.; value from 30 to 1,500 ozs. silver per ton. No. 7 level—South-west: The north cross drift has been driven 9 ft.; total distance extended, 25 ft.; there is no change in appearance of ground. No. 8 level: Considerable work has been done in blasting out the sides of the south-west drift, for the purpose of determining the width of ore at this point. Several cars of ore have been shipped from here, which produced silver from 20 to 35 ozs.; gold one to two-tenths of an ounce per ton; lead 20 per cent. to 35 per cent. West ore body: Height of stope, 26 ft.; length, 28 ft.; width of ore, 3 ft.; value, 45 ozs. silver per ton. Copper from 10 per cent. to 18 per cent. Robinson Mine—No. 2 level—South drift: Drift extended 25 ft. through milling ore averaging 2 ft. thick. South drift—No. 1 stope: Length, 87 ft.; height, 90 ft.; ore averages 3 ft. thick; value from 30 ozs. to 1,200 ozs. silver per ton. There is one point on this stope, for 12 ft. in length, where the ore is 30 ft. wide. South drift—No. 2 stope: Height, 73 ft.; length, 42 ft. Thickness of ore from 1 ft. to 3 ft. 6 ins.; value from 35 ozs. to 1,000 ozs. silver per ton. South drift—No. 3 stope: Length, 104 ft.; height, 28 ft. Thickness of ore from 1 ft. to 2 ft.; value from 10 ozs. to 75 ozs. silver per ton. No. 3 level—South drift: Drift extended 20 ft. through milling ore 1 ft. thick. South drift—No. 2 stope: Height, 50 ft.; length, 32 ft.; width of ore, 1 ft.; value from 10 to 40 ozs. silver per ton. South drift—No. 3 stope: Height of stope, 30 ft.; length, 75 ft.; width of ore, 2 ft.; value from 10 to 60 ozs. silver per ton. No. 4 level—South drift: Operations have been suspended here during the past fortnight for the purpose of improving the ventilation. South drift—No. 1 stope: Height, 41 ft.; length, 156 ft.; thickness of ore, 2 ft.; value from 25 to 250 ozs. silver per ton. In one portion of the stope, for a length of 20 ft., the ore averages 20 ft. in thickness. No. 5 level—South drift: Work has been suspended here for the past fortnight. The mine continues to look well throughout.—B. MCNEILL, Secretary.

THE OLD LOU MINING CO., LIMITED.

PROGRESS OF DEVELOPMENT.

MR. HARVEY, the mine superintendent, wrote under date June 24, as follows:—North and south drift: We communicated the north and south drifts on Friday, May 29; the bottom of the south drift is 6 ft. 6 ins. higher than the base of the north drift, the bottom of south drift being about on a level with the back of north drift. Stoping: Since communicating these points we have commenced to open up our stopes. No. 3 stope, north level, will in future be known as No. 1 stope. A stope started just over where we communicated will be known as No. 2 stope, and the inside stope on the south drift or the stope a short distance back from point of communication.

will be known as No. 3 stope. No. 1 stope—North drift: We have been squaring the ends of stope. We have also taken off a stope 31 ft. in length for 4 ft. 6 ins. high. The stope is now squared 21 ft. 6 ins. high over the back of level. The lode here is much broken, carrying in places two streaks of ore, one on the foot-wall, from 8 ins. to 1 ft. thick, the other near the hanging-wall, about 9 ins. thick. The ore is principally iron pyrites, making occasionally bunches of copper with a little bismuth ore. No. 2 stope—over point of communicating drifts: This stope has been started just over the point of communicating the two drifts, on a streak of iron pyrites intermixed with a little copper and patches of bismuth ore 9 ins. thick. We have suspended work here for the time, as it interferes with the men stoping north on the bottom of drift. No. 3 stope: We have stoped the lode over back of drift, extending south 6 ft. long by 4 ft. high. We have also taken off another stope over this one, 5 ft. high for 7 ft. in length. The ore here is broken and scattered, but we frequently meet with good patches of bismuth and grey copper ore. Stope in bottom of south drift—south drift at point of communication: We have taken off from the bottom of level a stope 6 ft. in length for 4 ft. deep. There is a streak of copper ore here 6 ins. thick, carrying occasional spots of bismuth ore. Shipping: On the 12th inst. we shipped to Denver, in car 3,528, about 5 tons of Bismuth ore, and approximately 5 tons of second-class ore. To date I have not received the result of sale. Ore on mine: We have sorted on the mine 25 sacks of second-class ore, and commenced with one or two sacks of Bismuth ore. Building: We have commenced erecting the new boarding-house, which will be completed in a few days. Leasers: The leasers have commenced work on the dump at the upper workings. There are six men employed; three picking the dumps and three hands jiggling ore. I hope soon we shall have a shipment of ore from here. Copy of assays: The following ore results of assays recently made from ore taken from the No. 3 stope, south drift, and from near where we holed the drifts. No. 1. silver, ounces per ton, $178\frac{4}{10}$; gold, $\frac{10}{100}$. No. 2. Silver, ounces per ton, $45\frac{38}{100}$; gold, $\frac{10}{100}$. No. 3. silver, ounces per ton, 42; gold, trace. Remarks: I hope by pushing the points in operation to be in a position soon to make another shipment.—B. MCNEILL, Secretary.

THE MONTANA CO., LIMITED.

MONTHLY RETURN.

THE secretary of the Montana Co., Limited, begs to state that the following information has been received by cablegram from the resident director at the mine:—"Total weight of ore crushed during June, 6,229 tons: yield from the mills, \$55,400; working expenses for the month, \$45,200." N.B.—The estimated number of ounces contained in returns by assay being, gold, 2,022 ozs.; silver, 10,543 ozs.

THE GUIANA GOLDFIELDS, LIMITED.

HISTORY AND PROSPECTS OF THE ENTERPRISE.

THE directors of this company have issued what cannot be viewed as otherwise than a favourable statement as to the progress, the present position, and the prospects of the company, together with extracts from encouraging reports upon the mines. From this document we learn that the company was formed in 1889 to acquire and develop mines and mining properties in the Guianas and elsewhere in South America, and after examining into the qualities of several mines in those parts, it was decided to acquire from Emile de St. Quentin, of Foix, Arriège, France, the mining concessions in French Guiana, called "Terre Promise," transfer and possession of which were obtained in Apl.—May, 1890. A thorough exploration of the property has since been made, the results of which have been extremely satisfactory, and prove the existence of valuable gold-bearing ore, the extensive development of which is now projected, and towards this purpose all preparations are nearly completed. The Terre Promise concessions are situated on the right bank of the Kourou River, about 48 miles above its entrance. The alluvial deposits have been tested, and considerable work has been done upon one of the reefs discovered. The property had previously been worked as a "placer" by a M. Aristide Riamé, who obtained from the gravel deposits over 40,000 oz. gold in the course of four years, working by the most primitive methods, and employing 10 or 12 men daily. The reef is of a highly promising appearance, and assays of the ore give an average considerably over 2 ozs. to the ton. The ore body is from 4 to 6 ft. wide, and is of great strength and solidity. There are several thousand tons of ore broken and ready for crushing. In addition to the Terre Promise, the directors of this company, in view of the notable richness of the locality in auriferous alluvial, have also acquired on advantageous terms the San Souci, Impromptu, and Emilio placer concessions, containing enormous virgin resources. The various properties of this company comprise about 20,000 acres, which are subject only to the annual Government tax of 2d. per acre and a royalty of 8 per cent. on the value of gold exported. The River Kourou, with its numerous tributary streams, ensures a regular supply of water for alluvial mine operations and quartz milling. The cost of transport of supplies, &c., from Cayenne is only from 10s. to 15s. per ton. The lands are thickly wooded, and will afford an almost inexhaustible supply of timber for fuel and construction. Labour is obtainable at rates varying from 3s. 4d. to 6s. per man per day, and according to the reports and statements by which the directors are guided, the working costs of mining and milling ore will not exceed 17. 10s. per ton, and this cost may be gradually reduced. It is proposed to erect crushing machinery to treat about 36 tons of ore per day, or working 20 days monthly, 720 tons, the profit on which will be equal to 4,680%, or 56,000% per annum. In the gravel concessions works will be established for treating 200 tons per day, or 4,000 tons monthly, from which a profit of 1,500%—equal to 18,000% per annum—is anticipated. The profits from the two branches of operations will thus be equal to 71,000% per annum—about 37 per cent. on the capital of the company. To provide the 20,000% further capital necessary to accomplish the above results, an issue of shares will be made after the annual meeting of the company to be held in August. Samples of ore from the mine may be seen at the offices of the com-

pany; also certificates of gold already sold. The company has recently been thoroughly reorganised, and an entirely new personnel has replaced the original directors and officials. The formation of subsidiary companies will shortly engage the attention of the directors. The various goldfields of the Guianas are gradually becoming known to the European market, and there can be no question of their extraordinary richness, also that they are rapidly rising in importance, and must speedily command prominent attention. Diamonds are found in British and Dutch Guiana. In French Guiana are situated the celebrated alluvial mines St. Elie, Enfin, Elysée, Dieu Merci, Nacional Pas-trop-tot, Adieu Vat, and Délices, which have already yielded several millions sterling and are still in operation. The mines of this company are comprised in the same auriferous zone, and from every information available, and the encouraging results obtained from the preliminary explorations made, the directors consider that the company is in possession of a valuable property which, given sufficient time to effect its development, cannot fail to prove remunerative to the shareholders.

Messrs. Brignaschi and Flory in their report to the vendor of the "Terre Promise" concession, dated September, 1889, state "The river is navigable at all seasons by boats of a certain tonnage, which renders it particularly favourable for serious enterprise. Its course does not present any serious obstacles, and has been carefully laid down in charts. The town of Kourou, at the mouth of the river, is about 36 miles from Cayenne by sea, and 20 miles by Colonial road. The means of communication are easy." They also say: "We have seen that this mine presents particularly favourable conditions in consequence of its proximity to the sea and to the capital of the colony. The river Kourou can supply water to any desired amount, and 60 stamps can be worked if required." The general report of Mr. W. Greville Wears, M.I.M.E., F.G.S., dated January, 1891, states: "The reef undoubtedly carries one of high grade, and operations will frequently discover rich shoots such as are peculiar to formations of this character. Considering also that in French Guiana 1 oz. of gold per ton of ore can be worked at a profit of over 24. 10s. per ton, the prospects of this concern are decidedly encouraging, inasmuch as the lowest assay of the average stuff has been 1 oz. 16 dwts. per ton." Senor José Ortéga Dick, alluvial mining expert of Venezuela and Dutch Guiana, has reported favourably as to the extent and value of the auriferous channels, and there are also reports from Mr. Robert Plummer and Mr. H. Vyvyan Rogers, both of which speak in no measured terms as to the value of the property.

ATKINS' AMALGAMATOR SYNDICATE, LIMITED.

THE peculiarities of this machine, which has successfully passed the ordeal of experienced critics, may be briefly described. The vertical chamber of the machine is simply a large decomposition cell. The exterior casing forming the negative pole and the broad-bladed carbon screw, the insoluble positive pole, down which the ore rolls by its own gravity, forming the soluble portion (if it may be so described) of the insoluble pole, where chemical decomposition is effected by means of the electric current. The inventor's object is to either dissolve all the gold or, in case of the gold being coarse, to cleanse it, so that it may be in a condition to be picked up in the amalgamating chamber. The gold that is dissolved is deposited upon the casing in a pulverent form, and falls down to be picked up by the mercury, and is separated from the ore as it passes out of the machine. Of course, the electrolyte or solution is suited to the class of ore under treatment. The solution used on the occasion of the general inspection was simply a weak solution of common salt, continuously. As the ore with the gold cleansed, but still mixed up with it, passes out at the bottom of the vertical chamber, it falls upon a bed of mercury containing a large quantity of sodium amalgam. The mercury forms a portion of the negative pole, and as there is an excess of current much more than sufficient to deposit the gold, sodium is deposited into the mercury, keeping the mercury in good condition, and entirely preventing sickening, fouling, &c. As the ore falls upon the mercury the revolving drum in the cylinder, with oblique corrugations, carries it forward, keeping it finely divided and bathed in mercury round and round until it is thrown out of the horizontal cylinder at the further end, where means are taken to separate the mercury from the ore, and the mercury is pumped out of the machine through a special mercury strainer, where the precious metals it has picked up are retained in the shape of an amalgam, and the mercury passes back into the machine at the junction where the ore passes into the horizontal cylinder, so that the mercury is constantly picking up the metals and parting with them in the strainer. The whole process is simple in the extreme, nearly automatic, with gravity playing a great part in carrying the ore through the machine; and as the re-agents are all recovered with the exception of the small amount of solution actually soaked up by the ore, the cost is very small, and wear and tear very little. The advantages claimed for the process are the following:—Refractory ores can be treated without the heavy expense and delay involved in concentrating, roasting, and smelting. Free milling ores can be treated at much less expense and with greater certainty and better results than under the present system of amalgamation; and float gold is recovered with practically no loss. These are important claims, and they have not been disputed by the many scientific and practical men who have made the Atkins' process the subject of their examination.

AVALA QUICKSILVER.—Report for June: Pumping is continued in the shaft. In Shuplia Stena 67.1 metres of levels were driven, 57 tons of ore produced, and 200.3 cubic metres of ground excavated in 72½ shifts. In No. 2 stope a new bunch of ore has been discovered. The reduction works treated 311 tons of mineral wet weight.—W. E. FRANKS.

WEARDALE LEAD.—Report on Weardale Co.'s mines for week ending July 4:—Ore raised for week, 81 tons; ore dressed for week, 99 tons; ore, slag and fume, smelted for week, 115 tons, producing 58 tons of pig lead.

THE firms of Messrs. William Edwards and Co., of 18, King Street, and Messrs. Pixley and Co., of 24, Moorgate Street, chartered accountants, have amalgamated. Their united practices will be carried on from this date at 58, Coleman Street, under the style of Jackson, Pixley, Browning, Husey and Co.

SUPPLEMENT.

The Mining World AND ENGINEERING RECORD.

ESTABLISHED 1871.]

SATURDAY, JULY 11, 1891.

[ESTABLISHED 1871.

REPORTS OF MEETINGS.

PALMAREJO MINING CO., LIMITED.

THE PROGRESS OF THE WORKS MEETS WITH THE HEARTY APPROBATION OF THE SHAREHOLDERS—MILL FINISHED AND RAILWAY NEARLY SO—MR. HART RAISES A STORM WHICH SUBSIDES IN VOTES OF THANKS.

THE ordinary general meeting was held at Terminus Hotel, Cannon Street, on Thursday.

Mr. Frederick Pigou

(chairman of the company) presided.

Mr. ROBERT J. SCRIVEN (secretary) read the notice of meeting.

THE ACCOUNTS.

The CHAIRMAN: Gentlemen, I think I may on this occasion repeat my previous practice of disposing of the formal business first, and ask you to pass the accounts and balance-sheet to Dec. 31 last, and in proposing they should be adopted and passed, I imagine the subject calls for a few remarks from me. These accounts carry us to the end of last year, when the state of our finances was very different from what it is now. During 1890 we had been in that uncertain state as regards the extent of our necessary outlay, to which all must be subject who have to depend upon estimates—many of them made by different persons and under different circumstances. From what was foreshadowed from time to time, we felt that our purse would not be long enough to carry out the substantial designs we had before us, but up to the last few months of the year we hoped that the 40,000*l.* (which is the amount of the debenture issue we had made, and which you notice in the accounts) would have been sufficient for our purpose. Subsequent information, however, showed that this could not prove correct, and, as most of you know from the quarterly reports, during Feb. last we paid off that debenture issue, and created a larger one, with the object of placing 75,000*l.* at the disposal of the board in order to cancel the first series of debentures, and to provide the company with the funds then stated to be sufficient to complete the capital expenditure up to the running of the mill. In this work we had the able help not only of the Mexican Explorations, Limited, but also of a number of our shareholders and their friends, without which we could not have succeeded in our efforts. I make these remarks at this stage, because they really relate to the accounts, which do not disclose, audited as they are to Dec. 31 last, the present position, and are therefore somewhat misleading to the casual observer. At the end of the balance-sheet a debit balance is carried forward, which should not be considered as a loss in the ordinary sense, because in the last year and the nine months previous (21 months in all) we had not treated our ores at all, the old mills having being dismantled and the new one not being ready; but this debit balance not only includes 2,000*l.*, which the auditor thought fit to add to form a reserve fund against contingent debts (there were no contingent debts, but that is a detail), but also many payments and items from which we have no immediate benefit, and which will come when our operations begin at the new mill, though they appear as an apparent loss in these accounts. In this category may be included, for instance, all the money spent at the mine, where large quantities of ore were broken down and exposed during the year. This ore, however, not having been removed from the mine, is not taken into stock and valued in the accounts. I now beg to move, "That the report and accounts for the year 1890 be received and adopted."

Mr. GOODSON seconded the motion.

AUDITORS' CERTIFICATE.

Mr. BERKLEY: The certificate of the auditors is not very precise, and does not say that they found the accounts correct and in the proper form, but simply in accordance with the vouchers, and I wish to know if there is anything in the difference.

Mr. ROSS: I beg to propose that on this occasion we shall hear your statement on the mines before passing the accounts.

The CHAIRMAN: If it is the wish of the meeting I will make it.

A SHAREHOLDER: I submit that the ordinary course should be adopted.

Mr. ROSS: It is the ordinary course to hear the chairman's statement first. (Hear, hear.)

A motion to this effect was negatived.

The CHAIRMAN: The secretary informs me that the certificate of the auditors is the one usually furnished. It is impossible that they can vouch for every detail, as they are not in Mexico. They can only say that the vouchers sent over are in order, and account for the expenditure, and naturally they do not take more responsibility.

The adoption of the report was carried unanimously.

THE GENERAL POSITION OF THE COMPANY.

The CHAIRMAN: To-day, gentlemen, I am presiding at some little disadvantage because we have not received a letter we may shortly expect, giving particulars of the completion of the various important parts of the mill, the progress of which was described in the last circular to the shareholders; but we know from the fact that most of the Mexicans left for their homes on June 15, and from the slackening requirements for funds needed to pay wages, that the mill is pretty well finished, and will be ready for work as soon as the ore can be brought to it. With regard to the mill, I thought it would interest you to know what sort of a fabric you are going to get, and I can now tell you.

MILL DESCRIBED.

The mill consists of a timber, stone and brick building, covering about 55,000 sq. ft. of ground (1½ acres), roofed with corrugated iron. There are three Blake crushers, which feed 10 batteries of five stamps each—50 stamps in all; 34 pans and settlers, two rotary driers for the ore before it goes through the stamps, and two rotary roasting furnaces on the White and Howell principle, for chloridising the ore after being crushed. The whole of this machinery is driven by four water-wheels, which can either be worked together or separately as required. The mill is built on the steep slope of a hill which had to be quarried away in order to secure the necessary gradients. You have had a lot of these particulars before in the various circulars, but it is as well to repeat them. (Hear, hear.) It may give an idea of the extent and magnitude of the works when I mention that the mere preparations of the foundations for the mill involved the removal, mostly by blasting, of more than 40,000 cubic yds. of rock from the hillside, although the site itself is an exceptionally favourable one. The railway will deliver the ore at the top of the hill—every care having been taken in the handling of the material, so that the ore can be passed by gravitation as much as possible from process to process. A smelting furnace and assay office, a small foundry, with cupola, &c., and the necessary workshop and fittings, have all been provided, and will make a pretty complete establishment. I do not think we shall have to add to it to any appreciable extent until we make up our minds to double the out-turn. It is satisfactory to know that everything in connection with the building and construction and contingent works are so far paid for, and that

WE ARE NOT IN DEBT.

Whether we can set to work a week or a month sooner or later is of secondary importance—the primary fact being that the mill is finished, that it is fully equipped, and that it is described as second to none in Mexico. (Cheers.) There are many subjects in connection with the practical working of the enterprise which we have had to consider, but with which I need not weary you. The future supply of salt, quicksilver, chemicals, and suitable stores is one that has had, and must have our consideration, and has already received close attention from the managers on the spot. These supplies, and the establishment of commercial trading shops in Palmarejo will absorb a certain amount of capital beyond that we have already provided. I am not going to ask you on this occasion to supply any of this money, as arrangements are in progress which I think will spare me from the necessity of so doing. (Cheers.) Our object as a board during construction has been to bring about the profitable treatment of the ores upon a large and, at the same time, economical scale. We have all had to exercise patience, and I especially refer to this fact at this stage because it is evident that the actual date when our stamps can commence crushing depends on circumstances we cannot control in London, and which do not allow the staff in Mexico to be too anxious to appear in the character of prophets. We, as you know, had been led to hope that the railway will be opened by the end of Aug., but only this week the Mexican Mineral Railway have had advices that rains and scarcity of labour have put the engineers' calculations somewhat out. This is nothing serious, but it is only one instance that we must not expect too much from the most confident anticipations as to time. Another subject on which I must speak to you is our large capital outlay. You will all agree that the seeking or asking for funds for unexpected purposes of expenditure is a thankless office. It is almost as objectionable as subscribing those funds oneself. (Laughter.) Now we have, as a board, been placed in both positions, for we have all largely supported this enterprise and the kindred company connected with it.

MR. EDWARD APPEGARTH, WHO HAS SPECIALLY PLEDGED HIMSELF

to this undertaking, has also helped to the best of his ability with his subscriptions, and many of our shareholders have borne more than their fair proportion. It is most difficult in a work of the magnitude we have in hand to estimate the total outlay, in fact, it must be quite a chance that an original estimate turns out to be correct. It is very rarely that the estimates of engineering work are not considerably exceeded even in England, but in Mexico there are and must for a long time to come be special reasons for disagreeable experiences of the kind.

DELUSIVE ESTIMATES.

In the original estimates made for the former directors of the com-

pany the cost of the whole works, mill, conduit and railway, was put down at 100,000 $\frac{1}{2}$., which included whatever might be supposed to be required for working capital. Mr. Moreing, no doubt, obtained a great many of his data from the same source, but he put the estimate at 150,000 $\frac{1}{2}$., as the minimum. When I was at Palmarejo, after making what we then thought to be liberal allowances, our engineer at that time considered that we could build a mill complete for 55,000 $\frac{1}{2}$., but when he began to get his materials together he soon found out his mistake. Our manager writes on June 1 a letter, which I may as well read to you, though a part of it is in the report:—

"The work is nearing completion in all its branches, and all I can say is, it is substantial and adapted to the ores to be treated, and I believe it is second to none in all this Republic. I may safely say there was never completed in the same time throughout all the mining history of this Republic the kind of work that has been finished here with the number of men and the amount of money expended. I hardly think the directors can conceive the magnitude of their work here."

That is satisfactory, so far, that we know there is somebody who does not think that either the money or time has been wasted. We know that there are now not any insurmountable difficulties—on the contrary, all seems to be provided for, and the value of the ores we have to treat is

NO UNKNOWN QUANTITY.

There is no doubt about the fact that it is enormous in this respect. We are told that there is as much good ore in the upper workings alone as will last out the present generation, and I believe this to be the fact, and that the value of our property is out of all proportion to the capital we have at stake. We have outside the Palmarejo Mine many thousands of tons of ore that we can depend upon, which will all go through our mill as time and capacity permits. We have inside our mines, in addition to the reserves, a large quantity of good ore. There is no doubt that we have an immense quantity of valuable ore, which, until our new works can begin to treat them, have no realisable value. During the past year, since the last general meeting, our manager has, from time to time, noted some specially good developments quite independent of the reserves, and although I am not sure that all these bodies of ore were unknown and unsuspected by the old workers, it is most satisfactory to have the anticipations of Mr. Moreing and others confirmed by a capable man who has no interest in representing our property to be better than it is. In one case he reports 10,000 tons of \$40 ore, and in another 14,000 in the Tucson and El Carmen. In another case he speaks of 45 to 50 oz. ore in the 5th level, and on Mar. 18 he writes that, carrying out connections on the Socorro, they encountered ore worth \$346 for silver, and \$12 for gold; and, again, ore worth \$420 for silver, and \$12 for gold. I have a few particulars here which I may as well give you verbatim as to what he says in this subject.

THE MANAGER'S VIEWS.

Sept. 20.—"Since the month of July have opened up a fine body of ore in Blanca above 5th level. 10,000 tons will average 40 ozs. per ton."

Sept. 23.—"It is probably safe to say that there are from 12,000 to 14,000 tons of ore in sight that can be milled to a profit in the Tucson or El Carmen. I do not by any means mean to say that further developments may not produce a great deal more, but this is all we have in sight at present."

Sept. 30.—"As I mentioned in some of my former letters, I have been timbering and catching up the caved ground, as you will understand, above the Socorro tunnel. The work has been progressing very slowly, and I telegraphed you on the 29th that we had opened up a large body of fine ore above the 5th level, which meant from the 5th to the 8th. In all there are about 10,000 tons of ore that will average about 40 ozs. per ton. Of course, I am very well aware that there are a great many more tons, but I am under the impression that it will have to be sorted more or less."

Sept. 1.—"I mentioned in my last letter that I would give you a general sample of the last 14 ft. of the Socorro winze. It assays 41.66 troy ozs. silver, and a duplicate sample shows exactly the same. The first 10 ft. of this winze showed 54 ozs. per ton, but I consider that the last 14 ft. looks much more promising, as it is more heavily mineralised."

Feb. 17.—"The rise in 6th level in Dec. and Jan. was more or less in a good grade of ore, that is to say, from 20 to 45 ozs. per ton, and it is now connected with the 10-ft. level; therefore, that portion of the mine is now well ventilated."

Mar. 18.—"Some 25 or 30 ft. before we made the connection with the old Socorro tunnel, we ran into old workings and into the winze marked on the map. This showed some 15 or 18 ins. of ore, a general sample from which assayed 346 ozs. silver and \$12 gold per ton; a second assay from same place gave 420 ozs. silver and \$12.00 gold per ton."

At the other end of the room there is a collection of photographs which show to a certain extent the character and the extent of our works. I am sorry to say that the photographs of the mill have not come out very well, and I have only been able to save a few of them. The negatives of the rest were spoilt. The views of the conduit and railway are extremely interesting, and will give you a good idea of what extensive works we have had to go in for at Palmarejo. I think, reviewed as a whole, we may all congratulate ourselves that we only have to exercise for a short time longer that patience which we have had to display for the last five years. It cannot be long before we are at work reducing the ores, and when we make a start

OUR RETURNS SHOULD BE LARGE AND CONTINUOUS.

I shall be happy to answer any questions connected with the general business, and in the meantime will go on with the resolutions that yet remain before us. The first is "That Mr. Thomas Eley Sykes, who retires by rotation from his seat at the board, and who offers himself for re-election, be re-elected. Mr. Sykes has been on the board as long as I have, and a good many of you know him to be thoroughly dependable, and I know that he is always ready to give me his help whenever called upon. He is a great ornament to the board in more senses than one—(laughter and cheers)—and I hope you will re-elect him."

A SHAREHOLDER: I have great pleasure in seconding the motion because I know Mr. Sykes has a large constituency in the North as well as in London, and has, with his friends, warmly supported Palmarejo with his money and his ability. I think we may thank

the board of directors for the hard and serious work they have undertaken. It is a matter that should be fully appreciated by us passing this as a unanimous resolution.

The Rev. J. BLAKISTONE: I am sure it will be interesting to the meeting that questions may be answered, because we have not met here for 14 months, and I know full well the great labour the chairman and directors have bestowed upon this matter. Having done my part in a small way both as regards Palmarejo and the Mexican Mineral Railway, the debentures and the preferences, and finding that hope deferred is a justifiable proverb, I think we can easily elicit a little more information upon one point, and that is with reference to the working of the lower tunnel.

VIEWS OF A SHAREHOLDER WHO HAS STUDIED HIS SUBJECT.

I am sorry to say I am an original shareholder, and most of the knowledge I have has been gathered from the various mining and other papers. I rise for the purpose of saying (after having followed this matter very closely) that in my belief this is an inexhaustible property—certainly in our time. You said that the value of the ore was no unknown quantity. It is so, but in view of the reports of 1889 and 1890, I would specially ask you to refer to the progress of the Dios Padre tunnel, where "results of great importance," the manager said, "were expected during the next few months." Since that time a much larger extent of stopping ground has been opened, and I have learnt from the secretary on another occasion that any amount of reserves stated by you is an addition to whatever there might have been prior to your taking office. Referring to Mr. Moreing's report, the amounts stated there are in American dollars; here they are in Mexican dollars, and anyone reading the two should keep that in remembrance in order to grasp more fully the importance of what Mr. Moreing says. I think you have stated some of the actualities of the property, but in answer to questions you might state more. As we are a little disappointed in the further delay, does that mean just a short one only in your judgment? I have risen, not in the character of a "desperate critic," but as one who has the highest confidence in the future of the property, only I hope you will say that that future is pretty immediate. (Cheers and laughter.)

THE RAILWAY.

Mr. CHERMERY: I congratulate you most sincerely upon the progress made, but there is one thing I should like to have a more emphatic reply to, and I trust that the railway company has some representative here who will be prepared to give it—when will the railway be finished? (Cheers.) Because, however good our mine may be it is of no use until this railway is finished, and the crucial point, I repeat, is the railway. That, I think, we must keep our minds upon. We know all about the mine—we know that it is all right, but what about the railway?

MR. HART RAISES A STORM.

Mr. HART (a director of the Mexican Mineral Railway): In reference to the question put concerning the railway, as one of its directors I say it is not a question for discussion here. (Oh.)

A SHAREHOLDER: Nonsense. That is simply an insult to our understanding, and I protest against it. It is monstrous to say such a thing. You take us to be fools. (Laughter.)

Mr. HART: A gentleman says it is an insult to his understanding that I should make any remarks concerning the Mexican Mineral Railway—

A SHAREHOLDER: You have totally misrepresented what he said.

Mr. HART (continuing): Has that gentleman 1d. of capital in the railway?

MR. HART ANSWERED.

The SHAREHOLDER: Yes; for I am a large shareholder in both Palmarejo and the Mexican Mineral Railway. (Loud cheers.)

Mr. HART: I am very glad to have met one who is a shareholder in both. (Cries of "Nonsense," and great uproar.) I do most decidedly say—from the inception of this undertaking to the present moment not 5 per cent. capital has been subscribed by Palmarejo shareholders. (Cries of "Nonsense.")

The FIRST SHAREHOLDER: That is nothing to the point. These remarks are monstrous—quite insulting. (Cheers.)

Mr. HART: I do not know what course you propose to pursue. If it is your desire to discuss the affairs of two companies, I will take exception to it. If it is your desire to ascertain the affairs of another company, subscribed by capital represented by 90 per cent. non-shareholders—(Great uproar)—

The FIRST SHAREHOLDER: What induced you to make the railway? Without the mine there would have been no railway. (Loud cheers.) It is nonsense.

Mr. HART: I am not in the habit of talking nonsense.

A VOICE: Then sustain your reputation. (Laughter.)

MR. HART SITS DOWN.

Mr. HART: I find your company is so largely concerned in the affairs of another company, that you decline to hear anything about that company, and, therefore, I must decline to offer further remarks. (The speaker sat down amidst cries of "Go on," and great uproar.)

Mr. CHERMERY: I would appeal to you, sir (to Mr. Pigou), to endeavour, if possible, to elucidate a reply about the railway. (Hear, hear.)

The CHAIRMAN: I wish that you had heard Mr. Hart. I think you would have got something more from him. If he does not mind going on, and you will kindly listen to what he has to say without interrupting him, it may be that you may get the information you want. You certainly will not get it if you do not listen.

MR. HART GETS UP.

Mr. HART: I am prepared to continue the few remarks I intended to make, but I do make it a primary condition that this meeting is not concerned with the ultimate success of the Mexican Mineral Railway. (Laughter.) I repeat that because we are two distinct companies, and though our interests are identical, and though we work in harmony and endeavour by every possible means to act in accord, yet we are two distinct bodies. The capital and the constituency are distinct and apart. (Cries of "No," and great uproar.) At the formation of the Mexican Mineral Railway 99 per cent. of the capital—

A VOICE: You have said all that before. (Great uproar.)

Mr. HART (continuing): 90 per cent. was subscribed by non-shareholders of Palmarejo. I would now get to that part which more particularly concerns you. (Hear, hear.) I do say, with a view of giving you such information as I feel I am at liberty to give you, that if it should be demanded, as if it were a part of your company's business, I should dissent from that proposition. (Uproar.)

A VOICE: Our interests are identical.

Mr. HART: Yes; but the constituencies and companies are separate. (Laughter.) We have been involved in works of a magnitude far exceeding the representations made to us at the outset. We have faithfully endeavoured to carry out all that it has been possible to do with the least expenditure, and the greatest speed. We have met with almost insuperable difficulties, which it would be impossible to describe, but they will be more fully dealt with at the next meeting of the Mexican Mineral Railway. All I can say for the moment is that the company has done its utmost to fulfil its obligations. It has provided the capital and paid its way. It has incurred no debts, and claims to have entered into no obligations it has not fulfilled, and as far as the desire to co-operate with you go it has done its best with the most sincere intention. It has had difficulties which it will be the duty of the chairman of the railway company, in the double position he occupies, to explain, but which he would not like to enter into as far as I do now. We have of late received information that the first (or latest) promise of the completion in June may be deferred for a month, so far as relates to the canal. It may be some little time yet beyond that in the final completion of the railway, but not to any important extent. I am now making remarks based largely upon the latest information received from our engineer in charge of the railway and canal, but have no hesitation in telling you that no man has been more deceived than I have at the extraordinary cost and time occupied in the construction of the line—a cost and time that we were never led to imagine at the outset, and of a character quite at variance with all the reports and estimates received. The only consolation I can offer to shareholders and derive myself is this—that now we have expended our money

WE ARE ON THE EVE OF COMPLETION.

(Cheers.)

The CHAIRMAN: I do not think I can add anything to what Mr. Hart has said. He has given you all particulars that anybody on this side of the table, or this side of the ocean, could have given you. With regard to the Dios Padre tunnel, the fact is that some nine months ago we found we had a tremendous quantity of ore on hand lying all over the place, but we had not a tremendous quantity of money, though there was a large amount of work to do with what we did have. We thought it best, therefore, to curtail the work inside the mine as much as possible. Therefore, instead of the Dios Padre tunnel going ahead at the rate we might have chosen, we kept but a small force at work, and I have not much more to say about it. It is in highly favourable ground, and we are always having reported to us that the ore is very good, but we have not come across any such chimney as I should like to make a fuss about. We know we are near one, but are not there yet, and have not been in a great hurry to get there for the reasons given. As soon as the mill is at work the place will start into activity again, and it will be necessary to keep the ground well open, and to put the mine into hard running order, and then I have no doubt we shall soon have some news for you.

A SHAREHOLDER: Is the mill insured?

PERILS OF INSURING MILLS.

The CHAIRMAN: No; except by ourselves as much as possible by a very efficient water service. You cannot insure a mill in Mexico or the United States, for the reason that if you did, as soon as any mine began to go down hill, it would immediately burn down its mill and be paid full price for it. (Laughter.)

Mr. APPLGARTH proposed, and Mr. MARSH seconded, the re-election of the auditors, Messrs. Cooper Bros., and it was agreed to.

Mr. CHEMEY proposed a vote of thanks to the chairman, and said: Let us hope now in the course of weeks we may have the joyful intelligence that we are on the eve of a great success. (Cheers.)

Mr. BLAKESTONE seconded the motion, which was carried.

The CHAIRMAN, in returning thanks, said: I hope the next time we have a meeting we may be in a position to declare a dividend. (Cheers.)

THE MURCHISON CROWN EXPLORATION AND MINING CO., LIMITED.

THE POSITION AND PROSPECTS—FURTHER VALUABLE INTERESTS THAT HAVE BEEN ACQUIRED, DETAILED.

The second ordinary general meeting of the Murchison Crown Exploration and Mining Co., Limited, was held at the City Terminus Hotel, Cannon Street, on Thursday, July 9, to transact the ordinary business of the company.

Mr. F. A. Gillam

presided.

Mr. FINLAY A. MACRAE (the secretary) read the notice calling the meeting, and the report of the directors was taken as read.

The CHAIRMAN: Gentlemen, from the report and balance-sheet you will have been enabled to gather something as to the present position of this company's properties, but it will not have conveyed to your minds the anxious work which has devolved upon your directors in searching out and sifting undertakings of sufficient promise to warrant the investment of your capital during the long period of great depression, which has prevailed so long in South African affairs. The policy of the board has been directed to obtaining large territorial interests, which, although they are not likely to yield an immediate return, may be capable of development of very great magnitude; whereas mining properties not only have always more or less elements of uncertainty about their initial stages, but necessitate immediate and continuous expenditure of money for opening out. This has been evidenced in the case of the mine in which we are interested, and upon which a sum of £2,850 has already been spent. Although a large quantity of rich quartz (about 2,000 tons, averaging 2 ozs. to the ton) has been raised, this cannot be turned to account for want of milling power, which we do not feel warranted in erecting

until the mine is proved in depth, for not only would this entail a large expenditure on the mine, but in addition the heavy burden of a milling staff and of the necessary surroundings for such an undertaking. For the cautious policy they have adopted the board have to thank their engineers, Messrs. Frecheville, and after full consideration they have thought it better not to rush into further great expense until the result of the work in depth (in the same range of country) that is being carried out by our neighbours, at some little distance on either side of us, is known. We shall then be in a position, without having incurred heavy expenses, to decide upon the best course. As is known to you, Mr. McCarthy, a mining engineer of considerable experience, was sent out by our consulting engineer to examine the mine, and his opinion coincides with that of Messrs. Frecheville, viz., that the value of the mine could not be determined without the expenditure of a very large sum of money, in a new and, geologically speaking, imperfectly known district. We did not feel justified in incurring this expense, as it might cripple the company's progress in more important undertakings. Mr. Frecheville is here, and will be able to give the shareholders his opinion; he will explain the arrangements he suggests, and will state his reasons for advising the curtailment of work on the mine for the present. It may be agreeable to you if I briefly refer to the acquisition of property we have made, and I will express the opinion, that in consequence of the careful watching and attention given to business, we have been fortunate in securing interests which may prove of very great advantage to the company. The first to which I will make reference is the Katanga Co., an Anglo-Belgian Co., formed in Brussels under influential auspices, of which you have received full particulars in the report. We now hold one-twelfth interest in one of the largest and most valuable tracts of country in South Africa. You are aware that the Congo Free State is the outcome of the International Association, the pioneer of the various States and chartered corporations which have been formed for the exploitation of Southern and Central Africa. The Congo Free State has, since its foundation, borne alone the brunt of the enormous preliminary expenditure necessary to get

A FOOTHOLD IN CENTRAL AFRICA,

and this large outlay has been mainly supplied at a great sacrifice by their far-seeing sovereign. This large expenditure has paved the way for commercial enterprise, and within the last few years the State has been opened out by the activity of Belgian companies, supported by the principal financial institutions of the country. Honest and solid principles have guided the initiation and management of these Belgian companies, and they merit, in consequence, the full and hearty support of European investors. The work already done by these companies in the Congo Free State has been very remarkable. Numerous steamers are now plying on the Upper Congo; stations have been founded, and well-built stores, mostly of burnt bricks, have been erected half way across Africa, natives have been trained in industrial pursuits, and at the same time solid commercial profits have been realised. These companies have been formed without undue inflation of capital, and they and their shareholders alone reap the entire benefit of all profits made, and their success is a happy augury for the future prosperity of the Katanga Co. These good results have until now been achieved mainly by trade and the opening of communication and founding stations, whereas in the territory of the Katanga Co., apart from the opportunities for trade in this well known ivory and indiarubber district, the Katanga Co. possesses perhaps the largest freehold right held by any country in Southern Africa, as the grant consists of, roughly, 50,000,000 acres of land freehold, with the preferential mining right over about 150,000,000 more.

THERE IS AMPLE EVIDENCE,

confirmed from many sources, as to the mineral wealth of Katanga, and as to the rich natural products of its soil, and the country further possesses good water ways, which will greatly facilitate commerce and development. The British South Africa Co., as you know, has already made, in the short space of 18 months, immense strides in their country, which last autumn was unknown except to a few travellers, and which is now being steadily populated and opened out by white men, and is in telegraphic communication with England. This is a good omen for the future of Katanga. You will observe that the concession has been secured on very satisfactory terms. The consideration is 10 per cent. of the shares of the company, present and future, the balance of the privileged share capital being cash subscription. The map received by you gives you the exact position and extent of the territory, and I do not think I can say more on this subject, except that in following the general direction which affairs have taken in the exploration of Africa, that is, in the acquisition and development of the territory not yet absorbed by the large Colonial corporations, the board believe they have taken the right step. It is certainly one whereby for a minimum outlay the company has secured a very large stake. It may take up too much of your time if I enter fully into details as to all of our investments. I will, therefore, limit my remarks as much as possible. At our last general meeting you were informed that the board had secured a participation in the Gaseitsives Mineral Concession, which consists of the right to select 400 square miles of country lying south of the Bechuanaland Co.'s territory. In it the Murchison Crown Co. have an interest of 8 per cent. The concession is held by a syndicate, who have an engineer on the spot exploring and locating the property. By their interest in the Matabeleland Co. the board have secured a share in a concern which holds a large participation in the Chartered Co., and is entitled to a *pro rata* of further issues of capital by the British South Africa Co. In order that the Murchison Co. should not be behind the other exploration companies in the opening out of Mashonaland, should it turn out to be a rich gold field, the directors decided to send out an expedition to that country and to Manica, for which they have employed the able prospectors which the company has amongst its members. The expedition has been fitted out with all regard for economy and efficiency.

THE DIRECTORS HAVE FULL FAITH

in Messrs. Gemmell and Greenlees, and believe that if the country proves to be rich, they will be able to secure good properties for this company. The directors believe that the shareholders will admit that they have done their best, while the depression has been lasting, to secure participations, on the most advantageous terms, in some of the best, if not the best, undertakings in Africa. What the

fruits will be I should not like to prophecy, as much must, of course, depend on the general course of financial and political affairs, and how these unknown countries of Southern Africa open out. As I have before said, I think that under all the conditions which can be foreseen, the investment should in time result in very large returns for the outlay incurred.

DIRECTORS TAKE ONLY HALF-FEE.

In view of the company not as yet paying any dividend, the directors have determined to reduce their fees for the present to one-half of the amount they are entitled to under the articles of association. I now beg to move the adoption of the report and statement of accounts. (Applause.)

Mr. THORNE rose to address the meeting.

The CHAIRMAN suggested that the meeting should, before discussion, hear the remarks of the expert, Mr. Frecheville.

VIEWS OF THE EXPERT.

Mr. FRECHEVILLE feared that he had not much information to give to the shareholders in addition to what the chairman had given them in his speech that day. He explained how the ore had varied in character, and how they had got into what miners called a hard make of stone. They had found that the ore was not of the value to pay well, and that the only thing to do was to sink deeper and test the mine, and get below this hard make of ground. He had given the matter the most careful and earnest consideration, and his advice to the directors had been that they should not continue sinking at the present time, but await the result of the experiments that were being made by other people who were exploring on each side of them. The Murchison range was as yet an

ALMOST UNTRIED FIELD.

and they must sink in depth to prove the reefs. He considered that the directors were acting wisely in postponing for the present further development of the reef. (Hear, hear.) They had, as the chairman had told them, some 2,000 tons of quartz stacked and ready for crushing, and this certainly represented some considerable value. Some ten samples were taken by the manager and sent to be treated, and the result of this treatment of the quartz had been to find that they yielded the very high assay value of 6 ozs. to the ton. Since then average samples had been taken from the heaps and had been crushed for them in a small prospecting mill, owned by an adjoining company, and the result of that treatment of 24 tons had been to give them a yield equal to 1½ ozs. of gold to the ton of ore, and, taking that in conjunction with the assays, which, as he had already stated, went as high as 6 ozs. to the ton, he thought that they might look for, say, an average yield of 2 ozs. of gold to the ton of ore. To crush the 2,000 tons that they had would necessitate the erection of a mill, and he did not feel that at the present time they would be justified in incurring the outlay. There was also, as well as the small prospecting mill, a proposal to erect a customs mill. He estimated, at the average he had given of 2 ozs. of gold to the ton of ore, that this 2,000 tons of quartz should yield them a profit of between 8,000l. and 10,000l. He would be happy to reply to any questions that any of the shareholders desired to ask.

The CHAIRMAN invited discussion.

Mr. C. SISTERSON said that he did not rise to make any complaint as to the directors' report, or the speech of the chairman, but he understood from the original prospectus that they could get gold much sooner than had proved to be the case, and he wished to know whether some steps could not be taken to obtain an early return. He had invested for his own interests, and not for those of his grandchildren. He wanted to have some return early, and thought that the directors might perhaps acquire some piece of ground that would give them this. He was not speaking in any way hostile to the board, but he only desired to say that apparently the Murchison property had not realised the anticipations formed as to its value. He was sure that the directors had done all in their power to further the interests of the property, and he only offered this suggestion, which he hoped would receive their consideration, viz., that he should endeavour to find some means of gaining any early return to the patient shareholders. He, personally, was pleased to accept the report and accounts.

Mr. THORNE endorsed the remarks of the last speaker in regard to the desire for any early return. He was verging on three score and ten, but still he would like to see a little bit of return before he went under, although he had the greatest respect for those who were to follow him. (Laughter.) He did not quite understand the expert's remarks were that to take it that the ore at gross 2,000 tons would yield about 2 ozs. of gold to the ton.

Mr. FRECHEVILLE: Quite so.

THE BOARD COMMENDED.

Mr. THORNE thought that that was satisfactory, and that the directors had shown great wisdom in the step that they had resolved to take in not pushing the development on the property too hurriedly. He further commended the action of the board in the reduction of their fees as showing their confidence in the future of the company and their desire to stand in with the shareholders, who were getting no dividend yet. He was a director of companies himself, and was an advocate for directors being paid, and well paid, for their hard work, and he felt that the shareholders were much indebted to the directors for their most generous action in this matter. He hoped that they would be remunerated when the proper time comes. He asked if it was the intention of the company to spend any money on capital account at present. He had confidence that the concession would become a great success.

The CHAIRMAN replied, and thanked the shareholders for their remarks, and he had to premise that the suggestion of Mr. Sisterston should receive the most careful consideration of the board. As to Mr. Thorne, he thanked him for his kind remarks as to the directors, and in respect to the question of mill or buildings, as had already been stated, they did not intend for the present to go in for any capital outlay. Their object had been so far, and would for some time to come, continue to be to

HUSBAND THEIR RESOURCES

in every way in their power.

A SHAREHOLDER: Hear, hear.

The motion was then put and carried.

The CHAIRMAN said that he was happy to see the directors retired upon that occasion, but they had to re-appoint the auditors, Messrs. Cooper Bros. and Co.

Mr. THORNE said that he would have much pleasure in proposing that Messrs. Cooper Bros. should be re-elected auditors of the company at the same remuneration as heretofore.

A SHAREHOLDER seconded.

The motion was carried.

The CHAIRMAN said that that would conclude the business of the meeting, but perhaps the shareholders would like to hear a few words upon their property from Commander Lovett Cameron, who had only recently returned from Africa where he had had very great experience.

Several VOICES: Hear, hear.

VIEWS OF AN AFRICAN EXPERT.

Commander LOVETT CAMERON, R.N., then addressed the meeting, and said that he had been at across Africa, from the one side to the other, and he could tell the shareholders one thing that had struck him. It was that the property of this company was situated in the richest part of Africa; that he had proved this. (Cheers.) There was a great amount of mineral ground possessed by them, gold was extracted by the natives, and down by the coast, copper abounded, and was found to be valuable enough to be gathered up and exported for the purpose of extracting the gold that it contained. He had also seen coal there, and cinnabar, which was the ore of mercury, and he had likewise seen lumps of silver in the hands of the natives, which it was impossible could have come from the coast or have been brought there by any white man, inasmuch as in many places he had been the first European who had penetrated amongst the people. There must, therefore, be a certain amount of silver there. Another great feature which strongly impressed him very much was the many important rivers to be found in that part of Africa, and which rendered navigation up to their property quite possible, and provided abundance of water for the time when they come to crush their ore in any large quantity. Great as the mineral wealth of the country was, he was also struck by its large vegetable resources. Everywhere he found indiarubber, vines, coffee, and spices abounded, and he was very glad to get this wild coffee, as he had been out of tea and coffee for a long time prior to his arrival there. He also found nutmegs growing wild. He next alluded with satisfaction to the manner in which railway connection was being pushed forward, and he expressed the view that the easy methods of access that railway and water would afford could not fail to help the country to develop its resources, and that in the future, year after year, both in mineral and agricultural wealth, the country would continue to develop and improve, and to yield profits that would be satisfactory to the shareholders of the company.

The CHAIRMAN said that that concluded the business of the day, and he had only to thank the shareholders for their attendance.

Mr. THORNE moved a vote of thanks to the chairman and directors for their services and their

GENEROSITY IN REGARD TO THE FEES.

The motion was seconded by Mr. SISTERSON, and carried.

The CHAIRMAN briefly returned thanks.

The meeting then separated.

GOLD MEDAL, MELBOURNE, 1881.

THE AGENCY CAN COMMAND AND SUPPLY THIS TO INVESTORS.

GENERAL FOREIGN MINES.

Many of these deserve special attention. Profits may be secured by acting upon sound advice in Buying certain Shares, whilst losses may be avoided by timely sales.

RE-CONSTRUCTIONS.

BEFORE making further Investments Write for Advice.

A similar remark applies to joining new Mining or other enterprises.

INDIAN MINES.

The information possessed by the Agency is invaluable for those wishing to Buy or Sell Shares in this Market.

KAFFIR MINES.

Special efforts have been made to secure the best and most reliable information as to the management, resources, and prospects of South African Mines in which the profits and losses have been alike phenomenal.

GREAT CARE IS NEEDED BEFORE INVESTING.

Those doing business through the Agency are kept informed as to any exceptional news in connection with the Companies in whose Shares they are interested. Purchases can be made for forward delivery, and sales effected for cash.

Messrs. ARTHUR GUINNESS, SON AND CO., Limited, of Dublin, after thoroughly testing the value of the invention at their Brewery, took a license, on the 5th August, 1890, from the Patentees for their process. Referring to this, the Chairman of the Company, Mr. R. Guinness, at the Annual Meeting of Shareholders of Messrs. Arthur Guinness, Son and Co., Limited, at Cannon Street Hotel, on the 9th of August last, said, "They had completed arrangements for the liquefaction and sale of the Carbonic Acid Gas, which was given off in the process of fermentation, which he had good reason to hope would prove a not insignificant source of revenue." *The Times*, August 11th, 1891.

The Royalty payable by Messrs. Arthur Guinness, Son and Co., Limited, is on their gross sales. Supposing this firm liquefied only one-third the gas produced by them in the year and sold the same at a considerably lower price than they are now selling it at, the income derived by the Company from this Brewery alone under their license would be over £7,000 per annum.

THE BREWERS' AND DISTILLERS' CO₂ COMPANY, LIMITED.

INCORPORATED UNDER THE COMPANIES ACTS, 1862 TO 1890.

CAPITAL - - £130,000, IN 25,850 ORDINARY SHARES OF £5 EACH.

OF WHICH 17,850 ARE NOW OFFERED FOR SUBSCRIPTION; and 150 Founders' Shares of £5 each, which will be entitled to one-half the profits of Company in each year, after payment of a dividend of 15 per cent. for such year upon the other Shares of the Company. The Ordinary Shares payable 10s. on application, £1 10s. on allotment, £1 10s. one month after allotment, and the balance as may be required in calls of not more than £1, at intervals of not less than Three Months. Subscribers of 200 Ordinary Shares and upwards will be entitled to purchase from the Vendor, at par, within One Month from Allotment, one Founders' Share for every complete number of 200 Ordinary Shares allotted to them.

PROSPECTUS.

THIS Company is formed to acquire the Patent Rights for the collection and utilisation of the Carbonic Acid Gas (chemically known as CO₂) given off at Breweries and Distilleries during the process of fermentation, and which has hitherto gone to waste.

The Patentees, who are all well known in the Brewery and scientific world, are Professor Tichborne, F.I.C.; Samuel Geoghegan, Chief Engineer of Messrs. Arthur Guinness, Son and Co., Limited; M. F. Purcell, F.C.S., and A. E. Darley, of Watkins' Brewery, all of Dublin.

The *Brewer's Journal*, of September 15, 1890, in referring to this process, says:—

"There is still, however, one bye-product of our Breweries that hitherto has not been utilised. We refer to the gases evolved during fermentation, consisting for the most part of carbonic acid, but including also small quantities of the vapour of alcohol and probably some volatile and aromatic ethers of unknown composition. A few figures, showing the enormous quantity of gas thus running to waste may be of interest to our readers. When a saccharine fluid such as beer wort ferments, part of the sugar is decomposed into alcohol and carbonic acid, approximately in equal proportions. Recent statistics tell us that over 1,000 million gallons of beer were produced in this country last year, containing on an average 5 per cent. of alcohol. During its manufacture, therefore, a like quantity of carbonic acid was evolved. One thousand million gallons of beer weigh approximately 100,000,000 cwt., consequently 5,000,000 cwt. of carbonic acid were given off from our breweries last year. The quantity of carbonic acid evolved from our distilleries is about one-fourth of that from our breweries, so that there is a total annual loss of gas arising from fermentation weighing not less than 300,000 tons. Considering the manifold uses to which carbonic acid is now applied, such as the manufacture of aerated waters, ice making, fire extinguishing, and certain chemical processes, it is a matter of surprise that no attempts have been made to utilise the enormous waste."

Writing on the same subject the *Brewery Trade Gazette* of January 13th, 1891, also says—

"It is always a source of regret to scientific and commercial men alike to see a bye-product of any manufacture going entirely to waste. For this reason one welcomes any enlightened attempts at the solution of such a problem. Some months ago we alluded to the introduction of Guinness's Brewery of a process for recovering the large quantities of carbonic acid lost during top fermentation. It would certainly appear as if this invention afforded an opportunity for saving and utilising the only brewery bye-product for the recovery of which no steps have yet been taken. This is very satisfactory news as far as it goes, but as the process has become the subject of a patent, it is impossible to predict at present, even granting its practical success in the manufacturing scale, how it will come out in point of price. Certainly, as far as anyone can see, it has all the elements of success in it. Of the profitable employment of the liquefied gas there can be little doubt."

By the Patentees' process the gas is collected as given off, purified, liquefied and stored in iron bottles for commercial use, and is specially applicable where a gas of great purity is required.

Sir Charles Cameron, M.D., ex-President and Professor of Chemistry and Hygiene, R.C.S.I., President of the British Public Health Medical Society, &c., has made a thorough investigation of the process as carried on at St. James's Gate (Guinness') Brewery, Dublin, and a copy of his report, dated March 28, 1891, accompanies this prospectus.

Sir Charles recapitulates the points touched upon in his report, as follows:—

"1. An immense quantity of carbonic acid is wasted in breweries. 2. A large proportion of this gas could be condensed to liquid at a cost not exceeding 3d. per lb., but probably less than a farthing per lb. 3. The process of liquefying the gas is successfully carried on at Guinness' Brewery, Dublin. 4. The liquefied gas prepared at Guinness' Brewery is perfectly free from any peculiarity of flavour or odour. 5. Carbonic acid produced at soda water works cost about 4d. per lb. 6. That it is safer and in every way more desirable to use in beverages carbonic acid derived from a food substance, such as grain, than from mineral sources. 7. The uses of liquid carbonic acid are numerous, important and increasing."

The demand for liquefied carbonic acid gas at such a price as brewers and distillers could afford to sell it at should be enormous, and should entirely revolutionise the manufacture of mineral waters. As is well known, vast quantities of carbonic acid gas are used by mineral water manufacturers, the cost to them of manufacturing which is stated by Sir Charles Cameron to be about 4d. per lb., besides entailing expensive plant and having to deal with large quantities of debris. For ice making, cold storage, fire extinguishing, beer raising, beer aerating, and numerous other purposes, the field should be most extensive.

Messrs. T. and E. Hall, Limited, who have for many years fitted up vessels engaged in the cold meat trade, report that from actual experience they find that the difference in coal necessary to cool 1,000 tons of meat from South America by the use of CO₂ Freezing Machines over the old process is as about 30 tons to 135.

Messrs. Arthur Guinness, Son and Co., Limited, of Dublin, after thoroughly testing the value of the invention at their brewery, took a licence on August 5, 1890, from the patentees for their process. Referring to this, the Chairman of the Company, Mr. R. Guinness, at the annual meeting of shareholders of Messrs. Arthur Guinness, Son and Co., Limited, at Cannon Street Hotel, on August 9 last, said, "They had completed arrangements for the liquefaction and sale of the carbonic acid gas, which was given off in the process of fermentation, which he had good reason to hope would prove a not insignificant source of revenue."

The royalty payable to Messrs. Arthur Guinness, Son and Co., Limited, is on their gross sales. Supposing this firm liquefied only one-third the gas produced by them in the year and sold the same at a considerably lower price than they are now selling it at, the income derived by the Company from this brewery alone under their licence would be over £7,000 per annum.

The patentees state that applications to treat have been received by them from various parts of the world; they have, however, decided to hold the same over, so that the Company may have a free hand in dealing with their various patents.

In a property of this magnitude it is difficult to estimate the profits that should be made by the Company; if, however, in Great Britain alone, where 300,000 tons, as above-mentioned, go to waste every year, only one-tenth, or 30,000 tons, were sold, and a royalty of only one farthing per lb. charged, the income from the same would be £70,000 per annum, or equal to more than 50 per cent. on the total capital of the Company. In addition to this, the Foreign and Colonial Patents should be an important source of revenue to the Company, either by granting licences or forming subsidiary companies, as might be deemed advisable.

Patents have been granted in Great Britain, Germany, France, Cape of Good Hope, and the South African Republic, and applied for in Austria-Hungary, United States of America, Canada, Argentine Republic, New South Wales, New Zealand, Queensland, Tasmania, Victoria, and India.

Mr. J. Fletcher Moulton, Q.C., the well-known Patent Counsel, has reported favourably on the validity of the British Patents; his opinions, as well as Sir Charles Cameron's original report, can be seen at the offices of the Company.

A Stock Exchange Quotation and Settlement will be applied for in due course.

The terms on which the Company is to acquire the patents, patent rights, and all improvements on the same for the whole world where patent rights have been or may be obtained, and including the benefit of the licence granted to Messrs. Arthur Guinness, Son and Co., Limited, are set forth in the contracts below mentioned; and the total amount payable under those contracts is £110,750, which is to be satisfied as to £9,000 in cash, £40,000 in fully paid ordinary shares, £750 in fully-paid founders' shares and the balance in cash or shares, or partly in each, at the option of the directors. The sum of £110,750 above-mentioned includes the purchase price for the property, payable under the first-mentioned contract, and the consideration to Mr. Rawlings for the re-sale to the Company under the second contract, he undertaking all the preliminary expenses of floating the Company down to the first general allotment of shares.

The following are the contracts above referred to, which, with the memorandum and articles of association, may be seen at the offices of the solicitors to the Company:—Seven contracts, dated respectively 18th October, 1890, 22nd November, 1890, 14th January, 1891, 30th March, 1891, 30th May, 1891, 19th June, 1891, 30th June, 1891, all made between Charles Robert Clarke Tichborne, Alfred Edward Darley, Marmaduke Francis Purcell, and Samuel Geoghegan, and Edward Manville, their agent, of the one part, and Edward Rawlings of the other part. And one contract dated 7th July, 1891, between the said Edward Rawlings of the one part, and the Company of the other part.

During Mr. Rawlings' negotiations for the purchase of the property and formation of the Company, agreements have been entered into with various parties in connection therewith, and as to the above expenses and the issue of the capital now offered, including agreements with the syndicate which has guaranteed the subscriptions for such capital, and with persons interested in the purchase-money, to none of which the Company is a party. Applicants for shares must be deemed to have had notice of these agreements, and to have waived all right to any particulars thereof, whether under section 38 of the Companies' Act, 1867, or otherwise.

Applications for shares must be made on the application form and forwarded to the bankers of the Company, with the amount of the deposit. If no allotment is made the deposit will be returned in full, and when the number of shares allotted is less than applied for, the balance will be applied towards the payment due on allotment, and any excess returned to the applicant.

Prospectuses and forms of application for shares may be obtained from the bankers, solicitors, and brokers, and at the offices of the Company.

July, 1891.

QUINLAND—LONDON.

MINING MARKET.

CITY, FRIDAY EVENING.

MARKET IMPROVE—FLAGSTAFFS AND AUSTRALIAN BROKEN HILL CONSOLS—MAKING-UP PRICES—PER- AMBULATING BROKERS—CORNISH DIVIDENDS.

THE course of the market this week has been like that of a good man struggling with his difficulties, and we all know that he is a spectacle for the gods. When we indicated last week that the outlook was fairly good, we scarcely thought that in so short a time the market, in certain departments, would so much revive, and that in the dry bones of mining shares there was left such immediate vitality. We certainly had the opinion that sooner or later prices would revive, because, as we have been at pains to point out, they neither represent in most cases the break-up value of the concern nor their intrinsic merits.

A sign that business is brisker, and that orders are coming forward, has been the larger attendance not merely in the Mining Exchange, but round about the mining door. In fact, the latter has this week been *par excellence* the real Mining Exchange. We have no wish to cast any slur upon the admirable arrangements which the committee of the Mining Exchange have made for the reception of their members, but when in such hot weather as this, one is invited to descend from such fresh air as Old Broad Street is favoured with to the cavern which at present does duty as the Mining Exchange, until more suitable premises can be found, the invitation is like that to a bad dinner,—declined with thanks. Presented with the choice of being smothered in a cavern or roasted on the pavement, brokers have chosen the latter, and though they have perspired much they have at least breathed freely. At the same time the crowd has, to some extent, rendered the western side of a portion of Old Broad Street impassable, and the police have caused bargains to be done in that sort of perambulating fashion better known to the vendors of ice creams and hokey-pokey than to the staid and respectable dealers in mining shares. It has been lowering to their dignity that bargains in Flagstaff, for example, should be commenced and concluded amidst unmelodious cries of "Move on," and that Australian Broken Hills should rise and fall amidst stern injunctions to "Clear the gangway." Little, after all, have the good men of the Mining Market heeded interruptions even of this humiliating kind so long as

business has been rampant and a decent holiday is seen in the perspective. Indeed, we may say that, considering the first three days of the week were occupied by the settlement, the volume of business was extremely encouraging, and indicative of the fact on which we have long insisted that, given fair monetary and commercial conditions, the discerning public will not suffer mining prices to remain at their present low level.

Last week we gave a comparison of the returns made by the various Randt mines. We now give the gross returns for June, which, although not the highest on record, are considerably above the totals of the corresponding months. The comparison stands thus for the first halves of the present and past years:—

	1891.	1890.	1889.
Jan.	53,205	35,030	24,986
Feb.	50,073	36,886	25,800
Mar.	52,949	37,680	23,705
Apl.	56,362	38,799	27,131
May	54,672	38,884	38,298
June	53,863	37,412	31,272
Totals	323,124	224,691	176,192

The protests that continually reach us in regard to the way mining prices are dealt with in the making up on the Stock Exchange find emphatic expression in the letter of a correspondent this week, who writes:—"I am glad the papers are taking up the question of the making-up prices in the Mining Market. I attribute to the scandalous way in which these are fixed the principal reason why the public now avoid mining shares. I am not running or carrying any mining shares, and so am not a sufferer directly. I only feel its effects in the shrinkage in value, which is the natural sequence whenever the public loses its interest in mines."

The first fillip given to the market was Australian Broken Hill Consols meeting, upon which the shares fell, though afterwards they somewhat recovered. It is a singular coincidence that brokers always read meetings unfavourably, possibly for the reason that they know that in business more men are saved by want of faith than by its presence. However, after knocking down prices, orders came in from the public to buy, and there was a sharp recovery.

Another fillip was giving to the market by the rumour that Prof. Vincent had actually filled his 3,000 bags with Flagstaff ore and got them within measurable distance of the market.

Bah! Bah!! Professor, have you any ore?

Yes, sirs, yes, sirs, 3,000 bags and more.

The Professor was triumphant, as we pointed out at the recent Flagstaff meeting, but when he returns to London with his ore sold, and the proceeds ready to divide amongst the shareholders, one is lost in contemplation to think of the glory and the renown that will await him. However, there is no denying the fact that Flagstaffs, which were despised and rejected on Monday at 5s. 6d., were, later on, dealt in at 8s. 3d., at which prices the bears were afraid to touch them. "Wait," said a broker, in a hoarse whisper, "and you will see Flagstaffs at 15d. or 15s.—it all depends upon the Professor."

In regard to the meetings of the week, most of them are specially alluded to in our leader columns. Of course, the leading one was Australian Broken Hill, but not less interesting were those of Day Dawn Block and Harrierville. The shares of all three companies, we think, merit attention. The Mount Leyshon meeting was chiefly remarkable for the distinction drawn between "men of standing" and "guinea-pigs," to which we have made some reference elsewhere. The Gippsland Proprietary Co. held a private meeting. Private meetings are generally synonymous with tales of woe; but we hope it was not so in this case. The Uranium meeting was certainly a very warm one. We have not reproduced some of the expressions used because it might hurt the feelings of the persons concerned to see them in print. The company has certainly had enemies from the commencement, but, as Mr. Smyth said, "with the elimination of the acid" there is every chance that it should do better, for there seems to be a good demand for uranium, and a satisfactory process for rendering it marketable has been found.

An attempt is to be made to resuscitate the Quartz Hill, *alias* Denver Gold Co., Limited, and we congratulate those who have set

the proposal on foot on having changed the name of this hitherto ill-fated company. It is now called the Indiana-Kansas Gold Mines—a title that also might be improved by abridgement. The opportunity is offered of applying for one share in every two held in the late Denver Co. on the payment of 5s. per 14. fully-paid share. Applications must be sent in not later than July 25. The 5s. will only be called up by instalments, and the proposal is set forth in a lengthened prospectus, containing suggestions that are both reasonable and promising. We are glad to learn that Mr. J. Jameson Truran, secretary of the old company, will also occupy that position in connection with the new, and Mr. H. T. Walker, chairman of New California, Limited, will be at the head of the highly respectable and business-like board he has associated with him.

The reports from the Colorado Silver Co. are becoming increasingly favourable. The mines are now being worked at 18 different points, and the drift in the "Terrible" is looking extremely well, as is also that in the Brown Mine, and continued improvement is shown by the Glasgow lode. Generally, the latest report, as well as several that have preceded it, indicate the steady improvement foreshadowed by Mr. Archibald J. Smyth, the chairman, at the late meeting.

Reverting to the market generally—with the exception of the slump in Ferreiras, the African section calls for no special feature unless we except the Diamond Market, which has been falling steadily—De Beers to the extent of $\frac{1}{16}$, whilst Burma Ruby could not sustain last quoted prices, after such a meeting as it held a week since. An important telegram has been received from Pigg's Peak, which seems to indicate that the much-vaunted Huntington mills have been discarded.

Coming to the Colonial section, Australian Broken Hills are 5s. better than they were a week ago, and by no means close at the best. Generally speaking, all Colonial shares are up, including Day Dawn Block, which rose on the meeting, and Gympies, which are still far too low.

In the Indian section, the feature of to-day has been the announcement of the interim dividend on Goldfields of Mysore shares, represented by fully-paid ordinary shares in the Ooregum Gold Mining Co. of India, Limited, and the Nundydroog Gold Mining Co., Limited, in the proportion of one share in each of these companies for every 13 shares held in this company.

Mysore Wests and Nundydroogs have been firm, and there have also been considerable dealings in Champion Reefs, Goldfields of Mysore, and Ooregum.

In the Copper section there has been dulness, but in the General department. Flagstaffs show a rise of about half-a-crown on the week. Callao Bis are now quoted call paid, and there has been some activity in Gravel Gold, Sierra Buttes, Golden Feather, Golden Gate, Pahang Corporation, Yankee Girl, and a few others. The changes for the most part have been fractional, except in Tolima "B," where sales have forced prices down 15s.

Dividends of 30s., 20s. and 10s., have been respectively declared by Carn Brea, Dolcoath and Tincroft, and though on the announcement the two latter shares rose, the former fell 2. The ways of the Redruth Exchange are indeed hard to understand. Here is another conundrum—Wheal Agar made a call of 2s.; and the shares rose $1\frac{1}{2}$, though possibly the explanation lies in the fact that a larger assessment was expected. It is proposed to run Trevaunance and Polberro as a united limited liability company. After what we have said in another portion of our present issue, the general public will see how unwise it would be to put any money into this concern. At the Dolcoath meeting Mr. Heard again raised the question of the payment of banker's charges. It really seems absurd, as he argues, that a mine with 16,000l. to its credit at the bank should be mulcted in these charges. We know some banks in London of the first standing that would be only too glad to keep such an account for nothing at all.

A Dolcoath shareholder writes:—"I think you will agree with me that a dividend-paying mine like Dolcoath, which has been paying dividends continuously, with but one exception, for the last 25 years, ought not to pay banking charges. It would not if it were financed properly." Most persons acquainted with the facts will agree with our correspondent.

The outlook for next week, we dare venture to say, is more promising than it has been for a long time past.

KAFFIRS.

There has been a slightly firmer tone in this description of shares during the past few days, and in several instances fairly good rises have taken place. Johannesburg Pioneer have advanced 10s., while several others have also risen somewhat. Ferreira shares have experienced a severe drop, and even after a fall of 30s., do not close at lowest. The other falls do not call for especial notice.

Business.—A rise is shown in Aurora of $\frac{1}{8}$; City and Suburban, $\frac{1}{8}$; Geldenhuis, $\frac{1}{8}$; Henry Nourse, $\frac{1}{8}$; Johannesburg Pioneer, $\frac{1}{8}$; Jubilee, $\frac{1}{8}$; Jumpers, $\frac{1}{8}$; Luipaard's Vlei, 6d.; Robinsons, $\frac{1}{8}$; Simmer and Jack, $\frac{1}{8}$; Spes Bona, 1s.; and Wolhuter, $\frac{1}{8}$.

The following have fallen: Pigg's Peak, Ordinary, 1s.; Sheba, 3d.; Croesus, 6d.; Crown Reef, $\frac{1}{8}$; Ferreira, $\frac{1}{8}$; Glencairn, 1s.; Johannesburg Waterworks, $\frac{1}{8}$; Langlaagte, $\frac{1}{8}$; Main Reef, 6d.; May Consolidated, 1s.; Modderfontein, 6d.; Randfontein, 6d.; Salisbury, new, 6d. and Stanhope, $\frac{1}{8}$.

DIAMONDS.

Extreme dulness has been experienced in these shares, and on De Beers being pressed for sale they gave way to the extent of $\frac{1}{16}$, others relapsing to a lesser extent.

Business: There is no rise to record, whilst a fall has taken place in Bultfontein Consolidated of 1s.; De Beers, $\frac{1}{16}$; Griqualand West, $\frac{1}{8}$; New Jagersfontein, $\frac{1}{8}$; and Burma Ruby, $\frac{1}{16}$.

INDIANS.

The market has not closed so well as it has been, although Nundydroogs have slightly improved. Goldfields of Mysore are lower—this fall being simply due to the shares being quoted xd of the 10ths of Mysore Gold shares now distributed. Ooregums are a shade lower.

Business.—A rise is shown in Mysore West of 3d., and Nundydroog, 2s.; whilst a fall has taken place in Champion Reefs, 1s.; Glenrock, 3d.; and Ooregum Ordinary, $\frac{1}{8}$.

AUSTRALIANS.

The feature of the week has again been the heavy dealings in Australian Broken Hills, which at one time changed hands at $1\frac{3}{8}$. Up to Wednesday they were dealt in cum dividend, but are since quoted xd, and still show a fair rise on the week. Day Dawn, Gympie Great Eastern and New Queen would have all shown better prices but for the fact of their now being quoted xd, whilst last week they were dealt in cum dividend. Wentworths have received a check, while most others remain stationary.

Business.—A rise is shown in Australian Broken Hill of $\frac{1}{4}$; British Broken Hill, $\frac{1}{4}$; Day Dawn Block, 3d.; Gympie Great Eastern, 9d.; and New Queen, 6d., whilst the only fall is in Wentworth Proprietary of $\frac{1}{4}$.

COPPER.

There has been little or no business in Copper shares, and where any alteration has occurred it has been of the downward kind. Rio Tintos, notably, are lower.

Business.—There is no rise to note, but a fall has taken place in Capes, of $\frac{1}{8}$; Copiapo, $\frac{1}{8}$; Namaqua, $\frac{1}{8}$; and Rio Tinto, $\frac{1}{8}$.

GENERAL FOREIGN SHARES.

The feature of the week in this section has been the dealings in Flagstaffs, which at one time rose to 8s. 3d. buyers, but do not close so good, although the market was very firm at the close. Gravel Golds are also better, and should go higher. Alamillos have fallen to the extent of 5s., while Tolima "B" have for some unknown reason receded to the extent of 15s. Golden Gates, although lower, do not close at the worst.

Business.—A rise is shown in Flagstaff of 2s.; Gravel Gold, $\frac{1}{8}$; New Viola, 3d.; Sierra Buttes, $\frac{1}{8}$; United Mexican, 1s.; and West Argentine, 3d.; whilst a fall has taken place in Almada, 6d.; Alamillos, $\frac{1}{4}$; Amador, 9d.; American Belle, 6d.; Balkis, 3d.; Bratsberg, 3d.; Golden Feather, 1s.; Golden Gate, $\frac{1}{8}$; Idaho, 3d.; Lisbon-Berlyn, 3d.; Monte del Oro, 1s.; New Gold Hill, 3d.; Pahang Corporation, $\frac{1}{8}$; St. John del Rey, 6d.; Tesoro, 1s.; Tolima "B," $\frac{1}{4}$; and Yankee Girl, 2s. 6d.

The following list shows the principal changes which have taken place:—

	Last Week.	This Week.
Alamillos	$1\frac{1}{2}$ 2	$1\frac{1}{4}$ $1\frac{1}{2}$
Almada	$1\frac{1}{9}$ $2\frac{3}{4}$	$1\frac{1}{3}$ $1\frac{1}{9}$
Amador	$2\frac{1}{6}$ $3\frac{1}{4}$	$1\frac{1}{9}$ $2\frac{1}{3}$

LATEST FROM THE MINES.

INDIAN MINES.

GOLDFIELDS OF MYSORE.—At a meeting of the directors of this company held to-day, it was resolved:—"That an interim dividend, free of income tax, represented by fully-paid ordinary shares in the Ooregum Gold Mining Co., Limited, and the Nundydroog Gold Mining Co., Limited, in the proportion of one share in each of those companies for every 13 shares held in this company, be and is hereby declared, payable to the shareholders on the books of the company on July 24, 1891, and that the transfer books be closed during the said July 24. The allotment letters to be issued on Aug. 4. The board will duly advise the shareholders how they propose to deal with fractional parts of shares."

COLONIAL MINES.

AUSTRALIAN BROKEN HILL CONSOLS.—Telegram from the managing director, resident at Broken Hill, dated July 11:—"A stoppage has occurred in output through a fault in the rich vein below the 280 level west. A change for the better has taken place. I expect to be able to raise rich ore next week."

BRILLIANT.—The company has cleaned up 770 tons for 1,448 ozs. gold; value, 4,800l.; and declared a dividend (the 23rd) of 2s. per share. The adjoining mine, Brilliant Block, is developing well, and will pay good dividends.

BRITISH BROKEN HILL PROPRIETARY.—The directors report that for the week ending July 16, 590 tons of ore were treated, yielding 94 tons of lead, containing 6,490 ozs. silver.

BROKEN HILL PROPRIETARY.—For the week ending July 16, 4,953 tons of ore were treated, yielding 743 tons of lead, containing 178,308 ozs. of silver. Cable also states price of company's shares in Melbourne as 10l. 4s.

DAY DAWN P.C.—Cable:—"The directors have sold, through Messrs. Johnson, Matthey and Co., 1,053 ozs. of gold, ex. Taroba, which realised 3,709l. 12s. 2d.

NEW QUEEN GOLD.—Cablegram, Charters Towers, July 15:—"We have shipped 745 ozs. (gold) s.s. Merkara. Started crushing 10th July. Will clean-up on 24th July."

WENTWORTH PROPRIETARY.—A telegram from Mr. J. J. Cooper, M.E., the company's consulting engineer, now on the property, states:—"Trial shaft Big vein sunk 30 ft.; assays show payable concentrates. Phoenix rise improved during the week from 7 ozs. to 22 ozs. to the ton. Other points improving. I have started cross-cut to junction."

QUEENSLAND SMELTING.—A cablegram this morning from the manager in Queensland, Mr. Weinberg, states:—"Have shipped per s.s. Merkara, copper bars, 560l.; copper matte, 1,000l.; bullion, 1,500l."

FOREIGN MINES.

AMERICAN BELLE.—Mr. Harvey cables that to date he has driven 30 ft. in ore on the main ore body lately entered in No. 3 level of the National Belle Mine.

ANGLO-MEXICAN.—The June shipment amounts to \$37,130.

CORTEZ.—Results for June:—Production, 47,750 ozs.; expenses, \$14,900; tons crushed, 700; development expenditure, \$5,470.

ELKHORN.—The weekly return of bullion shipments published on the 14th inst. should have been stated as for the week ending July 11, not June 11. Cable from the mine :—"During the month of June the mill ran 28 days, and crushed 902 tons; bullion shipped, \$37,580; smelting ore sold (310 tons), \$16,600; total produce, \$54,180; total expenses, \$23,805. The 1,150-ft. south level is looking well. Bullion produced for week ending June 11, \$8,895."

GOLDFIELDS OF URUGUAY.—Result of milling for June :—3,800 tons of ore crushed, 515 ozs. of bullion produced; value, \$6,500. 49 stamps running 30 days. The directors have sold, through Messrs. Pixley and Abell, the bullion produced during the month of May, which realised 1,646l. 5s. 9d. nett.

GRETA COLLIERIES.—The share transfer books will be closed from the 18th to the 31st inst., both days inclusive, preparatory to the payment of a dividend on the ordinary shares.

LA PLATA.—The results for June as cabled by the manager, are as follows :—"Mine output, \$5,330; dump output, \$960; profit for the month, \$820. There is a great improvement in mine."

NEW CALIFORNIA.—Cable from the mine manager dated to-day :—"June output, 440 tons; yield, 195 ozs. of gold; value, 630l.; costs, 540l.; mining profit, 90l.; expenditure on mine department and exploration, 240l. Water slowly subsiding.—**RICKARD.**"

NEW GUSTON.—Output for first half of July month :—"The mine superintendent cables to the following effect :—"Ore shipped, 550 tons; value (estimated), 8,000l."

NEW PIERREFITTE.—The warrants for dividend of 10 per cent. upon the capital for the three months ending June 30, declared by the directors on the 1st inst., have been sent out.

NEW PIERREFITTE.—The company has sold 150 tons of silver-lead ore to Messrs. Walker, Parker and Co., Limited, of Bagillt, at 11l. 19s. 6d. per ton, f.o.b. Bordeaux.

OURO PRETO.—A telegram, dated July 12, gives last month's return of gold as follows :—"3,038 tons of quartz produced 8,633 oits. (996 ozs.) of gold." The directors have sold, through Messrs. Johnson Matthey and Co., Limited, the gold obtained in the month of May, which realised 4,100l. 19s. 4d.

YANKEE GIRL.—Output for first half of July month :—"The mine superintendent cables to the following effect :—"Ore shipped, 580 tons; value (estimated), 8,260l."

RAUB AUSTRALIAN SYNDICATE.—Messrs. Arthur, Forbes and Co.'s advices from Singapore, June 17, state that crushing continues at the mill of the Raub Australian Syndicate, Pahang. On June 11 a cleaning up took place, 1,350 tons of stone yielding 925 ozs. smelted gold; value, 3,600l.

RUBY.—Telegram received July 14 from Eureka :—"24 tons tribute ore shipped; 8 tons tribute ore smelted, producing to company \$105."

SAN LUIS.—Cablegram from the company's manager at San Luis, Nicaragua :—"Bullion shipped, June, 1,670l., assay value; 240 tons of ore crushed; mill running 21 days."

HOME MINES.

CARN BREA.—The dividend was 30s. per share. The profit on the 16 weeks, 9,857l.; and the total balance in favour of the mine, 18,195l.

DOLCOATH.—The dividend was 1l. The profit on the 16 weeks, 4,880l.; and the balance in favour of the mine, 10,290l.

TINCROFT.—The credit balance was 6,735l.; the actual profit on the 16 weeks, 4,130l.; and the dividend, 10s.

WEST WHEEL GRENVILLE.—At the meeting of this company on Wednesday it was decided to close the mine, and offer it for sale as a going concern. 20,000l. of the capital remains uncalled.

WHEEL AGAR.—The call was 2s., and the debit balance 528l.

AFRICA.

LATEST FROM THE GOLD AND DIAMOND MINES.

CRÆSUS.—Crushing for last month was 223 ozs.

WITWATERSRANDT (KNIGHT'S).—The London agency received, ex Moor from Cape, 221 ozs. 18 dwts. smelted gold.

MOODIES.—A cable from the head office to-day :—"342 claims rented or leased; 1,739 tons crushed by claim holders, yielded 852 ozs. of gold."

PIGG'S PEAK.—Cablegram from Barberton :—"In place of Huntington mills shall have to erect 10-stamp mill. Chambers will explain everything."

LE CHAMP D'OR (FRENCH).—A cablegram of the crushings for June has been received as follows :—"10 stamps worked 25 days, crushing 630 tons, yielding 820 ozs."

HORO CONCESSION EXPLORATION.—The directors have received the following cablegram from the company's office at Barberton :—"Battery started July 11; mill working splendidly."

NORTH-EASTERN BULTFONTEIN.—Telegraphic advice received announces for last week, chiefly re-washings, 12,000 loads, producing 1,000 carats of diamonds; blue deposited, 7,500 loads.

GRASKOP MILL AND MINING.—The consignment of gold from the May crushing (278 ozs.) has been sold through Messrs. Johnson Matthey and Co., Limited, for 1,063l. 5s. 1d., or 3l. 16s. 6d. per oz.

SHEBA.—A cablegram from the manager is to the following effect :—"Level No. 6 have driven in upon the vein for 47 ft.; at the west end good ore is still being found. Crushing is going on satisfactorily."

AFRICAN GOLD RECOVERY.—(McArthur-Forrest Process). The following cable is just to hand from the manager at Johannesburg :—"June, Robinson, 2,400 tons; 1,600 ozs. Sheba, June, 1,116 tons; 2,269 ozs."

NIGEL.—Certain alterations and additions as suggested are estimated at 8,107l., and, when effected, it is believed the mill will then be on a sound running foundation, and capable of crushing 1,500 tons per month, "returning as high, and probably the highest, gold saving of any mill on the Randt."

EDWIN BRAY.—Twenty-five stamps have worked well, and crushed not only the quartz transported by the ropeway, but also all the reserve we had on the mill platform. Average of daily assays of tailings for the week, 5 dwts. 2 grs. N.B.—The tailings are from the pits through which they pass, and show that there are very few sulphurets at present.

CERRO DE PASCO.—The following report has been received from the manager, dated Barberton, June 15 :—"Mining work is progressing satisfactorily. The south-east cross-cut on block F is now entering a formation composed of sandstone, slates and quartzites, and we expect as we get into the eastern country to find reefs of a more payable nature than those already met with. At the east-end we are nearly through the fault mentioned in my last. When fairly through we shall cross-cut for the broken reef, and drive on it for some distance, before again cross-cutting to prove the adjoining ground. In the upper level there is 3 ft. of ore in the breast carrying gold."

MAY CONSOLIDATED.—Both mills have run about the usual time during the month, and both have been maintained in good working condition, and are continuing to run well. Much difficulty has been experienced in maintaining a sufficient number of natives, the more so as those procurable are of an inferior quality. Fuel: A six months' contract for the supply of fuel from June 1 has been entered into, and delivery commenced at a price considerably below anything yet obtained, viz.: 17s. per ton. The loan of 30,000l. obtained from the Anglo-French Exploration Co., Limited, which matured on the 17th of this month, has been repaid, and a fresh loan arranged with De Nationale Bank for six months, with right of renewal for a similar period, at 10 per cent. per annum—a rate considerably less than paid hitherto. The following are the figures and results for the month :—Quartz raised, 4,198 tons; quartz sent to mills, 4,501 tons; ore at grass, 6,747 tons; tons milled, 4,575; smelted gold, 2,071 ozs. 19 dwts.; value of gold, 7,510l. 16s. 6d.; average per ton, 9 dwts. 1.36 gr.; average per stamp, 2 tons 6 cwt.; time running, 70 heads :—27 days 22 hours 20 minutes; time running, 50 heads :—27 days 23 hours 13 minutes; time running, 20 heads :—27 days 20 hours 8 minutes.

CLUTHA.—Manager's report for week ending June 15.—Clutha section: North reef: Measurement at date, 81 ft. 6 ins.; work done for week, 3 ft. 6 ins. The lode is still panning fairly well, is worth for the week about 6 dwts. to the ton. It is now splitting into two branches, one trending with the formation, carrying the best gold at present. Victoria section: The 120-ft. level: Measurement at date, 334 ft. 6 ins.; work done for week, 4 ft. 6 ins. Better prospects in hanging-wall the last few days, and a fair sprinkling of visible gold. Rails have been laid from the face into the north shaft, and a corner of ground has been blasted away at the cross-cut to get a curve for the rails. Winze: Measurement at date, 20 ft.; work done for week, 4 ft.; only colours of gold at present. North winze: Measurement at date, 19 ft.; work done for week, 1 ft. This is a winze sunk from a drive on lode, out of open workings near the north shaft. A windlass has been fixed here, and sinking commenced to carry down this winze into the 120-ft. level. There is payable gold for about 2 ft., and the lode is opening out. General remarks: I have had to work on a reduced scale during the last two months to make amends for extra expenditure incurred previously for maintenance, purchase of timber, &c.

ST. AUGUSTINE.—Copy of letter received from Mr. Hartley, the manager at the mine, dated June 22 :—"Your favour of May 27 came duly to hand. I received your cable this week asking for my opinion as to the future of mine, and I cabled back that blue was again in the shaft, and that I would develop this as rapidly as possible, and cable again, but I am still in the same position, for we are getting continued changes in sinking—for instance, the blue I referred to as being in the shaft has dipped to the north-west, and is now at that end, but out of the shaft. It is not very broad, or, rather, not very thick, but I am going to put a small drive into it to see whether it increases or runs out. Some lumps I took from this is better looking blue than any we have had hitherto. In addition to this blue, another strip has now come in from the south. The rock blue in the shaft is altogether different, and much softer, and of a darker colour than any we got in the winze, and my opinion is that we are close to a body of blue, either on the south or north-west. It is, of course, difficult to judge, but I think everything points that way. The small pockets of good blue we come across in sinking dip away to the west or north-west or south, and we have now no rock in the shaft, only rock blue, and the pockets of blue we get at intervals. At the 292-ft. level we had blue ground in the shaft, and were sinking altogether in blue ground, with the exception of the north-east corner, where some rock made its appearance, and which proved to be the main rock round the mine; this rock gradually worked across the shaft, and worked the blue out of it at 376-ft. level, the last blue in the shaft being in the north-west end. At 509 ft. we again touched the blue at 3 ft. from the shaft in the north-east corner, and which was all rock at 436-ft. level. In sinking we got this blue in the shaft on the north-east side at 531, mixed with rock blue, which cut it out, the rock being at the north-west end of the shaft. At about 535 the rock blue cut this rock out, and underneath the rock was a patch of good blue, how much I cannot tell yet, but am now going to blast into it to see whether it is only a pocket of blue, or whether it will lead on to more; we need not stop the sinking to do this. I have mentioned the above as showing, so far as we can judge in the shaft, the direction from which the great changes in the mine have and are taking place, and it almost looks as if the rock blue we got in the winze is forcing the rock back towards south-west and north-west, and taking its place. The area of the mine, of course, is much larger, but for at least 250 ft., and perhaps considerably more, the extension cannot be taken into account, for the rock blue is very hard and unworkable, and if we were getting the same now I would feel very despondent. But as the rock blue in the shaft is of such a different colour, and also is so much softer, and also getting these pockets of good blue mixed with it, makes me hope that we will soon get to the limit of the rock blue at this side of the mine, and open out

into something good and satisfactory. From the following you will see that the rock blue must be very soft, as compared with that in the winze:—Work done: Sunk 15 ft. 6 ins. this week; put in 18 sets timber; cut hitches in side, and put in two bearers; put in 27 dividers; corner pieces; one ladder and staging, and mended staging of another ladder; put up iron guards for ladders. If I had not had to start suddenly and timber, I would have sunk 18 or 20 ft. this week, and this we could not possibly do with such ground as we got in the winze.

THE COROMANDEL GOLD CO., LIMITED.

PROPOSED AMALGAMATION WITH KAPANGA.

July 13.—On May 7 last a circular was issued, inviting the views of shareholders upon the question of the proposed sale of the property to and amalgamation of the company with the Kapanga Gold Mining Co., Limited. From the answers received the directors are of opinion that the feeling of the shareholders is in favour of the proposed sale. They have, therefore, convened a special meeting for next Tuesday to give effect to the sale. The directors are themselves strongly of opinion that the amalgamation will be of advantage to the company, and they recommend it to the shareholders.

FRONTINO AND BOLIVIA GOLD MINING CO., LIMITED.

PROFIT OF 7447.

THE directors have received advices from the mines dated May 23 and June 7. Also a letter from Messrs. Restrepo, dated May 11. The statement for the month of May is as follows:—1,103 tons of ore produced—bar gold, 1,327 ozs.; tributaries' gold produced—bar gold, 748 ozs.—bar gold, 2,075 ozs. Also 1,603 lbs. of sulphurets, valued at 2537. Estimated value of the gold and sulphurets, 5,2367. 7s. 6d.; cost at the mines, Medellin, and in London, and paid for gold bought of tributaries, 1,4917. 7s. 8d.; estimated excess of returns, 7447. 19s. 10d. The increase of cost is explained by Mr. Eustice at the commencement of his report. At Silencio the lode has been reached by the 340-ft. or deepest level. The new Californian mill of 12 heads now being erected is to be enlarged to 24 heads.—J. J. TRURAN, Secretary.

BRITISH MINING INTELLIGENCE.

D'ERESBY AND GWYDYR (July 15).—No. 9 level south: In sinking at No. 1 cross-cut south of shaft the lode is making very good patches of lead near the hanging wall, worth $\frac{1}{2}$ ton of lead to a fm. There is no cross-cut at No. 10 below this. The No. 2 cross-cut driving west to open up the footwall part of the lode has crossed the joint of lead referred to last week, and we are in hard ground again now. The stope going up behind the shaft is worth 15 cwt. of lead to a fm. We have not done much at stoping this week, the men have been timbering and putting in stull pieces. Tribute: The tribute pitches look better this week. Surface: We are very dry, and only enough water to run the wheels eight hours a day this week. We have finished our month's dressing, and sent off the lead last Monday.—H. NOTTINGHAM.

DEVON GREAT CONSOLS (July 16).—Wheal Maria, Capel Tor lode, Eastern shaft: In the stope in the back of the 36-fm. level west the lode will yield 4 tons of arsenical mundic mixed with copper ore per fm. The lode in the stope in the back of the 36-fm. level east is worth 4 tons of mundic and copper ores per fm. Wheal Anna Maria: In the stope in the bottom of the 110-fm. level, east of the engine shaft, the lode is producing 10 tons of mundic per fm. The lode in the stope in the bottom of the 130-fm. level west of the Field shaft on the south lode is worth 10 tons of mundic per fm. Wheal Josiah: In the stope in the bottom of the 130-fm. level east of Hitchin's shaft on the south lode, the lode is worth 3 tons of copper ore and 2 tons of mundic per fm. The lode in the stope in the back of the 130-fm. level, east of Hitchin's shaft, is worth 6 tons of mundic per fm. Wheal Emma: Thomas's engine shaft. In the stope in the bottom of the 100-fm. level east the lode is worth 10 tons of mundic per fm. In the stope in the bottom of the 100-fm. level east the lode is also worth 10 tons of mundic per fm. The lode in the stope in the back of the 100-fm. level east will yield 20 tons of mundic per fm. In the stope in the back of the 150-fm. level east of the inclined shaft the lode is worth 3 tons of copper ore and 2 tons of mundic per fm. In the stope in the back of the 112-fm. level west of the inclined shaft the lode yields 3 tons of copper ore and 1 ton of mundic per fm. The lode in the stope in the back of the 112-fm. level east of the inclined shaft is worth $1\frac{1}{2}$ tons of copper ore and 2 tons of mundic per fm. In the stope in the back of the 100-fm. level west of the inclined shaft the lode is worth 8 tons of mundic per fm., and saving work for copper ore. New shaft, new south lode: In the stope in the bottom of the 190-fm. level west the lode is worth 5 tons of mundic per fm., and a little copper ore saving work. In the stope in the back of the 175-fm. level west the lode is worth 2 tons of copper ore and 2 tons of mundic per fm. In the stope in the back of the 145-fm. level east the lode is worth $1\frac{1}{2}$ tons of copper ore and 1 ton of mundic per fm. The lode in the stope in the back of the 130-fm. level east yield 3 tons of copper ore and 2 tons of mundic per fm. The lode in the stope in the back of the 100-fm. level east of the new shaft is yielding 6 tons of mundic per fm. Watson's engine shaft: In the 172-fm. level west the lode is large—5 ft. wide—and is producing saving work of copper and mundic ores. In the 160-fm. level east the lode is $4\frac{1}{2}$ ft. wide, and is yielding 4 tons of copper ore per fm. In the 160-fm. level west the lode is also large—5 ft. wide—and is composed of capel, quartz, and saving work of copper ore. The lode in the stope in the back of the 160-fm. level west is yielding 4 tons of copper ore per fm.—W. CLEMO.

DEVON UNITED (July 16).—Willesford's shaft: In the 141-fm. level east the lode is 2 ft. wide, producing a little mundic. In the 144-fm. level west the lode is improving; now $2\frac{1}{2}$ ft. wide, with a little copper and mundic ores, and is looking very promising. In the winze sinking below the 132-fm. level west the lode is $2\frac{1}{2}$ ft. wide, and is also very promising. It is yielding 3 tons of copper and mundic ores per fm., for length of winze 9 ft. The lode in the stope in the back of the 132-fm. level west is $2\frac{1}{2}$ ft. wide, and continues to yield 2 tons of copper ore per fm.—W. CLEMO.

SOUTH DARREN (July 16).—The shaft is let to sink by nine men, at 197. 10s. per fm. The ground is a little harder, and as we are now carrying the lode we had to raise the price. The lode continues to look well, and fully maintains the value given last week, viz., 12 cwt. of silver-lead ore, and 10 cwt. of copper ore per fm. It is now 50 ft. under the 142 level. The 130 end west is let to four men, at 97. 5s. per fm. The lode is worth 1 ton of silver-lead ore per fm. Four men are engaged picking and tramming ore stuff, and two are working with the pitman, about sundry repairs to shafts, levels, &c. They are at present putting an air blast into the 130 end west.—J. MITCHELL.

TINDENE (July 14).—Good progress is being made in sinking the Tindene shaft below the 33-fm. level, and from present prospects we shall reach the 43-fm. level in about the time before mentioned. From the underlie of the great caunter lode we expect to pass through it with the shaft before the next level is reached. In the 33-fm. level cross-cut north of Tindene shaft we think that we have cut into the north lode, or a part of it, but have not opened sufficiently to state definitely about it; but, however, we have broken from it some good work for tin, and also have an increase of water. In the 33-fm. level east of south shaft on caunter lode it is producing a little tin, but not much to value. In the 33-fm. level east of south shaft it is rather small, but producing good work for tin, and opening out tribute ground. There is no change to notice in the tribute department since our last report.—J. CURTIS, W. STEPHENS.

VAN (July 16).—In the cross-cut towards the south lode at the 150-fm. level there is no change in the ground since last week's report; the end is still being pushed forward by six men. The two stopes over the 150 on the main lode are producing each 15 cwt. of lead ore per fm. The stope in back of the 135-fm. level on the south lode will yield 20 cwt. of lead ore per fm. At the 150-fm. level on bottom of Seaham's winze the cross-cut is still going south through the lode, but has not yet reached the south wall of it. It cannot be far off we think, as about 5 fms. have now been driven into the lode here. So far the vein in this cross-cut has not produced ore to value, but we hope it will improve when opened out upon east and west of the winze. The 120-fm. level east of Seaham's shaft continues in a large vein, containing small branches of lead and blende ores. The cross-cut south of this level for proving the lode to its full width, is about the same as last week, strongly spotted with blende and lead ores. The three stopes working at different levels (in the old parts of the mine) are still yielding 1 ton of lead ore each per fm. As stated in last week's report, a parcel of 50 tons lead ore has been sampled, and is for sale on the 18th inst.—J. PAULL.

WEARDALE LEAD.—Report for week ending July 11:—Ore raised for week, 78 tons; ore dressed for week, 116 tons; ore slag and fume smelted for week, 111 tons, producing 58 tons of pig lead.—R. S. MACLARAN.

WHEAL CREBOR (July 14).—In cross-cutting the lode at the 156 east we have during the past week intersected a leader of mundic ore 10 ins. wide, worth about 2 tons per fm. The ore is of good quality. The leader appears to be pointing a little towards the hanging wall of the lode going east. The forebreast of the cross-cut which has been extended 16 ft. is now in killas, and by the look of it the footwall cannot be very far off. The lode in the 132 end driving west on the south part of the lode is yielding 3 tons of mundic, and some good stones of copper ore per fm. The stope in the bottom of the 144 east of winze is worth 2 tons of copper ore, and 4 tons of mundic per fm. The stope in the back of the 144 west of cross-cut is worth 3 tons of copper ore and 4 tons of mundic per fm. There is no change in our tribute department to report.—P. D. HOLMAN.

WHEAL METAL AND FLOW (July 15).—During the past week the shaftsmen have made fair progress in driving the 27 end east of Watson's engine shaft in a lode about 1 ft. wide composed of tinny capel, peach and mundic, a very kindly looking lode. The Flow the past few days has yielded a little more tin.—S. P. CURTIS.

WHEAL UNY (July 15).—Hind's engine shaft is down $3\frac{1}{2}$ fm. below the 244-fm. level; the lode looks well, but does not improve in value. We have suspended operations in the 244 end west for a time and set to drive a cross-cut south by boring machine at 77. 10s. per fm. to prove several branches which have left the main lode, also with a view of cutting North Buller lode. A rise and stope in back of this level west of shaft by four men, at 6s. per ton. The 230 end to drive west by four men, at 77. 10s. per fm.; worth for tin, 67. The 230 end east by four men, at 67. 10s. per fm.; worth 77. per fm. The 203 end west by six men, at 97. per fm. Here we feel satisfied we are getting into the same channel of ground that made the tin in the levels above by draining down the water: now worth 107. per fm. The 203 east to drive by four men, at 67. 10s. per fm. This end looks promising; now worth 87. per fm. A stope in back of 203 west by ten men, at 6s. per ton; worth 187. per fm. We set 24 tribute pitches for two months, at tributes varying from 10s. to 13s. 4d. in the £. Standard for tin 80% and several pieces of ground well worthy of speculation to good tributaries.—J. WHITE.

FOREIGN MINING INTELLIGENCE.

ARGENTELLA (July 9).—No. 2 Marine: We cut the footwall yesterday. I am pleased to inform you of a great improvement in the whole character of the lode. It contains very kindly quartz and carbonate of lime, and has the appearance of good lead-producing ground. The footwall is regular and well defined. As soon as they have cut through about one metre, I think it advisable to continue east on the heading to meet the Africana. It is possible we may cut some good ground before we get to that point. Quartz reef, cross-cut south: Without change since my last report. Ogliastro Valley: We have met with a very hard band of rock, which they call here serpentine. I intend to cut into it a little more, if there is no change I will place the men to drive alongside on the leader of quartz and pyrites. In these leaders we find small stones of copper ore. No. 3 Rowe's workings, cross-cut south: The men have started driving east on the new lode. They have driven about two metres since the first of the month. The lode is a masterly one, containing silver-lead as before reported, with a great improvement for blende of a very good quality. The south wall continues its course as before, and I have no doubt as to its continuation. I am very confident of an improvement as we gain more cover. At present we have only about 30 metres. The general health is good.—Capt. J. B. ROBERTS.

ASIA MINOR.—Ara Dere Mine: The lode in the winze continues to produce good silver-lead ore. Chief mine: The lode in main adit has somewhat improved in size and appearance during the last week. The rise in the back of Michael is worth about 14 cwt. per fm. We are cross-cutting through a fine strong lode in Arthur, which is by no means of an unfavourable character. The Union stopes (28 men) have again improved, and are now worth 30 cwt. rich silver lead ore throughout. Dressing floors: Production to July 3: 6,994 tons crushed, yielding 476 tons rich silver-lead ore.

BALAGHAT-MYSORE (June 23).—Report of work done for the fortnight ending June 20:—North engine shaft, 600 north, has been driven 22 ft., making distance from shaft 92 ft.; the lode here is still very good, being about 18 ins. wide, and worth 7 ozs. 13 dwts. 12 grs. We shall have to suspend this drive for a few days to blast out the plat at shaft at the 600. The 500 winze has been sunk 3 ft. 6 ins.; total depth, 77 ft. 6 ins.; the quartz is now small, averaging about 6 ins., and worth 4 ozs. 3 dwts. 11 grs. The 500 back stopes: Quartz about 11 ins. wide; assaying 2 ozs. 11 dwts. 10 grs. The 500 back stopes from midway winze: Average width of quartz, about 2 ft.; assay value, 1 oz. 8 dwts. 8 grs. The 500 winze south of shaft has just been started and sunk 5 ft. 9 ins.; quartz about 9 ins. wide; worth 2 ozs. 8 dwts. 4 grs. The 410 winze north of shaft has been sunk 4 ft. 9 ins.; total depth, 22 ft. 9 ins.; quartz 10 ins. wide, worth 1 oz. 11 dwts. 14 grs.; this winze will come into richer ore when we have sunk a little deeper. The 330 back stopes: Quartz now very small, being about 6 ins. only, assaying 4 ozs. 14 dwts. 7 grs. The 330 back stopes, No. 2: Width of quartz, 14 ins.; value, 2 ozs. 4 dwts. 10 grs. The 270 south stopes: Quartz averages 10 ins., worth 2 ozs. 7 dwts. 16 grs. The 270 south: We have commenced work here with a rock-drill, but as the end has been driven by hand-labour, it will take us a few days opening out the drift again. The 205 winze north: Sunk 5 ft.; depth, 19 ft. There is a little quartz in the bottom worth a few pennyweights. The 205 back stopes: The quartz is about 1 ft. wide; value, 1 oz. 11 dwts. 8 grs. Haues' shaft: The shaft has now been carried down the full size to the back of the 330-ft. level. The ground is also secured to this distance. We shall be a day or two clearing away the dirt at the 330, after that we shall proceed with the shaft between the 330 and 410. The dividings are being put in the Downright for the skip-road.

BRATSBURG.—Report for week ending July 4:—Hoffnung Mine: At No. 2 adit level we still have a lode worth fully 1 ton per fm., and judging from the appearance of the bottom of the level especially, I should think that we had a valuable piece of ground ahead of us here. No. 1 rise in the back is of the same value as last reported, viz., 1 ton per fm.; and No. 2 rise, which we have resumed, is yielding $\frac{3}{4}$ ton per fm. No. 3 adit level is now carrying a lode about 3 ft. wide, and it is to-day showing more ore than it has for some time past, and the indications favour a speedy improvement. The rise here is worth about $\frac{3}{4}$ ton per fm. No. 4 level is also looking better, and some very good patches of ore have been met with. The rise in the back is producing $1\frac{1}{2}$ tons per fm., a very fine looking lode. The trial level at Murchison's is without change to notice. Johannes Mine: The western level on Howard lode is now producing $\frac{3}{4}$ ton per fm., but the eastern level is of same value as last week, viz., $\frac{1}{2}$ ton per fm. We have re-started the rise here, the present value of the lode here being 1 ton per fm. Surface work and remarks: The crusher rolls came to hand on first days of the week; hence we have lately been running the whole of the dressing machinery, and all has gone smoothly on, producing a fair quantity of ore daily.—J. D. HOLMAN.

BRATSBURG SMELTING AND REFINING.—Report for week ending July 5:—As reported last week we had decided not to do any more converting until after the arrival of the foreman from France, but upon Mr. Ball's arrival here he expressed a desire that as time was of importance we should in the meantime make another trial, so accordingly we made a start at 6 a.m. on the 2nd inst., and ran continuously until the evening of the 3rd, in all 36 hours, but the results, as far as the production of copper was concerned, were, as usual, unsatisfactory, the difficulty of keeping the charge molten towards the close of the operation having still to be overcome. We are, however, pleased to report that our chief obstacle, viz., the corrosion of the converter lining, appears to be entirely vanquished, as in the whole of the 36 hours the operation was in force we used only two converters, which was highly satisfactory. The copper obtained from the last experiments is now under treatment at the electro deposition department, and will be shipped for sale as soon as ready, but this will be some time yet, as, owing to its being such a small quantity, we are only running by day with one man.—T. F. SMITH.

CALLAO BIS (June 21).—Advices from the mines:—Independiente: Since the 8th inst. the shaft has been continued a further distance of 3 ft.; from surface, 160 ft., or 20 ft. below the No. 3 level. No change has taken place since last reported. The sinking has been delayed considerably through lack of steam power, but I am pleased to say another boiler is put up, and in future I see no cause to delay any sinking. The No. 3 level west: Raise in the back of this level has been advanced 17 ft.; distance from the back of the No. 3 level 41 ft.; lode 6 ft. wide, of good value. The No. 2 level west has been driven 16 ft.; from shaft, 234 ft.; lode 3 ft. wide, of the same value as last reported. Stopes east and west of the No. 1 winze in the bottom of the No. 2 level have been advanced 10 ft. east, and west of winze for a depth of 20 ft.; lode showing west of winze 12 ft.; lode showing east of winze 8 ft. wide. Both points of good value. At the end of this stope we have driven in a north direction 40 ft., finding the lode to continue and of rich value. The No. 2 winze on the north and south has been advanced 24 ft.; from bottom of level 40 ft.; lode showing 6 ft. wide, of fair value. This will be pushed as fast as possible to the No. 3 level to prove the existence of this lode at that point. Surface work: The binds for the other 10 stamps are completed. Engine room almost enclosed. The boiler taken from the Sosa-y-Mendez completed and at work, giving good satisfaction.

CHAMPION REEF (June 23).—Fortnightly report of the superintendant.—Mysore section: Carmichael's shaft has been sunk 2 ft. 6 in.; total depth, 247 ft. 6 in. The sinking is suspended for the time being, and the shaft coolies are now employed driving north at the 225 ft. level. The drift south at this level has been advanced 14 ft. 6 in.; total distance from shaft, 51 ft. 9 in. During the last few feet we have passed through a soft band of rock which was making across the heading, and having very much the appearance of a cross-course, which will be further explored after the drift is a little more advanced. Ribblesdale's shaft: Sinking 2 ft. 6 in.; total depth, 243 ft. 6 in. The cross-cut at the 240 ft. level has been driven 8 ft. 6 in.

The rock is very hard, but is still dipping west, and carrying occasional stringers of quartz. Garland's shaft: At the 240-ft. level the North drift has been driven 17 ft. The lode now carries 1 ft. of quartz which has a tendency of making wider as the drift is advanced, the quality of the quartz at present is rather low grade. The south drift at this level has been advanced 2 ft. 8 ins. We have now started a rock-drill at this point and shall no doubt be able to report better progress by the next mail. The lode is composed of small branches and carrying good walls. We have several coolies employed cutting ground for tip-plat, and hope soon to be able to recommence the sinking of shaft. Dalycell's shaft: We have commenced sinking below the 240 ft. level, and 1 ft. has been sunk. This work will now be continued regularly, as the drifts are sufficiently advanced to admit it. The north drift at the 240 ft. has been driven 15 ins. 4 ins.; total length, 40 ft. 10 ins. The lode is very regular, but small, only carrying a few inches of quartz. The south drift has been advanced 13 ft. 6 ins.; total length, 33 ft. 6 ins. The lode in end is about 2 ft. wide, composed of quartz, which has an assay value of about 3 dwts. per ton. Coromandel section: At Prospect shaft, the 380 ft. drift north has been driven 4 ft. 9 ins. In the present end there are several small stringers of quartz mixed with the country rock. The 320 end north is advanced 6 ft. 3 ins., and during the last few feet, we have cut into several small branches of quartz and felspar, but have not yet reached the main portion of the lode. The winze below this level has been sunk 7 ft., and the lode maintains a width of 3 ft., $1\frac{1}{2}$ ft. of which is quartz, which gives an assay value of $1\frac{1}{2}$ ozs. of gold per ton. This winze is being sunk on the shoot of ore passed through during the last 50 ft. in the drive, which gave good assay results. Judging from the present appearance of the lode in bottom of winze it has a tendency of making wider in depth. The 290 end south has been driven $4\frac{1}{2}$ ft.; total length, 168 ft. 6 ins. The lode is 2 ft. wide, composed of hard crystalline quartz, but of little value. Surface and general work: At Mysore section we are sinking a well for the supply of drinking water for the employes. The buildings in connection with the erection of the hoisting engine at Dalycell's shaft has been commenced, and the foundation for Italian miners' quarters is finished and ready for the building, which will be commenced in the course of a few days. Machinery working satisfactorily throughout the mine.

COLAR CENTRAL (June 23).—New shaft: 200 north has been driven 7 ft.; making total distance, 8 ft. 6 ins. from the cross-cut. The quartz is considerably smaller than it was, not averaging now more than 8 to 9 ins. It is, however, worth about 18 dwts. per ton. We are still carrying a good hanging-wall; but the foot is not so well defined. — Office note: A recent telegram reports that the lode is 6 ins. wide, worth 8 dwts. per ton.—A. S. B. OAKLEY.

DON PEDRO (June 15).—Half-monthly report:—Maquina Mine: Since our last report Gordon's shaft has been sunk 6 ft. in hard sandstone. We have prepared and commenced driving from the 50 plat towards Gordon's shaft to enable us to complete this important work as early as possible. This drive will also let down the water from face of Gordon's shaft, so that the sinking will be carried on without much interruption with water. The two named points will be pushed forward with the utmost vigour. The 50-ft. cross-cut has been driven, since last report, 6 ft. The face of cross-cut is all in lode. The sandstone referred to in our last has disappeared, and the No. 6 shoot of lode has taken possession of the forebreast. The lode is of a high standard, and rich samples are taken frequently. No. 4 drive: This also has been advanced one set of laths without any change in the good character of the lode. Running work: On the evening of the 1st the bottom transmission wire rope stranded; engine idle seven hours. On the 2nd, water was again put in fork, and all work resumed. On the 7th we stopped the machinery and took out of the top transmission wire rope the old splice, which was getting bad; therefore, a new piece was put in; engine idle six hours; water again put in fork, and work resumed on the following morning. A mason wall has been built and completed to protect Dawson's wheel from heavy floods in wet season. North mountain: A small force still continues working. Fair samples are met with, but, on the whole, the tonnage rules of low quality, although pays for working. We have here a good prospect for explorations. Adit level: This requires a great deal of attention, the old timber being very rotten.

EMERALD MINES OF COLUMBIA.—The manager, writing on May 31, says:—The widening of the Angostura has been done in a length of 70 metres, while the lowering of the lowest part of the canal has been continued in a length of 80 metres in 10 steps 0.60 centimetres to 0.70 centimetres each. The upper part near the old bridge has been widened in a length of 75 metres, and in lowering the canal there, and passing the first best vein with a step of 0.60 centimetres, we found that it changed from vertical into running horizontal. Consequently, I have opened the "banco" to work this vein in its length towards the north, to the foot of the Vulcan, and also am continuing the nivel commenced for the trench to take the water from the pond towards that height in order to assist us in removing the ground above us, and to make it passing the foot of the banco to take the debris down the canal.

EMMA (June 29).—My last report was under date of 22nd inst., and I now have to report progress for the past week as follows:—In the south-east part of the mine on the Emma tunnel level in the hanging-wall drift we worked eight men stoping and timbering and two carmen running waste and low-grade ore. We mined about 75 tons low-grade ore, which has been run to the mill. The ore is so intermixed with the ledge matter that we are obliged to dress it all by the mill process. The vein holds from $2\frac{1}{2}$ to 3 ft. wide, and we have every reason to expect a body of good ore at any time. In the footwall drift we worked four men sinking on the vein, sunk 12 ft.; total, 35 ft.; the vein at bottom of shaft is about $2\frac{1}{2}$ ft. wide; the ledge matter is iron, quartz, and limestone, as also manganese carrying a little silver and lead. We, therefore, anticipate cutting ore of a good quality and in quantity at any moment. On the Illinois tunnel level we worked four men drifting and raising on the vein, and mined 15 tons iron ore. This ore carries from 4 to 6 per cent. lead, and from 6 to 9 ozs. silver, and about 40 to 45 per cent. iron to the ton, is a good fluxing ore, and would bring in the markets from \$10 to \$12 per ton. We have about 3 to 4 ft. of this material, and upon stoping it and drifting we should run into better grade ore. We will ship a car load of this ore, say 15 tons, to market to ascertain its value. If, as I believe, we can get \$10 per ton for it, we can mine it at a profit, besides developing the vein. The cross-cut towards hanging-wall from level No. 3 south-east advanced 4 ft.; total, 167 ft.; worked one-

man; character of the ground is still hard, but seamy, and considerably iron stained. We ought to be very close to the hanging-wall, when ore ought to be found. We shipped about 18 tons concentrates and about 12 tons crude ore to market the past week. This will be sampled, assayed, and sold to-morrow or the day following.—H. C. WALLACE.

GUIANA GOLDFIELDS.—Mine report for June:—The profit on the May operations in the new concessions covered all the expenses of that department, also for general prospecting quartz work at Terre Promise, building new sheds, &c. We have employed six men for work on the reef, and six men prospecting. About 1,000 tons stuff have been passed through the sluices, and the total result of a 15 days' clean up was 18,750 francs, which we expect will show us a handsome profit. The prospectors have discovered three rich sections, where the gravel gives from 18 to 25 francs (20s. per ton). Without any doubt we have gold staring us everywhere, and the further the prospectors go inwards from the river the richer they find the ground. Quartz section: We have broken 40 tons from the east cutting on main reef; assay value, 3 ozs. 10 dwts. The appearance of this end has greatly improved. The pay-shoot in the western cutting still holds out. The samples forwarded last mail were from this point, and they should speak for the reef. The end assays over 5 ozs. to the ton, and we have broken 25 tons this month. The buildings, sheds, and boats are being overhauled. We hope to do very well next month.

—On the 15th inst. the company received the following telegram:—"West shoot improved; assay, 8 ozs. to the ton; assay, 8 ozs. to the new concessions; 550 tons treated; 10 men 12 days; excess of returns over outlay, 6,900 francs (about 276*l.*.)" Mr. T. H. Adr. Tromp, banker, of the Hague, Holland, has become a director of this company.

GYMPIE GREAT EASTERN (May 28).—Fortnightly report:—During the past fortnight the cross-cut at the 730-ft. level has been extended 12 ft.; total, 446 ft. from the shaft. We cut about 4 ins. of quartz in the cross-cut this week; its course is about east and west, underlying north; the country is still green stone. The north drive has been extended 8 ft.; total, 95 ft.; the reef formation is looking better, as there is more quartz making, which shows a little gold; there is about 6 ft. between the walls. The south drive has been extended 7 ft.; total, 69 ft.; there is about 18 ins. of crushing stuff, showing colours of gold. The stopes going north above this level are all showing fair gold. I have started stoping south since we holed through to the winze; the reef is small, but shows a little gold. I expect to get better gold here soon as there are some good plumbago floors in the second stope over the level. As instructed, I have started to drive south on the reef west of the dyke to make room to rise up to the slate which we should get in 50 ft. of rising from the floor of the drive. The reef is looking very well in the adjoining claim, 1 North Glanmire. The 690-ft. level: The back stopes going south over this level are showing a little gold. I have stopped the stopes going north for a while, as they were looking poor. For the four weeks ending May 18 there were 400 tons of quartz raised and crushed; 350 tons from the Orient reef and 50 tons from the Great Eastern reef, for a yield of 374 ozs. 4 dwts. 18 grs. of smelted gold. The 50 tons from the Great Eastern reef would not yield more than $\frac{1}{2}$ oz. to the ton. The battery is now fully employed; there is 15 head from the mine and 10 head for 2 Great Eastern. Everything about the mine, winding engine and battery, is in good working order. There are 60 men employed—50 on the mine and 10 at the battery.—J. JAMES.

INDIAN CONSOLIDATED (June 20).—Phoenix section: Tramway level has been advanced 14 ft.; the lode presents very much the same appearance as when last reported on; it maintains the same width, about 4 ft. There is a large band of decomposed stuff running through it, with some good veins of quartz. No. 1 level: Here we have driven 6 ft., the ground being harder than in tramway; the lode maintains its strong character, and looks most promising; the face now shows quartz and schist mixed, with streaks of chlorite. Stopes: I have no change to report in any of these. We are now breaking out at every point, the contractors having got up fresh coolies, and are tramming our usual amount of stone. Milling: We are working by water 10 heads only, and even that intermittently. This is owing to the extraordinary monsoon we are having. Instead of the usual heavy June weather we have fine, sunny days, with a heavy shower or two at night. Winze: We have now got the pump rigged, and started sinking again on Saturday.—C. A. PATERSON.

—(June 23).—Colar section.—No. 1 new shaft: The 210 south has been driven 30 ft. 6 ins., or a distance of 80 ft. from shaft. This has now been holed to the drift coming north from No. 2 new shaft. No. 2 new shaft has been sunk 16 ft. 6 ins., or a total of 19 ft. 6 ins. on the underlie below the 210-ft. level. There is quartz somewhat irregular for about 1 ft. 6 ins. in width, the length of the shaft. The quartz is, however, still poor. The 210 south drift was driven 5 ft., and as we appeared to be off the run of the lode, we put the same drill to cross-cut west. This cross-cut was driven 19 ft. 6 ins., and we seem to have just cut the lode again. The 210 north was driven 13 ft.; total distance 235 ft. 3 ins., and suspended on the 11th inst. The south drift from No. 1 shaft has holed at this point. Main shaft: The 240 main west cross-cut has been driven 20 ft. 6 ins.; total distance, 391 ft. 6 ins. There is no change at this place. The 240 No. 2 west cross-cut has been driven 15 ft.; total, 30 ft.—A. S. B. OAKLEY.

LEEDS COPPER (July 2).—Kent's shaft: The 20-fm. level driving west of this shaft still continues in bed vein 3 ft. 4 ins. wide, producing (as reported last week) 2 tons 20 per cent. ore per fm. No. 1, or Henwood stope, in the bottom of the 20-fm. level west, is not as good, producing only $1\frac{1}{2}$ tons 40 per cent. ore per fm. No. 2 stope in the bottom of this level is in good vein ore, producing $3\frac{1}{2}$ tons 15 per cent. ore per fm. No. 1 stope in the bottom of this level is producing more than last reported, worth $1\frac{1}{2}$ to 2 tons 15 per cent. ore per fm. No. 2 stope in the back of this level continues in good ore, producing 3 tons 20 per cent. ore per fm. The 15-fm. level driving west of shaft continues in bed vein 2 ft. 6 ins. wide, producing $1\frac{1}{2}$ tons 15 per cent. ore per fm. No. 1 stope back of this level continues much as last reported; the cross vein is rich in ore, producing 3 tons 20 per cent. ore per fm. No. 2 stope back of this level has improved since last week, producing 2 tons 15 per cent. ore per fm. McGee's shaft: The vein of quartz referred to in my last has improved as expected, and is now producing 2 tons 25 per cent. ore per fm. The stope in this shaft produces 2 tons 25 per cent. ore per fm. Kent's bed: The men have been removed from here to Kent's for a short time; so there is no

change to notice since the last. Surface: We have got the crusher complete, coffers fixed, and jiggling hutchies in position. Everything is being pushed on as rapidly as possible.—T. R. DAVEY.

MONTE DEL ORO (July 7).—Fortnightly report:—Taylor's engine shaft: Last week the water throughout the mine was forked, and immediately afterwards the pitman and miners proceeded to complete the road to the bottom of this shaft for drawing the stuff. The driving of the 316-ft. levels both north and south has since been commenced, the lode in each end being small. Shaft No. 6: In the 244-ft. level north of the shaft, 15 ft. have been driven since the last measurement, making its total length 537 $\frac{1}{2}$ ft.; the lode is composed of slate and quartz intermixed, and is about 15 ins. wide, a sample obtained from it assaying 16 grs. of gold per ton. From the back of this level, towards winze No. 11, the men have risen 19 ft., the lode carrying 18 ins. of quartz, yielding 1 dwt. 23 grs. of gold per ton, according to the assay of the sample taken. An attempt has been made to continue the driving of the 186-ft. level north, but on account of foul air no progress can be made, and consequently this end has been suspended until communication with Low's engine shaft has been effected; the lode is 3 ins. or 4 ins. wide, composed of flookan and slate, but the sample from it gave no gold by assay. Low's engine shaft: With the sinking of this shaft, the total depth of which is 103 $\frac{1}{2}$ ft., capital speed is being made, seeing 21 ft. have been sunk since it was previously measured, and as the water is not now very troublesome, I hope the shaft will rapidly reach the required depth.—J. ROBERTS.

NAMAQUA.—Abstract of superintendent's report for May:—Tweefontein Mine: 73-fm. level east: The line of the shaft is south of the lode; when sunk a further 8 fms., the shaft will be deep enough for another level plot and skip pit. 73-fm. level west: The lode still maintains its promising appearance, and at times good stones of ore are obtained, but not enough to value. The ground in this driving is very similar to that in the eastern level. 58-fm. level east: The value of this lode is now 6 tons per fm., and the general appearance is encouraging. The driving will be pressed forward with all possible speed, and it is hoped that some valuable stopping ground will be opened up. 43-fm. level west: It is hoped that the run of the ore ground will be reached very shortly. Small quantities of copper are found, but the rock is very hard. Stopes 43 east, 33 west, and 33 south of shaft: There is very little change to notice in any of these points. Wheel Julia Mine: There is no change to report. It has been decided to confine all attention to driving west, so as to get underneath the old mine as quickly as possible. New east centre: In consequence of a sudden influx of water it has been necessary to abandon this trial for the time at least. Should next summer (about Nov. next) be a dry one, it is likely we may be able to resume the work. Shipping: The Gloria, with about 1,000 tons of ore, arrived at Swansea on June 29. The Carmelita has left Port Nolloth for Swansea, with about 850 tons of ore. Output for Apl.: 371 tons of 30 per cent.

NEW DEVALA-MOYAR (June 22).—Main shaft: We have sunk a further distance of 7 ft.; total, 50 ft.; we have now got through the soft ground, and have ground requiring explosives. The shaft is timbered 47 ft. We have a little water coming in, but not sufficient to interfere with the work. No. 1 winze: Work here has been retarded by the new level, and we have only 2 ft. to report; total, 74 ft. We have still some quartz in the bottom, but the reef is mainly of no value. The water has increased slightly here. The 186-ft. level: We have driven here 3 ft. We have a seam of quartz about 2 ft. thick at the top of the face. Quartz sent to the mill during the week, 90 tons.—R. B. JOHNSTON.

NEW GOLD HILL (June 27).—The manager writes:—My idea is to have a good quantity of ore before we begin to mill, and then keep right on with returns, and not have any "hand to mouth" policy. Everything is working well, and I am getting along with some experiments, etc., that will enable me to submit some plans about the middle of July.

OOREGUM (June 23).—Mine report for fortnight ending June 22.—As is usual at this time of the year we have had a great deal of sickness in the camp, both among our Europeans and natives, which has considerably retarded our work for the fortnight. Wallroth's shaft: The 360-ft. level south advanced 13 ft.; total, 56 ft.; lode, 2 ft. wide; value, 2 ozs. 3 dwts. 13 grs. per ton. The 360-ft. level north advanced 5 ft. 2 ins.; total, 27 ft. 8 ins.; lode, 1 ft. 6 ins. wide; value, 3 ozs. 5 dwts. 8 grs. per ton. The plat at this level will be completed this week, and sinking of the shaft below it will be resumed next week. The 280-ft. level south advanced 14 ft. 9 ins.; total, 653 ft. 9 ins.; lode, 5 ft. 6 ins. wide; value, 1 oz. 6 dwts. 2 grs. per ton. No. 1 winze 280-ft. level south sunk 2 ft. 4 ins.; total, 51 ft. 4 ins.; lode, 1 ft. 3 ins. wide; value, 1 oz. 12 dwts. 16 grs. per ton. No. 2 winze 280-ft. level north sunk 4 ft. 3 ins.; total, 41 ft.; lode, 9 ins. wide; assaying 1 oz. 12 dwts. 16 grs. per ton. No. 3 winze same level sunk 4 ft.; total, 53 ft. 5 ins.; lode, 6 ins. wide; value, 10 dwts. 21 grs. per ton. The 215-ft. level north advanced 3 ft. 2 ins.; total, 78 ft. 9 ins.; lode, 2 ft. wide; value, 2 ozs. 14 dwts. 10 grs. per ton. Low's shaft: Sunk 1 ft. 4 ins.; total, below 350-ft. level, 17 ft. 18 ins.; lode to the west of shaft. The 350-ft. level south advanced 13 ft. 6 ins.; total, 165 ft. 6 ins.; lode still pinched. An assay from the vein gave 8 dwts. 17 grs. per ton. Winze bottom 350-ft. level south commenced, and sunk 4 ft. 6 ins.; lode 2 ft. wide, value 2 ozs. 5 dwts. 17 grs. per ton. Winze bottom, 270-ft. level south sunk 5 ft. 9 ins.; total, 42 ft. 6 ins.; lode 1 ft. wide, value 3 ozs. 16 dwts. 5 grs. per ton. The 200-ft. level south advanced 1 ft. 10 ins.; total from cross-cut, 24 ft. 4 ins., a vein of quartz in end 6 ins. wide, assaying 4 dwts. 8 grs. per ton. Probyn's shaft: Sunk 7 ft.; total below the 450-ft. level, 109 ft.; lode 5 ft. wide, value 3 ozs. 8 dwts. 21 grs. per ton. We shall continue sinking to end of the month, then commence 550 ft. levels north and south and cut plat. Rise in back 450-ft. level north, 4 ft. 6 ins. risen; total, 11 ft. 6 ins.; lode 4 ft. 6 ins. wide, value, 9 ozs. 8 dwts. 2 grs. per ton; 450-ft. level south advanced 28 ft.; total, 248 ft. 7 ins.; lode 3 ft. 6 ins. wide, value 1 oz. 12 dwts. per ton. No. 1 winze, 450-ft. level south, sunk 6 ft. 4 ins.; total, 15 ft.; lode 5 ft. wide, value, 2 ozs. 12 dwts. 16 grs. per ton. No. 1 winze, 366-ft. level south, sunk 4 ft. 3 ins.; total, 25 ft. 9 ins. We have about 4 ft. more to sink to communicate with rise in back of 450-ft. level south. No. 2 winze, bottom 366-ft. level south, sunk 1 ft. 10 ins.; total, 24 ft. 2 ins.; lode 1 ft. 3 ins. wide, value 1 oz. 1 dwt. 19 grs. per ton. The 300-ft. level south advanced 7 ft.; total, 287 ft. 8 ins.; lode 8 ins. wide; value, 10 dwts. 21 grs. per ton. Tailings Machinery: The standards for the Wheeler pans are erected

and the loadings for the engine completed. The mill has been kept supplied with quartz during the month up to date.

PACHUCA (June 20).—East drift: I am pleased to inform you that we have intersected the main vein in this drift, and are now driving on it night and day three shifts. The vein is a fine, well-formed, masterly lode, showing a good deal of iron pyrites, and spots of silver in its composition. As we only cut into yesterday, I prefer to wait a day or two before taking a sample for assay. I will take this on Wednesday next, so as to get a general average, and at once write you the result. We have driven this week 8 ft. 11 ins. West drift: It is with pleasure I am able to report a change in the vein here. The vein appears to have entered a different strata, and has changed correspondingly, and, although it has not much improved in value as yet, yet I am of opinion that a few feet further driving will show a decided change in the value of the lode.

—June 27.—I have driven 8 ft. 6 ins. in the west drift, and 9 ft. 8 ins. in the east drift. In the former we are getting a little water, which seems to point to our getting nearer to the Carretera vein. In the value of the veins in the drifts I have nothing new to report. The lode in the east drift is harder and more settled than it was in the level above.—F. W. BAUDEN.

PARKER (July 4).—Manager's report:—Your cable received on June 30, to which I replied on the 1st inst., viz.: That I was making very good progress in the construction of the pipe line, and that I hoped to finish in three weeks time. I have now laid and connected the 20-in. pipe up to Station 42, being nearly two-thirds of the distance we have to lay. The contour of our line being very uneven has necessitated the purchase of a large number of extra bevel rings, which I am pleased to say I received in ample time, so that there has been no delay in connecting the pipes. Gulch: I am pleased to say we have now got almost through the hard bar here, and the ground in the base of our cut is soft enough to "pick." I have but one more length of box to put in, to bring the grade up to the fall of our cut. Water supply for the town: I have not yet been able to report to you fully upon this, as I am waiting on the authorities here to give me a written agreement as to what amount they would guarantee per annum. If you should decide to lay a pipe-line through the town, also agreements for rights-of-way through any property, we might find that we should have to lay the main pipe. They (the town authorities) held a meeting last Wednesday, but nothing was definitely decided upon; they hold another meeting next week, after which I trust to be in a position to report to you fully upon this subject.

PESTARENA (July 3).—The 160-fm. level on No. 1 lode is suspended for the present, and the men set stoping above. The lode in the 150 is 1 metre wide, but carries no pyrites. The 90 south is in a very wide lode, containing little pyrites, and valued at 3 tons per ton at 7 dwts. per ton. The lode has been intersected in the 70 cross-cut, about 80 centimetres wide, highly charged with pyrites, and yielding 8 tons per fm. at 2 ozs. per ton. On the caunter lode the 80 end east is producing no ore at present, but will probably improve further on. The 55 east is yielding 4 tons at 9 dwts., the 55 west 6 tons at 15 dwts., and the 46 east 3 tons at 10 dwts. The stopes are yielding good average ore in fair quantities. The machinery throughout the mine is working satisfactorily. Val Toppa: There are four points at work, giving on the average 8 tons per fm. at 9 dwts. per ton.—W. ROBERTS, W. H. TRELEASE.

SOUTH-EAST MYSORE (June 16).—The driving of the cross-cut east of the 500-ft. level north of main shaft was resumed on the 1st inst., since which 16 ft. have been advanced, making a distance of 54 ft. 3 ins. We are constantly meeting with small branches and stringers of quartz, and the last blast discovered a branch of quartz 15 ins. wide. I washed a sample from it, which contained a little gold. We shall push on this cross-cut with the hope of intersecting the main part of the lode in this direction. Assuming the lode to be underlying at the same angle as what it is at the 295-ft. level, we shall intersect it in about two weeks more driving. The pumping and the other machinery is working well.—M. SCANTLEBURY.

CORRESPONDENCE.

We do not hold ourselves responsible for the Opinions or Statements of our Correspondents.]

INVESTORS BEWARE!

To the Editor of the MINING WORLD AND ENGINEERING RECORD.

SIR,—I see the shareholders of Polberro and Trevaunance wish to relieve themselves of what has become the intolerable burden of these two perpetual call-paying mines at the expense of the general public. They wish to throw over the cost-book system in favour of that of limited liability. I trust no outside person will be so unwise as to join them; at all events I trust he will not do so until he has examined into the history of these miserable concerns. If he does so act afterwards, then he may as well lose his money in this way as in any other.—I am, &c.,

ONE WHO KNOWS.

July 14.

EAST AREVALO MEXICAN MINING CO., LIMITED.

SIR,—Can you, or any of your correspondents, tell me anything about the East Arevalo Mine? I have seen no report from the manager of the mine for months, nor have I heard one word as to what is going on at the mine—if anything! I think it should be made compulsory that a mine manager send fortnightly reports, to be published by the directors, for the shareholders' information, for the quiet way in which the unfortunate shareholder's money is now appropriated, and be left entirely in the dark as to what is being done with it, is infamous.—I am, &c.,

AN EAST AREVALO SHAREHOLDER.

July 11.

VICTORY MINE.

SIR,—I have just seen Messrs. Tamplin and Hallett's July report, and certainly the directors must feel glad to learn that they have no ill-feeling against them. I wish we shareholders could say

the same. Had we had Messrs. J. Taylor and Sons for our mining engineers this would not have occurred, and, most certainly, the sooner we have them the better.

I should like, if this catches Mr. Hallett's eye, that he, as well as the present board of directors, would condescend to inform us how it has come to pass, that though we have been informed innumerable times that our mines are covered over with immense boulders containing gold, that these have never been blasted and crushed for the sake of getting this gold, which certainly would have saved much seeking and quarrying, thus saving labour and expense. Who, I ask, has been the means of keeping this back?

And, I should also like to know, could the present board have wrought the mine at present, when the Board of Trade were engaged in making their enquiries? For, if so, it has been not only a foolish, but very reprehensible act, for which they should be called to account their not having done so.

And now, since this enquiry is (I suppose) to go on, can you say if it will be in public, and reports be available, otherwise I fancy it will not do so much good?

It would be a good thing now if it could be got to an end soon for the sake of the much abused shareholders, and if nothing past condoning has been done, might not Mr. Hallett and his friends consent to join the board and see what can be done at once. Mr. Nicholls says in his last report that he has three or more places where he could commence work at once, and with little expense raise quartz and commence crushing. Should not that be tried at once?

Above all, let us all put our shoulders to the machine and set it in motion again. I hope many more shareholders will now let their voices be heard.

The property has all along been held up as second to none, both by past and present directors, but if it has been all a lie from first to last the sooner the public know of it the better, and avoid, as they will certainly do, both Hallett, who has been a director, and Gilbert and the present board.—I am, &c.

July 15.

A. B.

THE FALL IN PRICES.

SIR,—Your correspondent, "Contented Shareholder in 16 Mines," reminds me very much of Mrs. Nickleby in his way of mixing up subjects, or even more forcibly of Mr. Dick in "David Copperfield," who always mixed up every subject and every calculation with King Charles the First's head.

Where, I would like to ask this contented shareholder in 16 or 16,000 mines, is any reference to John Taylor and Sons? Evidently he is under the idea, because I do not mention this celebrated firm in my letter, that I am not aware of their existence. He might as well say because I do not speak of the Queen I never heard of Her Majesty. Well, I would like him to know that I am aware of the great engineering abilities of that firm, and that I hold shares in three companies to which they act as managers.

I am also aware that they have so much business that they could perhaps scarcely do full justice to any more *new* business (perhaps your contented shareholder is not aware of this with all his knowledge of that firm), far less to put life into such a corpse as the Victory. All the companies of the nature of the Victory after life is extinct put themselves into John Taylor and Sons' hands, but as a rule too late, and great as their managing skill is, they cannot magnetize such corpses; and I am afraid they are hurting their reputation by taking in hand so many companies who are already, practically speaking, corpses. I would like your correspondent to point out in my letter any expression of mine where I speak of giving up dealing in mining shares, and I most decidedly object to his putting words in his letter which are his own and quoting them as if they were mine.

However, I suppose, seeing that he is unable to refute anything I say in my letter, that he is unable to reply to it except by insinuations, which shows how poor a case he has, and how unequal a correspondent he is. Let this man draw his dividends on 16 (or 16,000 mines is it?) of 12 per cent., and it seems to matter little to him whether righteousness or unrighteousness flourishes, shares rise or fall by rigging, through false telegrams, reports, and letters.

But, really, Mr. Editor, I think the poor fellow is only a figurehead, writing to the dictation of some outside broker, and anything he says must be received *cum grano salis*.

If he is a man at all let him come out from under his incognito, and if he wants some information about lying telegrams, false reports, &c., I will be able to show him something that will open his eyes, unless he is as blind as a mole.—I am, &c.,

G. A. H. DOUGLAS.

21, Windsor Street, Glasgow.

July 16.

PALMAREJOS.

SIR,—On the 7th inst. I wrote to Mr. J. Stewart Wallace, chairman of the Golden Leaf, Limited, as follows:—

"Dear Sir,—Owing to your well-weighed hints at the last general meeting of the Palmarejo Mining Co., I there and then sold nearly all my holding, inducing some of my friends to follow me, but as there are still some who hold on, and I myself will not be present at the meeting on Thursday next, I make bold to address you this, and to venture the hope you may again show the body of shareholders the real position, and who will not forget how true a prophet you were last time, though the wire-pullers tried to shout you down. The points I would mention are:—

"1. Why have the directors not informed their employers on what basis the recent debentures were placed, and yet the Stock Exchange know all about it. To raise the 75,000*l.* required they had to issue the whole 100,000*l.* at 7 per cent., paying the Mexican Explorations, Limited, 3 per cent. per annum besides for their guarantee.

"2. As out of the 75,000*l.* raised the company had to pay off old loans of nearly 40,000*l.* what money in hand has the company now command of, taking into account the calls not yet made on the debentures, and the amounts due to complete the works, but not yet paid. And did not the debenture issue cover working expenses only to 31st inst. What if crushings do not begin till Oct. or later?

"3. Why did the directors recently assist the Mexican Mineral

Railway Co. in raising the money the latter company required? Would it not have been wiser for *this company* to hold aloof, amalgamate the two companies, the railway debentures and shares to receive £ for £ in Palmarejo shares, and raise the money ourselves? In which company are the directors and their friends most interested? Take, for example, the arrangement with the Railway Co., referred to at the meeting of that company in Mar., 1890, as regards crushing at the meeting of the Palmarejo Mine, and though the conduit other ore than that of the Palmarejo Mine, and though the conduit is absolutely building, to run our mill, we, with 400,000*l.* capital, are to only have five-eighths of the profit and the Railway Co. with 75,000*l.* capital to have the rest, or taking capitals into account, the company *without the mill* to benefit more than three times the company owning the mill! What a proof of "the best of their ability" (see their circular of Mar. 25, 1891) of the four Palmarejo directors—two of them being two of the three railway directors. If so, what a very clever man the one independent director of the railway company must be.

"4. What about the Dios Padre tunnel? According to Mr. Moreing's report, May 17, 1888, this was to cut the ore in the Blanca lode in about 1,200 ft. from the mouth. To the end of Jan., 1891, some 1,600 ft. had been driven, but *even now* we *still* have no news of these pay-shutes being cut. What does this mean? Has the tunnel in spite of all the outlay not been driven properly? I have reason for asking.

"5. Why in the Directors' circular of Mar. 26 did they begin their estimate of daily profit with a value of \$25 per ton, a figure never before mentioned? They must have had some reason. However, take it as \$30 ore, and their circular said the daily profit should be \$966. Exchange as per report \$6.50 to the £—but say \$6—though were the Yankees to fail with their silver fake it could soon be \$7. Say 300 working days; though Roman Catholic high days and festivals make this liberal. We then get 966 divided by 6 multiplied by 300, equal to 48,000*l.* profit per annum. But what against this? Interest, 7 per cent. debentures (100,000*l.*), 7,000*l.*; Mexican Exploration, 3,000*l.*; debenture redemption (if wise) at least 5,000*l.*; London office expenses, 3,000*l.*—a total of 18,000*l.*, or nett profits, 30,000*l.*—or 7½ per cent. dividend! But *when* to be received? Even if crushings begin Sept. 1 there will be nothing to divide for 1891, but rather a deficit for interest, &c., on the debentures from April Fools' Day. So 1892 profits may be divided in May, 1893, when the report comes out. Exhilarating prospect? But what if \$25 or \$20 ore, as the directors now quietly prepare the way to be the case, or exchange at \$6.50 or \$7 to the £, or working days less than 300? No wonder the insiders sell! *Palmarejo montes parturiunt et nascitur ridiculus mus.*

"6. Why, therefore, is everything painted so rosily to us, instead of information being straightforwardly placed before us for us to judge ourselves. Is it we might sell, and that would never do!

"7. Is it a fact that Mr. Applegarth's holding of over 33,000 shares is now actually reduced to 13,000 or less (? what is it), and that other large shareholders have followed his lead. But why should they know more than others?

"8. On what class ore do the directors intend to begin? If any good ore, \$40 or so, after these years of waiting, surely the present holders are entitled to have this hurried forward if there is any. If the directors say "No," does it not mean there is none? Which horn of the dilemma do they choose?

"9. Compare to-day's position and the directors' circular, Dec. 21, 1889:—"The directors continue to have ample funds in hand for all the purposes of the company," and the statements made in Mar., 1890 (Mexican Mineral Railway meeting), all the works would be completed by end of 1890. Result; in Mar. to May, 1891, the two companies have to borrow about 125,000*l.* or more, and the works *may* all be ready by Sept. 1, 1891. What clever business-like directors!

"10. To wind up, why have Mr. Breach and Mr. Pender, successive general managers, left and nothing been advised to the shareholders thereon, and why has, at this juncture when crushings are said to be near at hand, Mr. Applegarth's own friend and partner of many years past, Capt. Drake, been made general manager by a professedly non-Applegarth board? Strange, very strange!

"And yet some sanguine holders look for a dividend the end of this year, forgetting the many red herrings already drawn across our path, such as "sales," Government concession, wonderful strikes, newspaper puffs, &c., and, Sir, I ask you, in your clever way, to let a little more daylight into the position, and for which the great body of shareholders will be sincerely thankful. In fact, my fear is if the shareholders, as a body, sleep much longer, when they wake up they will find the Mexican Mineral Railway, or the Mexican Explorations, in command of the whole bag of tricks, and themselves with nothing. I apologise for troubling you, and remain,

"Yours truly,

"AWOKEN.

"P.S.—I enclose my card, which please treat as confidential."

Unfortunately, Mr. Wallace was also unable to be present, but as to the position, this seems to be even worse than I thought, for after having raised 40,000*l.* on debentures last Aug., increasing the issue to 100,000*l.* this spring, our directors take another bite at the cherry, and, like the horse-leech's daughter, call for more blood. Not only this, but the Mexican Mineral Railway Co. are in the same position, and evidently are also further behind in time. Thus, probably, the two companies together are another 50,000*l.* short, and not only is it certain Palmarejo will pay no dividend for 1891, but it looks very ominous as to the 7½ per cent. dividend for 1892, to be received, say, in May, 1893! I am informed the meeting was listless and lifeless, with the exception of the Hart incident; and no wonder. Your comments in your issue of the 11th inst. thereon went straight to the point, as usual, and it is refreshing to see one good paper supporting shareholders *v.* directors. The incident must indeed have been funny, and the attempted autocratic action of the would-be great Mr. Hart emphasises indeed point No. 3 in, and the last few lines of, my letter to Mr. Wallace. Palmarejo shareholders had better look out; their actual interest in the concern is fast disappearing.—I am, &c.,

NOW WIDE-AWAKE.

July 15, 1891.

MESSRS. M. B. FOSTER AND SONS, LIMITED, have declared an interim dividend of 6s. per preference, and 8s. per ordinary share, being at the rate of 6 per cent. and 8 per cent. respectively, payable on Aug. 1 to all shareholders registered in the books of the company on June 30.

REPORT OF MEETING.

DOLCOATH.

MINE LOOKING WELL—DIVIDEND OF £1 PER SHARE.

THE adventurers in Dolcoath held their twelve weeks' meeting on Monday on the mine, when

Mr. W. Rabling, C.C.,

presided.

The accounts showed that the labour costs during the three months had been 12,334*l.* 19s. 7d.; tribute, 1,576*l.* 12s.; merchants' bills, 6,170*l.* 7s. 7d.; Camborne parish rates, 274*l.* 6s. 6d.; bank charges, six months, 133*l.* 1s. 1d.; Miners' Hospital, 25*l.*; stannary dues, three months, 33*l.* 0s. 3d.; total debits, 20,597*l.* 7s. Black tin sold, 494 tons 10 cwt., at an average price of 54*l.* 6s. (less dues one-eighth 1,492*l.* 0s. 5d.), producing 25,354*l.* 7s. 11d.; extra carriage, 71*l.* 9s. 2d.; discounts, 41*l.* 18s. 5d. Total credits, 25,477*l.* 15s. 6d. Profit, 4,880*l.* 8s. 6d.; balance in favour of the mine, 10,290*l.* 19s.

The CHAIRMAN observed that there was an improvement of 1*l.* 8s. 6d. a ton in the price of tin as compared with the statement presented at the last meeting. The resolution of the committee to accept one-eighteenth dues instead of a quarter of the profits, had, been communicated to Mr. Frecheville. A reply had been received from him stating that the sanction of the Court of Chancery had been obtained to a reduction of dues, until further notice, from one-fifteenth to one-eighteenth of the gross products. With reference to the proposed sale of Straypark, Mr. Frecheville agreed to an interview with the committee when he next came into the county. The committee recommend a dividend of 1*l.* per share, and he proposed that such dividend be declared.

This was seconded by Mr. J. MAYNE and carried.

Mr. E. G. HEARD protested against the payment of banking charges by a great dividend-paying concern like Dolcoath.

In supplementing the report Capt. JOSHUA THOMAS said they had increased their returns considerably during the quarter, having returned 38 tons more than in the previous quarter. The price of tin was also 1*l.* 8s. per ton better, and they were enabled to double the dividend, giving 20s. instead of 10s., and also adding 180*l.* 8s. 6d. to the balance. They did not know yet what sort of lode they had south of the engine shaft at the 412. They had only opened on it for 11 ft. wide, and they supposed it was 20 ft. wide, judging from its size in the level above. There was some fine stuff coming in from the south side of the plot, and they hoped there was a good lode standing to the south. They would prove it immediately by boring machines, and in a week or two they would get through the lode. If there should be a good lode there it would be an important matter. He was hardly in a position to recommend the acquisition of more stamping power just yet till they saw what Harriett's and the eastern part of the mine turned up. There was a good lode in the winze under the 302, about 40 fms. west of the eastern shaft. It was now worth 40*l.* a fm., and it seemed to be improving as it went down. There was a vast quantity of ground there entirely unexplored. As soon as they holed the 400 east they proposed to start a level and drive west under the winze so as to prove the stuff from there to the eastern shaft. It looked a promising piece of ground. The mine was on the whole looking as well as he had seen it for some time past, if not better.

In answer to Mr. J. Wickett, the MANAGER said their produce was about 60 lb. to the ton.

COLORADO SILVER MINING CO., LIMITED.

18 POINTS AT WORK, AND DISTINCT SIGNS OF IMPROVEMENT SHOWN.

THE manager, writing under date of June 30, reports that the mines are being worked at 18 points, and that the drifts are being driven as rapidly as possible. Terrible Mine: 8th level west is now advanced 513 ft. from main shaft. This drift is looking exceedingly well, and the mineral is of good grade. Lode 4 ft. wide. Coin lode: Rockwell adit level now in 525 ft. Lode 4 ft. wide. Brown adit level now in 597 ft. from cross-cut No. 2. Brown Mine: There are six points at work, and 14 men are employed drifting and stoping. Last sales realised 168½ ozs. silver per ton, and 14 per cent. lead, and 106 ozs. silver per ton; in two classes. Glasgow lode—Mammoth tunnel level: Drift advanced 161 ft. Lode holds fully 5 ft. wide. This drift shows a continuous improvement. West Terrible: Drift advanced 110 ft. east of the West Terrible tunnel. Lode 4 ft. wide. Mineral vein 1 to 3 ins., with considerable solid ore. The ore from the different stopes is being prepared for sale, and will be reported next mail.—ERNEST E. PROBERT, Secretary.

REVIEWS.

THE "ELECTRICIAN" PRIMERS. London: The Electrician Printing and Publishing Co., Limited, Salisbury Court, E.C.

This series, of which vol. I. (Theory) and vol. II. (Practice) lie before us, is intended to be helpful on electrical subjects for the use of students and general readers. In this effort the author has borne in mind that the plainer and simpler the language he employs the more useful is likely to be the work to which he has set his hand. With the authors of some volumes on technical subjects the object seems to be to obscure the meaning by a lavish employment of technical terms, which are meaningless to the ordinary reader and probably not well understood by the writer himself. In this case, he who runs may read, and he who reads is instructed. The present state of electrical knowledge is described, and facts are brought up to date. The work should prove extremely useful, and certainly it is most interesting.

PUBLICATIONS RECEIVED.—We have received from the Institution of Civil Engineers the following publications:—"Pickwell on Petroleum Storage Installations," "Marten on the Sewerage of Dudley," "Hill on the Counterbalancing of Locomotive Engines," "Good on the Construction of the New Nadrai Aqueduct, Ganges Canal," "Ll. and C. Atkinson on Electric Mining Machinery," "Abstracts of Papers in Foreign Transactions and Periodicals," "Fox on Irrigation in Southern California."

THOMAS THOMPSON,

STOCK AND SHARE DEALER

ESTABLISHED 1862.

8½, ANGEL COURT, LONDON, E.C.,
And MINING EXCHANGE, LONDON.

Bankers:—THE CITY BANK, LIMITED, and METROPOLITAN
and BIRMINGHAM BANK, LIMITED.

INVESTORS in all classes of Stocks and Shares should read
Mr. THOS. THOMPSON'S MINING AND INVESTMENT CIRCULAR,
free on Application.

Shares sold at Special Prices for forward delivery (One,
Two or Three Months) on deposit of 20 per cent.

Orders by Letter or Telegram promptly attended to.

Telegraphic Address:—"REMEMBRANCE," LONDON.

NOTE ADVANTAGES WE OFFER TO INVESTORS
AND SPECULATORS.

LOCKWOOD, WHITLARK AND CO.,

5, THROGMORTON AVENUE, LONDON, E.C.

We make Mines a special study, and invite correspondence, whether
business results or not. We can always give reliable information.

We open any number of all classes of Mining Shares at close
market price of the day on 10 per cent. deposit, and carry them over
as long as clients wish at low contango rates.

We close speculative accounts at any time, and pay profits instantly,
irrespective of account day. We sell shares at current prices for for-
ward delivery at one, two, or three months on 15 per cent. deposit.
We are members of the Mining Exchange, and subject to the rules and
regulations of that institution.

Send for our prices before dealing elsewhere.

Options at low rates for account, one, two, or three months in
Mining, Land, and Miscellaneous Shares.

We deal in every description of Miscellaneous Shares.

We publish a South African Share List daily at 4.15 p.m., containing
useful information as to claims held, dividends paid, &c., post free.

Telegraphic Address: "PERSONIFY," LONDON.

NOTICE TO READERS.

Replies to Annual Subscribers will be sent by wire or letter, as
may be necessary.

Gold.—Certainly hold. The company is progressing most favourably.

Executer.—Sell, and secure the profit. A remote chance of a dividend.

Vin's Hoist.—Simply a "bear" movement. We advise you to keep them, as a
much better price is looked for.

M. K. S. (Yeovil).—Take up your proportion, or even apply for more. We feel
sure the company have a good chance.

Ducham (B. W.).—It is a question of time. They must eventually re-construct.
Do not buy just now.

Gardena.—As a speculation they are worth purchasing. You have little to
sacrifice at prices now ruling.

W. Bishop.—Buy Nos. 5, 8, 9, and 10. Others not to our liking.

Yorkshire Reader.—Safe to hold we consider.

Disappointed.—You cannot be called upon to pay the expenses. Your shares
are fully paid, therefore no further liability exists.

Tape.—The securities mentioned are good to hold. Each of them returns a very
fair interest.

T. Milston (Salisbury).—The depression that exists generally is the only
reason. Their prospects are decidedly good, and we advise you not to sell your
shares if possible.

High Priced Holder.—Yes. Hold them. About September they may rally in
price.

Investigator.—You are entitled to the dividend, and if claimed of your broker
he will no doubt in the ordinary way send it.

Light.—The capital is insufficient to bring about the desired result. We are
afraid they must re-construct.

Jubilant.—Although you have received the dividend, your purchaser is entitled
to it. There is possibly a good reason why the transfer has not been lodged.

F. A. B. (Manchester).—The shares are unsaleable, therefore you must wait
events.

Carlson.—We hardly think it necessary to do as you propose. They are
respectable people, and no doubt things will be put right in a day or so. Of
course, legally you have a right to do it.

Lady Reader.—Sorry you have such a large amount of money locked up in this
concern. Should opportunity offer we advise you to sell.

SOUTH AFRICAN TRUST AND FINANCE COMPANY, LIMITED.

SUBSCRIBED CAPITAL, £255,000.

BOARD.

B. B. TRENCH, Esq., Chairman.

Sir CHARLES METCALPE, Bart.

L. BALFOUR BURNS, Esq.

Sir STUART S. HOGG.

Major J. W. M. COTTON.

RICHARD SMITH, Esq.

EDWARD DICEY, Esq., C.B.

HEAD OFFICE.—19, ST. SWITHIN'S LANE, LONDON, E.C.

SOUTH AFRICAN OFFICE.

NATAL CHAMBERS, JOHANNESBURG.

GENERAL MANAGERS IN SOUTH AFRICA.

W. Y. CAMPBELL, F.G.S., and E. W. EVANS.

BANKERS.—THE MANCHESTER AND LIVERPOOL DISTRICT
BANKING COMPANY, LIMITED.

THE STANDARD BANK OF SOUTH AFRICA, LIMITED.

The Company undertakes the following business:—

The skilled investment in South African Mining, Land, or other
securities for European investors.

Professional and confidential reporting upon companies, mines,
mineral properties, lands, and generally advising European share-
holders and others in South African ventures.

To act as agents on behalf of principals interested in South
African investments, and for the protection of their interests, and
where desired, to register shares in such undertakings, and to issue
certificates in exchange for same, thereby enabling European holders
to co-operate for their mutual protection.

Financing or advancing moneys to corporations, companies, syndi-
cates, or persons in South Africa.

The receiving of money on deposit.

The purchase and sale of properties, and all classes of South
African securities or interests.

A Mining Circular containing special information will be posted
weekly from the South African Office to all subscribers.

A SPECIAL CABLE CODE FOR PROMPT AND ECONOMICAL COMMUNI-
CATION BETWEEN THE SOUTH AFRICAN AND LONDON OFFICES.

Further information can be obtained at the Head Office of the
Company.

The Mining World.

LONDON: SATURDAY, JULY 13, 1891.

The "MINING WORLD" is not the property of a Mining
Speculator nor under the control of any clique.

MAKING-UP PRICES IN MINES.

WE have observed with pleasure that an effort is once more being
made to reform the system pursued on the Stock Exchange in
reference to the making-up of prices in the Mining Market. That a
very radical reformation is needed is self-evident to anybody who
looks through the fortnightly making-up list and compares the prices
with those at which business has been done, perhaps at the very
time the quotations are struck. There is frequently an utterly
absurd disparity between the two sets of figures, and the curious part
of the business is that it is always a disparity in favour of the
dealers. Of course, people who speculate in high-priced shares,
such as Rio Tintos and De Beers, are treated fairly,
simply because any inequitable treatment would raise a howl from
one end of the House to the other. It is only the people who, as we
think, foolishly carry over low-priced mining shares, that are fleeced
so systematically. The protest so often made has been met
with a sort of defence of the system by a correspondent who signs
himself "Andi alteram partem;" but the writer shows that practi-
cally there is no other side to the question at all. He asks, "Are
mining shares to be regarded altogether in the same light as other
stocks, shares or securities?" If the question might be answered in
Hibernian fashion we should say: Why not? Mining shares are
carried over at a charge just the same as any other stock,
and if the dealers do not care to undertake the business
they are quite at liberty to refuse it. He goes on
to state that "there exists a well-known system of fixing making-up
or carrying-over prices. It is that the making-up price shall be the
nearest ½d. or 1s. 3d. below the middle quotation." If that is the
system, then the sooner it is altered the better. In any other stocks
the middle price is taken as the making-up figure, and that is a
perfectly fair arrangement to buyer and seller alike. The talk about
the risks run by the dealer is sheer nonsense. If the dealer has any
doubt about the stability of the broker with whom he deals, let him
refuse to deal; and as to the dealer's capital and reputation being at
stake, "Andi alteram partem" must have had his tongue in his cheek
when he penned that phrase. The whole question is one of fair and
equitable dealing, and if the professional dealers do not care to
operate on those terms they should say so at once, and take the con-
sequences.

A COMPANY TO BE AVOIDED.

THE prospectus of the New Mashonaland Exploration Co. represents an attempt to obtain money from the British investor, which that much-tried individual had far better keep in his pocket. It is also an attempt upon the faith of newspaper extracts, political speeches and market quotations to induce the said British investor to pay the expenses of an exploring party which he should, in his own interests, decidedly decline to do. He should tell the New Mashonaland Exploration Co. that so far as he is concerned its explorers are at liberty, like the members of the Pickwick Club, to travel as long as they like at their own expense. The persons who join this company must distinctly understand that they are pioneers, and that the joint-stock shore is strewn with the bleaching bones of similar enterprises—a fact of which, however, the prospectus wisely takes no cognisance. It rather trots out for review a number of companies doing an almost totally different kind of business, which have, in truth, made their money, not by exploring themselves as this company proposes to do, but by getting other concerns to explore for them. This they were only able to do in a “boom,” but is it necessary to say there is no “boom” now? Hence the chance of this company being able to form sub-companies is of the remotest kind. We detest gambling in all its forms, but will go so far as to bet the new hat we have just bought that the shares of this company now offered at par will (should it go to allotment, which we very much doubt) within three months be purchasable at a discount. We, therefore, advise those who propose to send their cheques, as directed by this prospectus, to refrain from doing so; but if the temptation prove irresistible, to make application conditional upon two-thirds of the capital offered being subscribed in cash.

The capital in question is 100,000*l.*, “with power to increase to 500,000*l.*” There are 8,000 founders, the rest (92,000*l.*) being ordinary shares. Subscribers for 200 of the latter will be entitled to one at 1*l.* of the former, but (and here is the bait) “applicants for founders’ shares can only obtain the same at the present price, viz., 12*l.* per share.” We should like to know how “the present price” came to be fixed at 12*l.* The investing fly who walks into this pretty little parlour will deserve what the fates have in store for him. We cannot advise investors to accept the invitation to subscribe upon the strength of the names of the directors. They are respectable persons, but in this connection are most remarkable for the valour without discretion, which has led them to join such a concern as this. One proof of their inexperience is found in the prospectus itself, which says:—“The company has already acquired the rights, at the price of 17,500*l.*, to 3,000 acres of land, one alluvial claim and 15 reef claims, upon which operations will be immediately commenced, so that the usual delay in the commencement of business by companies of this description will be avoided.” Surely the directors must know that mining cannot be commenced as with the wave of a magician’s wand. Months, possibly years, must elapse in a territory so distant before these claims can be tested on a commercial scale. Most of what is in this prospectus is conjecture, hypothesis, assumption—we had almost said, presumption. If it turns out as described here well and good, but are the ponderous chances that it may not do so worth the risk? Let the investor, in the light of his own, perhaps dearly bought experience, give the answer of common sense, and if he does he will put away his cheque-book into his safe, and the New Mashonaland Exploration Company’s prospectus into his waste-paper basket. He will watch the game, but nothing will induce him to play at it.

THE MEETING OF AUSTRALIAN BROKEN HILL CONSOLS.

THE crowded state of the Great Hall of Winchester House on Monday was an index to the intense interest felt in the speech of the chairman, and the general views of the management, as to the future of this undoubtedly great property. The chairman (Mr. J. H. Ward) rose under circumstances of great difficulty. Quite unexpectedly a telegram had been received announcing the suspension of the fortnightly output, and though the one that followed a day or two later relieved the tension to a great degree, the chairman naturally felt, that the position was one of some delicacy. But for the receipt of the first dispatch, we quite believe the shareholders would have adopted Mr. Grady’s very reasonable proposal to increase the fees of directors, under whose management Australian Broken Hill Consols has been brought from obscurity to occupy the chief thoughts of the Mining Market and the investing public. To visit upon the directors the receipt of an unfavourable telegram was ungenerous—nay, more, it was unjust. The position of the mine as shown by the chairman oratorically, and as attested by the reports with all the logic of facts, and by the accounts with all the force of figures, is excellent. The main object of the board has been to reach a lode believed to be identical with that of the Proprietary Co.’s mines, and having done so it has been followed with great success. This was continued without interruption until about three weeks ago when the fault occurred which stopped the fortnightly output, but a change for the better almost immediately occurred, and the manager expected to be able next

week to resume the raising of rich ore. A similar interruption occurred before, so that, as the chairman said, “there is no occasion for alarm.” On the contrary, there is every ground for encouragement in the prospective as well as for congratulation in the retrospective. 50,000*l.* has already been distributed amongst the shareholders, and there is now 25,000*l.* in hand which the board have to account for. The shipments of ore have been to the amount of 107,420*l.*, and, remarkable to say, the assay value on the spot has been within 7 per cent. of that which Mr. Daniel C. Griffith, the assayer to the Bank of England, has found here. Two blocks of property have been sold to East Broken Hill Consols, and 10,000*l.*, the cash part of the purchase consideration, has been received and is included in the 25,000*l.* before named. The discussion elicited information as to some minor details, but there is one remark that fell from the chairman we cannot let pass without complete endorsement, namely, that every information is furnished to the shareholders by the secretary. Nothing is kept back, and the pen of some ready writer must be continually employed to keep the shares *au courant* with what is going forward. This, coupled with the intrinsic merits of the property itself, accounts for the favour the shares have found in the eyes of investors. The market, for the moment, read the meeting unfavourably, but not so the public who sent in their orders to buy on the strength of it. We think the market barometer points fair for Australian Broken Hill shares, and that much better prices will be seen.

THE WALBROOK GROUP.

THE LAST OF NEW KITTY.

A PROMINENT member of the Walbrook group has just shuffled off this mortal coil. New Kitty is no more. The mine and its materials are for sale, and we wish better luck to the purchaser than that which attended the long-suffering shareholders. Assuming that they were original shareholders, and did not pay the fancy prices to which at times the shares were forced up upon no merits whatever, their calls amount to a total of 31*s.* per share. The mine was under the direction of Mr. J. B. Reynolds, with Capt. Vivian as chief of staff. The speeches and reports of these gentlemen in praise of New Kitty were many, but they have ended in the melancholy advertisement that announces the sale of the whole concern, stick, stock and barrel to the purchaser who will make the most liberal offer.

In referring to the Walbrook group as a whole, it must be owned that Mr. J. B. Reynolds is seen at his best when there is talking to be done, but when his flights of eloquence lead him into the regions of unfulfilled prophecy they are apt, like unnatural children, to turn upon the parent who begot them. In short, Mr. J. B. Reynolds scores heavily when orations are required to stimulate the payment of calls, but when the realisation of tangible results should come in the wake of reiterated prediction, Mr. J. B. Reynolds scores no more. The remembrances of his florid orations on behalf of West Kitty, Polberro, Trevaunance and the late Wheal Coates and West Polbreen, rise up before us as thickly as a London fog in mid-November, and as for his prophecies—Mr. J. B. Reynolds gives the Second Advent gentlemen a good start and then beats them in a canter. The digestion of this gentleman must be of the veritable ostrich kind, if in his inner economy he can dispose of the speeches he has made without the pangs of oratorical dyspepsia, and his luck must be great indeed if he can escape from taking a front rank amongst the false prophets of mining, of whom there are, unfortunately, too many about. It is no figure of speech for a Western paper to say that of New Kitty, as of his other mines, Mr. Reynolds “used to speak enthusiastically,” but his oratory was not according to knowledge.

Let us consider the position of the call-making companies, commonly known as “the Walbrook group,” of which New Kitty is now a defunct member, following as it does to the tomb West Polbreen and Wheal Coates. A short time since Mr. Reynolds addressed to the shareholders of these various concerns a circular which made no allusion to the luckless past, but indulged in the further prediction “that we may confidently look for the best results.” Let us see how long the shareholders have been “looking.” Since the year 1882 Trevaunance shareholders, and since the year 1884 Polberro shareholders, have been thus looking, but the horizon has been scanned in vain for any sign of a dividend. Mr. Reynolds, in this circular, announced the suspension of the ordinary four-monthly meeting, but intimated that “the shareholders will be called together to consider important questions relating to the efficient working of these properties.” This sentence might be so read as to indicate that the past working of the properties had not been efficient, but Mr. Reynolds does not mean this, for that would be self-condemnation. Little did the shareholders know that an early Walbrook engagement would be at the funeral obsequies of New Kitty. If in this circular Mr. Reynolds had intimated that there would be a cessation of calls, which, in the case of Polberro, have amounted to 25*s.* 6*d.* per share, and in Trevaunance to 37*s.* 9*d.*, he would have brought to the despairing shareholders the relief for which they have sighed, but instead of that he said: “Before we meet I should like to see a better price for tin.” Who would not? Mr. Reynolds would also like to see “much more animation and confidence generally in

commercial affairs." Now, one good way to bring about both is for some of Mr. Reynolds' predictions to come to fruition, and then as the natural sequence there would be "more animation and confidence generally in commercial affairs," and particularly in those of the Walbrook group.

We have been referring to the old files of the MINING WORLD, which rise up in judgment against Mr. J. B. Reynolds, not to say his manager. We do not assert that these gentlemen have not done their best to make the mines profitable, but, judging them by results, their injudicious speeches and reports have been lamentable, and the cause of heavy losses to those who have listened to or read them. We have said that in 1882 Trevaunance was formed, and that since then the shareholders have been mulcted in calls to the tune of nearly 37s. 9d., and yet the Stock Exchange Year Book states, "scarcely any metal has been obtained as yet." This is after nine years' working and report writing by Capt. Vivian, and as many years' prophesying and specchifying by Mr. Reynolds. In 1882 the latter gentleman spoke of 118% realised for tin sold as "significant for the future of the company," and Capt. Vivian said, "It would not surprise me if we came into a lode like West Kitty." From that date to the present the quarterly meetings have been continued, and also the calls, but not the sales. During the whole period the speeches at one meeting have been like those of its predecessor. In July, 1886, Mr. J. B. Reynolds said, "Our prosperity will advance by leaps and bounds," and Capt. Vivian added, "We have a mine for generations to come." Yes, he should have added, if shareholders will go on paying calls for generations to come. A year later Capt. Vivian spoke of "a very promising lode," and the chairman devoted some portion of his remarks to answering the question "why the shares are so low." He attributed it to every other cause than what we take to be the correct one—namely, the unfulfilled predictions in which he and the captain have indulged. So Trevaunance has gone on to the present time, the shareholders still paying calls, and from all appearances will continue to do so whilst they are willing to bear the quarterly assessments made upon them.

Mr. Reynolds and Capt. Vivian have also prophesied in the name of Polberro. They have always spoken of some mystic past in which enormous profits were realised by somebody, though certainly not by the present shareholders, but they have been, perhaps, wisely reticent as to stating the reasons which led to the abandonment of the mine. After paying in calls 25s. a share, the shareholders know those reasons only too well. Since 1884, indeed, the call-bell has tolled each quarter, and though the peal has been a merry one for the office into which the money has poured, it has been in the nature of a funeral knell for the shareholders. The prospects of Polberro in 1884, when the mine was re-started, were so described that it is a wonder the shareholders, who believed in Walbrook management then more than they probably do now, did not sell all that they had to get more shares, but probably the experience of Trevaunance had a deterrent effect. The climax of expectation was probably reached in 1886, when Mr. J. B. Reynolds assured the shareholders that "they would be astonished." So they have been, but not in the sense in which Mr. Reynolds lead them to think. The Beulah, so eloquently described on that occasion, has unfortunately been preceded by the Slough of Despond in which the shareholders are still seen floundering. Later on in that year the spirits of the shareholders were so high that Mr. Reynolds thought it just as well to administer a sedative, which he did, in the shape of "the usual call." On that occasion he said—"It is with more than ordinary satisfaction I meet you to-day," and continued in this strain towards the close. When, however, Mr. Reynolds fails in the matter of a dividend, he may be always relied upon to work up to a peroration. "You will be rewarded on such a scale as will astonish even the most sanguine." The astonishment of the shareholders has been in regard not to the largeness of their dividends, but to the frequency of their calls. About a year later Mr. Reynolds, nothing daunted, was to the fore again. He said: "We have the greatest reason to put almost unlimited value upon Polberro," and Capt. Vivian came in with the usual Amen, and said, "Polberro is a mine of which no one need feel ashamed," and yet in one of the latest communications the wretched shareholders of this concern have received they are told that they will be called together "to consider important questions relating to the efficient working of the mine."

The meaning of this has now been made clear, for the amalgamation of Polberro and Trevaunance is an accomplished fact. It is a marriage in which "there is no money"—nor do we think there is much love to furnish the counterpoise. It is the union of two moribund concerns, with the ultimate idea of "turning both into a limited company"—the last resource of impecunious Cornish mines. The cost-book system extolled in the discourses of Mr. Reynolds is now to be cast aside, and the much reviled limited liability principle to be appealed to, so that the general public may be drawn into the dual speculation, which has already caused the present owners 17. 5s. 6d. per share loss in the case of Polberro, and 37s. 9d. in that of Trevaunance. Should any of our readers be induced to subscribe for the shares, they must be prepared for that loss of their money which will certainly befall them.

Giving Capt. Vivian and Mr. J. B. Reynolds as much credit as we can for sincerity, it is impossible not to regard their public utterances as most unwise and injudicious. It is, however, for the

shareholders to consider whether they will not say of Trevaunance and Polberro: Cut them down—why cumber they the ground? It is for them to say whether they will continue to cast good money into these two holes, out of which nothing has hitherto come for them but disappointment, mortification and loss. Years ago we warned the shareholders to be content with the evils they had, and not to fly to further losses in these call-making concerns, and have reason to know that in many an instance we have saved shareholders losses that they would otherwise have incurred.

The advice we have given before we give again, for the swallow of West Kitty, it is apparent to the shareholders, does not make the summer of such concerns as Trevaunance and Polberro any more than it did of the departed Whcal Coates, West Polbreen, and New Kitty.

DAY DAWN BLOCK AND WYNDHAM GOLD MINING CO.

IN our issue of last week we were able to furnish our readers with some interesting facts and figures relative to the working of this company since its inception in the autumn of 1886. Briefly stated, what we were then able to show was that the company had crushed not far short of 100,000 tons; that the total yield of gold had been 111,000 ozs., valued at 387,000*l.*; and that the net profit had amounted to no less a sum than 184,400*l.* It is interesting to observe the average yield per ton, for there we have an index to the period of depression through which the company has recently passed. Commencing with a yield of 1 oz. 12 dwts. per ton for the first six months' working, the quality of the ore appears to have gradually fallen off, until it reached its minimum—10 dwts.—between Apl. and Dec. of last year. Mr. Hopkins, at the meeting on Tuesday last, described that as a very critical period in the company's history, for with an over-expended capital account, and scarcely able to make two ends meet in working the mine, the outlook was anything but cheerful. As a matter of fact, the directors would soon have found themselves *in extremis*, but for an improvement which set in in the early part of this year, which had the immediate effect of dispelling their anxious forebodings. During Jan., Feb., and Mar. 2,226 tons were crushed—a comparatively small amount in consequence of the necessity for curtailing expenses—and the yield was 3,619 ozs., or about 1 oz. 12 dwts. per ton. At the present time both the crushings and the yield are maintained, and, to use Mr. Hopkins' own words, the company continues to make a very handsome profit. It would appear, therefore, that the barrier of poor ground has been passed, and that a renewal of the riches obtained near the surface may be expected. The company has been considerably handicapped by reason of an insufficiency of working capital, but the directors have pursued a wise policy in applying liberally the profits on revenue account for capital purposes. We wish that we could see this sound principle more frequently adopted by directors.

Mr. Mills, who has recently returned from the property, addressed some interesting remarks to the shareholders, in the course of which he referred in very high terms to the local manager—Mr. Rollston—who has shown a considerable amount of forethought in acquiring for the company what is likely to prove a very valuable piece of ground adjoining their property. As to the improved appearance of the mine—Mr. Mills confirmed all that the manager had said, and even went so far as to add that, had he (Mr. Mills) had the drawing up of the report announcing the discovery, he would have put it a little stronger. A dividend of 6*l.* per share was declared, and further dividends may be expected at short intervals—as and when the funds permit. The directors were voted 1,000*l.* for their services during the past year, which is little enough considering that they are six in number. We must say we like the appearance of this property, as in it there are undoubtedly the elements of a sound mining speculation.

"MEN OF STANDING" v. "GUINEA-PIGS"

MOUNT LEYSHON has passed through a successful year. It turned out 16,000 tons of quartz for a yield of 5,944 ozs., and this year it has already crushed 9,340 tons for a yield of 2,760 ozs. The company is to be congratulated on having avoided a heavy expenditure in the purchase of Huntington Mills, which it will be observed from our African news, Pigg's Peak Co. appears to have discarded. The board bought instead stamps of the ordinary kind, and congratulate themselves on their sagacity. The Huntington Mills . . . much vaunted at one time, but we cannot remember them to have been of much service to mines—at all events under English direction. The company has also in sight 30,000 tons of ore, and it appears to be well managed both at home and abroad. Under all these circumstances one would have thought that the shareholders would have received thumping dividends; but no, 1*s.* per share was the total distribution made, the remainder of the profits having apparently been absorbed in outlay properly chargeable to capital.

A proposal emanating from the directors (at least it was mentioned in the chairman's speech) was to the effect that the fees of the directors should be raised from 400*l.* to 450*l.* per annum, and the suggestion led to an interesting discussion. We are not saying whether the amount is too much or too little, but when a shareholder ventures to express an opinion in the former sense, it is hardly courteous for

the chairman to tell him that "you are one of those gentlemen who like to get work done for nothing." The Chairman might have anticipated the retort of the shareholder, "I am far from considering 400% nothing." The meeting, however, was made remarkable by the ventilation of Genl. Steward's ideas on the subject of directors, of which he probably has the monopoly. This gentleman's proposal of the 50% addition was carried. Absent shareholders, who agree with the malcontent Mr. Fawell, will grumble at this, but why did they not attend the meeting to prevent it? Genl. Steward has the original idea that the only way to get what he calls "men of standing" to come on boards is to have a large number of directors, so that its members, as it suits them, may absent themselves from board meetings and attend to other concerns in which possibly they may have more interest. You must, therefore, says this distinguished officer, have a large board, so as to make sure of the necessary quorum, because, he added, "if you have a small board who attend regularly you will get guinea-pigs." Now, no one dislikes the guinea-pig director more than we do, but we confess to a decided preference to guinea-pigs who attend to a company's business as compared with "men of standing" who neglect it. Genl. Steward has great faith in the future of Mount Leyshon. We cannot share that faith if "men of standing" are to be put on the board who may, if they so please, neglect the company's business when their interests, their inclinations, or their pleasures call them in other directions.

THE WARATAH SILVER FIELDS.

A RECENT discovery in this district appears to be creating much excitement in the Colony. It is known as Reed's Silver discovery, and is situated in the North Valley, about four miles from Waratah. A return of 90 ozs. of silver to the ton has been obtained from assays, and it appears to be the opinion of experts that the stone can be treated to still better advantage. The lode can be easily worked, and there is said to be abundance of timber and water on the spot. We understand that a company is to be formed to work the mine with a capital of 50,000*l.* in 100,000 shares of 10*s.* each.

HARRIETVILLE.

WE regard the affairs of this company as extremely encouraging, notwithstanding the falling off in the yield from the quartz, which was shown by the accounts for last year. There is no doubt the mine is being developed in a manner calculated to make it a lasting success, and the manager has evidently thought it better to sacrifice the dividend for one year in order to attain this object. The speeches of Lord Ribblesdale and Mr. Taylor, at the meeting on Tuesday last, were in every respect satisfactory, and left no doubt in the minds of shareholders that there is a great future before the company. They had not merely opinions to offer, but actual facts to put before the shareholders. There are over 23,000 tons of reserves of ore which can be treated at a cost of 4*s.* 6*d.* a ton; the latest telegram from the manager announces a new discovery of fair-grade ore, and speaks of a great improvement in the general prospects; and the Government of Victoria have shown their faith in the property in a very unmistakable manner by making a grant of 730*l.* for the deep sinking of the mine. These three facts we regard as very encouraging, and we look forward to a long period of prosperity for the company.

NEWPORT ABERCARN.

THE shareholders in this company have certainly no reason to complain of their investment. They have had returned to them in dividends since the commencement of the company no less than 72½ per cent. on the ordinary shares, and 75 per cent. on the preference shares. This in itself is enough to make the mouths water of some of their less fortunate brethren, but that is not all. The company has started on the lower seam, and finds itself practically in possession of a new colliery, so that the dividends are likely to continue for a long time to come. The produce of this colliery has earned a world-wide reputation for its excellence as a steam coal, and will, no doubt, find a ready market for all it can turn out.

ANGLO-SAXON MINING SYNDICATE.

THE chief theme of Mr. Jeremiah Lyon's discourse at a meeting of this company on was the changeable character of the reef. At one time the company could and did pay 60 per cent. dividend, and then the crushings realised 5 ozs. 9 dwts. It was about this period that a correspondent who had been unfortunate in some of his other speculations wrote to us, saying, "Canuot we get directors for mining companies like those of the Anglo-Saxon Syndicate? Surely nature cannot have exhausted herself in the production of these gentlemen." Unfortunately these gentlemen, like the frail mortals connected with other enterprises, cannot control the nature that produced them, but are controlled by it, and at the present moment the company is passing through a zone of poor ground. When will it get out of it into rich ground once more? That is the problem which has exercised the minds of the directors, and which was the theme of discussion on Monday, but the most recent telegram does not point to any immediate change. At the same time those qualified to speak are not without hope that, in deeper sinking,

an improvement will shortly be met with. The directors, meantime, are doing all that men can do by development work of the most energetic and complete character to bring about a better state of things, and they have effected economies in all directions, commencing with the relinquishment of their own fees. They have the confidence of the shareholders, who know that the best is being done in the common interest.

HERCYNIA COPPER CO.

THIS company has been formed with a capital of 165,000*l.*, for the purposes of purchasing 39 copper and silver mining claims, together with the contiguous freehold property, machinery, &c., and for working the property on a large scale. The mines are situated in the Hartz Mountains, and comprise an area of about 10,000 acres. They are in close proximity to a railway station, thus affording easy means of transport; labour is plentiful and cheap, and coal is obtainable at 12*s.* per ton. Considerable work has been done on the property, and the reports are of an encouraging nature. The purchase price has been fixed at 125,000*l.*, of which 17,500*l.* is payable in cash, 67,500*l.* in ordinary shares, and the balance in cash or shares at the option of the directors. The capital is divided into 9,750 8 per cent. preference shares of 10*l.* each, and 6,750 ordinary shares of 10*l.* each.

THE BREWERS' AND DISTILLERS' CO₂ CO., LIMITED.

IT is well known that the gas companies derive very large profits from the utilisation of what they call their residuals. There is no reason why brewers and distillers should not do the same, particularly when they seem to have a process ready to their hand for the purpose. This was described by the chairman of Messrs. Arthur Guinness, Son and Co., Limited, at the last meeting as a process for the liquefaction and sale of the carbonic acid given off in the process of fermentation, and as likely to prove a "not insignificant source of revenue." The company is formed to do this business—in other words to acquire the patent rights for the collection and utilization of the carbonic acid gas (chemically known as CO₂) given off at breweries and distilleries during the process of fermentation, and which has hitherto gone to waste. From the character of the direction we are disposed to think much more favourably of the patent rights in questions than we should otherwise have done. By this process the gas is collected as given off, purified, liquified and stored in iron bottles for commercial use, and "especially applicable where a gas of great purity is required." The process has been investigated by scientific persons, and the report of Sir Charles Cameron which accompanies the prospectus will be read with interest and profit. We can quite understand that the demand for liquid carbonic acid gas should be enormous and such as to entirely revolutionise the manufacture of mineral waters. The fact that Messrs. Arthur Guinness Son and Co., Limited have taken these patent rights in hand on royalty will carry great weight with investors who are invited to subscribe to the capital of this undertaking, which is in 25,850 ordinary shares of 5*l.* each, of which 17,850*l.* are now offered for subscription; and 150 founders' shares of 5*l.* each, which will be entitled to one-half the profits of company in each year after payment of a dividend of 15 per cent. for such year upon the other shares of the company. The amount payable for the patent rights under the contract is 900*l.* in cash, 40,000*l.* in fully-paid ordinary shares, and 750*l.* in fully paid vendors' shares, and the balance in cash or shares, at the option of the directors. It may fairly be said of the prospectus, that it deserves the careful attention of investors.

THE MONEY MARKET.

CITY, FRIDAY EVENING.

AT length the upward movement in discount seems to have support, and the feeling is gaining ground that the period of cheap money has come to an end for the current year. The fall in rates has been so sharp, that a reaction is all the more probable now that the reserve of the Bank has been reduced by the loss of the Russian gold, and the demand for both Germany and Holland, which is likely to continue. The usual three months' bills are now quoted 1¼, 2 per cent., and four and six months' drafts at 2, 2¼ and 2½, 3 per cent. respectively. The glut of money continues, however, and is rather increased by the inactive state of discount bills being scarce on the one hand with little desire to take them by bankers, even at the higher rates, on the other. No fillip was even given to rates by the occurrence of the Stock Exchange settlement, and at call, or for a week, the quotations have not exceeded ½ and ¾ per cent. The Bank return, with over a million on balance taken for export, shows a loss of something equal, the total now being 15,962,000*l.* as compared with 11,676,000*l.* last year, but the proportion is only 1¼ less at 39 per cent., owing to the decreased liability in respect of public and private deposits. Private securities have further run off 300,000*l.* The exchanges have responded to the higher rates for discount, but the German rate still favours exports of the precious metal.

Little that is new can be added regarding Stock Exchange affairs. Business refuses to improve, and the bulk of this week's dealings have comprised small but incessant miscellaneous sales by those who have made losses elsewhere. Consols, after their late rise, have perceptibly fallen, and Rupee loans show weakness as well, but a feature in this connection is that the 4 per cent. Enticed is actually dearer than the 4½ per cent., and this decided preference is explained by the fact that the higher rated security is soon to be converted into 4 per cent. The settlement commenced on Monday and proved that the account open was phenomenally small. Exceedingly easy financial conditions prevailed throughout, and "backwardations" were almost

the rule than exceptions in English Railways and Foreign Bonds. Of course, all were not so scarce as to disappear contangoes, but rarely ever on good securities did the rate of continuation exceed 3 per cent., not even upon American Railroads. Internationals have not been strong owing to attempts by Paris to clear out in view of the strained financial condition of more than one foreign power. Home Railways have attracted more attention and fluctuated more than any other department. The dividends are not appearing rapidly and hardly one so far has given satisfaction. The South Eastern Co. pay 1 per cent. less than last year, as do the Brighton Co., but the latter have provided 23,000*l.* from revenue towards the cost of repairing their bridges. The Metropolitan lines can pay $\frac{1}{4}$ per cent. per annum more, and this gratifying result has maintained the underground lines. The Southern passenger stocks are higher, bar South Eastern, but the Scotch and heavy descriptions are weaker, despite good investment buying. Mexican Railways are very flat upon poor traffics, while Canadian hold their own. United States Railroads have shown irregularity, and partial depression, for the Denver Co. has passed its preferred dividend, and the Norfolk and Western may do the same it is feared. Texas, Pacific, Louisville and Atchison were nevertheless well bought. River Plate Banking shares are down on adverse rumours, and some are unsaleable. Breweries and Miscellaneous have fallen. Trusts, however, tended upward.

Discount to-day was more freely quoted, $1\frac{1}{2}$, 2 per cent., dated only short three months' bills being taken at anything else, but money at call was still superabundant at $\frac{1}{2}$, and loans for a week at $\frac{3}{4}$ per cent. continued difficult to place the capital offering, including the half-year's dividend money of the various great railway companies, which, however, will be mostly withdrawn by the middle of August, when there will be some hope for relief from the present glut.

A small amount of 13,000*l.* in gold was received at the Bank. Bar silver has receded $\frac{1}{4}$ to 46*l.*, and Rupee Paper relapsed $\frac{3}{4}$ per cent.

The Stock and Share Markets have further receded, and the more definite rumours regarding River Plate Bank, coupled with a heavy fall in the shares and a disappointing Great Eastern Railway dividend. The company for the half-year propose to pay $1\frac{1}{2}$ per cent. per annum and to carry over 5,000*l.*, which compares with 2 per cent. and about 30,000*l.* carried over this time last year. The stock has fallen 2, and with the exception of South Eastern, Hull and Barnsley and Chatham Preferred which were supported, most other railway stocks are weaker, Brighton "A" included—though the latter at one time was in demand on a continuance of satisfactory traffics. Consols fell to 95 $\frac{1}{4}$, $\frac{3}{8}$, par money, and all Indian securities were flatter. Foreign bonds have fallen, and the movement is most important in Uruguay and Argentine Sterling loans, which were considerably offered on the banking trouble referred to. Canadian and Mexican railways have fallen, and sales of American railroads led to a general relapse in that department as well, the leading stock being Denver Preferred, which receded nearly $\frac{1}{2}$ to 45 $\frac{1}{4}$. Miscellaneous and Nitrates were dull, but Salt Union recovered to 5 $\frac{1}{2}$, because the June tonnage amounted to 158,600 tons, against 157,900 in 1890. The chairman, Lord Thurlow, is about to resign.

Annexed are the final quotations to-day:—Consols Account, 95 $\frac{3}{8}$, 95 $\frac{1}{2}$; Egyptian Three-and-a-Half per Cent. Preference, 91 $\frac{1}{2}$, 92 $\frac{1}{2}$; Egyptian Unified, 96 $\frac{3}{8}$, 96 $\frac{1}{2}$; French Four-and-a-Half per Cents., 104 $\frac{1}{4}$, 104 $\frac{1}{2}$; Hungarian, 89 $\frac{3}{8}$, 89 $\frac{1}{2}$; Italian, 90, 90 $\frac{1}{4}$; Mexican, 84 $\frac{1}{2}$, 85; Peru Corporation, 84, 84 $\frac{1}{2}$ per cent.; Peru Preference, 22 $\frac{1}{2}$, 23 $\frac{1}{2}$ per cent.; Russian, 1889, 97, 97 $\frac{1}{2}$; Portuguese, 42 $\frac{1}{4}$, 42 $\frac{1}{2}$; Spanish, 72 $\frac{3}{4}$, 73; Turkish, 1871, 95 $\frac{3}{8}$, 96 $\frac{1}{4}$; Turkish Defence, 93 $\frac{1}{2}$, 94; Caledonian Railway, 115 $\frac{3}{8}$, 115 $\frac{1}{2}$; Great Eastern, 89 $\frac{3}{8}$, 89 $\frac{1}{2}$; Great Western, 159 $\frac{3}{8}$, 159 $\frac{1}{2}$; Brighton "A", 143 $\frac{3}{8}$, 143 $\frac{1}{2}$; North Western, 173 $\frac{3}{8}$, 173 $\frac{1}{2}$; Metropolitan, 83, 83 $\frac{1}{2}$; Metropolitan District, 29 $\frac{1}{4}$, 30; Midland, 153 $\frac{3}{8}$, 153 $\frac{1}{2}$; North British, 40, 40 $\frac{1}{4}$; North Eastern, 155 $\frac{3}{8}$, 155 $\frac{1}{2}$; South Eastern "A", 80 $\frac{3}{8}$, 81 $\frac{1}{2}$; Grand Trunk, 9 $\frac{1}{8}$, 9 $\frac{1}{4}$; Grand Trunk First Preference, 62 $\frac{3}{8}$, 63; Grand Trunk Second, 42 $\frac{1}{4}$, 42 $\frac{1}{2}$; Grand Trunk Third, 22 $\frac{3}{8}$, 23 $\frac{1}{2}$; Canadian Pacific, 84 $\frac{3}{8}$, 84 $\frac{1}{2}$; Denver, 15 $\frac{3}{8}$, 15 $\frac{1}{2}$; Erie, 19 $\frac{1}{4}$, 19 $\frac{1}{2}$; Milwaukee, 66, 66 $\frac{1}{4}$; Lake Shore, 112, 112 $\frac{1}{4}$ *xd*; Louisville, 72 $\frac{3}{8}$, 73 $\frac{1}{2}$ *xall*; Atlantic First, 30 $\frac{3}{8}$, 30 $\frac{1}{4}$; Ontario, 16 $\frac{3}{8}$, 16 $\frac{1}{2}$; Ohio, 18 $\frac{3}{8}$, 19 $\frac{1}{4}$; Norfolk and Western, 49 $\frac{3}{8}$, 50; Reading, 14 $\frac{3}{8}$, 14 $\frac{1}{2}$; Reading Bonds, 79, 80; Union Pacific, 44, 44 $\frac{1}{4}$; Wabash Preference, 23 $\frac{1}{4}$, 23 $\frac{1}{2}$; Ottoman Bank, 12 $\frac{3}{8}$, 12 $\frac{1}{2}$; Anglo-Telegraph, 45 $\frac{1}{4}$, 45 $\frac{1}{2}$; National Telephone, 43, 5*xd*; Hudson's Bay, 15 $\frac{1}{2}$, 16; Suez Canal, 108, 109; Guinness, 322, 324; Allsopp's Ordinary, 25, 27; Bryant and May, 14, 14 $\frac{1}{2}$.

RUSSELL MINES CO., LIMITED.

THE directors' report and balance-sheet to June 30 last have been issued with commendable promptitude. The company was incorporated on Sept. 27, 1889. The works have been considerably interfered with by the severity of the past two winters. The following work has, however, been done:—Hamilton's shaft, 12 ft. by 5 $\frac{1}{2}$ ft., has been completed from surface to 3 fms. below to 80-fm. level, and the adit extended 195 fms. Besides this several short cross-cuts have been driven from the old workings to the new shaft, about 20 fms. The whole length of the adit (nearly 600 fms.) has been laid with permanent tramway, and Hamilton's shaft fully equipped with pumping gear, ladder and skip roads, and made quite ready for immediate sinking by boring machinery. Capt. George, the manager, in his report expresses his firm conviction as to the value of the property. Further capital is, however, necessary to continue the operations on a scale warranted by the prospects, and a special meeting will shortly be called to take this matter into consideration.

GENERAL PHOSPHATE CORPORATION.—William Crookes, Esq., F.R.S., has joined the board of this corporation.

THE Ceara Harbour Corporation, Limited, notifies that dividend warrants for interest at the rate of 6 per cent. per annum for six months ending June 30, 1891, on the shares have been posted.

DE LAMAR.—The directors have declared an interim dividend of 9*d.* per share for the period ending June 30 last. The transfer books will be closed from 20th to 24th inst. inclusive, and dividend warrants will be posted on 28th inst.

THE death is announced of Mr. James Henry Murchison, from an attack of pneumonia. He was well-known in connection with mining affairs, and was secretary of the Tankerville Co. in the days of its prosperity, as well as later still when that prosperity had departed.

COMMERCIAL NOTES.

METALS.

THE Metal Market has been fairly active during the current week. Bank rate remains $2\frac{1}{2}$ per cent. Bar silver improved to 46 $\frac{1}{4}$ *d.*, and closes at 46*d.*

COPPER has been easier. G.M.B. warrants sold on Monday at 55*l.* cash, and 55*l.* 12*s.* 6*d.* three months, but have since declined to 53*l.* 15*s.* cash, and 54*l.* 5*s.* three months, improving to 54*l.* cash and 54*l.* 10*s.* three months. To-day's prices are 54*l.* 2*s.* 6*d.* cash and 54*l.* 12*s.* 6*d.* three months. The visible supply for the half month is given as 57,814 tons, against 57,325 tons on July 1. Deliveries for the fortnight, 3,365 tons. We quote English tough 58*l.* to 59*l.*; best selected, 59*l.* to 60*l.* 10*s.*; strong sheets, 67*l.* to 68*l.*; India sheets, 62*l.* 10*s.* to 63*l.*; yellow metal, 5 $\frac{1}{2}$ *d.* to 6 $\frac{1}{4}$ *d.*; ore, &c., 9*s.* 9*d.* to 10*s.* 9*d.* per unit.

TIN has been quiet. Straits improved from 92*l.* to 92*l.* 10*s.* cash, but eased off to 91*l.* 15*s.*, improving again to 92*l.* 2*s.* 6*d.*, and closed yesterday at 91*l.* 17*s.* 6*d.* to 92*l.* cash. Three months has realised 2*s.* 6*d.* to 5*s.* over spot, and Australian 10*s.* premium over Straits. To-day's tin prices are 91*l.* 17*s.* 6*d.* cash, and 92*l.* 2*s.* 6*d.* three months. The Straits shipments for the first half of July are given as 100 tons to London, 900 tons to America, and 30 tons to continent. Deliveries from warehouse have been small, 368 tons; English ingots, 95*l.* to 95*l.* 10*s.* The Dutch market has been steady; banea, 45 $\frac{1}{2}$ *s.*; billiton, 45 $\frac{1}{4}$ *s.*

TINPLATES quiet, and ordinary coke quoted 13*s.* 6*d.* to 14*s.* Liverpool.

SPELTER steady at about 23*l.* 15*s.* for ordinary brands ex ship here.

LEAD closes firm. We quote soft Spanish, 12*l.* 8*s.* 9*d.* to 12*l.* 10*s.*; soft English, 12*l.* 10*s.* to 12*l.* 15*s.*; L. B., 13*l.*; sheets, 13*l.* 10*s.* for export and 14*l.* home trade.

QUICKSILVER steady. Rothschild's price 7*l.* 15*s.*; seconds, 7*l.* 14*s.* to 7*l.* 15*s.*

ANTIMONY dull. Hallett's price for export to America is 48*l.* Ordinary brands and delivery, 45*l.* to 46*l.*

DIVIDENDS DECLARED AND ANNOUNCED FOR WEEK ENDING JULY 18.

Alliance Bank	8 per cent.
Alliance Financial Corporation	10 per cent.
Brighton Railway	3 $\frac{1}{4}$ per cent.
Birmingham and Aston Trams	10 p.c. & 2 <i>s.</i> p.s. bonus.
Bradford Old Bank	1 <i>l.</i> 2 <i>s.</i> 6 <i>d.</i> per share.
Bryant and May	7 <i>s.</i> 6 <i>d.</i> per share.
British Steamship Investment, Preference	6 per cent.
British Steamship Investment, Deferred	5 per cent.
Bristol Brewery	16 per cent.
Belfast Street Trams	7 $\frac{1}{2}$ per cent.
Belfast and Northern Counties Railway	5 per cent.
City Bank	11 per cent.
Ceara Harbour	6 per cent.
Central Bank of London	10 per cent.
Cork, Bandon and South Coast Railway	3 per cent.
Charles Dewynter	10 per cent.
Charles Ogleby and Co.	7 per cent.
Church of England Insurance	12 per cent.
East End Dwellings	5 per cent.
Founders' Stock and Share Trust	3 per cent.
Foster, Porter	8 <i>s.</i> 6 <i>d.</i> per share.
Globe Telegraph Trust	4 <i>s.</i> 6 <i>d.</i> per share.
General Life and Fire	12 per cent.
Goole Steam Shipping	6 per cent.
Glamorganshire Banking	7 $\frac{1}{2}$ per cent.
Halifax Commercial Banking	10 <i>s.</i> per share.
Hadley and Co.	10 per cent.
Hotel Victoria	7 per cent.
Imperial Colonial Finance	2 $\frac{1}{2}$ per cent.
Land Securities	4 per cent.
Lloyd's Bank	12 <i>s.</i> per share.

South Eastern Railway	2 $\frac{1}{4}$ per cent.
Third Scottish American Trust	7 $\frac{1}{4}$ per cent.
United States Debenture, Ordinary	7 per cent.
United States Debenture, Preference	5 $\frac{1}{2}$ per cent.
Victorian Farmers Loan and Agency	10 per cent.
West India and Pacific Steam	10 <i>s.</i> per share.

MR. MITCHELL HENRY, D.L., J.P., has joined the board of the San Jacinto Estate, Limited, of California.

REPORTS OF MEETINGS.

MOUNT LEYSHON (QUEENSLAND), LIMITED.

TURNOVER OF £23,320—HEAVY OUTLAY ON MACHINERY—30,000 TONS OF ORE IN SIGHT—FREE VIEWS OF A SHAREHOLDER.

THE fourth ordinary general meeting was held at 7, Drapers' Gardens, on Thursday.

Mr. A. W. Stirling, (chairman of the company) presided.

Mr. H. R. LEWIS (secretary) read the notice of meeting.

FORECASTS REALISED.

The CHAIRMAN: Gentlemen, I think, perhaps, you will expect me to say a few words to you upon the report. On the first paragraph it does not occur to me to make much remark. We have told you that the anticipations of last year have been fulfilled. I had the pleasure of being in the chair on that occasion, and remember telling the shareholders that we certainly should pay them one dividend, and probably two, but that would depend on the money to be spent on increased machinery. We have increased machinery, and yet have paid two dividends, and so every anticipation I held out then has been realised. The next paragraph deals with the amounts of ore crushed and yield of gold since we started crushing with our own battery at Mount Leyshon. You will have noticed that there is a steady increase, and last year we turned out 16,000 tons of a yield of 9,154 ozs. This year we have crushed already 9,340 tons for a yield of 3,750 ozs. The yield, as will be explained later on, is slighter this year than it was for some time last year, but the tonnage is rather larger. The output has kept pace with that of last year, and from advices received there is not the smallest reason to anticipate that the output will not continue to be kept up. Last year, when I had the pleasure of addressing a meeting of shareholders, we were in treaty for a plant, consisting of two Huntington mills and other crushing appliances, within two or three miles of our own mines, which we had hoped to secure as an addition to our own battery. The negotiations fell through because we offered a certain price, and the vendors were not content to accept it. I am not sorry, because I notice a report from Pigg's Peak Co., where

AFTER HAVING ADOPTED HUNTINGTON MILLS I BELIEVE THEY ARE GOING TO THROW THEM ALL OUT.

(Hear, hear.) We thought, perhaps, on the whole, it was better to stick to stamps, and we bought during the year the whole of the stamps, plant and mill of the Disraeli Mine at the price you are told. We thought at the time, and still think, we made an extremely good bargain.

BIG OUTLAY.

The stamps, plant and engine, and erecting, cost really 34,000l. This is within the mark, but, of course, a large proportion of that went for erection, and it is rather hard to say how it should be apportioned. The plant landed on the ground cost Disraeli Co., apart from the expense of putting up 15,000l., and we bought it from them for 2,750l. We had to pull it down, remove it, cart it away from the site of the Disraeli Mine mill to our own site 23 or 30 miles off, and when we came to pull it down we found that a considerable portion of what had been looked upon as sound timber would have to be replaced, for, though it was all right where it stood, it was not fit to be re-erected. Just after they pulled down the Disraeli mill the wet season came on earlier than usual in that part. Rain begins ordinarily on New Year's Day, and for that we had reckoned, but on this occasion it began in Nov. Therefore, we were stuck with the carting, and these causes, combined with the new timber, &c., operated in such a way that instead of its being at work as we hoped in the early part of Mar. we only now have advices that 10 of the 20 stamps were at work, and that the other 10 will be at work soon. (A VOICE: How soon.) I cannot tell you. Our manager refuses to give absolute dates. He says it is difficult to do so in a country where a man will go to work for you until he gets a better job, and then will leave you at half-an-hour's notice. Ten stamps are at work, and ten more will be at work very shortly. As far as

THE WATER SUPPLY

is concerned those who have been members of the company since the early days will recollect the great trouble there always was in supplying the battery with water. We have had a very wet season, and the manager assures us that all trouble for the present is at an end, and we have taken steps that it cannot occur again. It is perhaps unfortunate that we got tired of waiting and that we bought 1½ miles of piping. Before they were on the ground to increase the water supply from Clarke's branch of the Broughton river it began to rain. We had put the pipes together ready to discharge water into our battery, but have not used them, because we have had steady rain ever since. I do not think anybody can blame the board or manager for it. Some day, as sure as we are here and you are there, this piping will be wanted, because in that country we never can depend for a long period upon continuous water supply from rain. At present we have an ample supply without touching that from the Broughton River.

WE HAVE IN SIGHT OVER 30,000 TONS

and every yard he drives increases the supply. He tells us that high up the mountain he finds the ore to be of pretty nearly the same class as it is in the main workings below. He does not estimate, in talking about 30,000 tons, more than is exposed, and ready to be cut away when wanted. There is no sinking going on at present, and the supply is steadily increasing above what is used in the battery. The last letter I received from Charters Towers, yesterday, states the face of the drift is 50 ft. wide. There is a paragraph in the report which I think I shall say a word about. Owing to the great width of the lode there has been considerable difficulty in supporting the mine. Ever since we have been at work it has been in the minds of the board and general manager that there is considerable difficulty in supporting the ground when we have taken from 60 to 80 ft. of the quartz away. We had always managed to do it by means of pig styes and timber, and the mining inspector had at various times expressed a doubt as to whether the system we pursued in keeping up the stoped out ground was a proper

one. He had never done much more than grumble, and we had never had a serious accident, but just after Christmas he came and said

HE WOULD ALLOW IT NO MORE.

The result was that we had to abandon a certain portion of the mine, and for some months did nothing but crush stuff on the surface. By degrees we filled in some of the old grounds which we thought had been successfully timbered, and as we went along we secured the ground, and so are getting back to better parts of the mine, and the last telegram says that the crushings have almost returned to the best yields the mine made during the course of last year. Our manager assures us continuously that it is only a question of getting back to the good face which he hopes to do by degrees. I think he must pretty well have got back into most of them by now. Out of the profits of the year we paid you two dividends and spent a certain sum upon the new plant. We propose to go on paying for it out of current profits—a principle, I think, that will be approved by the shareholders. We might have come to you and asked you to raise 5,000l. worth of debentures, which would have paid off the whole of this costly new plant; but we have thought it better not to increase the capital at all, but quietly to pay for this, and then we shall have a battery of 40 heads of stamps, and complete water supply, both from the dams and Clarke's branch of the Broughton river, without an increase to the capital charges, and I believe the shareholders will approve the policy, and reap considerable benefit from allowing it to be carried out. Roughly, the battery will cost 5,000l. altogether. A portion of it was paid for last year, a portion this, and a portion is in course of being paid for now. Your board has done all that was possible to assist the mine in paying for the new plant. We have drawn no fees even, because we wished to put all our profits towards paying for the work as it went on, and I feel sure the shareholders will assist us by being not too anxious for dividends at present, until we get the 40 stamps at work, and the bank debt of 1,000l. paid. We shall have double the capacity we had a year ago, when we were able to pay you 1s., and carried forward something besides. We have thought it better to send out an assayer and member of the Institute of Mining Engineers—a gentleman of scientific attainments, who is our general manager's assistant, and who keeps a check upon the ore and battery, and who melts our gold and generally does the scientific work for the mine. We thought that with a larger output it was time we had a scientific and proper check both upon the quality of the ores and the tailings after passing through the mill, and that our gold should be melted and assayed by our own man, and the bank is perfectly willing to buy on his assay. Mr. Dowden is also in a position to assist Mr. West in the general management, especially when he is away. Many shareholders have expressed the desire that something of the kind should be done, and I think we shall all reap the advantage of his going out. As to the future, there is every reason why the mine should be most prosperous. From the reports we receive, both from the committee and the general manager,

THERE SEEMS TO BE NO LACK OF ORE.

It is not of a high class, and I do not expect it ever will be. Some of my colleagues expect it is going to be high class, but I believe we have practically unlimited ore of ½ oz. to the ton. With 40 heads of stamps, automatic feeding and saving money, we shall be able to make a reasonable profit.

Mr. SKELTON: You have had high-class ore before—why not again?

The CHAIRMAN: We sold only 5 tons at 79l. per ton, but have never had any great quantity. Whether we can promise to pay you a dividend this year or not I do not know. It depends first on whether we succeed in getting the same yield as last year—that is to say, whether the falling off is recovered and whether the other 10 heads will get to work very soon. If we were getting 10 dwts. stuff we could promise you a dividend, with the extra machinery at work, after paying our debts, but I should be disappointed if we had not something for you at the end of the year after paying all expenses. The London charges seem, compared with other mines, to be extremely small—under 8 per cent. of the total expenditure. The total expenditure, including London, is about 17s. 6d. per ton, and when we get the output increased we hope to reduce even that. The gold which I told you last year was of about the value of 2l. 10s. has yielded 2l. 11s. I move the adoption of the report and accounts.

Sir ROBERT HARLEY, K.C.M.G., C.B., seconded the motion.

Mr. FAWELL: Are you foregoing your fees?

The CHAIRMAN: We have not drawn them, but are leaving them to assist the company. We want to pay the bank before paying ourselves. The present rate of payment is 400l. a year, and we wish you to make it 450l., as it has been necessary to appoint a chairman, and the work is heavy sometimes, as many as 10,000 shares passing through the books in a fortnight.

A SHAREHOLDER FREELY EXPRESSES HIS VIEWS.

Mr. FAWELL: I think, with a return of only 23,000l., seven directors are too many.

The CHAIRMAN: You are one of those gentlemen who like to get work done for nothing.

Mr. FAWELL: Certainly not. But I am far from considering 400l. nothing.

The report was unanimously adopted.

The CHAIRMAN moved the re-election of Sir Robert Harley, and said that, though it might be possible to carry on the company with five directors, it was not exactly the right sort of thing to cashier any of the present board, but the directors had promised not to fill up any vacancies that might occur. Last year they elected two gentlemen who desired to be directors, one of them holding 12,000 and the other 10,000 shares.

Mr. SIMPSON seconded the motion, which was carried, as was also a resolution confirming the re-election of Mr. Vickers, who had been three months absent without permission. The auditor, Mr. James Harris, also was re-elected.

FEES TO BOARD.

Gen. STEWARD: I wish to propose that the sum of 450l. be allocated for the directors' fees. That is an extra amount of 50l. I am a very large shareholder in this company, and, with my children, hold 7,000 shares. I have followed this company very closely, and think the directors deserve the small fees we vote them and the 5 l. in addition. There is a considerable amount of work to do. If you want men of standing, you must have a large board so as to enable you to form a

quorum, for they have other things to attend to besides this company. If, however, you want men of the guinea-pig type, who only attend for the sake of their fees, then possibly you will have a smaller board, but your work will not be so well done. The only way to get men who have a large stake in the company is to have a large board, and pay them a moderate amount for their services. I have great faith in the future of this company. The directors have taken care of our interests, because in doing so they are taking care of their own.

Mr. SKELTON seconded the motion.

AN AMENDMENT LOST.

Mr. FAWELL: I move that it be deferred until the shareholders are receiving 5 per cent.

The CHAIRMAN: They did receive 5 per cent.

Mr. FAWELL: They are not receiving it now, and the present is an unfavourable time to propose an increase. I think if they wait until the shareholders are getting a dividend of 5 per cent. they ought to be perfectly satisfied. I move that as an amendment, and I am, moreover, of opinion that this matter ought not to have been brought forward without notice to the shareholders. I think it is out of place to propose an addition to the directors' fees when the shareholders are getting nothing. I, therefore, move my amendment.

The CHAIRMAN: Unpaid work is never properly done. I know of no mining company in London with a capital like this, and such an outturn where the London expenses, including the fees to the board, are under 1,000*l*.

A SHAREHOLDER: I think that fact is very creditable to the board.

The amendment was not seconded, and the original motion was carried.

The proceedings ended in the usual way.

THE RIPANJI QUICKSILVER AND SILVER MINES CO., LIMITED.

A VALUABLE PROPERTY THAT WILL BE SAVED BY A LITTLE TIMELY AID FROM ITS SHAREHOLDERS—A RE-CONSTRUCTION SCHEME ARRANGED TO SUIT THE VIEWS OF THE MEETING—MR. CANDLER DESCRIBES THE SATISFACTORY OUTLOOK OF THE MINES.

AN extraordinary general meeting was held at 3, Gracechurch Street, London, on Monday, July 13, 1891, for the purpose of considering, and, if thought fit, passing the subjoined resolutions, or a modification thereof:—

RESOLUTIONS.

(1.) "That the company be wound up voluntarily under the provisions of the Companies' Acts." (2.) "That Mr. Moses Atherton, of 12, King Street, Liverpool, be and he is hereby appointed liquidator for the purposes of such winding-up." (3.) "That the liquidator be, and he is hereby authorised to sell and transfer the business and property of the company, with all its liabilities, to a company about to be incorporated under the Companies' Acts with the name of the 'Ripanj Quicksilver and Silver Lead Co., Limited,' and to receive in compensation for such sale and transfer 85,000 shares in such company of 1*l*. each, with the sum of 14*s*. per share credited as paid up thereon."

Mr. Clifton Shield

(the chairman of the company) presided.

Mr. M. ATHERTON (secretary) read the notice of meeting.

The CHAIRMAN: Gentlemen, there will not be much occasion for me to occupy you very long to-day, because on previous occasions I have told you all I know about the company and its prospects. You know as much as I do about the company's position. I may remind you that, at the request of the committee, we sent out Mr. Candler, who is a mining expert of very considerable experience, and you have had his report in your hands. Anything I might say technically about the company you may dismiss from your minds as not worth attention, but I think you must give serious consideration to what Mr. Candler says, and he has come away with the impression that

THE PROPERTY IS WORTH SAVING.

We, as directors, have done all in our power to save it, first by issuing deferred shares, which met with no response, and now by our last attempt, namely, re-construction, which means the forming of a new company to buy the assets of the old on the basis set forth in the resolution you have heard read to-day. This re-construction, if carried into effect by the shareholders, will place something like 25,000*l*. to the credit of the company for further working capital, only a very small proportion of which we intend to call up for the present. Before proceeding to form a new company and offer you the new shares we thought it necessary to appeal to the shareholders as to what part they would take in the re-construction, and at the same time we set out the bases of that re-construction.

THE BOARD AGREED TO TAKE 10,000 OF THE SHARES,

but up to the present time we have had only applications or promises for 5,000 shares in addition. There is to be an adjourned meeting if we pass the resolutions, in order to confirm them, and it is probable that between now and then we shall have much more liberal support. At any rate, I think that all the evidence we have before us is that the company is worth saving. These are bad times, there is no question about it. In ordinary times we should have no difficulty in raising the money, but at the present moment you know how difficult it is to do so. We have to-day promises of subscription to 15,000 shares, but that will not do, as it only gives 4,500*l*., and it would be absolutely unjust to allot shares unless we can secure the amount of money requisite to carry out the objects of the company, as foreshadowed by Mr. Candler. In asking you to pass the resolu-

tions to-day I wish to tell you frankly that the promises are not yet sufficient, but I hope between now and the adjourned meeting for confirming these resolutions we may succeed in getting the requisite support. It depends upon the shareholders whether we can carry through the re-construction scheme or not. If we do, I think from the statements Mr. Candler has made there is every possible chance of good returns.

RE-CONSTRUCTION AND ITS ALTERNATIVE.

If we do not re-construct, then the money invested in the property up to the present will be lost. Therefore, I really trust that an effort will be made by the shareholders to bring grist to the mill and enable us to carry through effectively this re-construction scheme. Before putting the resolutions to you I would like to ask if you have any questions to put. I have heard remarks as to the basis of re-construction not being suitable. Well, gentlemen, I cannot suggest any better with fairness to the shareholders. The sore point is that more money is required. We have taken the 85,000 shares, and say that every shareholder in the old company may, if he chooses, subscribe for one share with 6*s*. liability—that being to provide the capital necessary. But I have heard gentlemen say—Why ask us to take a share with 6*s*. liability when we can buy an ordinary share for 1*s*. or 2*s*. in the market? That argument is unsound, because without fresh capital those shares are worthless. It is re-construction that will make them valuable. Once it is known that re-construction is a success, and that the company is possessed of the requisite working capital, your shares will have a very different real and market value. (Cheers.) Value your shares at nothing at the present moment, but excepting as giving you the right of participating in the re-construction, for that is their real value only. (Cheers.) I shall be happy to give any further information that may be required. (Cheers.)

A SHAREHOLDER: What are the liabilities?

The CHAIRMAN: 1,552*l*. 14*s*. 11*d*. owing to your bankers for advances.

A SHAREHOLDER: Would not 4*s*. be sufficient?

The CHAIRMAN: 2*s*. would be sufficient, according to Mr. Candler, to test the mine, but not to carry out our whole scheme. If we proved the mine valuable we should have to come to you again.

A SHAREHOLDER: Is there a fixed scheme for working the property?

The CHAIRMAN: Yes; it is detailed in Mr. Candler's report. It would require 20,000*l*., and 6*s*. per share would provide 25,000*l*. if all the shares were taken.

VIEWS OF MR. CANDLER.

Mr. CANDLER: The liability of 6*s*. has been adopted on my advice, and, therefore, it is only right you should have an explanation from me. Your property is very extensive, and embraces not one but really a series of mines. There are practically five or six places where mineral has been discovered, the one from the other 2 or 3 miles apart, and although we are not going to spend money everywhere, the point that struck me is that if you only make your liability 4*s*. you will have the possible expense of raising additional money again. The directors have told you they do not intend to call up more than 2*s*., for nine months to come. 8,000*l*. or 9,000*l*., according to my calculations, as put forward in my report, would put the property in a good position, but at the end of that time we should have to face the question, whether, having secured the ore (and there is no doubt about it), we should send it to Germany or Swansea for smelting, or put up plant and do it ourselves on the spot. It was to develop the mine and put up the plant that my estimate of 20,000*l*. was given, but if you like to do away with the smelting branch for the present and ship the ore, there is no objection to your making the liability only 4*s*.

A SHAREHOLDER: Is there no machinery?

Mr. CANDLER: Not for smelting. There are one or two engines. The company have opened up deposits of lead and zinc and cinnabar in different parts of the mines.

The CHAIRMAN: As far as the expenditure of money is concerned, and having regard to what has been secured, and the amount of work carried out, I think we may claim favourable comparison with any other similar mining company. But I take it that the work done is not sufficient, and we never had money to supply the machinery necessary.

A SHAREHOLDER: I think it was stated at the first meeting, when the former agent attended, that the property

COULD NOT BE MADE A SUCCESS UNLESS THE ORE WAS CONCENTRATED,

and it is impossible to do that without machinery. If you only subscribe 2*s*. there will be failure on the face of it.

Mr. CANDLER: I have considered all this, and in speaking of 2*s*., probably half the ore can be hand picked, and I think we shall probably be able to realise a certain sum on that. Still, unless you put up the concentrating plant, you cannot expect the profits you would otherwise receive.

THE CONDITIONS ARE VERY FAVOURABLE FOR SMELTING.

You can get fuel; you have a railway station close to the property. You have limestone for fluxing about half a mile away, and you have large deposits of iron pyrites, which with a little roasting, makes a valuable flux for lead ores. You have every means for smelting cheaply, and that being so, you can turn your ore into pig lead, and ship it to any market you like. Those are matters which have to be considered by the management afterwards, and that is why I have fixed upon the large amount of 20,000*l*. At the same time 2*s*. will develop and open the mine, and show what you have.

Mr. DAVID: I am afraid that the call of 6*s*. will frighten people, and if you do not get sufficient help the scheme will fall through.

SHAREHOLDERS WILL NOT BE DECEIVED.

The CHAIRMAN: I do not wish to frighten shareholders, but I have a still stronger desire that they should not be deceived. (Loud cheers.) We have said we will only call up the money by degrees.

Mr. DAVID: You speak only of the first 2*s*., and it would meet the views of many if you undertook merely to call the remainder a shilling at a time at separate dates.

Mr. CANDLER: I could go further, and say that after spending

10,000% on the property there would be no necessity to make any further call until the shareholders gave their decision in general meeting.

WHAT 4s. WOULD DO.

4s. would produce about 17,000%, and I think that sum would not only develop the mines, but enable us to put up a small concentrating plant, but I cannot bind myself to that statement positively.

The CHAIRMAN: If it is the feeling of the meeting, after the explanations I have given, that in order to make re-construction thorough and profitable, something between 20,000% and 25,000% will be required for all purposes, including smelting plant (which I look upon as most important), and which from the first I have always considered necessary—I say, if it is the feeling of the meeting that we should limit the calls to 4s., I shall be quite ready to agree to that. I do so, because 4s. will suffice, in Mr. Candler's opinion, to show such results that you should not have much difficulty in raising the remainder. The third resolution would have to be altered in that sense.

A SHAREHOLDER said that although he had paid as much as 6% 5s. per share for his holding he still had courage enough to go on, believing that success would ultimately attend their efforts.

VIEWS OF A MEMBER OF COMMITTEE.

Mr. BARRETT: I was appointed as one of your committee to inspect this property, and you may therefore like to hear a few remarks from me. I can assure you that the committee are perfectly decided on this point that you have the ore, and that what you want is the capital to develop it. I have accepted a seat on the board, with the liabilities incurred therewith, and have since attended every meeting, and have gone as carefully as I possibly could into the whole of the details of the property. I am quite sure in my own mind if we can rely on the reports we have received, not only from Mr. Candler, but from other engineers, that the ore is there and may be developed in order to pay dividends, but in fixing the liability at 6s. we went upon the prudent plan of having a little in reserve, which is especially desirable in a mining company. It was, therefore, the recommendation of the committee that the capital should be 25,000%, but at the same time we think that 4s. would show you such results that there would be no difficulty in raising whatever else might be required later on. Unless this capital be subscribed this property, although a good one, will simply be given away. That is my opinion as a representative of the shareholders, and it is a question for you to decide. I, for my part, am willing to take up a greater number of shares than I at present hold, and pay the liability on them, and if the shareholders do that generally I feel convinced that in 12 months they will be worth more than double their par value.

The CHAIRMAN: We are now dependent on the support of the shareholders. The board have taken all their shares, and may take more, but they cannot be expected to do everything. The board will agree to the liability being reduced to 4s. per share, whilst acknowledging that this will not produce the whole of the capital required to carry out in its entirety Mr. Candler's method of dealing with the property, because they are advised, and believe, that the amount to be thus raised will suffice to put the company into such a position that the additional sum required should be easily secured hereafter. We will alter the resolution in that sense.

WARNING TO SHAREHOLDERS HOLDING BACK.

I must point out that the shares are worth absolutely nothing except for the purpose of re-construction, and that therefore those who do not join may regard their shares as practically forfeited. Shareholders may apply for more than their proportion, as it is certain that some shareholders will not take up the proportion they are entitled to. This happens in all schemes of re-construction.

Mr. CANDLER: It is urgent that the re-construction should be carried through with the least possible delay, because, although the mines can be worked all the winter, you cannot a little later in the season get the machinery we shall require across the bad roads.

Mr. DAVID seconded the resolutions with the liability fixed at 4s. per share, which were then put to the meeting *en bloc*, and carried unanimously.

The proceedings of the meeting terminated with a vote of thanks to the chairman.

NEWPORT ABERCARN BLACK VEIN STEAM COAL CO., LIMITED.

SHAREHOLDERS HAVE HAD RETURNED TO THEM THREE-FOURTHS OF THEIR CAPITAL, AND COLLIERIES RECEIVE BETTER WAGES—STRIKING OF THE LOWER SEAM.

THE nineteenth ordinary general meeting of the shareholders was held at the company's Offices, No. 12, St. Mary Axe, on Tuesday, "to receive the balance-sheet of the income and expenditure for the past year to Mar. 31 last, showing a statement of the assets and liabilities of the company, with a report of the state and prospects of the property and works of the company; to declare a dividend; to elect two directors in the place of Mr. Thomas Bell and Mr. W. A. Soames, who retire in rotation, but, being eligible, offer themselves for re-election; to elect an auditor in the place of Mr. W. E. Bagshaw, who retires, but, who being eligible, offers himself for re-election, and to fix his remuneration; and for general purposes."

The Right Hon. Henry Cecil Raikes, M.P. (chairman of the company), presided.

Mr. ARTHUR R. MOLLETT (secretary) read the notice of meeting.

The CHAIRMAN: Gentlemen, it is now my duty, and an agreeable one it is, to move the adoption of the balance-sheet and the report, which have now been in your hands for some time. I am happy to think that it is really unnecessary to add much to what appears in the report, which, I hope you will agree with me in thinking, is on the whole the most satisfactory one that the shareholders have received. In connection with this undertaking, I need only supplement it by

referring to one or two small facts which have occurred since this report went out. Whereas we state here we have 260 cottages, the company now possesses 272, as 12 more have been finished since the report was drawn up. The cost of these cottages amounts to about 30,400%, and the rent now received, after deducting for repairs, ground-rent and depreciation, will give a return of between 6 and 7 per cent. per annum, so that, perhaps, there is no part of the capital better employed than that which has been laid out upon these cottages, because it brings close to the collieries the working population, on whom we have to depend for working them, and at the same time that we do that we are earning a profit of 6 or 7 per cent. per annum upon them. The secretary has worked out rather interesting figures with regard to the

DIVIDENDS FROM THE COMMENCEMENT

of the company, and states that when the present dividend has been distributed the ordinary shareholders will have received about 72½ per cent. of the capital they have embarked in the concern. The preference shareholders will have received back about 75 per cent. The average dividend paid for the last 10 years is about 6½ per cent. on the ordinary, and 7½ per cent. on the preference shares. (Cheers.) I think those are interesting facts which deserve consideration, not only from the shareholders, but also from persons with capital to invest who desire to become shareholders in our company. The most important fact, of course, is the satisfactory

COMMENCEMENT MADE WITH THE LOWER SEAM.

We spoke to you last year in words of hope and expectation with regard to that seam. We now find our best expectations confirmed. The seam has been reached, as the report and the statement of the engineers will have told you, and everything has been done to make it easily available, and we expect before the end of the present year to be raising, I believe, from 600 to 700 tons a day from that lower seam, and we are assured that even experts in coal can hardly discover any difference between this and the black vein seam itself. Therefore, we are

IN POSSESSION PRACTICALLY OF A NEW COLLIERY.

We had an interview with the men when we paid our annual visit there, and settled with them the terms upon which this coal is to be cut. They were, perhaps, a little higher than we would have wished to have arranged, but one of the features of all colliery enterprises during the last few years has been the great and steady rise in the earnings of the men. If it is satisfactory to the shareholders to know that they have received back something like three-fourths of their capital in dividends since the commencement of the colliery, and if it is even more satisfactory to be able to divide again as we are doing this year 10 per cent., I think it is also a source of satisfaction to know, even though it is at our expense, that the wages of the men employed are now about 60 per cent. higher than they were in 1879. It cannot be said that our colliery is one which benefits only those who have invested their money in it, for the men who are doing the work are receiving their fair share of our prosperity. In these days when we hear so much about

"THE HEARTLESS CAPITALIST,"

it is rather satisfactory to be able to say that our friends, the working classes, are participating, at least, equally with ourselves in the advantages to be derived from our undertaking. I shall be glad, as far as I can, to answer any question which may occur to any gentleman to ask, but I do not think I need detain you with a longer speech. I think the report speaks for itself, and I will content myself with moving "That the balance-sheet and report be now adopted."

Mr. J. T. BOWDEN (director): I second the motion.

PRACTICAL QUESTION.

Mr. THOMAS WILLIAMS: I should like to ask what is the thickness of the lower seam that you have just touched, and what kind of a top has it?

The MANAGER: One side of the shaft is 6 ft. thick, that is the eastern side; and on the western it is 5 ft., and a very good cliff roof indeed. We can work it more cheaply than the black vein.

Mr. WILLIAMS: That was the object of my question.

Mr. GODDARD: I should like to say, sir, I think it quite possible that in view of the exceptionally prosperous condition of the coal trade some of the shareholders may feel a little disappointed that the dividend has not been more in accord therewith, but for myself, I think we have every reason to congratulate ourselves on the result of the expenditure on the lower seam, which I think is most judicious, and hence I view the report and balance-sheet as highly satisfactory. The reserve fund has been brought to your notice before, and I have stated that I consider the directors have been most straightforward in their use of it, but, personally, I think the statement might have been presented in a more satisfactory manner. I must refer it to the gentlemen of the board, and have nothing further to say on that subject. With that exception I consider the balance-sheet, as the chairman says, the most satisfactory that has ever been issued.

RESERVE FUND.

The CHAIRMAN: With regard to what has just fallen from Mr. Goddard—his view, with regard to the reserve fund, is very largely shared by several of the directors, and we have always felt it would be desirable when the opportunity came to put the reserve fund in a more settled form than it is at the present time, but, of course, we have had to look to what is the best use we could make of any money of that sort, and have thought that employing it in our business, where it has been earning so good a dividend, has been on the whole more acceptable to the shareholders as a body than separating it more distinctly from our other funds. But the importance, as a matter of principle, of so doing has never been lost sight of, and whenever the opportunity arrives I, for one, shall be glad to give more effect to it.

The report was unanimously adopted.

DIRECTORS AND AUDITORS RE-ELECTED.

The CHAIRMAN: Our next business is the question of electing directors, and I have great pleasure in proposing the re-election of Mr. Thomas Bell, who represents a very important portion of our constituency in the North, and who brings to bear a very useful element of experience derived from a coal field worked in a somewhat

different manner from our own, but a system which it is extremely useful for us to be acquainted with.

A SHAREHOLDER seconded the motion, which was carried unanimously.

The CHAIRMAN: I now have to propose the re-election also of our colleague, Mr. W. A. Soames. I can only say that Mr. Soames has not been so very long a director, but he has taken special pains to familiarise himself with the business of the company, and we have found him a most valuable addition to the board, and moreover he is one of the largest holders in the company.

Mr. CRAVEN seconded the motion, which was carried unanimously.

Mr. THOMAS WILLIAMS proposed the re-election of the auditor, Mr. Bagshaw.

A SHAREHOLDER seconded the motion, which was carried unanimously.

The CHAIRMAN: I presume that the meeting will desire that the remuneration of the auditors be the same as it has been in past years, and I beg to propose that that be so.

Mr. T. WILLIAMS seconded the motion, which was carried.

The CHAIRMAN: That concludes the business.

A SHAREHOLDER: Before we separate I should like to propose a vote of thanks to the chairman and directors for their services during the past year. We can all appreciate those services in the result that is laid before us to-day. (Cheers.)

Mr. THOMAS WILLIAMS: I have great pleasure in seconding the motion.

Carried unanimously.

The CHAIRMAN: I have to thank you for your kindness in proposing to us a vote of thanks. We happily meet to-day under circumstances of prosperity, and I feel quite sure that the same kind consideration will always be extended to our efforts, even if the price of coal at a future time should rule less favourably than it has done during the past year.

URANIUM MINES, LIMITED.

A COMPANY DECLARED TO BE RUINED BY THE ACTION OF A FEW OF ITS OWN SHAREHOLDERS—A VALUABLE PROPERTY IN JEOPARDY BUT FOR THE RESOLUTE AND SELF-DENYING ACTION OF ITS BOARD.

A SPECIAL MEETING of this company was held at the City Terminus Hotel on Thursday.

The Hon. F. W. B. Massey-Mainwaring (chairman of the company) presided.

THE WORD "RECENT."

The CHAIRMAN: Gentlemen, after explaining that Sir Alexander Armstrong had retired from the board, and that he had been asked to preside, said: The Press has made you aware of the result of the action brought against this company by one of its shareholders. I need not discuss that result—in fact, I do not think I would be allowed to discuss it. You have noticed it turned upon the word "recent." Well, in our view, it was a *recent discovery*, but the Courts seemed to hold otherwise, and that I am not allowed to discuss. Upon the result of that case, of course, several shareholders threatened us with actions. I am glad to say that there was only a small minority, but still they required to be dealt with just as much as if the number had been large, for the reason that if the capital had to be returned it would have meant immediate bankruptcy to the company. After the first action, of course, there was a certain amount of money to be paid, and your directors and a few friends came forward, and so enabled the company to pay it. (A VOICE: To whom?) To those shareholders, and there was a large amount of costs. The immediate cause of our calling you together is, unfortunately, because of the action of our solicitor, the only person who did not assist us, as I think he ought to have done. He claimed to have his costs at once paid. They were paid to a large amount, but the remainder we were not able to pay at the moment. I endeavoured to get him to take debentures to tide the matter over, but he would not do it, and pressed the company. (A VOICE: Shame.) Hence the lack of money arises principally out of the action of some of our own number.

Mr. SMYTH: What is the solicitor's claim?

The CHAIRMAN: 114l.

Mr. SMYTH: (surprised): Only that?

The CHAIRMAN: Yes, that was the balance. You will therefore understand, gentlemen, the necessity of doing what we first endeavoured to get done, namely, to get debentures taken up by the shareholders. The shareholders did not respond—in fact, the only people who did so were the directors and their friends, who came in to a certain extent, and I may say

THE OPPOSING SOLICITOR BEHAVED MOST HONOURABLY AND KINDLY

to us. He actually took some of his costs in debentures, which was certainly an example to our own solicitor, and treated the company (although solicitor for the plaintiff) with every tenderness that could be imagined. I thank him very much for having done so. Of course, as you will have seen by the notice, the object of our meeting is to reconstruct the company in order that we may not lose what I think I shall be able to prove to you is an extremely valuable property. Only the other day we got a cheque sent to us for 100l. as against uranium, but we were not able to meet it, simply because of inability to increase our plant, and were obliged to return the cheque, which otherwise would have gone for the purchase of uranium. It shows that there is plenty of demand for it, but we have never been in a financial position to increase our chemical works so as to be able to meet it. We have always been in arrear, and that is an important thing for you to consider—we not being able to supply orders we get for the sole and simple reason that we have not had the money to increase the chemical branch. There is no doubt the first thing we have to decide is—the property a good one! I do not think there can be the slightest doubt of that, and cannot imagine that the shareholders will allow such a property to go to the winds without providing a small amount of money, so that it may be put upon a sound financial basis. We have developed the mine. We have proved the existence of the lode lower down, that is to say, between the lower and the upper level, and there is a vast

amount of uranium. We know what we are asking you to put your money into. We have all our machinery there, and the only blame that may attach to the directors is that they have put it up too soon. That is a fault that happens often in mining, and the machinery came perhaps to more than we expected. It belongs to the company, and we are in this position, that we can go on working

AS FAST AS WE CAN INCREASE OUR CHEMICAL BRANCH.

When this company was started, as I think your late chairman remarked to you at the last meeting, it was for the purpose of working uranium ore. There was no thought of making oxide of uranium. We found our uranium, however, was not the same as that in Vienna, and that we had practically to find out a process to treat it, because when we sent our ore there the Germans were not able to do so by any of their known processes. Through the diligence and energy of our chemist we have been able to treat it most successfully, and just before the meeting I asked him whether we were able (this is rather a difficult thing) to treat the pitch blende which occurs in our mine, and he said "Yes," for his experiments were complete. It had passed the stage of experiment, and he could treat pitch blende as well as the ordinary uranium ore. I do not think I need go further into the value of the property. You all know practically as much as we do upon that subject, and I will proceed to explain to you the idea the board have put forward as to re-construction.

RE-CONSTRUCTION PLANS.

We have done so because shareholders like to have before them the concrete proposals of directors, which, of course, are subject to modification by the shareholders. As far as I can judge of a re-construction scheme, this is a fair one, but it remains for you to say whether you like it or not. You will see the position is extremely pressing, and something must be done. Some of the directors and myself are helping with money to carry on the company, so that there shall not be a standstill, and the vendor has kindly assisted also to carry on the matter for a time, so that there shall not be any immediate crash. We come to you to see whether you will assist us to make the position absolutely certain. I think a few papers have been circulated with the heads of the re-construction, and, therefore, you will be able to judge the details better than if I were to read them through. You will see at the present time there are 1,600l. worth of debentures held by the directors chiefly, and we hope to continue 1,200l. worth. We can hardly ask the solicitor for the plaintiffs to carry on his 400l. that he took in debentures to ease the position, and I may tell you he took that amount after being at the trial, and hearing all the evidence respecting the mine, which, to my mind, speaks volumes. (Cheers.) There will be 1,200l., we hope, to carry forward. There are

LARGE STOCKS OF ORE WAITING TREATMENT,

as you saw by the last account, and this would have been treated had we possessed the capital to increase our plant. We could not do that, and therefore the position is that the ore is there, and only waiting this capital to be turned into money. We propose to diminish the development of the mine for about a year, because I do not think it will be necessary to do so except on a small scale, but we shall have to keep sufficient development going to comply with our lease, but practically the business of the next year will be a chemical one, and we shall depend upon our chemist rapidly to produce market uranium. The directors made an estimate of what, from their present sale of oxide and nitrate of uranium, the erection of the larger chemical works and plant will be, and we estimate we shall be able to sell about 5,200l. worth of oxide and nitrate of uranium. We have made a calculation as to our expenses at the mine, 800l.; at chemical works, 600l.; general accounts for chemicals, 600l.; rents, rates, taxes, and royalties, 250l.; carriage, secretary, clerks, and offices and sundry expenses, 450l.; and I have the authority of the board to say that

THEY DO NOT INTEND TO TAKE FEES

until the position is clear, and we are making this estimated profit of 2,500l. None of the money subscribed, therefore, for the preference shares will in any way go to your board—it will all go for the work of the company. You are aware the directors have not taken any fees for a very long time—certainly not since the crux has arisen; they have put in more money than they have taken out. I think we can look you straight in the face and tell you we have done perhaps more than we were obliged to do. The surplus we propose to divide as follows:—

"This surplus to be divided as follows:—6 per cent. on 1,200l. debentures, 72l.; 15 per cent. on 3,800l. preference shares, 3s. called, 342l.; 7½ per cent. on 19,479l. ordinary shares, 1,461l.; towards redemption of debentures, 200l.; balance, 425l.—2,500l. Should any further sum be earned, the amount to be applied in further amortization of debentures. The directors will act without remuneration for one year, except in the above-named events."

"The proposal is to wind up voluntarily with a view to reconstruction on the following lines:—A new company with a capital of 25,000l. in 5s. shares to be registered. Capital to be divided into 5,521l. preference shares, carrying cumulative 15 per cent. dividend, and 19,479l. ordinary shares. The ordinary shares to be issued as fully-paid up, and to be distributed as follows:—Two shares of 5s. each to the holder of every 1l. fully-paid ordinary share in present company subscribed by the public, this will absorb 6,859l. Four shares of 5s. each to the holder of every five 1l. ordinary shares, originally allotted to the vendor or his nominees, this will absorb 10,620l. Four shares of 5s. each to the holder of every ten 1l. deferred shares, originally allotted to the vendor or his nominees, this will absorb 2,000l. Founders' shares in present company to be forfeited. Total ordinary share capital, 19,479l. Of the 5,531l. preference capital to be created as above, 3,800l. will now be issued in 5s. shares, payable 1s. on application, 1s. on allotment, 1s. one month after allotment, and the balance in 6d. calls if and when required, one month's notice being first given. The three instalments of 1s. each will yield 2,280l. This will be applied as follows:—To pay indebtedness of present company, about 500l.; to pay off 400l. of debenture issue of 1,600l., 400l.; to equip enlarged chemical works, 600l.—1,500l.; balance for working capital, 780l."

I have remarked with reference to this Austrian Uranium, that it was originally thought ours was exactly the same. There is no doubt it is not, but requires a different treatment altogether. That is why we were not able to sell the ore in large quantities over there, because

they wanted to treat it in the ordinary way, and could not do so. Now we have discovered a way of doing it, and there is no difficulty whatever in producing as much Uranium oxide and nitrate and also the produce from the pitch-blende as we like. I should like to explain to the meeting that we have

APPOINTED MR. NORTH, MANAGING DIRECTOR.

He agreed to come to us without salary, and I cannot help informing you at this meeting of the extraordinary amount of energy he has thrown into the affairs of this company. (Cheers.) I think I speak the feelings of the board in telling you that he has worked night and day to make the company a success. (Cheers.) Possibly, you may say it was his interest to do so. That may be, but I do not think so. He has worked more than any other man in a similar position would to advance the interests of the company. The board recognised the position, and have appointed him to the "complementary office" of managing director, for which he receives no salary. Upon that it is right to tell you a little friction occurred which made Sir Alexander Armstrong leave the board, though why I did not know. He has often told me how he recognised the extraordinary energy Mr. North has thrown into the working of this mine. Now, I think you know as much as I do, and can only leave the position before you to be dealt with by you as business men. I only trust that between us we shall elaborate a scheme which will prevent this great concern (for it is a great one, and a new industry to this country) from coming to an end, which it ought never to do with the knowledge I have in my head. (Cheers.)

POSITION FURTHER ELUCIDATED.

Mr. ARCHIBALD J. SMYTH: After the exhaustive speech of our respected chairman, upon the subject of this mine, I would desire to remind you in the first place of a certain amount of debt we owe to them as directors for having come forward as they did, for having put their hands in their pockets, and for subscribing to these debentures at a moment when the money was much needed. You will all remember (those of you who have been, like myself, original shareholders in this company and paid for their shares) that this lode of Uranium has been the cause of considerable conflict. I carefully watch the evidence given in the Law Courts upon this subject which all hinged, as the chairman said, upon the word "recent." Such a minor and trivial decision should not alter our minds as shareholders as to the value of this property, but unfortunately, as you have been speaking of chemistry, there was thrown into the bottle of this company's affairs a few drops of a very strong acid which it is very desirable to eliminate, if possible, in the new one. This strong acid began to boil, and has continued in a state of effervescence during the whole history of the company. Had we been able to extract it earlier the company, in my opinion, would unquestionably have been a great success. (Cheers.) What is the position?

THE URANIUM LODGE HAS BEEN FULLY PROVED.

Of that there can be no doubt, and equally so of this, that we can sell our Uranium ore when converted into oxide as fast as they can use it. Finding out the necessary treatment has occupied some time, and has taken longer than most of us would have expected, but now that it is accomplished we may look with some confidence to the future, and support you in the admirable scheme which you have placed before us this morning. (Cheers.) I have

NEVER SEEN A BETTER RE-CONSTRUCTION SCHEME,

and I have had a great many of them under my notice. This appears to be the best of them all, as it brings the shares that were subscribed for by the public into prominence over those of the vendor. That is the chief point which interests us—that we who subscribed for our shares are in a more advantageous position in the new company than we were in the old, and if that were not so, I for one would not ask your support to this scheme. I would again ask you to bear in mind that our gratitude is due to the directors for having come forward at the time they did. Being large shareholders they subscribed to these debentures. (Cheers.)

MEETING DECLARED TO BE ILLEGAL.

Mr. LAYTON: This meeting is illegal. The articles state that seven clear days' notice must be given. Your notice is dated July 9, and this is July 16; therefore you can do business to-day.

Mr. HARRIS JAMES said the articles sustained this view.

Mr. SMYTH: Then if it be found that this meeting cannot do the business for which it was convened I shall move that a fresh meeting be called, and that proper notice be given.

Mr. WILLIAMSON: I will second that.

MANAGING DIRECTOR SPEAKS HIS MIND.

Mr. NORTH (managing director): I think this a fitting chance for me to say a few words. The person who has drawn your attention to the articles (Mr. James) was the chief witness in the recent action upon whose evidence Mr. Justice Romer decided that the plaintiffs in that action were entitled to rescission of contract. The other gentleman, Mr. Layton, is a shareholder who has not paid up the full amount due on his shares; if he had done so we should not have been in the position we now are.

Mr. LAYTON: 18*l.* 15*s.* would not have saved you.

Mr. NORTH: You and others like you. (Cheers.) We shall have to call a fresh meeting, which will take 10 or 12 days, and, in the meantime, you are brought face to face with the fact that there is at the present moment a judgment against the company, and upon that judgment

THE DEBENTURE-HOLDERS WILL ENTER INTO POSSESSION.

The debenture-holders (the majority of them) are not only shareholders but your directors. They can, and they will, control for the benefit of the shareholders the action they take. (Cheers.) At the same time, I may tell you emphatically, they will enter into possession. I, for one, am not to come to shareholder meetings time after time, after having worked as I have done for the benefit of the company.

Mr. JAMES: A wire puller. (Cries of "Order.")

Mr. NORTH: I was saying, when Mr. James indecently interrupted me, that I was not going to come to a meeting to be brought face to face with such people as he, and as to whom I do not care to mince my words. We are brought to a crisis. The action of Mr. James and his friends is like their action from the beginning. They have

nothing but quibbles with which to face this crisis. We come here ready to face it, and if Mr. James or any other shareholder thinks he can obtain any evidence of any sort against me personally, I am here and will answer it, but one thing I want to make clear, Mr. James is the cause of your present trouble. (Shame.) He went into the witness-box and informed Mr. Justice Romer what may or may not have been correct—that the discovery of the Uranium lode dated back some 18 or 19 years ago, and Mr. Justice Romer in the course of the trial said most emphatically that if the action had been one brought against the directors for fraud he would have required very different proof from what was given to him on an action merely for rescission of contract. On the one hand, the plaintiff goes into the box with the prospectus and says, I took those shares upon the strength of a paragraph therein, which says this discovery was a "recent" one. It is put to him—Did you rely upon the word "recent?" and he says he did. Mr. James goes into the witness box and says it was not a recent discovery. (That was the point pure and simple. The judge says—Between the two there is a witness who was at the mine and the manager of the mine, who swears it was not a recent discovery, and these gentlemen say they took shares upon the faith of it being a recent discovery, and I must rescind the contract.

Mr. WILLIAMSON: I thought the directors had appealed?

Mr. NORTH: I will come to that presently. The next point in sequence is something for your information. When the directors took charge of this company Nov., 1889, they went to the mine, where they found Mr. James in possession on behalf of the vendor. Before parting with one penny piece of your money they examined the mine to assure themselves that every statement in the prospectus was in accordance with facts. Mr. James conducted them over the mine and through the underground workings, and they satisfied themselves that the property was a good one, as Mr. James in the witness box did not dispute. He having had the prospectus in his hand, and early copies of it too, having had it circulated through his friends, and himself

NEVER DRAWS THE ATTENTION OF THE DIRECTORS TO THE FACT

that there was a word in it which was wrong. (Hear, hear.) At that moment the directors had every penny of your money in their hands. You were the person (to Mr. James) who brought this mine to my knowledge to begin with, and I brought it to the knowledge of certain gentlemen as directors. Those directors having issued their prospectus, and finding themselves very much attacked in the Press, went down to see the property. You received them, conducted them over it, but never told them that there was this improper word at a time when they could return the money, but after the lapse of 15 months you appear as the witness for the plaintiffs, the effect of whose action is to put the company in its present position. (Cheers.) You now rise with your friend to say this meeting is not legal.

Mr. LAYTON: I never saw Mr. James before.

Mr. NORTH: You were in close confabulation, and we always

JUDGE OF PEOPLE BY THE COMPANY THEY KEEP.

(Laughter.) We shall have to issue notices for a fresh meeting, but you need not feel so uncomfortable as you might otherwise have done for reasons that I will name, and the first is that the directors will give an honourable undertaking that the shareholders shall not be put in a position of jeopardy. (Cheers.) Mr. James has

PLAYED INTO MY HANDS,

and I thank him, because I have very grave doubt (as a gentleman who is good enough to act legally for me has also informed me) whether we could have got rid of the position of deadlock that we are in, owing to the action of other shareholders, who think they have nothing to do but to call for their money, which has already been spent on machinery. We could not get rid of that position of deadlock without the directors taking possession of the property as debenture-holders. Consequently that will now be done, and, gentlemen, you have to thank Mr. James for having put your shares in a safe position. That is the outcome of his action. (Loud cheers.)

THE CHAIRMAN THROWS DOWN THE GAUNTLET TO MR. JAMES.

The CHAIRMAN: I say, advisedly and strongly, that the conduct of these people passes everything I have ever known in matters of this kind. I tell Mr. James plainly that he is not going to defeat the shareholders or the board, for this reason, that I will give my last penny to support this company before such a man as he shall succeed in his purposes. If it comes to a matter of finding 3,500*l.* I will find it myself, but I will not be thwarted by a person such as he is. (Great applause.)

Mr. JAMES wished to address the meeting, but the shareholders decided not to hear him, and on the motion of Mr. WILLIAMSON, seconded by Mr. SMYTH, the chairman was cordially thanked for presiding.

It is understood that a new meeting will be called as soon as possible.

WHEAL AGAR.

CALL OF 2*s.*

A SIXTEEN-WEEKLY MEETING of the adventurers in Wheal Agar was held on Tuesday on the mine.

Mr. C. Bawden

(the purser) presided.

The statement of accounts showed the total debits to be 7,030*l.*, made up of labour costs, 3,992*l.*; merchants' bills, 2,689*l.*; machinery, 240*l.*; stannary assessment for the half-year, 13*l.* 6*s.* 9*d.*; and bankers' charges, 94*l.* On the other side were for black tin sold, 5,783*l.*; extra carriage of tin, 3*l.* 12*s.*; sale of arsenic, 951*l.*; discount allowed by merchants, sale of old iron, income tax returned, &c., 467*l.* 18*s.*; leaving a loss of 421*l.* on the 16 weeks' working, and a balance against the mine of 528*l.* 18*s.*

In reply to Mr. VIVIAN, Capt. DANIEL said the present average produce of tin was 50 lbs. to the ton.

The accounts were then adopted on the motion of Mr. WOOLCOCK, seconded by Mr. VIVIAN.

On the question of the disposal of the balance, Dr. PERMEWAN thought they should not start a new manager with an incubus about

his legs. He suggested that a call of 2s. should be made so as to cover the loss up to date.

Mr. VIVIAN seconded, and the motion was unanimously adopted.

Further resolutions were adopted to the effect that the committee meetings should be held monthly, and the appointment to be for 12 months.

TINCROFT.

DIVIDEND OF 10s. PER SHARE—MR. HARVEY ON THE COAL QUESTION.

A SIXTEEN WEEKS' MEETING of the adventurers in Tincroft was held on the mine, on Tuesday.

Mr. Frank Harvey

presided.

The accounts showed that the labour costs during the four months had been 8,146l. 7s. 4d.; merchants' bills, 4,741l. 8s. 6d.; vice-warden's assessment, half year, 29l. 6s. 9d.; dues, 431l. 14s. 11d.; other items bringing the total debits up to 13,636l. 7s. 3d. Copper sold 116 tons 18 cwt. for 493l. 7s.; arsenic, 86 tons 2 cwt., for 688l. 15s. 2d.; tin, 317 tons 16 cwt., for 16,183l. 10s. 4d.; slime tin sold, 6 tons 12 cwt., for 229l. 5s. 4d.; discounts, 135l. 4s. 4d.; other items making the total credits 17,766l. 7s. 4d. Profit, 4,130l. 0s. 1d. Balance in favour of the mine, 6,785l. 11s. 10d.

CAPT. TEAGUE said although not very many valuable points were mentioned in the report, yet their prospects were generally very encouraging, for the lode was more settled in Martin's east shaft, and they had a valuable new discovery in the end driven from the sump to Martin's east. The new floors for saving the slime tin were working satisfactorily.

The CHAIRMAN said the expenditure was less than during the previous 16 weeks, and the returns had increased. The profit was nearly 2,000l. more than last time, but there were then some extra charges. At any rate, their extra profit was about 1,000l. The committee recommended a dividend of 10s. a share, which would absorb 3,000l., and leave a balance of 1,130l., which, curiously enough, was the exact amount of the contract for the new air compressor. He proposed the adoption of the accounts and report.

Mr. J. JOSE seconded.

COAL.

In the course of discussion the CHAIRMAN referred to the remarks made by the chairman of Wheal Grenville at a recent meeting. Mr. Gould had said that by entering into a contract for coal outside the merchants of the county, who were sending rubbish to the mines, he had been able to effect a saving of 1,000l. or 1,200l. a year. It might be true that at Wheal Grenville they would save a considerable amount from the drop in the price of coal this year, but Tincroft would do quite as much in proportion. They had their coals now at nearly 1s. 6d. a ton below what they cost last year. Mr. Gould had said that by importing the coal they would save much more because the quality of the coal would be better. He did not doubt Mr. Gould's sincerity for a moment, but such a remark must reflect seriously upon the merchants of the county, and he was not prepared to sit down quietly and accept it. He was fully prepared to state and substantiate the statement that the coal his firm had been supplying would compare favourably with any coal Mr. Gould might import at Wheal Grenville at the price he was now paying. The

position he had taken up was erroneous, and he (Mr. Harvey) was prepared to get some independent person to test the quality of the coal at Tincroft and Carn Brea with that of Wheal Grenville, and to pay the mine the value of the difference—(applause)—and his firm would, as a penalty, give a like amount to any charity they might name.

Mr. W. H. RULE said Messrs. Harvey were buying the coal they were now selling to that mine in Wales, and brought it for 8s. a ton. Freight cost 4s., and carriage and quay dues at Portreath 2s. 6d. That would be 14s. 6d. a ton. He did not mind paying Messrs. Harvey 15s. 6d., but to give them 16s. 5d. was too much.

Mr. JAMES WICKETT hoped they would treat the remarks of Mr. Rule with all the consideration they deserved. (A laugh). If they took Mr. Rule's advice, instead of paying dividends of 10s. they would have no dividends at all.

Mr. HEARD proposed a dividend of 10s. a share, which was seconded by Mr. WICKETT and carried.

CARN BREA.

DIVIDEND OF £1 10s. PER SHARE.

A SIXTEEN WEEKS' MEETING of the shareholders in Carn Brea was held on the mine, on Tuesday.

Mr. F. Harvey

presided.

The accounts showed that the labour costs had been 11,419l. 12s. 10d.; merchants' bills, 5,979l. 6s. 8d.; dues, 926l. 9s. 3d.; rates, 203l. 16s. 4d.; other items made the debits 18,728l. 4s. 4d. Tin sold, 546 tons 16 cwt., for 27,910l. 19s. 3d.; slime tin, 13 tons 9 cwt., for 395l. 13s. 6d.; halvens, 58l. 2s. 6d.; discount, 149l. 17s. 3d.; total credits, 28,586l. 1s. 9d.; profit, 9,857l. 17s. 5d. Total balance in favour of the mine, 18,195l. 7s. 6d.

Capt. W. T. WHITE, in supplementing the report, observed that since it was written they had indications at the 300 that they were passing through the cross-course, and the lode had taken its usual character. They hoped in a few days to report a very good improvement in that end. If the old sump continued to open up as well as in the past it would prove a valuable thing for the mine.

Mr. J. JOSE seconded, and the resolution was carried.

Mr. E. G. HEARD proposed a dividend of 30s. per share.

Dr. J. PERMEWAN seconded.

This was carried.

This concluded the business of the meeting.

DEATH OF MR. LUKE SOLIAGUE.—We regret to announce the death of this gentleman, which took place yesterday, at two o'clock in the afternoon, at his private residence in Eltham Road, Lee, Kent. Mr. Soliague was part proprietor of the *Bullionist*, with which he was associated almost from its foundation. He was most active in the commercial department, and to his unfailing energy much of the success of the *Bullionist* is to be attributed. Mr. Soliague was also a partner in the firm of Walker and Co., 27, Throgmorton Street. The deceased gentleman has been confined to his home for several weeks, so that his death was not unexpected. Mr. Soliague was well known throughout the City, and leaves a large circle of acquaintances and friends to lament his loss.

ROBEY & CO., Globe Works, LINCOLN.

ROBEY & CO.'S IMPROVED STONE BREAKER AND ORE CRUSHER.

ROBNEY & CO.'S STONE BREAKER AND ORE CRUSHER, for crushing Ores, Quartz, Road Metal, Railway Ballast, Cement, Phosphates, Coke, Coal, &c.

The above illustrates the most simple form of Stone Breaker made, and has no equal for easy transport over bad roads or mountainous countries. Steel has been largely employed, and in the place of the usual heavy Cast-iron Frame, a neat and much stronger Frame of rolled steel is used, with a saving of some tons in weight. The great depth of the side gives it increased stiffness, and the materials of which the machine is constructed ensure great rigidity and thorough adaptability for heavy work.

The parts are few and simple, and thoroughly accessible for oiling, adjusting, and cleaning, and the liability to breakage is reduced to a minimum.

The jaws are easily renewed, and are made of our own special mixture and treatment, rendering the face well suited for quartz. These jaws can be adjusted while the machine is running so as to reduce the material to any desired size, and are adapted for either cubing or crushing.

ROBEY & CO., Globe Works, LINCOLN.

THE FULL PROSPECTUS WILL BE ADVERTISED ON WEDNESDAY NEXT.

HERCYNIA COPPER COMPANY, LIMITED.

INCORPORATED UNDER THE COMPANIES ACTS, 1862 TO 1890.

SHARE CAPITAL - £165,000,

DIVIDED INTO:—

9,750 8 per cent. Preference Shares of £10 each - - £97,500
6,750 Ordinary Shares of £10 each - - - £67,500

The whole of the Ordinary Shares are taken in part payment by the Vendor.

PRESENT ISSUE:—9,750 PREFERENCE SHARES OF £10 EACH,

Payable—£1 on Application; £2 on Allotment; £3 One Month; £2 Two Months; and £2 Three Months after Allotment.

The Preference Shares are entitled to a Preference dividend of 8 per cent. per annum, and to one-third of the surplus profits after paying an 8 per cent. dividend on the Ordinary Shares. So soon as the Preference Shares shall have received dividends aggregating 100 per cent. the preference rights shall cease to exist and both classes of shares shall rank *pari passu*.

REPORTS OF MEETINGS.

THE AUSTRALIAN BROKEN HILL CONSOLS, LIMITED.

£50,000 IN DIVIDENDS—£25,000 IN HAND, AND AN EQUAL AMOUNT WRITTEN OFF TO DEVELOPMENT AND PRELIMINARY EXPENSES—WHAT THE MANAGER OF THE PROPRIETARY CO.'S MINES THINKS OF AUSTRALIAN BROKEN HILL.

THE second ordinary general meeting was held at Winchester House, on Monday, "for the purpose of receiving a report from the directors, and for the transaction of other business of the company."

Mr. John Henry Ward

(chairman of the company) presided.

Mr. L. J. WOODMAN (secretary) read the notice of meeting.

PROPERTY DESCRIBED

THE CHAIRMAN: Gentlemen, I daresay there will be some shareholders here who were not at the last meeting, and I shall give a little fuller explanation than I should otherwise have done for that reason, as I consider at a meeting like this it is desirable to acquaint everyone concerned as fully as possible with the facts. The property, as you know, is situated in New South Wales, and now consists of 138 acres of land—we having recently sold two blocks of our property of 40 acres each to the East Broken Hill Consols, Limited—a company which was floated in an extremely satisfactory manner some little time since. The accounts show a very healthy state of affairs. (Cheers.) This, I may tell you, results from the realisation of the very rich stuff that we have extracted from the mine, which we have followed down as far as possible. That rich stuff, I may, in the first instance, tell you, is almost a by-blow, to use a common word. Our main object has been to go down to get a lode which we believe to be identical with that of the Proprietary Co.'s mines, and in the course of our mining work we came across, and up to recently, have followed it with great success. This success, I may say, has gone on every fortnight till about three weeks ago, when we received the telegram announcing a lower output for the fortnight. As you are aware, last Friday (July 10) we received a telegram, which we at once put before you, that there was to be no output for that fortnight. The following day we received another which was immediately published, or within half an hour of its receipt by the board, which was to the effect that a stoppage had occurred in the output through a fault in the rich vein below the 280-ft. level west. "A change for the better has taken place. I expect to be able to raise rich ore next week." Now, gentlemen, with respect to that, I am not going to devote a very great amount of time in its discussion, because I think it is by no means a material point. It will be within your knowledge that that rich vein has been interrupted before. On one occasion it was interrupted from Nov. 12 last year until Feb. 4—a much longer period than it has been interrupted up to the present moment. Therefore, I say these few words rather to encourage you than to cause you to despair, because I have every reason to believe that we shall go on in a very satisfactory and encouraging way in the future.

NOTHING KEPT BACK.

We have never kept anything back from the public since I have had the pleasure of being connected with this mine. We have invariably published the reports when we had them, and have never withheld a bad report when we have received it. (Cheers.) I now want to call attention to other parts of the mine. We have had from time to time outputs from those other parts, which promise most satisfactorily indeed. Of second-class ore, in May last we had an output of one lot of 25 tons, which contained 6,784 ozs. of silver, which is good enough for anybody; and in July again we had another output of 25 tons, containing 5,997 ozs. of silver; and also I may call attention to a report which was made on Dec. 27, 1889, by Capt. Richard Pyper, a well-known expert, who has visited these mines, and understands them thoroughly well. In his report he says:—

"Talking of levels driven from the main shaft—so far two levels have been driven west, and have exposed to view 30,000 cubic ft. of argentiferous galena and chloride ore, which will be found equal in value to that already sold for smelting purposes in England and the colony."

Therefore, that gives you an immense amount of stuff that can be turned into money as the occasion may require. In working our mine we have all along placed the greatest confidence in the discretion of

OUR MANAGING DIRECTOR, MR. EDMUND POWER,

who for a long time had a seat at this board, but who went out to the colony to take charge of the mine, and to look after the interests

of the shareholders. I need not tell you he has worked with great advantage for us. He has worked with unremitting energy, and in saying this, gentlemen, I do not do so because I happen to have had a seat at the board of a company with Mr. Power; but I have taken the trouble, from private and other sources, to make enquiries, and am satisfied beyond a doubt that no person could have given greater or more regular attention and energetic work to a property than your managing director, Mr. Power, has done. (Cheers.) The success of your mine is assured, for your mine is a made property, and as a going concern I do not believe it has its equal anywhere in the world. (Cheers.) All that, I can tell you, is due to the pushing manner in which Mr. Power has done his work.

A SHAREHOLDER: Quite true.

WHAT HAS BEEN DONE.

THE CHAIRMAN (continuing): I will just give you a few figures to let you know how we stand. We have declared and paid since Jan. last 50,000% in dividends, equal to 10 per cent. on the capital of the company. We have written off the whole of the development and preliminary expenses of the mine—that means to say we have given you back your original capital which you gave us to start the mine with, and I have still 25,000% besides that I shall have to account to you for. (Cheers.) I do not think there is any shareholder present who can say that that is not a sound financial position to be in. You have altogether realised and shipped 107,420% worth of ore, and of that stuff we have realised considerably more than half. The rest of it is on the way shipped, and I may tell you fully insured, so that you may take it that you have, if not what I told you exactly in cash in the next thing—in actual value. I may tell you another fact that you may be gratified to know, that when we publish our reports of so many tons containing so many thousand ounces you may naturally say—how do you know there are so many thousand ounces? The answer to that is that we have this stuff assayed at Broken Hill before it leaves, and I must tell you that up to now, having realised somewhat more than half of what we have produced, we have in all cases found that the actual realised valuation comes

WITHIN 7 PER CENT. OF THE ASSAY VALUE.

(Cheers.) Now, for an assay value, I think that is a very near thing. (Cheers.) I may also tell you that in dealing with this extraordinarily rich stuff, we are represented by a gentleman well known in the City of London—

MR. DANIEL C. GRIFFITH, THE ASSAYER TO THE BANK OF ENGLAND,

who takes charge of your ore the moment it arrives, and reports fully the best course to adopt in its treatment as to the actual weight and assays, and further watches the whole of the consignment until such time as it is turned into actual cash. (Cheers.) The bills of lading come direct to the Messrs. Rothschilds, and the stuff goes into their smelting works at Wood Street. From there we deal with it in such a way as Mr. Griffith advises, but up to the present moment we have every reason to be highly satisfied with the results that are turned out. As you will see from the report, one of our directors has resigned, and according to the terms of the articles of association we were bound to nominate another gentleman to fill the vacancy until we had the pleasure of meeting you to-day. I may inform you, as we tell you in the report, that we had the pleasure of nominating Mr. Arthur Weguelin, whose assistance will be of great use to us. He is a gentleman of good business capacity and a man who does not shirk work, and that is the kind of director that we think ought to be on the board of such a company as this where there is a considerable amount of work to do, and where that work must be got through. I tell you, gentlemen, I have very little more to tell you, but before I sit down I will simply put the report and accounts, and ask you to accept them. At the same time I will be glad to answer any questions, for we have nothing to keep from you, and also to hear any remarks that shareholders are likely to make. (Cheers.)

QUESTIONS.

A SHAREHOLDER: I should like to know what you are going to do with the new shares in East Broken Hills.

THE CHAIRMAN: I will first put the motion before the meeting "That the report and accounts be, and the same are hereby read and adopted."

MR. HARRY CHESTER MASTER (director): I second the motion.

MR. GILBERT ELLIOT: I have a point to put of great importance to the shareholders of this mine. In the mine manager's report for Jan. 8, 1891, I read, "There are shipments of 1,331 bags, weighing 61½ tons, consisting of five different classes of ore, assaying up to a maximum of 100 ozs. of silver to the ton, and 39 per cent. of iron sent during the fortnight to the Government smelting works at Fribourg." May I ask what was the realisation of this ore at Fribourg, and generally I would wish the shareholders to hear what has happened in regard to the treatment of the lower grade ore of this mine.

MR. HARRIS' RESIGNATION.

MR. MASERONE: Under what circumstances did our friend Mr. Harris, who was the oldest shareholder as well as director, at

occupied the chair for a considerable time, to the great service of the company when it was in low water, resign? It does not seem to me that the mine has done any better since Mr. Harris left, and I should like to know if it is within the competency of the meeting to know how it is we have lost Mr. Harris. He was certainly our lucky man, and I fearlessly assert that he did more for the mine than has been done for it since he resigned. I should like to know if pressure was brought to bear to put him out of the position in which he pre-eminently stood in assisting the mine out of its difficulties, and in getting money for us when we wanted it over and over again.

Mr. MEADE: You said you had another 25,000*l.* to account for, but according to the figures you should have between 50,000*l.* and 60,000*l.* Has the other 25,000*l.* gone in preliminary expenses?

Mr. ELLIS: We give you credit for putting everything before, but it would be much better if we were able to get a report each time you realised the ore, telling us what it has realised. If we had that before us we should be able to see more of what is going on. I speak for a great many connected with the Stock Exchange, who do not know exactly what your ore realises when it is smelted and sold at the Messrs. Rothschilds. We should like from time to time to hear the particulars, and there would be fewer fluctuations in the shares, because we then should be able to judge more ourselves of how we stand.

Capt. MCLACHLAN: Is there any stock of tailings left at the mine, and what amount of silver is left in them? Have any samples been sent to Fribourg to be treated by the processes known there?

A SHAREHOLDER: Will the directors take steps to have reports as received from East Broken Hill Mine conveyed to us also?

REPLIES.

Mr. ISAACS: Has the cash been received from East Broken Hill?

The CHAIRMAN: With regard to the question as to East Broken Hill, I may tell you that a great many details have to be gone into before we can settle what we are going to do with the property you got in exchange for the land. First of all, the most important is this, that under the Companies Acts you must set aside a certain proportion of your consideration money to represent the value of property which you have parted with. We sold 80 acres of land, and must put aside something out of the purchase consideration to represent that amount, and we are now in communication with our managing director in Australia with a view to getting proper valuation made of those two blocks, so that we may be able to say what amount we should put aside to represent the capital of the company that has been parted with.

Mr. MEADE: But you knew the value of the property when you sold it.

The CHAIRMAN: I beg to differ from you entirely; we did not know what the value of it was then or is to-day.

The SOLICITOR: It has to be apportioned.

Mr. MEADE: You do not sell a thing and ask what it is worth.

The CHAIRMAN: We must apportion the value of it. We have not sold the whole of the property, and we want to know the value.

Mr. MEADE: When you sold you attached a certain value to it, and I do not see that you want this valuation made over again.

The CHAIRMAN: As to the cash, we have received 10,000*l.* which is included in the return of 25,000*l.* With regard to the ore treated at Fribourg, that was sent by a sailing ship, and we have not yet had any returns. It was shipped by the managing director, Mr. Power, and the return will come to him, and he will forward it to us. As soon as we get it, it will be placed in the hands of the shareholders. With regard to Fribourg ore, it contained 39 ozs. of silver as the lowest, up to 100 ozs. as the highest value.

Mr. GILBERT ELLIOT: What sort of ore was it?

The CHAIRMAN: It was galena ore.

Mr. ELLIOT: Was it a sulphide?

The CHAIRMAN: It was not.

Mr. ELLIOT: Was it a carbonate? (Laughter.) Laugh as you like, gentlemen, it makes all the difference to you, because the one ore can be worked and the other cannot. (Hear, hear.)

The SOLICITOR: Will you, please, take your turn. The chairman is answering questions in detail. You put certain questions, which the chairman is answering, and he will reply to any others later on.

Mr. ELLIOT: There is no information. (Laughter.)

The SOLICITOR: It is not your turn yet to ask further questions.

The CHAIRMAN: At the present moment we have not a great quantity of low-grade ore. There is a considerable amount of grass, and we are considering what is the best way to treat it. With regard to Mr. Harris—we were sorry to lose his co-operation. No pressure was brought to bear on him by this board. He simply resigned. Mr. Harris certainly gave us a great deal of hard work, and helped us very materially. We regretted that he thought fit to go, and according to the articles we elected another gentleman to his place.

Mr. MASERONE: He was asked to resign.

The CHAIRMAN: You may have information that is not in my possession. The letter he sent was simply one of resignation, and he gave no reason. Any gentleman who likes to see that letter can do so at the office.

A SHAREHOLDER: Has he left on good terms with the board?

The CHAIRMAN: On the best terms—so much so that he was in the office this morning with me discussing the affairs of the company.

VOICE: Has Mr. Harris sold his shares?

The CHAIRMAN: Mr. Harris is a very large shareholder, and has sold some.

A SHAREHOLDER: Was that the cause of his resignation?

The CHAIRMAN: I cannot tell you. Perhaps if you call upon Mr. Harris he can give you the best answer to that himself. (Laughter, cheers.) With regard to the question on finance the shareholder asked, I pointed out that having paid 50,000*l.* in dividends, written off 24,000*l.*, and having another 25,000*l.* in my pocket, that represents 50,000*l.* he asks about. (Cheers.) With regard to the periodical dividends, I deeply regret that the gentleman who put the question to me did it was for Stock Exchange purposes, but I could not afford for those purposes to give him exclusive information which is the common property of shareholders.

Mr. ELLIS: I did not mean that, I meant this—that we should like to know from time to time what the ore realises. Now and then, when a certain amount of ore arrives, we should like to know what value it realises. You give the quantity, but do not give the

amount it realises. We give you every credit for being as open as possible, and I do not ask for information in any invidious sense, but only for the shareholders.

The CHAIRMAN: I thought I told you pretty plainly that the ore all along had come within 7 per cent. of the estimate. I can give you any particular shipment that you require. Our report is by telegram, and a fortnight afterwards the ore is shipped, and then it is six weeks before it gets to England, and five weeks before it is treated. How could we give you more information than we have? With regard to the reports from East Broken Hill, we shall be glad to let the shareholders know every report. We have no desire to keep anything from them.

A SHAREHOLDER: Have you received the cash for your sale for East Broken Hill and also the shares—in other words, have you swallowed your own offspring?

The CHAIRMAN: At present we have swallowed nothing but 10,000*l.*

The SHAREHOLDER: You have bolted your own issue.

The CHAIRMAN: We bought our own issue, and a satisfactory buy it has been. You virtually have your own property, and you have the working capital for it without having to put your hands in your own pockets.

A SHAREHOLDER: Does the 10,000*l.* form part of the 50,000*l.* to which you referred?

The CHAIRMAN: I referred to nothing of the kind.

The motion for the adoption of the report was carried unanimously.

The CHAIRMAN proposed, and Mr. MASTER seconded, the confirmation of Mr. Weguelim's appointment as a director, and it was carried, —Mr. WEGUELM assuring the meeting of his best services.

A SHAREHOLDER proposed, and Mr. MEADE seconded, the re-election of the auditors, Messrs. T. S. Evans and Co., their remuneration being left to the board, and this was carried unanimously.

INDEPENDENT TESTIMONY TO THE VALUE OF THE PROPERTY.

The CHAIRMAN: We have concluded the business of the meeting, but there is present a gentleman who is well acquainted with our property in New South Wales. I believe he occupies a high official position, but happens to be over here for his vacation in England. He has been down the mine, and I have great pleasure in asking him to state his views, and what he considers the value of your property.

A SHAREHOLDER: Is this gentleman an expert?

The CHAIRMAN: No; inspector of police in the district. (Laughter.)

Mr. SAUNDERS, who was cheered, said: I am very much obliged to you for inviting me to this meeting. I should have told you, first of all (had the question not been asked), that I am not a mining expert, although I know many of the experts in Australia, and have known your mine for about four years. I last visited it in March of this year at the invitation of our managing director, Mr. Power, who, I was very pleased to hear, seemed to have given every satisfaction to the company. I was very glad to hear the remarks of the chairman in reference to him, because, in Australia, mining engineers hold him in the same high esteem as you do here. I know him personally. We went down the mine about Mar. 25. Mr. Howell, the general manager of the Broken Hill Proprietary Co., went down the mine with me and several other experts, and I heard Mr. Howell tell Mr. Power what he thought of the property:—He said, "There was every reason to believe that it would be, without doubt,

ONE OF THE RICHEST MINES IN AUSTRALIA."

He examined the mine on surface, and he also took bearings with a compass underground, and expressed great surprise at the richness of the lode. We were down the mine more than one and a-half hours. After that another expert, Mr. Matthews, the manager of the Round Hill Mine, who is a very reliable man, also spoke highly of the property. Mr. Howell is assisted in his opinion by every recognised mining manager, and that opinion is to the effect that Australian Broken Hill is one of the best mines in the district; in fact, every visitor to Broken Hill, after seeing the Proprietary Co.'s property, will not leave without seeing Consols Mine. It is very close to it, and they can easily go across, and all wish to do so on account of the great richness of the ore. It is altogether a different class of ore from that found in the Proprietary Mine. Mr. Matthews has considered the lode as

A TRUE FISSURE VEIN

It is generally recognised as a good property. I am not a shareholder, but should be pleased if I were one.

Mr. MASERONE: What will they give for the mine in Australia?

Mr. SAUNDERS: They were 2*l.* 10*s.* when I was there in March. (Cheers.)

Mr. GRADY: I am sure none of us have listened to the remarks of the chairman without having come to the conclusion that we possess a property of extraordinary value. I think, taking the history of this company for the short time it has been in existence its record is eminently satisfactory. We have sold two blocks at a very good price, and have received two dividends of 1*s.* each. That represents an enormous amount of work, consideration, and business knowledge brought to bear upon the conduct of our affairs, and I find on looking at the accounts that for two years the remuneration of the directors is fixed at the enormous sum of 685*l.*, or not 400*l.* a year, for the gentlemen who have brought about these satisfactory results.

A SUGGESTION.

I am sure, echoing your sentiments, that we should make the board some tangible recognition for the manner in which they have worked on our behalf, and I propose the following resolution:—"That the remuneration of the directors be increased as from Jan. 1 last to such an amount as will give to the chairman 250*l.* per annum, and each other member of the board 150*l.*, and in addition a sum equal to 1 per cent. on all the profits made and dividends paid by the company, such latter sum to be divided amongst them as they themselves may think advisable." I will ask a brother shareholder to second that motion. (No.)

The CHAIRMAN: This has come as a surprise upon the board, and as it evidently meets with anything but your approval, we would not wish to put it before you, but at once conclude the business of the day.

Mr. MEADE: I think, at least, we ought to propose a vote of thanks to the chairman. Any questions I have addressed to the board have

certainly not been in a hostile spirit. I do believe our directors are doing the best they can for us, but I think we should recognise that perhaps the proposition just made has come inopportunistically on the recent reports. At the same time I believe the

SHAREHOLDERS ARE GRATEFUL TO THEIR DIRECTORS,

and am sure they would not like to leave this room without giving expression to that feeling. I beg to propose a vote of thanks to the board for the able manner in which they have conducted our affairs.

Mr. ELLIS seconded the motion, which was carried by acclamation. The CHAIRMAN: I am glad our labours are not unappreciated by you. I will not dilate upon the amount of work we have had to do, but will merely tell you that for the last three months, for about four days a week, I have been in the City with my colleagues up to 11 o'clock at night, but that goes without any further remark from me. We cordially thank you for the confidence you have expressed in us. We have striven to do our best with the property for the benefit of all concerned. We are all large shareholders ourselves, and represent very large holdings. I may tell you that as long as I am here with my present colleagues I am satisfied the work will be done in a straightforward and honest manner, and that you will be treated with candour and truthfulness, and will know the good or the bad, whatever it may be. (Cheers.)

DAY DAWN BLOCK AND WYNDHAM GOLD MINING CO., LIMITED.

RECENT IMPORTANT DISCOVERIES—A GREAT IMPROVEMENT IN THE MINE—SOUND FINANCIAL POLICY—A DISPUTE ABOUT DIRECTORS' FEES.

The ordinary general meeting of the shareholders of the Day Dawn Block and Wyndham Gold Mining Co., Limited, was held at the City Terminus Hotel, London, on Tuesday.

Mr. Geo. Hopkins, C.E.,

presided.

Mr. THOMAS WINDER (secretary) read the notice calling the meeting, and also the minutes of the previous meeting, which were duly confirmed.

CAUSE FOR CONGRATULATION.

The CHAIRMAN, who was cheered on rising, said: Gentlemen, you will take the report and accounts, I presume, as read; and in addressing you to day I think I cannot do better than repeat the first paragraph in our manager's report, in which he says:—

"It affords me great pleasure at the close of another financial year to congratulate you on the greatly improved prospects of your property, after perhaps the most critical period in the history of the mine."

Gentlemen, that is exactly what I feel it is my duty and pleasure to say to-day. That the mine and the company have passed through a very critical period there can be no doubt—so critical at one time that the directors had very seriously to consider what steps should be taken to preserve the position of the company; and in June last they cabled out to the manager to confine all mining operations to the deep levels, as being those most necessary to be carried out—that was the running of the No. 9 level, the sinking of the No. 2 underlie shaft, and the sinking of the No. 3 shaft; and, in addition, to break down no stone from any part of the mine which was not payable, and on which he could not make a profit. Mr. Rollston carried out those instructions loyally and cheerfully, and, in addition, he did some exploration in the ground on the western side of the No. 2 shaft with this result—that after working for nine months at a loss,

AFFAIRS CHANGED ALMOST BY MAGIC,

and we were at once put into a very strong position, financially and otherwise. (Cheers.) If you refer to the crushings which are given on page 2 of the report you will see that from Apr. to Dec. in 1890 we crushed 7,092 tons, from which we only obtained 3,571 ozs., of the value of 12,317. In round figures, the ore yielded 10 dwts. per ton, which is scarcely payable. But now mark—in the three months in 1891—Jan., Feb., and Mar.—from 2,226 tons we virtually obtained the same quantity of gold as we did in the previous part of the year from 7,092 tons; the actual quantity being 3,619 ozs.—which is a little in excess of the other—of the value of 12,502. During the year we had to spend a large sum of money in

DEVELOPMENT WORKS,

poor as we were. You will find them set out in Mr. Rollston's report. They consisted of driving the No. 9 level a distance of 475 ft., sinking the No. 2 shaft a depth of 143 ft., sinking the No. 3 shaft 228 ft.; and, in addition to this, 310 ft. of levels and cross-cuts in other places, and 293 ft. of winzes. That is a large amount of work, and expensive work too; but, in addition to that, there were also the development works done in the ground on the western side of the No. 2 shaft, where he encountered such a magnificent reef of stone. Notwithstanding those heavy expenses, you will find from the revenue account that taking the whole year together, after paying the whole of the expenses of dead work, which are charged to revenue, that the company made a profit of 10,790. 13s. 5d., and I may add—what I daresay all of you know, for you get the reports sent to you every fortnight—that from that time to the present we have continued to make a very handsome profit. (Applause.) Now, Mr. Rollston says this—and it is important for you to bear in mind, or, rather, it is desirable that you should get clearly into your minds,

WHAT THESE DEVELOPMENTS MEAN.

As you know, the shafts are going down at about an angle of 45 degs. At No. 2 shaft we have a level at 630 ft. from the surface, and another at 805 ft. from the surface—that is to say, there is a distance between them of 177 ft. He has now got a communication between those two levels for the whole distance of 177 ft., in which, he says, "the reef averages 4½ ft. in thickness throughout, of good stone," and when he says "good stone" he means stone that will yield somewhere in the neighbourhood of 2 ozs. to the ton. He also says that he has got a distance in length of 187 ft. opened up on the lode; and, turning those figures into weights, he estimates that in that block alone—that is, between those two levels—there is about 10,000 tons of stone in sight.

That is not all, for we have levels both above the 630 ft. and below the 805 ft.; and he is proceeding now to extend those levels, and there is no doubt that this reef, which he has just mentioned as giving in that length 10,000 tons, extends both above and below the block of ground he was speaking of.

POSITION ASSURED.

So that I think, gentlemen, having passed through a very severe crisis, you may congratulate yourselves, and we may congratulate you on the fact that you have got into a very different position, and that your position for some time, at least, is assured. (Cheers.) A little later on I shall have to propose that out of the money standing to the credit of revenue on Mar. 31 certain payments be made. First of all we have used, with your consent, during the last three years a large amount of revenue for the purposes of capital—that is, in completing the new mill, in sinking the No. 3 shaft, and in making some branch railways. Those works are now completed, and we shall to-day ask you to pass a formal resolution authorising us to transfer the sum of 47,882. 19s. 6d. from revenue to capital account, that sum representing the cost of those works which I have mentioned, over and above the capital we had in hand to carry them out. You will remember that when the company was first started we had a working capital of 20,000. only, and these works have cost this 47,000. or 48,000. in addition, which we propose to take, and, in fact, have taken out of revenue.

THE QUESTION OF DIVIDEND.

Now, being again in a prosperous condition, the directors have had to consider the question of dividends, which I know is always an interesting one to shareholders. We shall propose to-day to pay a dividend of 6d. per share (free of income tax) out of the balance, which will absorb 12,460. ; and, as regards future dividends, some of my colleagues think it is desirable that we should pay dividends only every six months; others think that we ought, if we can, to pay them every three months. (Hear, hear.) They both have their objections. Quarterly dividends, in one sense, are objectionable, because, if the mine falls off a little temporarily and you are obliged to miss one dividend, down go the shares immediately. On the other hand, it is rather a long time, when we have the money in hand—for you can see by our fortnightly returns just as well as we can, what money we have—six months is rather a long time to wait. I think—and I should like an expression of opinion from the shareholders on the matter—I think that we had better take a middle course, and pay interim dividends whenever we can, not binding ourselves strictly to the three months, which gives a great scope for persons speculating in the shares, and not putting you off for the long period of six months, which would be only giving you one interim dividend between our meetings.

FUTURE WORKING OF THE MINE.

As regards the future working of the mine, we shall of course confine our attention very much to this part on the western side, because as we get fresh levels run there and fresh ground opened up, we shall be enabled to increase our output. Formerly we used to raise from 7 or 8 levels and from all parts of the mine 1,100 or 1,200 tons a fortnight, and sometimes even more than that; but latterly we have only been raising about 500 tons, and in one fortnight as little as 390 tons. We expect, however, as these new levels are run, and fresh ground opened up, we shall be enabled considerably to increase that output. During the year you will have noticed, from the plans which we sent out with the report, we have had a slight

ADJUSTMENT OF OUR LEASES

from the Government. We have surrendered some ground on the Wyndham reef, which we came to the conclusion it was not worth while our holding, because it involved a considerable outlay to keep it in hand, and we were getting nothing for it. We, therefore, abandoned it, but at the same time we got some additional ground in a much more advantageous position, so that our managers have made an application to the Government for a readjustment of the leases, and that will take place in due course. We have also abandoned the old No. 1 shaft, which you will remember was carried down nearly to our northern boundary. The reason why we abandoned that was that in the adjoining property there was a new vertical shaft sunk to a little over 1,000 ft. which is connected with our No. 9 level. We not only through that shaft get good ventilation, but all the ore, or as much of it as we choose to send from that part of the mine, goes up that shaft. The No. 2 shaft in the future will be our principal working shaft, and that is intended to be carried forward into the Day Dawn Freehold ground, which we acquired in 1887. We shall go on sinking that shaft continuously; and the No. 9 level will be continued westerly, in order to test the ground on the western side of that shaft at a greater depth, and will at some future period intersect the No. 3 shaft, which is also going forward into the Day Dawn Freehold ground. Just at the present moment our manager has applied to the Government for three months' suspension of work on this No. 3 shaft, which has been a very heavy drag upon the resources of this company. We have never yet had anything from it, although it is a necessary work, and a work that will by and by repay us well for the outlay; but up to the present moment it has been a drag and an expense to our revenue. Our friend, Mr. Mills, has recently returned from the mine. I do not know whether he cares to say anything about it to you, but on his return—

A SHAREHOLDER: Is not he the vendor?

The CHAIRMAN: He was the vendor. On his return he reported to us that

THE MINE WAS LOOKING EXCEEDINGLY WELL,

that he was well pleased with it and with the management; and I think that we, the directors, endorse that fully, for there is no doubt we have in Mr. Rollston a very able, conscientious, and painstaking manager—(hear, hear)—and one who at all times and in every direction studies but one thing, and that is the interests of the company. (Applause.) Mr. Mills—and we are much obliged to him for it—like all persons who are able to criticise, pointed out one or two things to us which we were glad to hear, and which, I think, may be improvements; but they are small matters of detail which I need not bother you with. One is with regard to working some free vanners at the mills; but, speaking generally, I think I may say for Mr. Mills that

he was exceedingly well satisfied with everything that he found going on there. (Cheers.)

THE MILL.

Now, as to the mill. Some shareholders I know have had a doubt as to whether it was wise policy on the part of the board to erect the mill where we did, and such a large one. I can only say that the mill is answering our expectations in every way, and we are exceedingly well satisfied that we have put such a mill up, and put it where it is; because, although we have to pay the carriage of the ore from the mine to the mill—which, by the way, I may mention the Government has reduced from 2s. 4d. a ton to 1s. 7d., which makes a very considerable difference—even paying the larger sum of 2s. 4d., our manager reported that it was less than what we should have had to pay before for carriage. Therefore, the fact of the mill being 10 or 12 miles away from the mine is no detriment in that respect; it has, on the contrary, a great many advantages, not the least of which is that we have at all times of the year an abundant supply of water, which we had not at Charters Towers. Apart from that, as I have mentioned at previous meetings, the Corporation of Charters Towers were complaining of the sludge and refuse from the mill finding its way into the streams and creek, evidently from a sanitary point of view, it being a part of their business to look after the sanitary condition of the town. We had some little difficulties on the Burdekin from the same cause at first—namely, putting our refuse into the river—but that, I am pleased to say, has disappeared altogether.

MILL RESULTS.

The mill, which is capable of treating, when working day and night, some 35,000 or 40,000 tons per annum, has only been working 12 hours a day, crushing, in round numbers, 10,000 tons of our own, and 10,000 tons of our neighbour's ores. I do not want to go too much into detail as to the profits that we have made, because perhaps some of our customers might be asking us for a reduction—(laughter)—but I can tell you this, that after getting what we do from the outside public, we crush our own stone at a very small sum indeed. (Cheers.) Of course, that is not the only cost, because we must take into account the outlay of capital which the mill has cost us, but taking everything into consideration, the mill has been a very good investment.

LACK OF CAPITAL.

The only thing is—and I am sorry for it—you had no capital to erect it with, and instead of dividing profits amongst you as we ought to have done, we had to use those profits for erecting the mill; but we thought, and you thought, that it was better to do that than to increase our capital, which already is very large. (Hear, hear.) You may remember that last year, which was not a very grand year, we made a profit of 31,000%, but we were not able to give it to you. However, those expenses are now at an end. (Cheers.) Your mine is looking well, your prospects are bright, and I think in the future whatever we earn you may safely reckon upon that we shall divide amongst you. Of course we must continue, as all miners ought to do, to pay our deadwork out of revenue. We shall have to keep on sinking these shafts, running levels and opening up fresh ground, but I think, after debiting revenue even with all those expenses, from this time forward we shall be able to give you a very substantial return. With these remarks, I beg to propose the adoption of the report and accounts. (Applause.)

Mr. JAMES ALEXANDER (director): I have much pleasure in seconding the adoption of the report and accounts.

ASKING FOR A 9D. DIVIDEND.

Mr. WILLIAM DAVISON: I gave you notice in writing the other day that I would move that we pay a dividend of 9d. instead of 6d.

The CHAIRMAN (after a pause): I am afraid Mr. Davison that as there is no seconder that resolution will fall to the ground.

A SHAREHOLDER: How much would you have in hand after paying 9d. a share dividend?

The CHAIRMAN: We shall carry forward about 4,000%, and since these accounts were made up we have made a further profit of 10,000%, or 11,000%. Therefore, 15,000% is probably not far from the mark. By sending you the fortnightly returns showing our receipts and expenditure, you can tell just as well as we can what money we have. But it is not the wish of my colleagues that we should approach low-water so fearfully close as we approached it this time last year. (Cheers.) I think we must keep a reasonable amount in hand. (Hear, hear.) It is always there, and, as I said just now, without committing ourselves to quarterly or any other dividends, we had better let the matter stand.

WHAT THE ARTICLES SAY.

One of my colleagues has pointed out to me that clause 98 of the articles of association says that "the general meeting may declare a less, but not a greater dividend than that recommended by the directors." Therefore, I am afraid my friend, Mr. Davison, must let his resolution drop this time. (Cheers.)

A RECENT VISITOR TO THE MINES.

Mr. THOMAS MILLS, who was received with applause, said: Mr. Chairman and gentlemen, our chairman was good enough to remind you that I was out on your property this year. I was in Queensland in Apr., and made two separate visits to the mine down below, one or two visits to the mill, and several visits to the surface. It is far more easy to visit the surface than to go below—especially at the time when I was there, for it was extremely hot. At any rate, I went from Mills' Day Dawn United shaft, passing through our eastern workings, and along the No. 9 level. This level we have not yet received any profit from, but I may tell you, gentlemen, that there is a large body of stone there carrying gold, and I am in hopes some day that we shall be getting profits from that part of the mine. We are not, however, working it at the present time. Then I came up through the No. 2 shaft into what is called our 805-ft. level. There I came on to this new "make" of stone, and I may tell you that these reports were written about a week before I arrived there, and I can confirm all that they say. In fact, if I had had the writing of the report when I was there I would have put it a little stronger. In that 800-ft. level there is laid open nearly 200 ft. of reef, averaging about 5 ft. in width, and showing gold in places to the extent of 1½ ozs. or 2 ozs. to the ton. But, of course, crushings alone will prove if that is so. At that time we were putting up a rise to meet a

winze being sunk from the 630-ft. level, but this winze and rise had not then broken through, and that was what caused the excessive heat. The miners, consequently, were not able to do the same amount of work. Later reports, however, say that that winze has broken through, and that that part of the mine is now well ventilated.

A LARGE REEF IN THE 630-FT. LEVEL.

In the 630-ft. level I saw also a very large reef, which was apparently of great extent. The manager then proposed to start a 500-ft. level, which I believe they have done by this time; and I think we ought to get as good stuff in that level. I was very pleased with the management of the property. Our business has been conducted with economy in every shape and form throughout the hard times. I was gratified also to find that our manager had shown a considerable amount of forethought in the interests of the company by acquiring a piece of ground adjoining our property, which is very valuable to us. He might have acquired it for his own benefit, but he was working for us, and he acquired it for our benefit. (Cheers.) I hope the time will come when the board will see their way to thanking him substantially for it. I do not think I have anything more to say, unless any of you like to ask me questions. Last year, when I was here, reference was made to Mills' United Day Dawn shaft, adjoining our property, and somebody said it was awfully disappointing to the people—poor crushings are always disappointing—but the crushings now are good and that mine is paying handsome dividends; so that those people who were disappointed then can rejoice now. (Cheers.)

QUESTIONS.

Mr. ROBERTSON: I am under the impression that you said you expected they would come upon the reef that was in existence when you sold the mine. Are you under the same impression now?

Mr. MILLS: I was asked if ever I saw this mine in a bad state before, and I said "Yes, I have;" and I added, "You will have to get out of this duffer stone, and you must expect to go through a blank before you come upon good stone again."

Mr. ROBERTSON: Do you think now that they will come upon the same reef that was in existence when you sold the mine?

Mr. MILLS: We have come upon gold that was not known to exist when we sold the mine.

The CHAIRMAN: We have never lost the reef. The reef is one body going down throughout the whole of our property, but it is poor in places.

Mr. ROBERTSON: But with all due deference to you, the reef did not pay.

The CHAIRMAN: Exactly so. Sometimes the reef carries no gold at all, it is absolutely blank, but still the reef is there.

A SHAREHOLDER: It is what you call a "slide" in the reef.

Mr. MILLS: We have gone through a cross-course.

The CHAIRMAN: Yes, and found the gold on the other side.

A SHAREHOLDER: Is there any intention of working the property of the Day Dawn Freehold Extended?

Mr. MILLS: Yes; Nos. 2 and 3 shafts are run for that property. No. 2 shaft will strike it first.

Mr. W. H. JOHNSON: How far are you now from the ground that this gentleman refers to?

Mr. MILLS: This ground is about 500 ft. or 600 ft. below the No. 3 shaft, but close to No. 2 shaft.

The CHAIRMAN: The United shaft is about 150 yds. distance from our ground. I think they are running east, away from our ground.

Mr. WOOD: What number of stamps have you, and whose mill is it? Is the ground that we are working pockety?

A TRUE FISSURE LODE.

Mr. MILLS: This is a true fissure lode—a continuous reef.

Mr. WOOD: And is there no refractory ore in the mine?

Mr. MILLS: It is very trifling.

Mr. WOOD: I should like also to know whether the tailings that come from the mill have been analysed, and with what result?

Mr. MILLS: We have analysed them at different times, and about 3 dwts. is the result.

The CHAIRMAN: It is a 60-stamp mill, and the stamps were made at Maryborough.

Mr. MILLS: The board ordered 10 stamps from Messrs. Fraser and Chalmers, and 50 were made in Queensland.

Mr. WOOD thought that the latter 50 must be obsolete, and went on to say that he considered the directors should write off something for depreciation of plant and machinery.

The motion was put to the vote, and carried unanimously.

The CHAIRMAN: The next resolution is, "That out of the balance of 64,620/15s. 1d., standing to the credit of revenue on Mar. 31 last, a dividend of 6d. per share (free of income-tax) be, and the same is hereby declared payable to all the shareholders registered in the books of the company on July 7 inst." Mr. Davison will be glad to hear that the dividend warrants will be sent out in two or three days, and I hope that the principle of *bis dat qui cito dat* will be some recompense to him for the smallness of the amount. (Laughter.)

Mr. DAVISON: I can wait a little.

The CHAIRMAN: All things come to those who wait. (Laughter.)

Mr. MCILWRAITH seconded the motion, and it was carried unanimously.

The CHAIRMAN: The next resolution I have to submit to you is as follows:—"That out of the sum of 64,620/15s. 1d., standing to the credit of revenue on Mar. 31 last, the sum of 47,882/19s. 6d. be transferred to capital account, the said amount having been expended on the erection of the vertical mill, branch railways, and No. 3 shaft."

Mr. THOMAS ELEY SYKES (director) seconded the motion.

A SHAREHOLDER: What is the object of this transfer?

The CHAIRMAN: It is merely a book-keeping entry. It stands now to the credit of revenue, and we desire to place it to the credit of capital account, seeing that we have spent the money for capital purposes.

The resolution was put and carried unanimously.

DIRECTORS' REMUNERATION.

The CHAIRMAN: The next question is that of the remuneration of the directors, and I have to remind you that we have faithfully carried out what we said we would do at the last meeting. Things looked anything but healthy at that time, and we said that we would not draw any fees until we saw the result of the year's work, and then we would come before you, and ask you to vote us such sum as you thought we were entitled to. You know that according to the articles

there is a sum of 1,700*l.* to be set aside as remuneration for the directors. We do not ask you to do that, but we do ask you to propose such a sum as you think fair and reasonable.

A SHAREHOLDER: What do you propose yourself? (Laughter.)

The CHAIRMAN: It has been suggested to me that instead of 1,700*l.* it should be 1,200*l.* I do not know whether that would meet your views.

A SHAREHOLDER: How many directors are there?

The CHAIRMAN: Six now; until recently there were seven.

Mr. WOOD: I shall have much pleasure in proposing that the remuneration of the directors be 1,200*l.*

Mr. JOHNSON: I beg to second that.

A DIRECTOR THINKS 1,200*l.* EXCESSIVE.

Mr. ROSS ROBINSON (director): I am sorry that I have to oppose this resolution. We have been passing through bad times, and during the crisis the directors have been enabled to curtail expenses to a great extent both in Australia and London. Now, I think it will come with very bad grace indeed if, while curtailing expenses all round, we take a large sum of money ourselves. I consider 1,200*l.* a great deal more than the shareholders ought to pay to the directors. 800*l.* should be sufficient to meet the case, and I feel in duty bound to oppose the resolution.

Mr. WHETSTONE: I beg to propose that 800*l.* be paid to the directors as remuneration for their past year's services.

A SHAREHOLDER seconded the amendment.

Mr. NORMAN THOMAS: There can be no doubt that our directors have done well for us in bringing us through critical times. I think we should defer the consideration of this subject, say for six months, and then, if the mine has done well, we can deal generously with our directors.

UNGENEROUS.

Mr. BLACKET: Now that we are doing so very much better, I think this discussion very unwise and ungenerous. As the chairman remarks, and justly remarks, all business men know perfectly well that when there is no business doing, it is a very anxious time for those who have the management. You must keep your staff going and pay them all the same. I think it is unreasonable on our part to want to make any reduction in the amount that the chairman has suggested.

The CHAIRMAN: It has been moved as an amendment and seconded: "That the remuneration of the directors for the year ended Mar. 31 be 800*l.*" As many as agree with that signify the same in the usual way. I am sorry, gentlemen, to divide the meeting. The whole 1,200*l.* means one halfpenny a share.

A VOICE: Do not let us be mean.

Mr. EVANS: I shall be happy to receive a 5*d.* dividend. (Laughter.)

A SHAREHOLDER: It has been suggested by the chairman that 1,000*l.* would be accepted, and I think the majority of the meeting would be inclined to agree to that. I propose that 1,000*l.* be paid.

A SHAREHOLDER seconded.

The CHAIRMAN: It is moved and seconded, "That the remuneration of the directors for the year ended Mar. 31 last shall be 1,000*l.*"

After some further discussion, it was unanimously agreed to pay the directors 1,000*l.*

JUSTICE TO THE MINE MANAGER.

The CHAIRMAN: I think we should do a little justice to those who are serving us at a long distance from us. We have lost about half an hour over 200*l.* Now, let us do a little justice to Mr. Rollston, for it is to him we look for results. I have very much pleasure in proposing "That the thanks of this meeting be given to Mr. Rollston for the able and satisfactory manner in which he has carried on the affairs of this company as its general manager in Queensland during the past year." (Applause.)

A SHAREHOLDER: I beg to second that, but I should like to propose a more substantial thanks. I would suggest that the 200*l.* be given him.

The CHAIRMAN: I should say let Mr. Rollston have the odd 700*l.* that we are not taking.

A SHAREHOLDER: What does he get now?

The CHAIRMAN: 350*l.*

Mr. EVANS: Mr. Mills has told us that

MR. ROLLSTON ACQUIRED A CERTAIN PROPERTY FOR US,

when he might have acquired it in his own interests. Would it not be better to defer the question of making him some handsome present in consideration of that until the next meeting, when we may be able adequately to recompense him?

Mr. WOOD: Do I understand that Mr. Rollston handed over this property without any consideration at all to the company?

Mr. MILLS: Yes.

Mr. McILWRAITH: I had the pleasure of meeting Mr. Rollston two years ago at Charters Towers, and I formed a very favourable impression of him. It occurred to me that he was a really first-class manager, and I am sure there is no mine manager in Australia who has the responsibility that he has who is so badly paid. The amount suggested by the chairman—namely, 700*l.*—is a very fair one, and I hope it will be carried.

The CHAIRMAN: We cannot give shares away. I think, gentlemen, you had better leave it to the board, and pass the following resolution:—"That the best thanks of this meeting be given to Mr. Rollston for the able and satisfactory manner in which he has carried on the affairs of this company as its general manager in Queensland during the past year, and the directors are hereby authorised to take into consideration in some substantial manner the services he has rendered to the company."

The motion was carried unanimously.

FORMAL BUSINESS.

Messrs. Monkhouse, Goddard and Co. and Messrs. Thomson, Jackson, Gourlay and Taylor were then re-appointed auditors for the current year at a remuneration of 40 guineas.

Mr. SYKES proposed the re-election of the chairman as a director, and remarked that the shareholders could have very little idea of the value and importance that Mr. Hopkins was to the company.

The motion having been seconded, was carried unanimously.

The CHAIRMAN: Gentlemen, I am much obliged to you. We

sometimes have a little difference of opinion, but on the whole we manage to get along very well.

The CHAIRMAN: Whilst I am on my legs I will propose the re-election of Mr. ROSS ROBINSON. I think, however, he has shown a little want of discipline to-day in not telling me what he was about to do. At the same time, I must say that cutting down these few pounds will not make your mine a success.

Mr. MELLODEW seconded the motion, which was carried; and a vote of thanks to the chairman terminated a protracted meeting.

The directors notify that the warrants for the dividend of 6*d.* per share declared at the general meeting, held on the 14th inst., have been posted to 2,560 shareholders.

SALE OF GOLD.

The directors have sold, through Messrs. Johnson, Matthey and Co., Limited, 1,531 ozs. of bullion, ex s.s. Taroba (proceeds of the returns of Apl. 25 and May 9), for the sum of 5,449*l.* 1*s.* 6*d.*

HARRIETVILLE GOLD MINING CO., LIMITED.

THE YIELD FOR THE YEAR SHOWS A FALLING OFF, BUT PROSPECTS ARE ENCOURAGING—IMPORTANT DISCOVERIES—COMPLIMENTS TO THE MANAGER.

THE third ordinary general meeting of the shareholders in this company was held at the Terminus Hotel, Cannon Street, E.C., on Tuesday, July 14.

Lord Ribblesdale

(chairman of the company) presided.

Mr. JOHN GARLAND (secretary) read the notice convening the meeting.

THE WORK OF THE YEAR.

The CHAIRMAN: Gentlemen, I have got to move that the report and balance-sheet to Mar. 31 be received and adopted, and I suppose, as usual, you will be ready to take that report and balance-sheet as read. It is a very full and a very excellent report as regards detail, and the arrangement is very convenient, that is Mr. Davey's report. Indeed, it is so full that the directors have made their report correspondingly short. He left hardly anything for us to explain, which could be explained better or more fully than he had done himself. Of course, I do not pretend that this is altogether a satisfactory year. At the same time, an immense amount of exploratory work has been done—I think 130,000 cubic ft. altogether. The figures are not in my mind, but I feel certain that it is very much in excess of the exploratory work done the previous year. And while all this has been going on, and the mine has been developed in a thoroughly workman-like manner, we have extracted 10,561 tons of quartz, against 3,071 tons extracted last year. If only the grade of the ore had kept up, that would have enabled us to pay a very handsome dividend this year, but, unfortunately, those 10,000 odd tons only gave an average yield of gold of 8 dwts. 19 grs., as against 1 oz. 5 dwts. on the 3,000 tons we treated last year. I will not go into the reasons for that, which are more or less gone into by Mr. Davey, because you will hear of the mining technicalities from Mr. Taylor presently. The only thing I would say is this—I do not think we need be discouraged by this. It is

DISAPPOINTING, BUT NOT DISCOURAGING.

Everyone who has had anything to do with gold mines must know, however wise your policy, however prudent your management, and however energetic your efforts, you cannot keep up the grade of the ore. You will have lean years, and fat years. Unfortunately we have had a lean year, but that only leads us to hope that this year the pendulum may swing the other way, and we shall have a fat year. Another thing I would say is, that of course we took this over as a going concern, and it was the experience of the people who worked this mine before that warrants us in coming to the conclusion that this low-grade ore is exceptional.

PRESENT PROSPECTS.

I should also like to say that our present prospects are, I may say, improving almost every day. The news we have been receiving lately is of a more encouraging character than before. Some of it has been published, but the telegram I am going to read to you has not been published. On the 1st inst. Mr. Davey informed us by cablegram as follows:—

"The reserves of ore have increased 3,000 tons since Mar. 31. The body of ore is increasing in width 50 ft. below J. There is a favourable change in the weather. Sufficient water available to run all the machinery."

On the 9th inst., that is five days ago, we received the following satisfactory telegram from our superintendent:—

"We have struck two shoots of ore of fair grade north and south of Guerdon; tunnel J has the appearance of good body of ore. Pieces of quartz very rich in free gold. 455 ft. backs: A part of the mill is running on ore from here. There is a great improvement in general prospects. Government grant 730*l.* to sink. Have secured new lease adjoining Guerdon."

I think that is a highly satisfactory telegram, and it is not a telegram that has come at our instigation. It is evidently a fresh discovery, which he at once, of course, made us acquainted with. In connection with this telegram it is very fortunate we have secured the extension of this new Guerdon reef, because, as Mr. Davey points out in his report, it will save us, perhaps, some blackmail in the future.

ADVANCES FROM THE GOVERNMENT.

The next point I should like to refer to is, that our negotiations with the Government of Victoria have been successful as regards their advancing us a sum for prosecuting deep sinking in the mine. We have got 730*l.* This, of course, is repayable from the profits arising from the ground which is developed by this sum of money, and I think I am right in saying that the Victorian Government is very liberal in its treatment of mining companies in which they believe in all such matters. I think it is clearly brought out in the report, but I should like again to bring it out that we are able to treat ore of a very low grade to a profit. Mr. Davey estimates, and I think his estimate now

should be taken as a very fair one, considering he has had ample experience of all the conditions of mining on the Harrierville Mine—he estimates the expense at 4s. 6d. a ton, which is a little over a pennyweight, and I think in his report he says anything over 2 dwts. in a considerable body of quartz would pay well. I do not think I have anything to add as to the general policy of the company. We are very well satisfied with the way in which Mr. Davey is managing the mine. He speaks highly of his staff, and our plant and machinery is all in excellent order, and has been singularly free from the tiresome breakdowns which often cause embarrassment and disappointment. He says

THE MACHINERY IS ALL WORKING WELL.

There is only one other point I should like to say something about, that is, directors' fees. Your board have taken this matter into consideration, and have decided to draw not the whole sum to which we are entitled under the articles of association, but only one-half that sum, from midsummer of this year until the mine is paying. I have nothing further to add, but shall be pleased to answer any questions shareholders may put to me. I beg to move "That the report and balance-sheet to Mar. 31, 1891, be received and adopted."

Viscount GRIMSTON, M.P. (director): Gentlemen, I beg to second the adoption of the report and accounts proposed by our chairman, and I have great pleasure in confirming, from my intimate knowledge of the business of this mine, the favourable aspect which he has presented to you of its future. I am not going to make a long speech, but I wish to call attention to some small points which your chairman touched very lightly upon, which are valuable, as indicating the successful management of the mine and the

TRUST WE HAVE IN OUR ABLE MANAGER.

Mr. Davey. He speaks of a certain shoot of gold, and says, "This shoot is intact to the surface—about 400 ft." He estimates the reserves at about 20,500 tons, and says, "it can be broken, trucked, and crushed at a cost of about 4s. 6d. a ton, including timbering." Everyone who knows anything about mining will understand that a man who can treat ore at so low a cost must have, first of all, set out his plans with the utmost exactness, and, secondly, be a most efficient and trustworthy manager, who knows how to treat ore to the best advantage. There is a second point which shows his great ability. He speaks of the treatment of pyrites, and says, "The roasted ore is being amalgamated in two Wheeler's pans, and the yield, as well as the daily assays of tailings, shows that we are saving over 90 per cent." This is a most encouraging aspect of affairs, and I am quite certain that you who understand the manner and method of working mines are well satisfied and pleased that we have so efficient a manager, who is using his very best endeavours day by day and, I might almost say, night by night for the prosperity of the property. (Hear, hear.) I am quite sure you will endorse the board's strong feeling of gratitude to Mr. Davey for his efficient and valuable services.

THE UNDERGROUND WORKINGS DESCRIBED.

Mr. JOHN TAYLOR: Gentlemen, a glance at the map which accompanies this report must have made it evident to you how vast these workings are, and how numerous their ramifications. The exploratory work in sinking, driving and rises amounts, as you will have read, to as much as 4,600 ft. The greater portion of this has been what is called deadwork, that is thoroughly exploratory work. It has been distributed over a very large area, and many different points have been attacked. The result of that has been the discovery of three what we look upon as entirely new shoots of ore—one south of tunnel G, one north of tunnel J, and the continuation of the Guerdon lode. In the new lease, called Taylor's, a discovery has been made. To test a vein from which former workers were said to have taken away some small number of tons of rich stone, which they raised and crushed, and from which they got a very good return, we drove south of tunnel D, and got payable gold to a distance of 98 ft., the average width of the lode being 2 ft. We have crushed from there 1,785 tons, giving a yield of 471 ozs. of gold, an average of 5 dwts., and leaving a nett profit of about 1,000% on that small operation. A winze has been sunk upon this, and laid open fair quantities of visible gold, and a rise which has been put up to the surface has opened up about 600 tons more of this rock. This will be valuable in the tunnel B where the lode has been found to be 3 ft. wider than above, with gold, and a continuation of this same shoot has been struck in tunnel C with a rich streak a foot wide. This shoot will also be valuable, because it is easily accessible from the tunnel A, which passed through the Jackass at a still further depth of 130 ft.

THE TIDDLEDEE MINE.

In the Tiddledee Mine there is a very important piece of work in hand. A branch level, south from tunnel D, towards the Mons Meg Mine, we have driven something like 1,100 ft. The lodes have been disturbed and the progress has been retarded by a very heavy influx of water, but that level has now drained the Mons Meg workings and also the shaft below the tunnel J. This work is being carried on as fast as possible. There is a mention in the report of Tracey's workings; since that time we have the news in one of the later reports that the driving south-east from tunnel D has intersected the shoot below these workings. The lode is 2 ft. wide, and of promising appearance. In the Mons Meg Mine most of the work has been confined to developing and stopping the lode over tunnel J, where it has ranged from 3 to 16 ft. wide, and from which over

6,000 TONS OF ROCK,

yielding an average of 12 dwts., has been taken, and the reserves are estimated at 4,000 tons. With regard to this new shoot, you will have read what Mr. Davey has said with special interest, not only from the description of the body of ore, but from the statement containing reference to the cost, of which Lord Grimston has already spoken. Rock of 2 dwts. 5 grs. is payable. The estimate of reserves here we can consider of value, because of the width of the lode. To go further south again, tunnel J has been driven nearly 500 ft. to the east to what is called Guerdon lode. In this distance of driving we have

CUT NO LESS THAN EIGHT DISTINCT LODES.

Three of these were auriferous of certain value at the actual point of intersection, and they will undoubtedly claim attention as soon as

circumstances admit. The Guerdon lode, as described in this report, is said to be 9 ft. wide, carrying a vein of quartz 1 ft. wide, showing gold in fair quantities. From this place comes the capital news, which you heard read in the cable of July 9, announcing that further shoots of gold-bearing rock had been intersected in driving both north and south from the end of this tunnel—Tunnel J. This is a place of special importance, because there is 450 ft. of untouched ground above. Lord Grimston has alluded to the local manager out there in very pleasant terms, and I am sure it will be gratifying to Mr. Davey to read what his lordship has said. There was a time when some of us were impatient, and very much inclined to think that if we had been out there things would have gone on faster. I do not think that feeling can remain in anyone's mind any longer, and the greatest praise is due to Mr. Davey. You will gather from the report

THE EXTENT AND MAGNITUDE OF THESE OPERATIONS,

and we all know what he has done for the company in carrying out the mining work. He has acquired these additional water rights to secure a supply of water to the mill in dry weather, and, last of all, we know he has acquired from the Government this very substantial grant of 730l. towards the deeper mining. The fact that the Government are prepared to assist us substantially towards the expense of deeper mining is important, not only for the financial aid, but because it most strongly demonstrates to us the confidence that the Government mining engineers must have of the prospects of these veins in the Harrierville property when more deeply worked. I think this confirmation of the opinion of our superintendent is a very valuable one to us all. The news in the cable of July 1, speaking of the addition to the reserves of 3,000 tons in the three months, and now this cable of July 9, speaking of the

GREAT IMPROVEMENT IN THE GENERAL PROSPECTS,

leads me to believe very confidently in the future of this mine, and I look forward to being able to maintain the returns and increase the profits for the current year.

A SHAREHOLDER: When does Mr. Davey expect to cut the shoot in tunnel D in the Mons Meg Mine?

Mr. TAYLOR: We have driven 1,100 ft., and the water coming away leads us to think we are very near the shoot now. I think we may hear of that any day.

A REPRESENTATIVE OF THE AUSTRALIAN SHAREHOLDERS.

Mr. SMITH: Mr. Chairman and gentlemen, I have known this mine for a very long time, and I have been asked by a number of Australian shareholders to represent them at this meeting and put before you their views. I wish, however, to draw a distinction between the views entertained by them and the views I entertain myself. Several of the Australian shareholders have an idea that we are doing too much for posterity in this mine. The opinion with them is, we might have extended over three or four years the amount of exploration we have done this year. I think most of them would be prepared to admit you are building up a splendid future for the mine. They have the idea, however, we might, if the amount of exploration done in this one year had been distributed over three or four years, now be in a position to pay a handsome dividend, and more especially if another battery had been erected which could treat a very much larger quantity. Their idea is briefly this—that it might be to the advantage of the mine if a board of consultation and advice, consisting of old shareholders out there who know the mine well, could occasionally be brought into conference with Mr. Davey. That is the view of the shareholders out there. As for my own view, I have known that mine for 38 years; I have known all the work that has been done upon it, and I have a tolerably good idea what ought to be done now. I have

NOT THE SLIGHTEST DOUBT ABOUT THE FUTURE OF THE MINE, but I should like to see the thing accomplished as soon as possible. I am quite satisfied that the interests of the mine and the shareholders are safe in the hands of Mr. Davey; in fact, if anything, Mr. Davey is over doing it. He is taking too much out of himself. But we do not want to work the mine for posterity. We know that the Australian mode of working a mine is different from the English, but I am not certain but that the Australian mode is more remunerative than the English. At any rate, a little mixture of the two might be of advantage to us both.

The CHAIRMAN: We must all be very grateful to Mr. Smith for the very moderate and wise speech he has just made. It is of great value to us to know what the idea of the experienced shareholders out in Australia is, and I can assure Mr. Smith and the parties he represents, here to-day that the board will give very full consideration to the suggestion he has just made. I do not like to give any expression of opinion on the remarks he made, for I think it is a delicate question, and one which it would be very foolish of me to say anything about at present, as I have not had time to consult my colleagues. I see a great many objections, but they may be compensated on further consideration. I can give no expression of opinion one way or the other on that suggestion. We are all very pleased to hear how fully Mr. Smith is able to concur with the remarks made about Mr. Davey. That is the testimony of a man who is

JUDGING FROM HIS OWN EYES,

and not entirely from letters, as we have been obliged to do. I am also very pleased to hear what a prosperous future Mr. Smith believes is in store for us, but I am not sufficient of a mining expert to say whether the exploratory work done this year could have been spread over three or four years equally well, and whether it would have been worth while to have gone after the rich stuff, and taken no thought for the morrow. The Australian and English idea of mining may be at variance, but at the same time some wise point of attack might be discovered. We shall do the best we can for the property. We have every respect for the suggestions of Mr. Smith, but it would be very difficult for us all of a sudden now to go back on the policy we have been working the mine upon hitherto. All these are things your board will consider, and we are exceedingly grateful to Mr. Smith for having brought forward the views of the Australian shareholders.

ADDITIONAL STAMPS.

A SHAREHOLDER asked whether the board were thinking of sending out more stamps.

The CHAIRMAN: In page 22 of Mr. Davey's report he speaks of a second mill of 25 heads, which will be worked, of course, by the same water, and if we get the stuff would enable us to treat quartz at a very low figure. It is quite in our minds directly we have got sufficient reserves to justify it we shall increase our stamping power. The motion was then put to the meeting, and carried.

The CHAIRMAN proposed "That Mr. Francis Retallack and Mr. Charles K. Steuart be and they are hereby re-elected directors of this company."

Viscount GRIMSTON seconded the motion, which was carried unanimously.

On the motion of Mr. LEWIS, the auditors, Messrs. Cooper Brothers and Co., were re-elected for the ensuing year, at a remuneration of 25 guineas.

SPECIAL MEETING.

The meeting was then made special for the purpose of passing the following resolution:—

"That articles 91 and 92 of the articles of association of the company be repealed, and that in lieu thereof the following articles be substituted:—'91. The company shall employ Messrs. John Taylor, Frank Taylor, and Robert Taylor, now carrying on business in co-partnership as civil engineers, at No. 6, Queen Street Place, London, under the style or firm of 'John Taylor and Sons,' as the consulting engineers and managers of the company; and so long as any or either of the present partners shall remain members or a member of the said firm, and the said firm shall be willing to serve the company as consulting engineers and managers, the said firm shall be employed as such engineers and managers, provided that such employment may be determined by special resolution of the company.' '92. Either of the managers may resign his office, but in that case, or in the event of the death of a manager, the continuing managers or manager shall be deemed to be the managers or manager for the purposes of these articles.'"

The SECRETARY having read the notice of meeting, The CHAIRMAN (Lord Ribblesdale) proposed the resolution as above.

Mr. FRANCIS RETALLACK seconded the motion, which was carried.

The proceedings closed with the usual vote of thanks to the chairman.

ANGLO-SAXON GOLD MINING SYNDICATE, LIMITED.

A MINE THAT HAS PAID 80 PER CENT. DIVIDEND—AT PRESENT IN POOR GROUND—A REMARKABLY CHANGEABLE REEF.

The third annual general meeting of this syndicate was held at the Cannon Street Hotel, on Monday.

Mr. Jeremiah Lyon

presided.

Mr. E. A. REEVES (secretary) read the notice convening the meeting, and the directors' report was taken as read.

AN INTERESTING COMPARISON.

The CHAIRMAN: Gentlemen, the most striking part of the report, which you have been good enough to take as read, is that portion of it wherein a comparative statement is given of the working results of this mine for the past three years. You will observe that in the first year our average crushings were 5 ozs. 9 dwts. per ton, and that resulted in our paying you a dividend of 60 per cent. In the following year our crushings only averaged 2 ozs. 6 dwts. per ton, and that enabled us to pay you a dividend of 20 per cent. In the year that is now under review, unfortunately, the crushings have come down to an average of 1 oz. 9 dwts. per ton, and the result has been that we are not in a position to recommend any dividend to you on this occasion; and whilst this will no doubt be a great disappointment to you, it is doubly so to the directors, because, seeing that they had been successful in an economic working throughout the past year, they thought they would be justified in looking for very much better results.

IMPORTANT ECONOMIES.

We have raised and crushed this year 4,118 tons, as against 2,096 tons in the previous year—about double the quantity—and, as a practical demonstration of the success which has attended the board's exertions in regard to economy, I may tell you that the total expenses in Queensland for the 4,000 tons are 1,246*l.* less than they were for the 2,000 and odd tons the previous year. (Hear, hear.) I am not speaking of the average of 2,000 tons, but of the aggregate amount of 4,000 tons this year, the total expenses of working the whole of which are 1,246*l.* less than they were in the previous year when only half the quantity was raised and mined. I shall show you in detail later on how this is arrived at, but to a large extent it is attributable to the tramway being in operation. In order to accentuate the aggregation of these economies, and to enable you to realise the keenness of the disappointment that the directors have in meeting you on this occasion, it is but right that you should understand how these economies have been brought about, and fully comprehend the position in which we now come before you. Shareholders, rightly or wrongly, are very apt to judge a board of directors not so much by the figures that they present to them, but simply on the question of the dividend results. When, however, the quality of the quartz upon which we have been working is found to diminish to so serious an extent as I have indicated to you, you can readily understand that that diminution is entirely beyond the control of the directors; and consequently, although you are apt to regard only dividends as the true test of success, when the quality of the ore stuff is entirely a matter of speculation, the directors cannot have any blame attached to them for the very poor stuff that we are now working upon. Unfortunately the 4,000 tons that we have raised and crushed have only produced the same quantity of gold as the 2,000 tons produced in the previous year.

MR. SPIRO'S APPOINTMENT.

Last year I announced that Mr. Harbord had tendered his resignation, and that the board had accepted it, and appointed Mr. Spiro to

succeed him. Mr. Spiro took charge on May 12, and it must be satisfactory to you all to know that the first report he sent home—after taking charge of the mine, and after making a most exhaustive examination both above and below ground—was couched in the most flattering terms relative to the very high condition of efficiency in which he found everything at the mine. (Hear, hear.) It frequently happens that when a new manager is appointed he is apt to be too critical and to complain—at all events, you may expect to have the severest criticism upon the work of his predecessor—and so it should be gratifying to you, as it is to us, to know that Mr. Spiro spoke very highly of all the works when he took possession.

MINING OPERATIONS.

You will see, by the copy of the report we sent you, the work that Mr. Spiro has done during the past year. The main shaft has been sunk 80 ft.; the winzes have been sunk 148 ft.; and the levels and cross-cuts have been driven 346 ft. In addition to that, the dam has been raised 2 ft., and strengthened, and we are given to understand that the capacity of the dam now is sufficient for our water requirements for the whole of the year. The new plant which has been erected during the past year consists of a much larger high-pressure steam-engine, a boiler, a tailings pump, a stone-breaker, a donkey feed-pump and two safety cages. The works on the mine were stopped on Oct. 14 last to enable this new machinery to be erected. It was done with such celerity that the work of the mine was started again on Nov. 8; so that there was a very brief delay in erecting all this new plant. Mr. Shakespeare, the Government inspector, visited the mine in Nov., and expressed himself as highly satisfied with everything that he saw. The result of Mr. Spiro's administration has been so far successful that he has succeeded in diminishing the cost of wages for mining and milling, which, during the past year, have only averaged 2*l.* 3*s.* 6*d.* per ton.

PROFIT AND LOSS ACCOUNT.

If you look at the profit and loss account you will observe that the items are particularised in as simple a manner as is considered necessary, and I shall proceed now to make a few comparisons and to amplify the report somewhat. This year we have succeeded, notwithstanding the large amount of extra work that we have done, in reducing the wages to miners by 66*l.* I shall not give the exact figures in the comparison of this year with last year, but simply the net results. The wages to engineers are 5*l.* less; timber and stores are 1,100*l.* more; that is accounted for by the fact that we have done double as much work, and the more work we do our expenditure for timber and stores must necessarily be increased proportionately. In our tramway expenses we show a reduction of 1,609*l.* compared with last year. In charcoal and firewood we are 529*l.* more, and that is accounted for, first of all, by our having a larger boiler—the consumption of firewood is a great deal more than it was previously—and, secondly, the price of firewood has increased upon us. In the immediate neighbourhood of our mine the woodlands are being steadily depleted, and we have to go further afield now to get our wood for engine purposes, and every year we may expect to have our firewood costing us a larger sum. The result of that, so far, has been that on the profit and loss account, notwithstanding that we have done this double quantity of work, our expenses show a diminution of 569*l.*, compared with the previous year.

QUEENSLAND EXPENSES.

As to the Queensland expenses—the interest and exchange shows a diminution of 455*l.* That is brought about very largely from the fact that we have had no money to remit here. Had it been otherwise, we should none of us have objected to seeing that item increased. Telegrams are 94*l.* less; salaries and management in Queensland are 134*l.* less; travelling expenses and sundries are 32*l.* more; so that the Queensland expenses in the aggregate show a reduction of 1,246*l.*

DIRECTORS VOLUNTARILY RELINQUISH THEIR FEES.

With regard to the London expenses—you will see by the accounts that the principal item there is the directors' fees. Last year there was an amount of 400*l.* due to the directors, which they did not take, and which, they said, they would not take until dividends were again paid. Consequently, that amount of 400*l.* that was owing to them they have waived, and it is written off entirely. (Hear, hear.) This year we commenced with directors' fees of 975*l.*, and we have not taken a penny-piece of that; and we are all agreed at present that we do not intend to take any unless we are able to pay dividends. (Cheers.) At the same time, I do not see that we are called upon to do that, because our ceasing to pay dividends does not arise from inefficiency of work on our part, nor from less time and labour devoted by us to the company's interests; but the board own more than one-fifth of the shares of the company, and whatever fees they may take it is like taking the money out of one pocket and putting it into the other. We have written off depreciation of machinery 628*l.*, and our loss of horses by sale and death has necessitated the writing off of nearly 900*l.* under that head. You may remember that before we made the tramway we had to do the whole of our carting at great expense; this necessitated our keeping a stud of 60 or 70 horses, which have now nearly all been disposed of.

FACTS IN CONNECTION WITH THE PROPERTY.

I wish now to give you a few facts in connection with the property as it now exists, and in order that you may more readily understand me, I wish you to bear in mind that we have one main shaft, and that our workings are on the east and on the west of it. In the eastern part of our workings the reef has entirely cut out. We have driven 150 ft. eastward from our main shaft, and we have cross-cut at the end of that drive 25 ft. without finding any reef. Now, the reef in the western workings is of an extremely changeable character, and it totally differs from all the characteristics of the reef that were observable in the more shallow workings. We drove on the west from our No. 4 level—our bottom level so far—60 ft. before we met with the reef. We then found it 4 ft. thick, and running about 2-oz. stone. In a foot or two it disappeared again, and we again picked it up a foot or two further on, but it was only ½-oz. stone. In order that you may realise the

CHANGEABLE CHARACTER OF THIS REEF,

I wish to impress upon you this—that at the end of Mar. it was 4 ft. thick; on Apr. 6, proceeding on the same line of reef, it was about

6 ins.; and on the following day, Apl. 7, it opened out to 2 ft. But in addition to the irregularity of the reef, it has also become very difficult to work. At one part, working in one of the winzes, the ground is so hard that it takes 150 to 160 drills to get down 2 ft. The bulk of our work is done by contract, and by the last advices it was the third lot of contractors who were working that particular winze; the two other parties who had taken it before had abandoned it because it was impossible for them to do any good with it; consequently, they lost the deposit of 25 per cent. that they are obliged to lodge before commencing the contract. Mr. Harbord writes recently that our reef is "still in unsettled country—not sufficiently deep to be in regular strata—and that, in consequence, it varies in size very much—from a few inches up to as wide as 14 ft." I do not wish to unnecessarily alarm or depress you, but it is only right that you should have all the facts, whether they are cheerful or the reverse. The directors do not wish to hold anything back from you, but they desire you to form your own conception of the property. In anticipation of this meeting being held we gave instructions that a cablegram should be sent to us giving us the very latest news as to the condition of the mine in order that we might come before you, and give you these details.

A TELEGRAM.

That telegram, I am sorry to say, is not by any means satisfactory. It runs to this effect:—

"The average width of the reef is 24 ins., and the average yield will be about 10 dwts. The stopes are looking poor; the body of ore is narrowing and of low grade."

That, unfortunately, is the most recent telegram we have relative to the present condition of the mine; therefore I have no hesitation in making clear to you that the present position of the company is a very critical one, because we cannot reduce wages—there is a very powerful union in the Limestone district, and we are already being encountered with the difficulty of obtaining labour. Men are leaving the district for more genial places, even though they will get lower wages. We can find no boys to work for us, and a great deal of the work on the surface might be done by boys. For the most insignificant work we have to pay 3l. 10s. per week, consisting of six days of eight hours each. If the ore continues to decline in quality, as it has been doing, and as this telegram still further accentuates, the position will be very serious, and it will be for us to determine what we shall do. We are continuing the sinking of the main shaft. In the report we tell you that we had sunk 80 ft. during the year, and since Mar. 31 we have sunk that main shaft another 57 ft. We must not overlook that the sinking of the main shaft is essential to our working as a mine. We must go deeper, and we must have other drives.

ILL-HEALTH COMPELS MR. SPIRO TO RESIGN.

Unfortunately, the climate of the district where our mine is situated is a very trying one, and we are very sorry indeed to hear that Mr. Spiro's health has been very unsatisfactory during the last few months—so much so, that it has necessitated his giving us three months' notice that he must leave. We are sorry for this for several reasons. We have every reason to be satisfied with the excellent manner in which he has conducted the operations of the company whilst he has been in charge, and it is especially a matter of regret to us that he should be leaving at this critical juncture in the history of the company. We have, however, requested our local director—Mr. Harbord—to look about for another manager, and it is a most essential factor in the success of the company to have a good manager. Being in possession of a good mine, it does not follow that you are going to get anything out of it; the acquisition of an able and competent manager is almost of equal importance. We hope we may be successful in finding a man who will be as painstaking as Mr. Spiro has been during the past year.

DIRECTORS ARE THE LARGEST SHAREHOLDERS.

I always make a point of telling you the holdings of the directors. At present the directors hold 10,634 shares—that is 400 or 500 more than they held last year; so that they have not parted with any of their property at all. Whilst the directors have thought it right to lay all these facts before you, they are not by any means disheartened or dispirited, nor do they take a pessimistic view of things. It has been the experience of many mines in Queensland, after showing phenomenal richness in the upper workings, to find a barrier of very inferior ore stuff, but by going to a lower depth they have sometimes found a similar rich deposit below. Even in the celebrated Mount Morgan Mine, which is generally considered to consist of a mountain of ore stuff, they have reached a certain point, after taking off the top of that ore stuff, and now they find that there is a large barrier of poor stuff which must be removed before they can get to the richer deposit which they believe exists below. Whether that will be our experience or not I do not know, but the fact of our reef being broken up as it is an indication that we need not be hopeless. Even should we consider it necessary in the interests of the syndicate that we should cease working at the mill, we shall proceed with exploratory work. We shall sink the shaft and drive levels at certain positions in that shaft, and then if we meet with the same quality ore stuff as we had in the upper workings we shall come before you with a more satisfactory report than we do to-day. At the same time the year's working has resulted in

A PROFIT OF ABOUT 4,000L.

and, unhappily, in the six months' preceding the present year the workings were exceedingly unsatisfactory, and we lost a great deal of money which we have had to pull up, and we have now almost wiped off the balance against profit and loss, which stands at about 780L. Gentlemen, such are the facts that it is my duty to lay before you, and I can only assure you that the directors have done their utmost, and you may rest assured that we shall continue to study your interests, as our own are so much identified with them. Whilst I cannot, I am afraid, send you away in a very cheerful humour, yet I ask you to look at the more hopeful view of the picture, and to bear in mind the experience of other mines in Queensland, where, after phenomenal richness on the top, a temporary barrier has interposed to stop the rapid acquisition of wealth. We can only hope to find ore stuff of better quality as we go down deeper. The chairman concluded by moving the adoption of the report and accounts.

A HOPEFUL VIEW.

Mr. HENRY BRANDON (director), seconding the motion, said that he did not altogether agree with the somewhat gloomy tone adopted by the chairman. He thought it highly probable that they would meet with richer ore stuff as they sank deeper, and with this view the main shaft was being sunk with all possible speed. He and his friends in Queensland held a larger interest in the company than anyone in England, and none of them had gone into this mine under 6l. to 9l. per share. That, he thought, was a sufficient guarantee that the interests of the company would be safeguarded.

Mr. LEE asked if Mr. Spiro had given any reason for expressing the belief that he would pick up the reef on the eastern side.

The CHAIRMAN said he had a

LETTER FROM MR. HARBORD

upon that subject, in which he remarked, speaking of the eastern ground, "There was a strong reef on the surface and a little gold in it, but, so far, we cannot get it below. There are indications in one place of the level of a reef going in the hanging-wall, and I have asked Mr. Spiro to put some men on there, and try and work it for a short distance." The managing director thought there was something to be found in the lower workings, and evidently that was Mr. Spiro's idea also.

The report and accounts were unanimously adopted; the retiring directors and auditor re-elected, and the meeting closed with a vote of thanks to the chairman.

WEST CARZISE MINE.

A FINAL CALL OF 1s. 2d. PER SHARE.

A MEETING of the adventurers in this mine was held on Thursday, at Drapers' Gardens, London, E.C., for the purpose of passing the accounts and making a call to discharge the outstanding liabilities.

Mr. W. Simmons

presided.

Mr. EDWARD ASHMEAD (liquidator) read the notice calling the meeting, and also a letter from the agents for the lords, stating that they would accept 75l. in full discharge of all dues, rent and compensation for land, on the assurance that the shafts had been fenced and all other claims disposed of. Mr. Ashmead said the amount required to pay all the debts would just be realised by a call of 1s. 2d. per share.

Mr. HODGKINSON: What did the machinery fetch?

Mr. ASHMEAD: 184l. 17s. 6d.

The CHAIRMAN then proposed that the accounts be received and adopted, and circulated amongst the shareholders.

Mr. HODGKINSON seconded the motion, which was carried.

Mr. HODGKINSON then proposed that a call of 1s. 2d. per share be made, payable on July 30.

Mr. SIMMONS seconded the motion, which was carried.

The proceedings then terminated.

HOLLOWAY'S OINTMENT AND PILLS.—These world-renowned remedies are confidently recommended to miners, navvies, and all who have to work underground, or where noxious atmospheres exist. The minute particles of coal or metal which permeate the air in such places tend to block up the lungs and air-tubes, giving rise to bronchitis, asthma, and palpitation of the heart. In Holloway's remedies will be found a safe and easily used medicament, for the penetrating properties of the Ointment relieve the local congestions and the mildly laxative effects of the Pills cause the liver to act freely, and the breath to become unembarrassed. By early resort to these remedies many a serious illness may be averted, and soundness of health maintained.

EXTRACT FROM CIRCULAR ISSUED BY

GEORGE GREGORY & CO.,

STOCK AND SHARE DEALERS

4, TOKENHOUSE BUILDINGS, LOTHBURY, BANK OF ENGLAND, LONDON, E.C.

Telegraphic Address: "GRAMMARIAN, LONDON."

JULY 13, 1891.

DEAR SIR,—Nineteen days have elapsed since the commencement of last Stock Exchange settlement, on which we issued the usual general circular, as well as double column advertisement, in the *Financial News* and other leading monetary and society organs of the then current week.

Intervening changes have been frequent, and occasionally important in extent, as will be noted on comparison, and to correspondents still desirous of obtaining the circular of 24th ult., it will be forwarded post free on application.

THE MONEY MARKET,

Which for many weeks past has been in an almost plethoric condition, did not afford unmixed confidence to the too expectant bulls of stock. The immense reserve seemed rather to impart a feeling akin to fear in them, with the dreaded Russian withdrawal still overhanging the market. That nightmare now removed by the free export of gold which has been going on has only partially reassured them, notwithstanding that it has been found politic to again reduce the minimum to 2½ per cent.

A comparison of the leading figures in the last Bank return, and for the corresponding date of three previous years, cannot fail to prove useful to readers and clients:—

	Now.	July, 1890.	July, 1889.	July, 1888.
Reserve in millions ...	17	11½	13½	12½
Coin and bullion Do. ...	27	21	23	21½
Proportion to liabilities ...	40½	34½	30½	38½
Bank rate... ..	2½	4	2½	2½

The result of such comparison is highly satisfactory, for bankers' dividends, so far as declared, show that no undue strain has been necessary to keep the money market in a condition of such ample security.

If even America becomes a drawer upon home resources later on, they should be, at least, equally replenished by the dividends which must flow into this country from its investments in well-chosen and paying foreign securities.

THE STOCK MARKETS,

Without at any time more than a moderate amount of business in progress, prices and prospects have been in the ascendant. Contango rates, where exacted, have been so nominal as to indicate the existence of considerable commitments still open for the fall; while every feature of consequence, including weather conditions and harvest prospects, point reasonably in the opposite direction. The semi-holiday character of the past week and the German Imperial visit have had much to do with the want of animation at the present settlement, but with the day-to-day declarations of dividends generally, which can only be satisfactory, we think the new account of four days' shorter duration than that now closing will render a good result to buyers of well-chosen securities.

HOME RAILWAYS.

The Sheffield dividend, declared on Saturday, at ½ per cent. to the Ordinary, against ¾ per cent. a year ago, was quite anticipated by the market, and so far from proving damaging to the value of the "A" stock it carries over to-day at 34, or ¾ per cent. better than on 24th ult. The exceptional character of the traffic and general working of this system do not constitute the announcement a rule by which to judge of the dividend prospects of other lines, although the fortnight's advance in its price must be viewed favourably by intending buyers of Home Railway stocks generally.

Our previous recommendations have all resulted, in the interval, in profit greater than is apparent from the two making-up lists; but the prices attaching to the latter will probably be deemed sufficient for purposes of comparison; say:—

	June 24.	July 13.
MIDLAND	153½	154
GREAT WESTERN	156½	158½
GREAT EASTERN	91½	91½
GREAT NORTHERN "A"	72½	76
SHEFFIELD "A"	33½	34
HULL AND BARNSLEY	35	36
NORTH-WESTERN	170½	174½
METROPOLITAN	81½	83
CALEDONIAN ORDINARY	115½	116½
NORTH BRITISH	66½	68½
DO. DEFERRED	39½	40½
BRIGHTON "A"	139½	141½

From the generally important increases of traffic on all these, we feel we cannot do better than continue the recommendation of them alike to speculators and investors.

AMERICAN RAILROADS exhibited every symptom of booming in the earlier half of the interval, since when their course has been irregular and only partially sustained. The declaration last week of a 5 per cent. dividend on Louis-

villes should impart tone to the entire list, and, doubtless, will do so very shortly. For the moment, however, holiday influence seems to have taken possession of the leading Wall-street operators, who are consequently holding aloof.

We now specially recommend—

LOUISVILLES,

NORFOLK PREFS.,

LAKE SHORE,

NORTHERN PACIFIC PREFS.,

ATCHISON INCOME BONDS,

UNION PACIFIC,

ONTARIOS,

MILWAUKEES.

At the presently low rates prevailing for money, friends should not fear to pay one, or even two, contangoes in order to secure a timely interest in any of these, which are the most promising for an early and continuing advance.

CANADIAN PACIFICS.—A reference to many past fortnightly circulars will show our persistent recommendation of these shares. We began when they were fully 20 points below the present quotation. On the 21th ult. they carried over at 81, and now at 83½, a splendid profit in the short interval upon any amount of cover from £10 upwards. We here repeat that the security is steadily on its way to 100, and ought to be bought on the instant.

GRAND TRUNKS STOCKS.

On 24th ult. we wrote:—"Buyers should not be out of Trunk preferences at present low and safe prices." They compare as follows:—

	June 24.	July 13.	Advance.
FIRST PREFERENCE... ..	59½	63½	4½
SECOND DO.	39½	43½	4½
THIRD DO.	22	23½	1½
ORDINARY	8½	9½	1

These results, although grand, will surprise no one, our estimate of these stocks having for a long time past been so uniformly correct. They are still a good purchase.

MEXICAN RAILWAY (VERA CRUZ).

Although the different issues have been higher than when we last wrote, they are now two points lower all round, and should, therefore, engage prompt attention for the rise.

FOREIGN AND MISCELLANEOUS STOCKS

Do not present momentary features of strength, while the choice is so ample and preferable in the departments of which we have just treated. When the general dividend season has again elapsed, we will return to this section with new recommendations, according to prevailing circumstances.

MINING AND LAND SHARES

Are likewise quiet, and while no momentary necessities to buy exists, holders should yet be careful not to part with any shares at current quotations.

Upon every Stock which we recommend we have carefully compiled "Reasons Why," and our aim is to afford such information in its entirety to all inquirers.

We continue to direct constant attention to every class of investment or speculative business, including Options, which are becoming a favourite medium. Cover in protection of clients' operations may be deposited either in the form of cash or any marketable security.

The fullest information cheerfully and promptly given in response to all inquiries.

GEORGE GREGORY AND CO.

P.S.—Write for our work, entitled "Hints to Speculators" (136 pages), giving a mass of information, and teeming with reliable, honest, and straightforward advice. It also contains the highest and lowest prices of all stocks, together with dividends paid for the past 10 years. Issued gratis and post free.

£5 COMMANDS £500 STOCK AT 1 PER CENT. COVER.

BROKER.

R. M. NICHOLAS, Esq., 23, Cornhill, and Stock Exchange.

SECRETARY AND OFFICES.

Mr. T. ERNEST MALLYON, 218, Gresham House, Old Broad Street, E.C.

ABRIDGED PROSPECTUS.

THIS Company has been formed to acquire and carry on the well-known extensive smokeless steam coal collieries known as the Bwlfa and Merthyr Dare Collieries, situated in the Dare Valley—in the heart of the smokeless coal district—about 3 miles from Aberdare, in the county of Glamorgan.

The books of the collieries have been examined by Messrs. Price, Waterhouse and Co., chartered accountants, of Gresham Street, whose report (which can be seen at the offices of the Company) shows the output to have been as follows:—

Coal sold during the year ending December 31, 1889 ... 205,811 tons.

Coal sold during the year ending December 31, 1890 ... 242,687 tons.

Their report also shows that the nett profits of the collieries before charging interest on capital or loans, and subject to deduction for reserves as set out therein, were as follows:—

Nett profits of the year ending December 31, 1889 ... £23,028 4 10

Nett profits of the year ending December 31, 1890 ... £30,035 6 2

The amount required to cover the 7 per cent. dividend on the preference shares now offered for subscription, the interest on the mortgage debentures, and the additional expenses of management, being together only £12,000 per annum, it will be seen that the margin beyond is very ample.

The collieries have been inspected by Messrs. Forster Brown and Rees, of Cardiff, the well-known colliery engineers, the quantity of unworked coal being estimated to be upwards of 26,000,000 tons.

For particulars of the purchase-money, &c., see full prospectus.

After payment of the dividend at the rate of 7 per cent. per annum on the preference shares, and setting aside an amount for depreciation of plant, and for reserve fund, the balance of profits in each half year, after payment of a dividend at the rate of 7 per cent. per annum on the deferred shares, will be divided as follows:—One moiety as additional dividends on the preference shares—limited, however, to a further 5 per cent. per annum—and the balance as a further dividend on the deferred shares.

On the basis of the average profit of the last two years, the proportion of profits which would accrue to the preference shares would enable an additional 4 per cent. to be paid, which would make the total distribution in respect thereof 11 per cent. per annum.

No promotion money of any kind will be paid by the Company.

For contracts see full prospectus, which can be obtained of the bankers, solicitors, and at the offices of the Company.

A SAVING OF 300 PER CENT. OVER ORDINARY HAND-LABOUR.

Send for full description, Price List, &c., to

WELLINGTON & CO.,
MANUFACTURERS, 73A, QUEEN VICTORIA STREET, LONDON.

It is perfectly automatic, and bores holes from ½ to 2½ inches diameter at the rate of 1 to 2 inches per minute in hard rock. It will work equally well in any direction or on any uneven surface. No skilled labour required to run it. No expensive repairs. Made in two sizes, and can be worked by electric motor if desired. Hundreds of these Machines are at work in all parts of the world in Mines, Quarries, and for all kinds of rock excavating. It is the only effective and durable hand-power Rock-drill ever made.

SHOWING DRILLS AT WORK SINKING AND DRIVING.

DIAMOND-CORE DRILLS for Hand or Steam Power for PROSPECTING or DEEP BORING.

No. 2 DRILL.

TONITE

IS RECOMMENDED TO CONTRACTORS, MINERS, PIT SINKERS, QUARRYMEN, AND OTHERS, AS BEING THE SAFEST OF ALL EXPLOSIVES.

TONITE is a most efficient and economical blasting agent, and is largely in demand. It does not contain any Nitro-glycerine, and, is, therefore, exempt from the dangers of exudation, or of freezing and its attendant process of thawing.

THE COMPANY MANUFACTURE

PATENT DETONATORS FOR USE WITH TONITE.

Also supply Safety Fuse and Electric Firing Appliances of best description.

Address: THE COTTON POWDER COMPANY (Limited),

TELEGRAPHIC ADDRESS—

QUINLAND—LONDON.

MINING MARKET.

CITY, FRIDAY EVENING.

MORE SINNED AGAINST THAN SINNING—LESSON OF THE TIMES—THE SERIOUS FALL IN PALMAREJOS—GENERAL COURSE OF BUSINESS.

THE Mining Market has been fairly lively during the past week, but has not exhibited quite so much animation as might have been expected. The cause is to be attributed in some measure, at least, to the impression produced on the public mind by the evidence given in the stopped bond case a week ago. It is a very singular thing, which has, however, been plural in its application, that whenever the Mining Market begins to rear its head from a previously received crushing blow, that head droops once more under the effects of another. Watching the Mining Market is like watching a Punch and Judy Show. Judy puts up her head and receives from her spouse (the original wife-beater) a blow, and disappears through the trap. Now, no sooner does the Mining Market show its head and begin to smile, but it is knocked under by some such event as the stopped bond case, some financial trial, or some other circumstance, which has the effect of discouraging the public, and of leading it to the erroneous belief that no good thing can come out of such a Nazareth as this.

But is not this a mistake? Is not mining more sinned against than sinning? Is it not wounded in the house of its friends, and is it not rashly condemned by those who, if they took a more reasonable view of the position, would be the first to come to its support. "Look at the fall of prices," is the cry. Well, let the oracle step forward, and tell us what description of prices has not suffered depreciation during the last 9 or 12 months. Look at the lament that the railway directors are pouring into the ears of shareholders at every meeting. In fact, turn to whichever corner of the Stock Exchange you will, the same state of things is to be found, and the brokers, like so many Stock Exchange Jeremiahs, are going about wringing their hands and weeping with a bitter lamentation.

The lesson of the whole business is that the present state of affairs presents an admirable opportunity to judicious investors, with surplus profits at command, to buy carefully selected mining shares at present low prices, and wait that turn of affairs which is certain to come unless all past experience is to be slapped in the face, and a contradiction given to the previous course of business in which cycles of depression are followed by cycles of inflation. This is the line along which the investors should run to-day, and, so far as we can see, there is no danger signal ahead. Perhaps they will

prefer to wait until prices are higher. Such in the past has been the common experience, and such, too, is the perversity of human nature.

The business of the week has again largely centred round Australian Broken Hill Consols, which, after being depressed until to-day, are much firmer as the market closes. This is on the expected resumption of fortnightly crushings. The company's offshoot, East Broken Consols, has had some favourable news from the mine, and this being read to the meeting on Monday was received by the shareholders present with much satisfaction. In regard to the allotment, it now turns out that the public subscriptions were 60,000*l.*, of which the company retains 50,000*l.* for working capital, having paid 10,000*l.* to the parent company, and along with it the remainder of the purchase-money in shares.

There has been a perfect slump in Palmarejo shares, and no wonder. The damaging letter we published last week, which exhibited a keen insight into the company's affairs, was followed by the still more damaging circular of the directors themselves early in the week, in which the formation was actually announced of "The Mineral Securities Limited," to which the shareholders were invited to subscribe a sum of 32,000*l.*, with interest offered at the rate of 25 per cent. To such a circular as this, we feel perfectly certain the late lamented chairman of the company, Mr. Bladon, would never have put his hand. The present management of Palmarejo has indeed brought it to a pretty pass, when, according to this circular, the directors only think that money will be forthcoming at the rate of 25 per cent. The unpleasant part of the whole business is that, according to a letter which the secretary has written, the actual position was known to the directors at the meeting on July 9, and for some reason, we cannot explain, was not disclosed. The directors would have done far better had they at the meeting taken the shareholders completely into their confidence and not have left them to suppose that the financial requirements of the company could be made up without any appeal to them, whereas the real fact turns out to be that the directors represent the property to be in jeopardy for the want of funds, and the urgency for these funds to be so great that they actually offer the appalling interest of 25 per cent. No wonder Palmarejo shares have fallen heavily, and from the tone of the market they are likely to be purchased more cheaply still.

The meetings of the week have not been of a very important kind. That of East Broken Hill Consols has been alluded to already. Potosi re-construction has been a quasi-success, 100,000 shares short of the full number holding back. There will be no difficulty in placing the balance on the receipt of the first good news from the mine. The management of Yuruari and Potosi has been too much for Capt. Pryor, and a new manager has been appointed for Potosi. Talking of Yuruari, the offices are now at Copthall Buildings, and the direction of the mining operations is entirely left with Messrs. John Taylor and Sons. There has been a movement this week in the shares, though not of a very pronounced kind. Coromandel is about to amalgamate with Kapanga, and Red Reef is to make an attempt at re-construction. The Midas Co. held what, on the whole, must be considered a satisfactory meeting, and so also did the Camarones Co. The full details of both will be found specially referred to in our leader columns.

In regard to the Market generally, the tone of diamond shares has been most unfavourable, De Beers having a notable fall. All along we have urged our readers to sell any of these shares that they might have had, and trust that long ere this they have taken our advice. Land companies are also lower, and the report issued by the new directors of Balkis will not do much for the shares. The directors talk of the success of Graskop, but the public may be assured that they, the Balkis directors, have had nothing to do with it. Of course, Graskop shareholders need not be informed of this, for the very good reason that they know it. Randt and other gold shares are also down, and every company hailing from South Africa wears the reverse of a rosy appearance.

There has been rather more life in the Australian Market for the reasons already given.

In the Indian section there was a sharp rise in Champion Reefs on the announcement of the satisfactory telegram we publish in the

usual place, but the telegram from South East Mysore had no effect on the shares. Generally speaking the Indian Market has been weak, and the brokers explain it by saying that the distribution of the Mysore shares to Goldfields shareholders has had a depressing effect. This is only temporary, and we expect to see Indians quoted at much better prices than those at which they left off to-night.

The Copper Market calls for no remark, the changes having been merely fractional.

The chief fall of the week has been in Palmarejos, which has been to the extent of nearly 4s. There have been big sellers about, and every time a man opened his mouth, to use a market expression, he, "got stuck," with Palms, as they are familiarly called. On June 20, that is before the recent meeting, and about five weeks, since Palmarejos were quoted at 14s.; to-night they are 7s. 6d., representing a fall of nearly 100 per cent. in five weeks. Flagstaff, Richmond, and Tolimas have not maintained their firmness, but Don Pedros, Frontino, and Golden Gate and Feathers are all a shade better. The Home Market has again been dull, but Wheal Grenvilles show a substantial rise, and Wheal Agars a substantial fall.

Tesoro Golds have been in demand, and close firm at quoted prices. We hear good accounts of this mine, and should not be surprised to see the shares reach a comparatively high quotation.

There appears to be the prospect of a fair amount of business during the ensuing week, but its latter part will be interfered with by the Bank Holiday exodus.

AFRICAN LANDS.

With the exception of British South Africa Chartered there has only been a falling market—in the case of London and South African Explorations and Oceana to the extent of 10s. each, with others in a lesser degree. The market closes in anything but a healthy state, and we should not be surprised to see yet lower prices. There have been no dealings in New Mashonaland shares, and we do not expect to hear of any except at a discount. It would be interesting to know upon *bonâ fide* subscriptions from the public the directors proceeded to allotment.

Business.—A rise is shown in British South African Chartered of $\frac{1}{8}$, whilst a fall has taken place in Bechuanaland of $\frac{3}{16}$; Exploration, $\frac{1}{16}$; Goldfields of South Africa, $\frac{1}{4}$; London and South African, $\frac{1}{2}$; Oceana, $\frac{1}{2}$; Silati River, 6d.; Sutherland Reef, 6d.; and Zoutpansberg, 1s.

INDIANS.

The market has been fairly active, but the recent distribution of Mysore shares has tended to lower prices. Champion Reefs were firmer on the telegram.

Business.—A rise is shown in Champion Reef of 2s.; South East Mysore, 6d.; whilst a fall is noted in Goldfields of Mysore of 3s.; Mysore Gold, $\frac{1}{8}$; Mysore Harnhalli, 6d.; Mysore Wynaad, 3d.; Nine Reefs, 3d.; Nundydroog, 2s.; and Ooregum Ordinary and Preference, $\frac{1}{8}$.

KAFFIRS.

This section has been very much neglected, it being difficult to deal in any number of shares at quoted prices. When any alteration takes place it is of the backward kind. Wemmers have been the principal sufferer (7s. 6d.), while several others have also fallen.

Business.—A rise is shown in Bantjes of 6d.; whilst a fall is shown in the following: Pigg's Peak, Preference, $\frac{1}{8}$; Sheba, 6d.; Thomas Reef, 6d.; Aurora, $\frac{1}{8}$; City and Suburban, $\frac{1}{8}$; Crown Reef, $\frac{1}{8}$; Goldenhuis, $\frac{1}{8}$; Great Gold Zone, 6d.; Jubilee, $\frac{1}{8}$; Jumpers, $\frac{1}{8}$; May Consolidated, 2s.; Moss Rose, 6d.; Spes Bona, 1s.; Wemmer, $\frac{3}{8}$; Witwatersrandt (Knights), 6d.; and Wolhuters, $\frac{1}{8}$.

DIAMONDS.

This market has been very depressed, and, in consequence of De Beers being forced for sale, they have fallen nearly 20s. New Jagersfonteins have also receded 5s. The amalgamation is notified of this company with the Jagersfontein United.

Business:—A rise is shown in Griqualand West of $\frac{1}{8}$; whilst a fall is noted in Bultfontein Consolidated, $\frac{1}{8}$; De Beers, $\frac{1}{8}$; New Jagersfontein, $\frac{1}{4}$; and Burma Ruby, $\frac{1}{8}$.

2/3	Ottos Kopje	1/9 — 2/3
$\frac{5}{8}$	Burma Ruby Mines 15s. pa d. .	$\frac{7}{8}$ — $\frac{9}{8}$

AUSTRALIANS.

The market for this class has been more active. Gympie Great Eastern and the two Day Dawns have been the favourites. Gympies have been in demand at 10s., and close firm. Australian Broken Hills showed buyers this evening at 1 1/8.

Business.—A rise is shown in Australian Broken Hills of $\frac{1}{8}$; Mosman, 6d.; and Scottish Australian $\frac{1}{4}$; whilst others remain unchanged.

COPPER SHARES.

There has been nothing of an encouraging nature in the Copper Market, and prices have given way in consequence of selling from Paris, Rio Tinto being as usual the chief sufferer, while Capes and others have fallen in a lesser degree. The market, however, does not close at its worst, and at the finish was somewhat brighter.

Business.—A rise is shown in Copiapo of $\frac{1}{8}$; whilst a fall is noted in Libiola of $\frac{1}{8}$; Mason and Barry, $\frac{1}{8}$; Namaqua, $\frac{1}{8}$; Panulcillo, $\frac{1}{8}$; Quebrada, $\frac{1}{8}$; and Rio Tinto, $\frac{1}{4}$.

GENERAL FOREIGN SHARES.

A good business has been done in the lower-priced shares, and there certainly appears a fair chance of many of them rising in value. Don Pedro are somewhat firmer and look like going better. Golden Feathers are firmer, chiefly on some brokers buying the call for mid-Sept.

Frontino are slightly firmer, and the shares are difficult to purchase. Pacific shares have been dealt in, but Palmarejo have fallen heavily, for reasons given in our leader and correspondence columns. Richmond and Tolima "B" have been both offered, and close lower.

Business: A rise is shown in Don Pedro of $\frac{1}{8}$; Frontino and Bolivia, $\frac{1}{8}$; Golden Feather, 3s.; Sierra Buttes, $\frac{1}{8}$; whilst a fall is to be noted in American Belle of 6d.; Balkis, 9d.; Flagstaff, 1s.; Golden Leaf, 3d.; Palmarejo, 3s. 9d.; Richmond, $\frac{1}{8}$; and Tolima "B" $\frac{1}{8}$.

The following list shows the principal changes which have taken place:—

LATEST FROM THE MINES.

INDIAN MINES.

CHAMPION REEF.—A telegram from the superintendent at the mine, dated July 23, is as follows:—"Have cut lode in cross-cut Ribblesdale's shaft; pieces of rock containing visible gold."

NERBUDDA COAL AND IRON.—The sales of coal for the month of June are 615 tons.

SOUTH-EAST MYSORE.—A telegram dated July 20 is as follows:—"Winze: The vein improves as it goes down; pieces of rock containing visible gold."

COLONIAL MINES.

AUSTRALIAN BROKEN HILL CONSOLS.—A telegram from the managing director, July 19:—"Rich ore has been raised during the week containing 5,000 ozs. of silver. Expecting daily strike fine body of ore."

BRITISH BROKEN HILL.—For the week ending July 23, 616 tons of ore were treated (including 190 tons of iron ore), yielding 92 tons of lead, containing 4,928 ozs. of silver.

BROKEN HILL PROPRIETARY.—For the week ending July 23, 5,300 tons of ore were treated, yielding 742 tons of lead, containing 180,200 ozs. silver.

DAY DAWN BLOCK AND WYNDHAM.—A cable from the general manager at Charters Towers gives the result of the crushing for the fortnight ending the 18th inst.:—"Tons crushed, 700; yield of gold, 723 ozs.; approximate value, 2,495 $\frac{1}{2}$; fortnight's expenses, 1,100 $\frac{1}{2}$."

DAY DAWN P.C.—A cablegram from Charters Towers gives the result of this company's crushing for the fortnight ending July 18, viz.:—"1,100 tons, 1,035 ozs." (Estimated value, 3,519 $\frac{1}{2}$.)

MILL'S DAY DAWN UNITED.—The company crushed for the fortnight ending 18th inst. 890 tons of quartz for 908 ozs. of gold. The approximate value is 3,130 $\frac{1}{2}$. The company will also pay a third dividend of 3,750 $\frac{1}{2}$.

MOUNT LEYSHON.—A cable, dated 21st inst., from the manager at Charters Towers, gives the fortnightly crushing:—"410 tons crushed, 230 ozs. gold; 20 stamps mill ran 161 hours (6 days 17 hours); running 30 stamps."

SUNBURST.—Cable:—"343 tons yielded 1,373 ozs. gold; value, 4,600 $\frac{1}{2}$." The usual dividend of 1s. per share is declared, and 1,500 $\frac{1}{2}$ is carried to reserve fund.

FOREIGN MINES.

CALLAO BIS.—The directors have sold, through Messrs. Johnson, Matthey and Co., the gold obtained during the month of June, viz., 714 ozs., which realised 2,802 $\frac{1}{2}$ 8s. 8d.

DICKENS CUSTER.—Cable from Mr. Axford, the managing director at the mines:—"Shipped bullion amounting to 1,777 $\frac{1}{2}$, for 15 days in July (1st to 15th); expenses, 15 days in July, cash, 644 $\frac{1}{2}$; milling and mining supplies, 450 $\frac{1}{2}$. N.B.—In answer to numerous inquiries the ore crushed since May 11 last has been extracted from the company's own mines."

ELKHORN.—Bullion produced for week ending July 18, \$8,350.

GOLDEN FEATHER CHANNEL.—Cablegram from Col. Frank McLaughlin, the company's general manager at Oroville:—"Large portion river flowing through canal; will turn all in, 24th day of July; present test (of canal walls) very satisfactory.—McLAUGHLIN."

GOLDEN GATE ALLUVIAL SYNDICATE.—Cablegram from Col. Frank McLaughlin, the company's general manager at Oroville:—"Large portion river flowing through flume; all will be, 24th day of July.—McLAUGHLIN."

ORITA.—Cablegram from the superintendent relating to Run No. 57:—"We have cleaned up 700 $\frac{1}{2}$."

PITTSBURGH CONSOLIDATED.—Cablegram from the mines, July 16:—"Will ship bullion amounting \$3,600 to-day. Mill shut down six days for repairs. New rock-breaker fixed. Four mills working at present—started yesterday."

RUBY.—Telegram received from Eureka:—"24 tons tribute ore shipped; 41 tons tribute ore smelted; producing to company \$117."

SAN BERNARDO.—Accounts for June show as follows:—Ore sales, \$11,752.56; expenses for the month, \$6,020.73; ore shipped in addition, but not yet realised, \$3,833.70 (estimated).

TOLIMA.—The company report the estimated value of their returns for May at 8,443 $\frac{1}{2}$ 2s. 5d., showing a profit of 4,950 $\frac{1}{2}$ 15s. 9d.

HOME MINES.

WHEAL GRENVILLE.—The statement at the last meeting that after two or three months the mine would be in a position to increase its returns from 50 to 100 tons of tin per month, would seem to be an inducement to investors to pick up shares at the present low price. This is the opinion of a Western paper and it is ours.

WHEAL BASSETT.—At the meeting there was a small balance in hand.

TICKETING FOR TIN ORES.

A tin ticketing took place at Redruth on Tuesday last, when 288 tons were offered, with the following results:—

VALUE OF ORES SOLD FROM EACH MINE.

	Tons. Cwts.		Per ton.			Value.		
			£	s.	d.	£	s.	d.

AFRICA.

LATEST FROM THE GOLD AND DIAMOND MINES

LUIPAARD'S VLEI.—Licences for May, 370*l*.

EDWIN BRAY.—Mill: 25 stamps have been continually at work as far as the supply of quartz would allow. Average of daily assays of failings for the week, 1 dwt. 17 grs.

ZARUMA.—A cablegram from the manager at the mines is in respect to the May and June produces:—"Produce for the month of May, 360*l*.; this is in addition to the 734*l*. already advised for June."

HILL'S WATERFALL.—It is proposed to wind up this company at a meeting to be held on Friday next. Shareholders who wish to avoid having the remaining liability on their shares called up should lose no time in sending their proxies to the directors.

NORTH-EASTERN BULTFOEIN.—Telegraphic advice received announces for last week 15,000 loads washed, producing 1,600 carats of diamonds; blue ground deposited, 8,100 loads; underground blue ground, 525 loads tested, yielding 92 carats, not yet ripe; open blue ground, 40 loads tested, yielding 10 carats.

UNITED LANGLAAGTE.—Notice is given that the certificates for the new shares in the reduced capital of this company will be ready on Aug. 4, and will be given in exchange on and after that date for the old certificates. Certificates for shares in the new issue will also be ready on the same date, and will be given in exchange for the bankers' receipts and allotment letters.

VIRGINIA (TRANSVAAL).—The manager, writing under date June 17, confirms his cablegram that day announcing the improvement of the lode in Dutchman's shaft, and adds that the lode is 3½ ft. wide; a sample taken as nearly as possible across the lode showed by pan washing fully 1 oz. of free gold per ton of ore. Capt. Richards adds: "I consider the prospects most excellent."

WASSAU (GOLD COAST).—The yield of gold for the month of May last was 114½ ozs., standard weight, of the net value of 436*l*. 0*s*. 9*d*. During this month the Adjah Bippo mill worked 16 days, and crushed 164 tons of lode, giving a yield per ton of gold equal to 0.70 ozs. The Crockerville mill was idle, owing to the then scarcity of workmen. Through the kindness of the Swanzy Estates Co., this difficulty has now, we believe, been got over, and we may reasonably expect increased remittances for the future.

TRANSVAAL GOLD EXPLORATION AND LAND.—General manager's advices, dated June 22:—Mining: Ophir Hill, Theta vein: Ore extracted, 15 tons; assay value, 6 ozs. 14 dwts. per ton, and 5 tons, assay value, 2 ozs. 9 dwts. per ton. Brown Hill, Nu vein: Ore extracted at No. 1, 209, 50 tons; assay value, 4 ozs. 2 dwts.; and at Nos. 1, 211 and 1, 220, 17 tons; assay value, 2 ozs. 1 dwt. per ton. Prospecting: The deposit of low-grade ore on Edin Hill showed no improvement; but work was being continued in the neighbourhood; the men who were at work on Zeta had been transferred to Ophir Hill, near the company's eastern boundary, and were prospecting there. Mill work at the battery was proceeding with regularity. Transport was still active, and 177 tons had been hauled from Nu Mine during the week.

CITY AND SUBURBAN.—The total measurement of driving, sinking and rising executed during the month is 353 ft. 4 ins., of which 155 ft. 4 ins. is on south reef, 169 ft. on main reef leader, and 29 ft. on cross-cuts. The ore mined was 2,010 tons, being 496 tons from south reef, and 1,514 tons from main reef leader and main reef. Of the total, 262 tons came from drives and shafts, and 1,748 tons from stopes. The ore crushed during the month was 1,805 tons, of which 398 tons came from south reef, and 1,407 tons from main reef leader and main reef. The gold produced from the above is 811 ozs. 4 dwts. The average yield per ton of ore crushed is equal to 8.99 dwts., the assay value (average) of the tailings is equal 6.73 dwts. per ton, showing the actual value of the ore to be 15.72 dwts. per ton, and the extraction by amalgamation equal to 57.18 per cent.

PIGG'S PEAK ESTATE.—Mine report for week ending June 20:—Devil's reef: Prospecting drives. Drove for the week, 40 ft. Ground getting harder, and no gold in panning. Remaining boys making road for getting on machinery to the Devil's reef. Tamblyn reef: Shaft sunk for the week 3 ft.; total, 37 ft. 6 ins.; good-looking rock, but shows no gold in panning. Cross-cut driving north: Drove for the week, 8 ft.; ground much softer, but no wall as yet. England's reef: We are making preparations for resuming work at this point. Boundary B and No. 1 works have been discontinued for the present. Peak: Pigg's drive: Drove for the week, 14 ft.; total, 214 ft.; ground much harder. McGready's works: The Havelock extension will hereafter be called McGready's works. Prospects at this point continue good.

HORO CONCESSION (SWAZILAND).—Report from superintendent, June 17:—I beg to send you below the report of the work done here from the 1st to the end of the 15th of this month. No. 1 tunnel: The drive to the east along the reef from No. 1 tunnel, mentioned as having been commenced in my report of last month, has been advanced 14 ft.; the ground carries a little gold all along. The ore shoot at the bottom of No. 1 shaft has been finished, so that now the ore shoots and tramways are completed from mine to battery. Pipe line: Most of the men have been at work on the pipe line. There are still about six waggon loads of pipes to come forward, these I expect to arrive in about 10 days. As to the line from the falls to the settling tank, about 300 yds. of the 800 yds. are in place, and about 1,200 yds. of the 1,500 yds. of the line from the tank to the battery. The line from the eastern stream to the settling tank is practically completed.

CLUTHA.—Manager's report for week ending June 22.—Clutha section: North reef: Measurement at date, 85 ft.; work done for week, 3 ft. 6 ins. The lode has not been payable during the week, but I expect the falling off is only temporary, there being payable ore still ahead on the surface. Victoria section: The 120-ft. level: Measurement at date, 339 ft. 6 ins.; work done for week, 5 ft.; we are still following a compact quartz lode, but the prospects have been poor for some time. The improvement noticed the end of last week has not been maintained throughout this week, although at time of writing the face of quartz in the end is payable, and I hope it will continue so. Winze: Measurement at date, 26 ft.; work done for week, 6 ft.; very little improvement here this week; a ladder and skids have been fixed here. North winze: Measurement at date, 24 ft.; work done for week, 5 ft.; we are sinking in the soft hanging-wall, and leaving the best part of the lode standing.

COMMERCIAL NOTES.

METALS.

THE Metal Market has been active during the current week.

Bank rate remains 2½ per cent. Bar silver has advanced to 46½*d*., closing 45½*d*.

COPPER has been depressed. G.M.B. warrants declined from 54*l*. 2*s*. 6*d*. cash, to 52*l*. 2*s*. 6*d*. and three months from 54*l*. 12*s*. 6*d*. to 52*l*. 15*s*.; from this there was a reaction yesterday to 52*l*. 12*s*. 6*d*. and 53*l*. 5*s*. respectively. To-day's prices are 52*l*. 15*s*. cash and 53*l*. 7*s*. 6*d*. three months. We quote English tough 56*l*. 10*s*. to 58*l*.; best selected, 58*l*. to 59*l*.; strong sheets, 66*l*. to 67*l*.; India sheets, 61*l*. 10*s*. to 62*l*. 10*s*.; yellow metal, 5½*d*. to 6½*d*.; ore, &c., 9*s*. 9*d*. to 10*s*. 9*d*. per unit.

TIN has been irregular. Straits declined from 91*l*. 17*s*. 6*d*. to 90*l*. 7*s*. 6*d*. cash, improving again to 91*l*. 10*s*. cash. To-day's prices are 92*l*. cash, and 92*l*. 7*s*. 6*d*. three months. Three months has sold from 5*s*. to 10*s*. per ton above spot, and Australian commands about 10*s*. per ton over Straits. The Dutch market has been easier, and we now quote Banca, f55 to f55½; and billiton, f54½. English ingots were done at 94*l*., but are now quoted 95*l*.

TINPLATES.—The market is unsettled. We quote ordinary coke 13*s*. to 14*s*. per box Liverpool.

SPELTER has been firm. To-day's quotation is 23*l*. 15*s*. for ordinary brands ex ship here.

LEAD has been quiet. We quote soft Spanish, 12*l*. 7*s*. 6*d*. to 12*l*. 10*s*.; soft English, 12*l*. 10*s*. to 12*l*. 12*s*. 6*d*.; L. B., 13*l*.; sheets for export, 13*l*. 7*s*. 6*d*. to 13*l*. 10*s*.; home trade, 14*l*.

QUICKSILVER quiet. Rothschild's price, 7*l*. 15*s*.; seconds, about the same.

ANTIMONY dull. Hallett quotes 48*l*. for export to America; ordinary brands and delivery, 45*l*. to 46*l*.

DIVIDENDS DECLARED AND ANNOUNCED FOR WEEK ENDING JULY 25.

Yorkshire Banking	15 <i>s</i> . per share.

THE ZARUMA GOLD MINING CO., LIMITED.

THE PROFITS ARE LARGELY INCREASED, AND THE QUARTZ SHOWS AN IMPROVEMENT.

July 22.—During the past year the mill has worked in a satisfactory manner, the number of tons crushed being 6,741, and the total ounces of gold bullion received 4,852, which, together with net value of concentrates, realised 12,805*l*. 4*s*. 9*d*., against 7,795*l*. 1*s*. 10*d*. in 1889. The expenses at the mine amounted to 9,773*l*. 18*s*. 4*d*., showing a profit on mining operations of 3,026*l*. 6*s*. 5*d*., or 8*s*. 11*d*. per ton of mineral treated. This amount has been sufficient to pay London expenses and a large proportion of debenture interest. Capt. Bryant's report for the year refers to the existence of rich veins in portions of the company's property not yet developed; also that the value of mine mineral for 1890 was in excess of that for 1889. On the 14th inst. the board received advice of the last crushing, which gave 275 ozs. of gold bullion from 300 tons of quartz, or 0.81 ozs. per ton. The average per ton last year was 0.73 ozs., so that the present return shows an improvement of 9 per cent.—R. DURHAM, chairman.

DON PEDRO GOLD MINING CO., LIMITED. PRESENT POSITION OF AFFAIRS.

FOR the information of those shareholders who have not followed the reports it may be desirable to explain that the new shaft has now been opened out full size down to the 40-fm. level, a distance of 95 fms. from surface. This shaft is necessary to provide a free passage-way for men and materials into the mine, and for bringing the mineral to surface. The work of sinking the shaft the remaining 10 fms., i.e., down to the bottom of the mine, is being pushed on with all possible speed. Gold raising: The appliances which Mr. Touzeau stated in his report were necessary to admit of gold raising operations being advantageously carried on, are in a forward state. Several shipments have already been made; the remainder of the articles are nearing completion, and will be despatched very shortly. Intersecting and testing the lodes—No. 8 lode: The 50-fm. cross-cut has been continued through the No. 8 lode a distance of 72 ft., rich samples being continually taken therefrom. No. 6 lode: After reaching the headwall of the No. 8, the 50-fm. cross-cut was further advanced and has since intersected the No. 6 lode. The drirage will be continued to ascertain its dimensions and quality, and at the same time push on to strike the Canoa and Underlie lodes, "where we believe vast riches are standing. With good progress in driving we hope to reach the rich deposits about the time we get the new shaft to the 50" (vide Capt. Jeffery's report for May, 1891). Nothing could be more satisfactory than the reports received regarding the extent and quality of the mineral already opened up, and as soon as the power-hauling apparatus, now on the mine, is completed (to replace the tedious and expensive mule whim hitherto in use), and arrangements made for adequately treating the mineral on a large scale, the directors feel confident that highly satisfactory returns of gold will be obtained. Management: The shareholders will be glad to learn that the directors have again secured the services of Mr. E. M. Touzeau. He left England on the 2nd inst., and is probably by this time at the mine. The board considered it of the highest importance that Mr. Touzeau should make all arrangements for carrying out his own recommendations, especially with regard to hauling and treating the mineral, and they feel confident that he will display equal energy and ability in expediting the gold returns as he did in reaching and testing the lodes.—J. E. DAWSON, Secretary.

KANGARILLA PROPRIETARY SILVER MINES, LIMITED.

AN IMPORTANT AND SATISFACTORY REPORT.

THE directors, in a circular to the shareholders, dated July 22, state that they have received the following report from their manager at the mine, which they consider so important and satisfactory that they have resolved to send it to the shareholders *in extenso*.

June 16.—Aclare Mine: I herewith submit the following report on the work done in your mine during the past fortnight:—No. 1 winze is now connected with the 120-ft. north level, thus opening up No. 1 block ready for stoping when necessary. The ore has not been rich for several feet, but a better average could be obtained in the foot-wall. This winze will be continued through to adit, and form the main northern pass when finished. North end: The 120-ft. level has been extended 11 ft., and it will now have to be stopped until the No. 1 winze is deep enough below it to resume work without hindrance to either party. No. 2 winze is holed through to adit level, and it came down in good average ore the whole distance. By the completion of this work our No. 4 block is ready for stoping. No. 3 winze has been started and 9 ft. sunk below adit level; the ore in bottom is higher in lead than any we have hitherto had, and it should be good ore for concentration. No. 4 winze: Owing to No. 2 winze being directly above it, and work being dangerous whilst the connection was being effected, work has been suspended for nearly a week, but we shall be able to start again in a day or so. 6 ft. have been sunk, and the average grade is a little lower. We put a shot into the hanging-wall and obtained two samples, which are really the best that I have obtained in the mine. No. 1 assayed 15½ per cent. lead, 53 ozs. 9 dwts. 20 grs. silver per ton. No. 2 assayed 18½ per cent. lead, 86 ozs. 3 dwts. 4 grs. silver per ton. I consider that finding this grade of ore so much deeper than our previous workings, is a very favourable sign, and to test this bottom block and to render it open for vigorous working at any time, I have invited tenders for sinking the main shaft. Thus with this latter work, and Nos. 4 and 3 winzes going down, we shall soon open up blocks for stoping. South end: This drive has been extended 15 ft., and there is no alteration to note; the ore in the face is about 18 ins. thick, containing a large percentage of zinc; it assays fairly well for silver, 24 ozs. per ton, lead 7 per cent. Stopping contract: This has now been abandoned by the contractor after several changes in the men. The ground is very hard, and in future we will work it underhand. We have had 10 men working on wages putting a stope over the back of the level, so that the horses can haul the trucks from the main shaft out, and good progress is being made. Mount Barker tunnel: This tunnel has been advanced 10 ft. during the fortnight, a tram road has also been laid down. The lode carries a few ounces of silver in the pyrites, but we have not seen any lead for several feet. Concentrating works, &c.: During the past fortnight the engine for crushing has been finished, also the Castelnau concentrator put together, the spin gear and rolls are now being erected. As the machinery is brought forward so it is being erected. The building contractor has reduced his hands, merely leaving half a-dozen men to finish small jobs. We shall push on now as fast as possible, and make every effort to start on Aug. 1. Outside the concentrator we are erecting a hopper and tramway to deliver the ore automatically to rock-breaker and rolls. The hopper will hold 50 tons, and so our horses will only need to work 16 hours, whilst the concentrator will keep going the whole 24. One two-roomed cottage has been erected during the fortnight; our assay office is now finished, and this work will be done on the mine after this week. The 4-in. pipes for water supply are now on the ground, and we shall put them in position shortly. Generally speaking, the appearance of the mine is very promising, and the connection made with Nos. 1 and 2 winzes gives us every opportunity of breaking sufficient ore to keep the concentrator in full work when

necessary. The finding of good samples of ore at 56 ft. below the adit is very important, and we can confidently look for a decidedly favourable change at the water level. The percentage of lead may increase considerably, and be also followed by a decrease of zinc sulphide. It should be our aim to test this as speedily as possible, for it may give us ore that will not require concentration, but will be clean enough to send to the smelters direct.—D. D. ROSEWARNE.

REPORT OF MEETING.

THE POTSDAM REEFS, LIMITED.

HEAVY EXPENSES, BUT INDIFFERENT RESULTS.

THE general meeting of the shareholders of this company was held on Tuesday week, at Winchester House.

Commander F. C. De Lousada, R.N.,

presided.

The CHAIRMAN, in moving the adoption of the report, said that the directors took charge of the property in 1889, and at that time they were confident that they possessed a very rich mine, with outcrops of reefs on the surface. The property was in extent 50 acres upon a hill. There were two ways of working the property, one by sinking shafts and the other by driving a tunnel into the side of the hill, and by that means cut through the property. The board communicated with the manager on the spot, and he agreed with them that the best way to work the property was by driving a tunnel. The manager had accordingly commenced to drive the tunnel, and up to the present time 408 ft. had been cut. The expenditure at the mine had been somewhat high owing to the heavy wages, which they had had to pay for the white labour at the mine, and also to the fact that they had built houses to house their men, which had enabled them to keep at the mine when the men at the neighbouring mines had been obliged to leave. Transport was an exceptionally heavy item in the neighbourhood of the mine, and the charge for the transport of a ton of goods was enormous. He believed before long that they would have a railway in their direction which would considerably reduce the rates. With regard to what had been done at the mine, the shareholders would see that the shaft had been sunk 105 ft., and the tunnel was now 408 ft. long. The ventilating shaft was sunk to 57 ft., and when it reached the proper level they would be able to drive in both directions. A small reef, which had been cut at the 105-ft. level, gave an average of 1 oz. of gold to the ton, which was the only gold-bearing reef which they had cut up to the present time, although in the south drive they had found indications of gold. He concluded by moving the adoption of the report.

This was seconded by Mr. C. H. COBBOLD, and, after a somewhat protracted discussion, carried.

The retiring directors and auditors were re-elected.

AMALGAMATION.

An extraordinary meeting was afterwards held for the purpose of considering the amalgamation with the Sutherland Reef, Limited, and the voluntary winding-up of the Potsdam Reefs Co. to effect such amalgamation.

The CHAIRMAN then explained the position of the two companies' properties, and the advantages which would accrue from such amalgamation, both with respect to the working of the properties and the saving of expenditure in London, and

The SOLICITOR having read the agreement of the Harmony Proprietary Co.,

The resolutions were put to the meeting and carried.

A vote of thanks to the chairman closed the proceedings.

THE BALKIS CONSOLIDATED CO., LIMITED.

NEW DIRECTORS AND NEW FINANCIAL ARRANGEMENTS.

IN their annual report the directors say that during the year the property account has been increased by 7,053l. 1s. 8d. of which they give the details. The existing debentures have been renewed for three years from June 30, and an arrangement has been made with the British and Transvaal Financial Co., Limited, for a further issue to the extent of 10,000l. for the proper development of the Eersteling property and other purposes. Col. Malleon and the Hon. A. C. Cadogan have resigned their seats, and Mr. Pearce Edgecombe, Mr. Grant Conybeare, and Lieut.-Col. Fludyer have joined the board. The company's late manager at Eersteling having resigned his post, the directors sent out Mr. Walter Duncan to undertake the duties, who appears to be an energetic and able manager. The reports latterly received from the property point to the reefs proving to be of steadily-increasing value as depth is attained.

NORTH-EASTERN DIVIDEND.—The accounts for the half-year ending June 30 last, subject to final audit, show a balance which will admit of the payment of a dividend on North-Eastern Consols at the rate of 6 per cent. per annum, as compared with 6½ per cent. for the first half of 1890.

BRITISH MINING INTELLIGENCE.

DEVON GREAT CONSOLS (July 23).—Wheal Maria—Eastern shaft, Capel Tor lode: In the stope in the back of the 36-fm. level west, the lode is yielding 4 tons of copper and mundic ores per fm. The lode in the stope in the back of the 36-fm. level east is worth 4 tons of copper and mundic ores per fm. Wheal Anna Maria: The lode in the stope in the bottom of the 110-fm. level, east of the engine shaft, is yielding 10 tons of mundic per fm., and saving work of copper ore. In the stope in the bottom of the 130-fm. level, west of the field shaft on the south lode, the lode is also yielding 10 tons of mundic per fm. Wheal Josiah—Hitchin's shaft, south lode: In the stope in the bottom of the 130-fm. level east, the lode is worth 3 tons of copper ore and 2 tons of mundic per fm. The lode in the back of the 130-fm. level east on the main lode, in the stope, is worth 6 tons of mundic per fm. In the stope in the bottom of the 103-fm. level east of Agnes' shaft, the lode is worth 2 tons of copper ore and 2 tons of mundic per fm. Wheal Emma—Thomas's shaft: In the stope in the bottom of the 100-fm. level east the lode is worth 10 tons of mundic per fm. The stope in the bottom of the 100-fm. level east is producing 10 tons of mundic per fm. In the stope in the back of the 100-fm. level east the lode is worth 20 tons of mundic per fm. Inclined shaft: The lode in stope in the back of the 150-fm. level east is yielding 3 tons of copper ore and 2 tons of mundic per fm. The lode in the stope in the back of the 112-fm. level west is worth 2½ tons of copper ore and 1 ton of mundic per fm. The stope in the back of the 112-fm. level west of the inclined shaft is producing 1 ton of copper ore and 4 tons of mundic per fm. In the stope in the back of the 100-fm. level west the lode will turn out 7 tons of mundic per fm. New shaft—New south lode: In the stope in the bottom of the 190-fm. level west the lode is worth 5 tons of mundic per fm. and a little copper ore. In the stope in the back of the 175-fm. level west the lode is worth 2 tons of copper ore and 2 tons of mundic per fm. In the stope in the back of the 145-fm. level east the lode is worth 1½ tons per fm. of copper ore and 1 ton of mundic. In the stope in the back of the 130-fm. level east the lode is worth 3 tons of copper ore and 2 tons of mundic per fm. In the stope in the back of the 100-fm. level east is worth 5 tons of mundic per fm. Watson's—Engine shaft: In the 172-fm. level west the lode is not so large, now 3 ft. wide, worth a little copper and mundic ores. In the 160-fm. level east the lode is large, 5 ft. wide, and is yielding 4 tons of copper ore per fm. In the 160-fm. level west the lode is 4 ft. wide, saving work of copper and mundic ores. In the stope in the back of the 160-fm. level west the lode is 4 ft. wide, producing 4 tons of copper and mundic ores per fm.—W. CLEMO.

DEVON UNITED (July 23).—Willesford's shaft: In the 144-fm. level east the lode is 2 ft. wide, and is composed of quartz and a little mundic. In the 144 level west the lode is 2½ ft. wide, of a very promising character, producing a little copper and mundic ores. In the winze sinking below the 132-fm. level west the lode is 2 ft. wide, yielding 3 tons of copper and mundic ores per fm., for length of winze 9 ft. The stope in the back of the 132-fm. level is producing 3 tons of copper ore per fm. of good quality.—W. CLEMO.

DRAKEWALLS (July 16).—The ground in the engine shaft continues much the same as stated in my last report; it is composed of granite, capel, and occasional veins of tin. 3 ft. 8 ins. has been sunk in the past week. The lode in the 160 driving east is yielding 4 tons of mundic, and saving work for tin. There is nothing new to report in the 160 driving west. The lode in the rise in the back of the 160 west continues to yield 5 tons of mundic per fm. The stope in the back of the 160 west is producing 10 tons of mundic per fm., and saving work for tin, and No. 2 stope in the back of the 160 west of the winze produces 9 tons of mundic per fm., and saving work for tin. The lode in the stope in the bottom of the 147 east continues to yield 11 tons of mundic per fm., and saving work for tin. There is no change to notice in the lode in the 147 driving east; ground still continues hard for exploration. The lode in the stope in the back of the 132 west of the cross-course is producing 4 tons copper and mundic ores per fm. We expect to finish cleaning out the arsenic to-morrow, which we estimate roughly to be about 80 tons. The jiggling machinery is working very satisfactorily, and all other surface work is being got on with as fast as possible.—H. RODDA.

DRAKEWALLS (July 23).—In consequence of a breakage in one of the main iron loops, in connection with the pumping rod, breaking the underlay of the shaft on Tuesday last, 2 ft. only has been sunk during the week. The engine is put to work, and we hope to get the water in fork again by to-morrow evening. In the 160 driving east the lode continues to yield 4 tons of mundic per fm., and saving work for tin. The 160 driving west is producing a little saving work both for mundic and tin ores. There is no change to notice in the 147 driving east since last advised. Nos. 1 and 2 stopes in the back of the 160 west of the engine shaft are producing respectively 11 and 9 tons mundic per fm., and saving work for tin. The stope in the bottom of the 147 east is yielding 12 tons mundic per fm., and the stope in the back of the 132 west of the cross-course is producing 4 tons copper and mundic ores per fm. All the surface work is being got on with satisfactorily.—H. RODDA.

EAST BLUE HILLS (July 15).—The 30-fm. level to drive west on the north section by six men, at 5½. 5s. per fm. Here we are breaking some good stones of tin. I like the lode very much. The 30-end west on south section to drive by six men, at 4½. 10s. per fm. The lode is making wider, and looks better. We shall sample some stuff from it soon. The 35 end east we have set part tutwork and part tribute, as the tributaries were working beyond the end to their inconvenience. Now they get 3½. 10s. per fm. for driving, and 13s. 4d. in the £ for all stuff broken in end and stope. We also set four tribute pitches for two months at tributes varying from 11s. to 13s. 4d. in the £, at 52½. standard for tin. We have several pitches we can offer good tributaries and long takes, where I am satisfied good tributaries will do fairly well. The boiler for stamping engine is on the ground, and the men are now putting it in. We are also repairing the stamps, and hope to be at work again next week.—J. WHITE, F. WILLOUGHBY.

EAST GRASSINGTON (July 22).—Report from the manager:—Hammond shaft: The 47-fm. level west has been advanced 23 ft., and stope 7 fms., giving 10 fms. 5 ft. of ground removed here during this month. The vein in the end is to-day nipped, and the encasing rock hard for progress. Stope in back of level in a lode 2 ft. wide yields 20 cwt. of lead ore per fm. No. 3 sump is down 42 ft. below the 47 in a lode 2 ft. wide, yielding 23 cwt. of lead ore per fm. We are evidently

opening out a fine section of payable ore ground here. Stope at intermediate and 37-fm. levels are worth respectively 10 and 12 cwt. per fm. Harris main engine shaft: This shaft is now down 34 ft. 6 ins. below the 47. The rapid progress attained here has not been exceeded in the north of England in similar stratum. The 47 east has again met with a cross-course. Stope in back of level in a lode 2 ft. wide yielding 25 cwt. of lead ore per fm., being at present the richest point in the mine. In the 37 east the lode is 2 ft. wide, yielding nice stones of lead ore and promising for a further improvement. Two stopes in back of level worth together 20 cwt. of lead ore per fm. The other points as for some time past. Machinery throughout the mine in good order, and working smoothly and well. Dressing and smelting operations in full swing. Past month's operations realised a fair profit.

LEADHILLS (July 20).—Brown's vein: The 145-fm. level north of Jeffrey's shaft keeps in a vein above 4 ft. wide, wholly spar, with a nice dampness, and sometimes spots of ore. The stope above the 145 north of Jeffrey's shaft is worth 20 cwt. of ore per fm. We are cleaning out the broken ore from No. 1 stope above the 145 south of Wilson's shaft. No. 2 stope is worth 100 cwt. of ore per fm. The stope above the 145 north of Wilson's shaft is worth 40 cwt. of ore per fm. The three stopes above the 130 north of Jeffrey's shaft are worth 25, 25 and 20 cwt. of ore per fm. respectively. The stope above the 130 south of Jeffrey's shaft is being cleaned out. The 115-fm. level north of Jeffrey's shaft continues in a vein above 4 ft. wide, charged with quartz and ore, worth 20 cwt. per fm. The stope above the 115 north of Jeffrey's shaft is worth 15 cwt. per fm. The 100-fm. level north of Jeffrey's shaft keeps in a vein above 4 ft. wide, charged with spar and ore worth 5 cwt. per fm. The stope above the 100 south of Wilson's shaft is worth 25 cwt. of ore per fm. The 85-fm. level north of Jeffrey's shaft keeps in a very promising vein, above 4 ft. wide, mixed with quartz and ore, worth 5 cwt. per fm. The 70-fm. level south of Wilson's shaft shows a vein 5 ft. wide, well mixed with spar and spots of ore scarcely to value. The two stopes above the 35 south of Flat Rod shaft are worth 35 and 30 cwt. of ore per fm. respectively. Sarrowcole vein: Gripp's adit north of George's Roust vein is in a vein above 4 ft. wide, showing a nice mixture of quartz and spar, but without ore at present.—T. NEWBIGGING.

NEW MINERA.—Report for two weeks ending July 17:—The 275-yd. level—No. 2 rise and stope: Lode 4 ft. wide, worth 4 tons lead ore and 1 ton blende per fm. The several stopes from this level still keep good. The 255-yd. level west of Rise No. 1: Very little done here; lode rather poor. The 295-yd. level west of Rise No. 2: Lode 4 ft. wide, worth 3 tons blende per fm. Winze below 295: Down 15½ yds.; improved; worth 2 tons blende per fm. The 315-yd. level: Driven this fortnight 11 yds.; lode 4 ft. wide, worth 3 tons blende and 1 ton lead ore per fm. Dressing: The crushing machinery is now overwhelmed by the product of the mine, and preparations are being made for adding to the plant.

NEW MORGAN.—Mill report and clean-up from June 26 to July 15.—Chidlaw lode: Average number of heads working, 40 heads; time mill was running, 320 hours; number of tons crushed, 960 tons; average speed per minute, 88 blows; labour cost per ton, 8d. per ton; material cost per ton, 2d. per ton; tramming cost per ton, 6½d. per ton; total cost per ton, 1s. 4½d. per ton; motive power, water. Clean-up: Tons crushed, 960; yield, amalgam, 675; sponge gold, 253½; bullion yield, 250½; yield per ton, 5 dwts. 5 grs. The total cost of mining the quartz, including expenses at the mine (excepting dead-work), is approximately 6s. 6d. per ton, making total cost of mining and milling 7s. 10½d. per ton.—N. T. WILLIAMS.

PRINCE OF WALES (July 15).—In the 150-fm. level east the men are engaged in blasting down the lode which is 3½ ft. wide in tinny capel and peach with stones of tin, saving stuff for the stamps. In this level west the men are also taking down the lode which is 2 ft. wide, having the same character and value as in the eastern level. The lode in the 166 west is very much the same as for some time past, being 3½ ft. wide in hard tinny capel and spar with copper ore; worth 12½ per fm. There is no change in the cross-cut south, neither in the ground nor quantity of water since last week.—S. ROBERTS, J. PROWSE.

PHENIX UNITED (July 22).—In the setting report the managers say:—We have at various points six pitches, at tributes varying from 8s. to 13s. in the £ for tin.

PRINCE OF WALES (July 23).—In the 180-fm. level west the lode is 2 ft. wide, composed of a very promising nature, peach and tinny capel with rich stones of tin; altogether it is good stamping stuff. We are expecting a great improvement in this end soon, as the lode is getting porous, and water issues more freely from it. In the 180 east the lode is 3 ft. wide, but at present somewhat unsettled and disordered. There is but little change in the lode in the 166 west since last week, being still 3½ ft. wide in hard tinny capel; worth 10½ per fm. In the cross-cut south at this level, towards the Goodluck lode the water, which is about the same in quantity, is spread more over the end. No other change worthy of notice.—S. ROBERTS; J. PROWSE.

ROMAN GRAVELS (July 23).—The lode at the 155 north is still very strong, and of a promising character; the vein in present forebreast is in two divisions, which are together 4½ ft. wide, composed of the usual matrix and nice blotches of lead ore. This level is now driven 10 fms. 1 ft. The 155 on Caunter vein is driven 9½ fms., and the forebreast is just entering a cavity which has cut down say two-thirds of the feed of water, which was last week flowing from the forebreast in the level above. It is probable that the whole of the water will shortly be cut down to the deeper level, and we hope that the 155 is on the point of entering the same bunch of ore which is being laid open by the 140 level. The vein at said 140 level is in two divisions, which are separated by a rib of stone 2 ft. thick; there is every sign to-day that the divisions are coming together again, and the forebreast improving; we value it to-day at 1½ to 2 tons per fm. The 140 south is driven 105 fms., the vein in the forebreast being quite 3 ft. wide, composed of carbonate of lime of a most promising character, but without a sufficient quantity of lead ore to enable us to place a value upon it. The three stopes in back of the 140 north, average 1½ tons per fm. The lode at the 125 south has greatly improved in character since last week, and is to-day 3 to 4 ft. wide, composed of very fine-looking carbonate of lime, blende, and rich blotches of lead ore; the value we place upon it is 1 ton of blende to the fm. We believe we shall be able to place a further value upon it next week. The remaining points in the mine are without any recent

change. We have to-day sold 50 tons lead ore for 425/. and shall sample a parcel of blende next week.—A. WATERS.

SOUTH CONDURROW (July 22).—We are making good progress in driving the 138-fm. level north of Marshall's shaft towards the main tin lode. The winze below the 123 is worth 12/. per fm. The stope in the back of the 123 is worth 10/. per fm. The 40 end east of engine shaft is without tin to value. Three stopes in the back of this level are worth in the aggregate 30/. per fm. We have a fall of ground in the 50-fm. level east of King's shaft, which has blocked the level and stopped the tramming, but we are doing our best to remove the obstruction as quickly as possible.—W. RICH, W. THOMAS.

SOUTH DARREN (July 23).—The shaft is 53 ft. 6 ins. under the 142. The lode continues to look well, being rather improved for lead but not containing much copper, being worth 15 cwt. of silver-lead ore per fm., with a mixture of copper. The 130 end west is worth 1 ton of silver-lead ore per fm.—J. MITCHELL.

VAN (July 23).—The cross-cut towards the south lode at the 150-fm. level continues in hard ground, with faces of lead ore in the joints or beds crossing the level. Pipes are being fixed and arrangements made for putting a rock-drill to operate in the end in a few days, when more rapid progress will no doubt be made in the driving of this important point. The cross-cut south of the 150-fm. level at Seaham's winze, although driven 7 fms., is still in the lode, which is composed of slate rock, quartz, and a strong mixture of blende ore. We anticipate shortly reaching the south wall, when it will be determined on which part of this large lode the level shall be driven forward upon eastward. The 120-fm. level east is in a big lode, and the part carried spotted with lead and blende ores; much lode remains on each side of the level, to be proved by cross-cutting hereafter. This end is now being driven by six men and rock drills. The cross-cut driving south behind the 120 end is now in 5 fms., and has contained strong blende all the way, with spots of lead ore, the forebreast being of a very promising character. The six stopes at work in different parts of the mine will yield, on the average, 18 cwt. of lead ore per fm.—J. PAULL.

WEARDALE LEAD.—Report for week ending July 18:—Ore raised for week, 83 tons; ore dressed for week, 93 tons; ore and slag smelted for week, 140 tons, producing 71 tons of pig lead.

WHEAL CREBOR (July 21).—The points in operation in the mine are as under:—Four men driving the 156-fm. level east of new shaft on the hanging part of the lode, at 5/. per fm.; the part of the lode carried is yielding 4 tons of good quality arsenical mundic per fm. Four men stoping the bottom of the 144 east of winze, at 3/. per fm.; the lode is worth 2 tons of copper ore, and 4 tons of mundic per fm. Four men stoping the back of the 144 west of cross-cut, at 3/. per fm.; the lode is worth 3 tons of copper ore and 4 tons of mundic per fm. Two men driving west at the 132 on the south part of the lode, at 5/. per fm.; the lode is yielding 3 tons of mundic, and some good stones of copper ore per fm. In the upper levels we have six tribute pitches worked by 12 men, at tributes varying from 12s. to 13s. 4d. in the £. As previous communications will have informed you, we have found both the north and south wall of the lode in the cross-cut at the 156 east. The lode from wall to wall is 18 ft. wide, 1 ft. wider than it was at the last place where it was cut through. The first 3 ft. in width from the hanging wall will yield 4 tons of mundic per fm.; the next 10 ft. is composed principally of spar and capels yielding a little mundic, but not of much value; next to this there is a leader of mundic about 10 ins. wide. This leader will produce about 2 tons to the fm.; then there is a patch of killas 4 ft. wide; between this killas and the footwall there is a small branch, 2 ins. wide, of mundic and copper ore. This branch lay on the footwall of the lode. The footwall has been broken, and the country rock is showing. The branch of mundic 10 ins. wide is tending a little towards the hanging part of the lode, and according to the present look of it the two parts will come very near each other about 10 fms. east, where a good deposit of mundic ought to be found. We have not made any addition to the number of tributaries through the advertisement, but hope to do so shortly.—P. D. HOLMAN.

WHEAL METAL AND FLOW (July 22).—The lode in the 27 east end is showing promising indications and getting harder. The stope of tin stuff in the flow is about 15 ft. high and tinny throughout.—S. P. CURTIS.

WHEAL UNY (July 22).—The lode in Hind's shaft is about 7 ft. wide; the ground at present is very hard, and worth, for tin, about 18/. per fm. for length of shaft. Lode looks better than it turns out. Engine working well. The 244 cross-cut south has passed through a small branch about 3 ins. wide, showing a little tin. All the other points are going on all right. No change since last reported in them.—J. WHITE.

FOREIGN MINING INTELLIGENCE.

ANDALUSIAN (July 13).—At Saturno Mine we are now driving the fourth level west, it is worth $\frac{1}{2}$ ton per fm.; near the end we are making a small rise to help the ventilation by communicating this to the winze we have between our third and fourth levels, it is also worth $\frac{1}{2}$ ton per fm. Nearer the shaft and east of the winze we have a stope worth 1 ton per fm. or rather more. In the fourth level east of shaft we are rising to hole to our third level so as to ventilate. The rise is worth about $\frac{1}{2}$ ton per fm., and will leave paying stopes, so that the paying ground extends east of shaft as I expected, although the third carried little ore.—HASELDEN.

AUSTRALIAN BROKEN HILL CONSOLS.—Mine manager reports by mail for fortnight ending May 28.—Engine shaft: Chamber at 520 level completed. The 280 level west, rise on rich vein; vein very strong; ores raised consist of sulphide of silver, chlorides, fahlerz, and native silver, the last mentioned including a leviathan block weighing 16 cwt. Altogether for the fortnight we have raised from rise and incline 60,243 ozs. of silver contained in 7 tons of the various ores described, the whole of which is now being cased for London. Intermediate level west of rise driven 12 ft.; total, 20 ft. Struck a small vugh in an iron vein, from which we raised some rich sulphide of silver and chlorides. Incline shaft in rich shoot sunk 6 ft.; total, 70 ft. Struck the downward portion of rich vein, and are now driving west upon it, to prove the thickness of the ore body; the vein here discloses sulphide of silver ore, yielding 9,000 ozs. of silver to the ton, as well as iodide of silver, a quantity of which has been raised and included in the output as above. Winze to intersect incline sunk 5 ft.; total, 29 ft.; obliged to stop owing to great inflow of water; when this has been drained from below work here will be

resumed. Block 95: Underlay portion of shaft sunk 4 ft.; total, 19 ft.; lode looking well; water increasing. Block 97: North shaft sunk 13 $\frac{1}{2}$ ft.; total, 90 $\frac{1}{2}$ ft.; lode looking well.

—The mining manager reports by mail for the fortnight ending June 11, as follows:—Engine shaft, 289 ft. level west, driven 6 ft.; total, 420 ft. The rich vein, which is being worked above and below this level, is yielding sulphide of silver ore, chlorides and native silver in increased quantity and value, the output for fortnight being 9 tons of these ores, containing in all 82,107 ozs. of silver, now being cased for shipment to London. Incline shaft sunk 8 ft.; total, 78 ft. Lode widening, and water still further increasing. Intermediate level driven 4 ft.; total, 24 ft.; lode widening. Block 95: Shaft on underlay of lode sunk 9 ft.; total, 28 ft.; lode improving, and water steadily increasing. Block 97: North shaft sunk 18 $\frac{1}{2}$ ft.; total, 109 ft.; lode dipping faster, with appearances indicating a favourable change.

BRATSBERG.—Report for week ending July 11:—Hoffnung Mine: No. 2 adit level is practically unchanged since last report, maintaining a value of 1 ton per fm. The two rises in the back of this level are both yielding about $\frac{1}{2}$ ton per fm. At No. 3 adit level the outlook continues most encouraging, and recently the lode has been producing about $\frac{1}{2}$ ton per fm. The rise in the back here is now producing about $\frac{1}{2}$ ton per fm., the lode having become very small. No. 4 level is yielding good saving stuff, but not enough to value. The rise here is still worth 1 $\frac{1}{2}$ tons per fm. At Murchison's there is no change worthy of note. Johannes Mine: The western end of the level on Howard lode is now without value, but the eastern end is yielding $\frac{1}{2}$ ton per fm. The rise in the back on Howard lode is worth fully 1 ton per fm. Surface work and remarks: Dressing has gone on very regularly during the past week, and the new crusher rolls have thus far given satisfaction. The Charles Atkinson arrived at Skien on the 10th inst. with a cargo for that port. Loading of ore was, I hope, started this morning, and she will probably be ready for sailing to-morrow evening.—J. D. HOLMAN.

BRATSBERG SMELTING AND REFINING.—Report for week ending July 11:—There is nothing new to report since last week, as everything has been standing awaiting the French workman from Aguilas. We decided to lengthen the stack which conveys the smoke and fumes from both roaster and water jacket in order to increase the draught, and thus prevent the blowing off of the fine ore through the water jacket. A skilled mason from Skien was to have arrived on Thursday night, and everything was ready for him, and the scaffolding up, but he disappointed us. However, he is to arrive to-night, and as the job is only one of a few days we shall be ready in good time for the French workman to begin at once. We have been experimenting with the flue dust, and find that when mixed in the clay mill with lime and water it cazes very well, and is likely to do well.—T. F. SMITH.

CAPE COPPER.—May report:—Ookiep: The ground in the 117-fm. level east of 72 winze is very changeable. One part of the month it was worth from 1 to 2 tons of copper ore per fm., but at the present time it is only yielding a little saving work for the dressing floors. There is no change to notice in the character of the rock in the 117-fm. level south towards the new shaft; the forebreast is still in massive quartz. The driving of the 105-fm. level (No. 6) north-west of main east level is suspended for the time, and the men are put to sink a winze to prove the productive ground recently passed through in depth. The rock in the 80-fm. level (No. 16) south-east of new shaft contains a few spots of purple copper ore. The ground in the 68-fm. level (No. 6) south of 24 winze also contains spots of copper ore. The stopes throughout the mine continue to yield their usual quantity of copper ore. Trial mines.—Springbok: The stope in the 59-fm. level at the present is only producing a little saving work. Nababeep south: The ground in the 59-fm. level south-east of north-east level is disseminated with copper ore through out. The 59-fm. cross-cut south of the above level has been temporarily suspended to enable us to start a cross-cut northward, to prove the ground in that direction. Ookiep East: The stopes below and above the 66-fm. level are worth about 2 tons of copper ore per fm. Spectakel: The stope in the 36-fm. level south-east of Kelly's shaft is yielding about 1 $\frac{1}{2}$ tons of copper ore per fm. The ground in bottom of Landsburg's shaft is producing rich stones of copper ore.—Capt. HENWOOD.

—Returns for May: Ookiep, 1,760 tons of 23 per cent. Arrivals at Swansea: The Golconda and Taunton. Arrivals at Port Nolltoh: The Abercarne, Carmelita, Cubana, Glance, and Hondeklip. Bills of lading received: 690 tons of ore per Glanrafon, 370 tons per Hondeklip.

COLOMBIAN HYDRAULIC (June 16).—The following are the details of the operations during the month of May:—Run No. 173: After a run of 1,112 hours at the head of the mine, south of the centre of the channel, we made a general clean up on June 17, which resulted thus:—From the main sluice, \$13,604.70; purchased gold, \$1,202.00; and recovered from slags and old crucibles, \$71.00; giving a total result of \$14,877.70, or about 3,000/. The cost for May being \$5,773.70, there remains a profit of \$9,104.00, or about 2,400/.—A. E. OAKES.

DAY DAWN BLOCK AND WYNDHAM.—Mine manager's report for fortnight ending May 23:—No. 2 underlie shaft: This shaft has been sunk a further depth of 8 ft., making total depth from the surface 1,444 ft.; the ground is hard granite, but is fairly good for sinking. The 902-ft. level: The cross-cut has been timbered. Driving on the reef will now be commenced; there are 5 ft. of stone, of poor quality. The 805-ft. level west: Stopping is being carried on above this level. The reef will average $\frac{1}{2}$ ft. in thickness, of payable quality. It is intended to commence sinking a winze forthwith to connect with the 905-ft. level. The hanging-wall reef is 1 ft. in thickness, of payable quality. The 630-ft. level west: The stopes above this level are looking fairly well; the reef is 3 ft. thick, and of good quality. The 500-ft. level west: This level has been driven a further distance of 26 ft., making total distance from the shaft 97 ft. The cross-course has not yet been intersected.

DAY DAWN P.C.—Report for the fortnight ending June 6:—The output of quartz is 1,138 trucks; sent to the Excelsior mill 1,110 tons. The No. 13 level west side has been extended a further distance of 30 ft., and holed through to the Day Dawn Block and Wyndham, making a total distance of 40 ft. The stone, which was about 2 ft. thick, cut out after driving about 15 ft. from our own shaft. No. 13 level east has been extended a further distance of 12 ft., making a total distance of 24 ft. from the shaft. The formation is 10 ft. wide,

carrying 4 ft. of stone on the hanging-wall of fair quality, the remainder being a horse of mullock, with a few small leaders of quartz through it. No. 12 level footwall drive has been extended a further distance of 6 ft., making a total distance of 341 ft. from the underlie. The reef in the face of this level has somewhat pinched, but has every appearance of opening out again. We have at present 2 ft. 6 ins. of stone of very good quality. I have done nothing in the leading stopes this fortnight. The No. 3 and 4 stopes are carrying 6 ft. of stone of good quality. In the No. 2 stope we have 7 ft. of stone of medium quality, and in the No. 1 stope 4 ft. of stone of good quality. In the No. 1 stope going west from the No. 2 winze we have 5 ft. of very good stone. I had six men stoping on the west side of No. 1 winze on about 2 ft. of stone, which has cut completely out. No. 11 level, hanging-wall drive, has been extended a further distance of 8 ft., making a total distance of 80 ft. There are 4 ft. of stone in the face of this level of good quality. The stope over the back of this level is carrying 2 ft. of stone of fair quality. No. 7 stope over the back of the footwall drive is carrying 4 ft. of stone of good quality. No. 6 stope, 5 ft. Nos. 4 and 5 stopes, 4 ft. of stone of very good quality. In the No. 3 stope we have 8 ft. of very good stone. In the Nos. 1 and 2 stopes, 4 ft. of fair quality stone. I have started to sink a winze on the footwall drive 337 ft. from the shaft on 2 ft. of stone, which has been sunk 8 ft. No. 10 level: The stope on the footwall drive is carrying 6 ft. of very good stone, and in the stope over the hanging-wall drive we have 1 ft. 6 ins. stone of fair quality. The 240-ft. level east has been extended a further distance of 10 ft., making a total distance of 76 ft. from the shaft. The stone which, at the beginning of the fortnight, was about 1 ft. thick, of a rubbly nature, has cut out altogether. The number of trucks of quartz hauled from each level is as follows:—No. 13 level, 50 trucks; No. 12 level, 420 trucks; Nos. 10 and 11 levels, 537 trucks; No. 2 shaft, stopes under No. 5 west level, 54 trucks; stopes over No. 5 west level, 57 trucks; stopes from No. 4 west level, 20 trucks; total, 1,138 trucks. No. 2 underlie shaft: The No. 5 east level has been extended a further distance of 22 ft., making a total distance of 393 ft. from the shaft; the ground passed through is a very hard red granite, showing scarcely any signs of a footwall. No. 5 level west: In the stopes under this level we have 2 ft. of stone of medium quality. In the No. 1 stope over this level we have 2 ft. of stone of fair quality. In the No. 2 stope the formation is 4 ft. wide, carrying 1 ft. of stone on the hanging-wall, and 1 ft. on the footwall, of medium quality. No. 4 level west has been extended a further distance of 16 ft., making a total distance of 388 ft. from the shaft. The stone in the face of this level will measure 2 ft. 6 ins.; although a little broken up, is of good quality. No. 3 Straight shaft: The engine and engine-house have been completed. I got steam up on the 4th, and started the engine, which worked satisfactorily. The work in connection with the brace and mullock tip is being proceeded with as fast as possible. Lease 1,280: The eastern drive has been extended an additional 8 ft.; making the total length of same, 176 ft.; there is no change to report this time. On the 2nd inst. we started to cross-cut for the footwall at a point about 150 ft. from the underlie, and up to date have driven 5 ft. through nice formation; there is a small leader running in the same direction as we are driving and dipping west.—T. LESTER.

EAST BROKEN HILL CONSOLS.—The mining manager reports by mail for fortnight ending May 28:—Block 98: South engine shaft enlarged and timbered for the whole depth, and contract left to sink another 100 ft. Surface work: Poppet heads erected; engines were put under steam on May 28 for the first time, and worked very smoothly. They will commence the regular work of hauling from Monday next, when the pulley wheels will be fixed on poppet heads, and all in readiness for the contractors to start. Block 99: West cross-cut driven 9½ ft.; total, 27½ ft. No change. Dam more than half completed.

ETHERIDGE UNITED (May 27).—Fortnightly report.—My last report was dated May 13. No. 1 South Caledonian Mine: During the past fortnight the reef has been broken down from the stopes at the 80-ft. level, it will now average 15 ins. in thickness. There are 30 tons in the paddock, which I have now started to cart to the mill for treatment. It is very heavy mundic ore, but the prospects I get from it are not very encouraging, though it assays 1 oz. 12 dwts. gold, and 5 ozs. 7 dwts. silver. The 130-ft. level west of shaft: I have not as yet been able to work for the water being so heavy, but I will make an effort again next week, as I should like to get this level prospected as soon as possible, it being very expensive on firewood. I will crush what stone I get next month, and wire you the result.—M. FERGUSON.

FLAGSTAFF (July 4).—During the last week I have made rather less headway than common. The July 4 celebration being near at hand a number of my force of men in the mine have gone to Salt Lake. I do not expect them back for a week. I have also taken several men out of the mine to help in sacking ore, and good progress is now being made with that work. We are drawing the ore into three classes, as it seems it will bring more that way. I am pleased to report a good deal better class of ore below sixth level again. It is now more than 3 ft. wide, and shows plenty of silver-lead. I think we are going to have a big lot of first-class ore here. Above sixth the ore is also all first-class, and bigger than ever it has been before. It is now 5 ft. 4 ins. wide, and seems to be going off in two directions. I am not taking much of the ore out either above or below, but only exploring it in length. When the miners get back from their holidays I expect to make a better showing. Level 7 is still looking well in the face, and I have just cut a small seam of iron in main sixth, which looks well.—A. L. SWOPE.

GARFIELD (July 4).—The following work has been done at the mine:—Western Mine—180-ft. level: The north-east drift has been extended 15 ft., making a total of 85 ft. From this point we started to cross-cut towards the old works, being compelled to do so, as the air was so poor. We have cross-cutted 16 ft. The ground in the face of the drift is not as favourable as we had last week. In cross-cutting we cut through a seam of porphyry and talc, which looked favourable to drift on.

GYMPIE GOLDEN CROWN.—Report for fortnight ending June 4:—I have to report that driving and stoping north on the March reef at the 240-ft. level are being carried on as usual. The reef in the stopes is small and is not showing much gold. At the 105-ft. level driving and stoping north and south are being carried on. In the brown slate the reef averages about 8 ins. in thickness, and during the past week very good gold-bearing stone has been met with in the

south drive. Lease 777, 2 mile—Main shaft: On the Peter and Paul the south drive and stope are being continued; the reef averages about 1 ft. in thickness and shows a little gold. The north drive is also being carried in on the reef. At the eastern shaft, drives north and south on the above reef at the 130-ft. level are being carried in below the slate break; the reef is about 18 ins. in thickness, and in breaking it down yesterday it showed very fair gold, and the prospects at this point are very encouraging. From a washing-up of 200 tons, 54 ozs. 12 dwts. 6 grs. smelted gold was obtained from March reef.—T. RAMAGE.

HARRIETVILLE (June 12).—Fortnightly report:—Mons Meg Mine: Rise on new shoot north of tunnel J advanced 22 ft.; total, 120 ft., the lode is 2 ft. wide, but carries very little gold. Drive north of shaft 50 ft. below tunnel J extended 14 ft.; total, 25 ft.; the lode is 4 ft. wide, but poor. The south drive at same level has advanced 19 ft.; total, 37 ft.; the lode is 4 ft. 6 ins. wide, and of payable quality, a portion showing fair gold in the stone. North drive 170 ft. above tunnel J advanced 9 ft.; total, 145 ft.; the lode is 6 ft. wide, a portion only of which is payable. South Mons Meg Mine: A tramway has been constructed in the No. 1 tunnel, and a drive extended 5 ft. north of the old shaft; the lode here is 5 ft. wide, and carries a little gold. Guerdon Mine: Drive north of tunnel J on Guerdon lode extended 35 ft.; total, 100 ft.; the lode is 1 ft. wide, and has been carrying a small percentage of gold, but not in payable quantities. The south drive at same level has advanced 33 ft.; total, 93 ft.; the lode is 3 ft. wide, and has produced some very fair specimens, but, on the whole, it is not payable, although of promising appearance. Tiddledee Mine: Drive south of tunnel D towards Mons Meg advanced 28 ft.; total, 1,123 ft. The ground is much softer, and the lode, 1 ft. wide, carries a little gold. The cross-cut east of the above drive has been extended 27 ft., and is now in a belt of slate; but, as the ground is quite barren, work has been suspended here for the present, and the men have been put to drive on a massive lode to the west of the main level towards Mons Meg, which at the point of intersection carried a little gold. The drive south of tunnel C towards new shoot has been extended 37 ft.; total, 414 ft.; the lode is 2 ft. wide, but has again become poor. We shall immediately commence to rise from this level to the winze below tunnel D. We have started a stope on the shoot of auriferous stone recently traversed, the lode being 18 ins. wide, and carrying visible gold. The drive south of tunnel B towards new shoot has advanced 27 ft.; total 354 ft.; the lode here is 1 ft. wide, but poor. We have also commenced to stope at the back of this level, and are meeting with fair quality stone, the lode in the stope being 6 ft. wide. The drive south of tunnel C on the Jackass No. 1 lode is again being extended. The lode is 4 ft. wide, and carries a little gold, with every indication of an improvement. Machinery: All the machinery at mines and mill is working satisfactorily. The air-winch is now in use at the shaft on the Mons Meg main shoot, and works well. Furnace: Our stock of concentrates having been exhausted, we have been compelled to allow the furnaces to cool for a time until we have again accumulated sufficient pyrites to warrant, say, a month's roasting. In all, 203 tons of concentrates have been treated, and the results have shown that about 92½ per cent. of the assay contents of gold has been saved. This should be considered as most satisfactory.—T. G. DAVEY.

KETCHAU (PAHANG).—The ½ cwt. of stone from the Mount Sain lode, received on the day of, and shown at the general meeting, held on the 26th ult., has since been assayed, with the results given in the following certificate:—"Assay Offices and Ore Floors, Hatton Garden, E.C. Certificate of assay. We have crushed, mixed, and carefully assayed the parcel of auriferous quartz, ex one box, and find the following to be the result. Weight before grinding, 57½ lbs., avoird.; after grinding, less grains, 55½ lbs., avoird.; box of metallic grains, 17,100 ozs., troy. Assay fine gold, .926; fine silver, .068. The ground mineral produces 949 ozs. 11 dwts. fine gold per ton of 20 cwt. of ore. The same, treated by amalgamation, 863 ozs. 5 dwts. fine gold per ton of 20 cwt. of ore. The yield of gold amenable to amalgamation, including metallic grains, being 95 per cent., this mineral would certainly be considered as a free milling ore. (Signed.) JOHNSON, MATTHEY & CO." In order to determine the question of free milling it was necessary to assay the mineral by the usual process, also by amalgamation. Messrs. John Taylor and Sons have been appointed consulting engineers to, and managers of, the corporation.

LEEDS COPPER (July 9).—Kent's shaft: The 20-fm. west end is not quite as good as it has been for some time past, being more mixed with schist, and producing 1½ tons 15 per cent. ore per fm. No. 1 stope in the bottom of the 20-fm. level west has also fallen off, producing 1½ tons 20 per cent. ore per fm. No. 2 stope in the bottom of the 20-fm. level is producing good ore, vein average 4 ft. wide, and worth 2½ tons of 20 per cent. ore per fm. No. 1 stope in the back of the 20-fm. west level is producing 1½ tons 15 per cent. ore per fm. No. 2 stope in the back is also producing 1½ tons 15 per cent. ore per fm. The 15-fm. level driving west of shaft continues poor, but hope to see an improvement soon. No. 1 stope in the back of this level is looking well, producing 2½ tons 15 per cent. ore per fm. No. 2 stope in the back is in fair average, bed producing 1½ tons 15 per cent. ore per fm. We have started another stope, which we will call No. 3. This is also in fair average, bed producing 1½ tons 15 per cent. ore per fm. McGee's shaft: The drive and stope here are without change, the drive producing 1½ tons 25 per cent. ore per fm.; the stope, 1 ton 25 per cent. ore per fm. Kent's bed: We are now getting well into the bed here, which is showing good stones of ore.—T. R. DAVEY.

MYSCORE (June 30).—Mining report for the fortnight ending June 30:—I will send you the usual monthly report next week. We have not had time to-day to finish the measurements of the ground, &c. We have cut plat at the 890-ft. level at Rowse's shaft, and commenced to cross-cut west; the ground is rather hard for driving, but clear of the trap-rock, and looking congenial for gold. The lode in the 780 north of Rowse's shaft is 4½ ft. wide, and assaying 3 ozs. 2 dwts. 17 grs. The lode in the 620 south of incline shaft (on the west lode) is 1 ft. wide, and assaying 1 dwt. 23 grs. The lode in the 520 south of incline shaft on the wide lode is 1½ ft. wide, and assaying 2 dwts. 14 grs. Glen's shaft: The lode in the 250 north of the shaft is 1 ft. wide, and estimated to be worth 5 dwts. We have intersected some small veins of quartz and carbonate of lime in the 250 cross-cut east of this shaft, but nothing to value. Tennant's shaft: The lode in the 360 north of the shaft is 1 ft. wide, and assaying 2 ozs. 8 dwts. 19 grs. The lode in the 360 south of the

shaft is 6 ins. wide, and showing a trace of gold. The lode in the 290 north of shaft is 1 ft. wide, yielding a little quartz, but not sufficient to value. I do not think this level is quite far enough north to catch the run of quartz gone down in the level above. The 290 south of shaft is yielding occasional stones of quartz; the lode at present is in contact with trap-rock, but I think it will get clear of it, and improve again very soon. Schaw's shaft: The lode in the 450 north of the shaft is small and unproductive. The lode in the 450 south of the shaft is 10 ins. wide, and assaying 1 dwt. The lode in the 320 north of the shaft is yielding occasional stones of quartz, but not sufficient to value. The lode in the 320 south of the shaft is 9 ins. wide, and estimated to be worth 2 dwts. Rising: The lode in rise in back of the 780 north of Rowse's shaft is 4 ft. wide, and assaying 7 ozs. 0 dwts. 16 grs. The lode in rise in back of the 450 north of Schaw's shaft is 2 ft. wide, and assaying 10 grs. The lode in rise in back of the 180 north of Tennant's shaft is 2½ ft. wide, and assaying 1 dwt. Stopes: The lode in stope in bottom of the 700 south of incline shaft is 2 ft. wide, and assaying 1 dwt. 15 grs. The lode in stope in back of 700 north of Rowse's shaft is 1½ ft. wide, and assaying 17 dwts. 21 grs. The lode in No. 2 stope in back of this level is 2½ ft. wide, and assaying 2 ozs. 8 dwts. The lode in stope in back of the level south of shaft is 3 ft. wide, and assaying 10 dwts. 10 grs. The lode in No. 2 stope in back of this level is 2 ft. wide, and assaying 1 oz. 17 dwts. 5 grs. The lode in stope in back of the 620 south of Rowse's shaft is 3 ft. wide, and assaying 11 dwts. 1 gr. The lode in No. 2 stope in back of this level is 2 ft. wide, and assaying 1 oz. 9 dwts. 5 grs. The lode in stope in back of this level north of shaft is 2 ft. wide, and assaying 9 dwts. 16 grs. The lode in No. 2 stope in back of the level is 2 ft. wide, and assaying 2 ozs. 12 dwts. 16 grs. The lode in stope in back of the 550 north of Rowse's shaft is 2½ ft. wide, and assaying 2 ozs. 12 dwts. 6 grs. The lode in No. 2 stope in back of this level is 2 ft. wide, and assaying 1 oz. 12 dwts. The lode in stope in back of the 400 south of Rowse's is 3 ft. wide, and assaying 3 dwts. 6 grs. The lode in stope in bottom of the 400 north of Taylor's is 2 ft. wide, and assaying 5 dwts. 6 grs. The lode in stope in back of the 360 south of Plummer's is 2 ft. wide, and assaying 5 dwts. 15 grs. The lode in stope in back of the 296 north of Plummer's is 1 ft. wide, and assaying 1 oz. 7 dwts. The lode in stope in back of this level north of Rowse's shaft is 4 ft. wide, and assaying 7 dwts. 16 grs. The lode in stope in back of the 236 north of Rowse's is 2½ ft. wide, and assaying 2 dwts. 15 grs. The lode in stope in back of the 290 north of Tennant's shaft is 2 ft. wide, and assaying 19 dwts. 14 grs. The lode in No. 2 stope in back of the level is 3½ ft. wide, and assaying 1 oz. 10 dwts. 8 grs. The lode in stope in back of the 180 north of Tennant's shaft is 3 ft. wide, and assaying 1 oz. 1 dwt. 13 grs. The lode in No. 2 stope in back of this level is 3½ ft. wide, and assaying 1 oz. 15 dwts. 22 grs. Sinking: We are making very satisfactory progress with the sinking of Gilbert's shaft. The lode in the winze sinking below the 180 north of Tennant's shaft is 3½ ft. wide, and assaying 12 grs., but it looks much better quartz. I regret to say our tailings machinery has been idle for nearly a fortnight past for want of water in consequence of the long drought this summer. The rains have been delayed much longer than usual, but we are expecting the monsoon will burst almost every day, which would give us plenty of water to carry on all our operations. The mill samples:—New mill quartz, 2 ozs. 8 dwts. 23 grs.; old mill quartz, 1 oz. 12 dwts. 6 grs.; new mill tailings, 7 dwts. 3 grs.—J. GILBERT.

MYSORE REEF'S (June 30).—Fortnightly report.—Harvey's shaft: The advance made in the 520-ft. level north during the past two weeks has been 15 ft., which makes a distance of 48 ft. 6 ins. from shaft. We have now altered the direction of this end, so as to intersect the lode as early as possible. Cross-cut west at the 520-ft. level: I am pleased to say we have intersected the lode 28 ft. from shaft, which shows a very regular underlie and a good hanging-wall. At the point of intersection it is 10 ins. wide, composed of blue quartz and arsenical pyrites. The sample I broke on the evening of the 24th inst., when I telegraphed you, assayed 1 oz. 8 dwts. 17 grs. of gold to the ton, and a sample since broken from different parts of the lode assays 9 dwts. 2 grs. of gold to the ton. We have driven about 6 ft. beyond the point of intersection in hard sterile rock. I have now commenced to drive south on the course of the vein, which I trust will open as we advance. The 400-ft. level north has been extended 13 ft. 7 ins., now 199 ft. 5 ins. from shaft. We are driving on small stringers of quartz and carbonite of lime which show a trace of gold. I have put these men to blast down the ground penthouse below the 400-ft. level so that we may bring down the skip road to the 520-ft. level. As soon as this is completed they will be put to cross-cut west of the plat at the 460-ft. level, where I hope to intersect the lode. The 400-ft. level, south: A week since we again resumed the driving of this end, since which 8 ft. have been advanced, making a distance of 126 ft. 6 ins. from shaft; the lode in the present end is 1 ft. 6 ins. wide, composed of quartz, hornblende schist and a little pyrites, and worth, according to assay, 1 dwt. of gold to the ton. Air shaft: Stope in the bottom of the 140-ft. level; the part of the lode we are taking away is 8 ft. wide, and worth, according to assay, 6 dwts. 12 grs. of gold per ton. I have recently milled 30 tons of ore from this place, and obtained about 10 ozs. of gold therefrom.—M. SCANTLEBURY.

MYSORE-WYNAAD AND MYSORE WEST.—The mining manager reports by mail for fortnight ending June 30:—Tank Mine, North shaft: The 173-ft. level has been advanced 6 ft.; total from shaft, 9 ft.; and the cross-cut east from the end of this level has been driven 14 ft. 6 ins. The rock is hard and tight, but the back of the level, where we have cut up to the soft ground above the floor, is exceedingly wet. The ground is full of stringers and patches of quartz, but we have not yet reached the lode, it has evidently gone more downright than the shaft. I do not think, however, we shall have many more feet to drive before we cut it. I am now putting in a party of coolies to resume the sinking of the shaft, this will be hindered a good deal for some little time by the stuff from the level, but I hope next month to sink a few feet, and complete cutting a plat when we shall try to catch all the water there, and continue the sinking if possible without dropping the pumps. South shaft: This shaft has been sunk 5 ft. 9 in., making a total depth of 107 ft. 9 in. from surface; there is no change in the rock, but the water is increasing. Some of the rock in the sides of the shaft is getting rather heavy, and we shall probably have to timber up 30 ft. or so next month, after doing this we shall put in the lift and start the pumping

engine. Surface: Good progress is being made with the loadings for the air compressor at North shaft, the boilers are in position and the flues will be built up during the next fortnight. All other work is going on satisfactorily.

NEW CALIFORNIA.—Report for second half of June:—The 2,000-ft. level, west of shaft: Main drift in 866 ft., and rise and stopes at 750 ft. from shaft. Stopes east and west of No. 2 winze and intermediate drift at ditto. Very little progress has been made in these lower workings since time of last reporting, on account of the heavy seepage waters then spoken of, and the little work that has been done has not been enough to open up anything new. The 2,100 and 2,200-ft. levels are still under water. This extraordinary influx of water has been a great hindrance to us of late, but it seems to be abating somewhat now. This condition of things has thrown us on our upper levels almost entirely for our production, and will account for our reduced output. The 1,800-ft. level west of shaft (stopes): These workings are on a vein 2½ ft. in width, of very fair milling ore, and turning out from 7 to 8 tons per fm. The 1,500-ft. level, west of shaft, south vein, east of junction, and stopes. The stopes on the south vein have produced well in the last few weeks, and the vein is very regular. The 1,500 ft. west of shaft south vein cross-cut, stopes and winze: We are opening up the ground below in sinking on the vein. The vein in the bottom of the winze shows up well. The 1,100 ft. east of shaft in 518 ft.: The last few feet advanced at this point have developed nothing new.—F. RICKARD.

NEW DEVALA-MOYAR (June 29).—New shaft: What we took for hard ground proved to be only a band of hard clay with rock embedded in it. We are through this and again in soft ground, but the water has increased and is interfering with the work. Sunk during the week 5 ft.; total depth, 55 ft. No. 1 winze: We have sunk 1½ ft.; total, 75½ ft. Although we have no quartz in the face, we have a seam of quartz 4 ft. thick carrying pyrites in strings. The work of sinking is greatly retarded here as all the stone from the new level falls into the winze. The 186-ft. level driven 3 ft.; total, 6 ft.; reef not of any value as yet. All our machinery is working well.—R. B. JOHNSTON.

NEW EBERHARDT (July 5).—The mine manager reports as follows:—Monitor: Number of tons of ore extracted and assorted during the past two weeks 65 tons; assay value of same as per mine samples \$36 per ton. The mine outlook at present is more encouraging than for the past two weeks. The seam of ore we are now working being somewhat wider, and the grade is also getting better. The amount of ore taken out for the past week is less than that mined for the week previous, owing to the mine closing down yesterday on account of our national celebration (July 4). The ore team delivered to the mill dump 110 tons of ore, making in all a total to date of 276 tons on the mill dump. Eberhardt: Our work of repairing has progressed well, we having finished our No. 2 upraise, and the connections with the air-pipe will be made to-day. It has been quite a dangerous piece of work, from the fact that everything was overhead and the timber very rotten. I am very pleased, however, to state that it has been finished without accident. I expect to start several drifts in this upraise, provided we can get sufficient air, as the ground is quite favourable for ore, there being a large amount of quartz, and I cannot believe but where there is such a large quantity of this ore, it being so regular that we shall surely come upon some of a higher grade, either higher up or off to one side or other of this upraise; but have hopes of finding ore in running south. On June 23 last we commenced drifting north and south from the top of No. 2 upraise. I have not measured the ground yet, for there was so little work done, Saturday being our national holiday. Both of these drifts are in good promising ground, which carries considerable low-grade quartz. I have also started a cross-cut on tunnel level. This cross-cut is being run to connect with a winze coming down from the level above in which we had some good prospects. Our prospects above or immediately over the level where the winze starts are very good, but the air is bad. By running the cross-cut it will give good air and enable us to prospect this ground. I have started another cross-cut running westerly. The face of this driving is a mixture of quartz, lime and spar, and is quite favourable ground for ore. I will try to give you in a day or two number of feet made at the different points. I have great hopes that our efforts will be rewarded, both here and at Monitor. Here our field is large, and above our present workings there have been millions of dollars taken out of the company's mines, and I have not the least doubt in my mind that, at our present depth, or even deeper, there will yet be found large and paying deposits of ore.

NEW GOLD HILL (July 4).—I am collecting data, and making experiments necessary to giving you definite conclusions as to the best mode for us to undertake for the treatment of the ore. In the meantime we are developing ore daily, and will have a large quantity by the time we are ready for it. My policy is, first, to make sure of large quantities of ore, and then the best method of treatment, then erect for the treatment, and give you monthly results that will be satisfactory to you and to myself. It would be a shameful waste to try to use our present mill, because we would save but half of the gold and none of the copper; besides being at too great a cost to be profitable. By the present mill it would cost \$3.00 per ton to save one-half the gold in the ore. By the new arrangement I want to make, it will cost us about \$2.00 to save 90 per cent. Mine: Everything is working well, and good progress being made. Carters: Carters' work has been suspended on account of the ore being too low grade to prove profitable. Winze: 4 ft. sunk this week, making a total depth below the 160-ft. level of 55 ft. The vein is nearly 3 ft. in width and well defined, besides being well mineralised. The 160-ft. level: 5 ft. driven for the week on a vein about 1 ft. in width, and carrying well in copper, with some gold. The 300-ft. level: 5 ft. driven for the week on some well-defined stringers of sulphurates. Martin shaft: Sinking here continues, and will do so down to 200 ft. from the surface, when we shall cross-cut into the vein, which we hope to find improved. We are now down 178 ft., having sunk 3 ft. for the week. Progress is slow, owing to water and heavy timbering. Ore reports: Ore on surface June 27, 163 tons; ore mined from winze, week ending July 4, 6 tons; ore mined from carters' work, week ending July 4, 2 tons; ore on surface July 4, 171 tons.—R. EAMES, jun.

NEW VISO (July 16).—Manager's fortnightly report:—All our works proceeded regularly until Saturday last, the 11th inst. since which our tin washing on the California concession, from which we were getting about half of our produce, has been suspended, the owners of the water, with which we were working, having taken

it to irrigate their maize, which was an absolute necessity. After the time of irrigation, which continues about two months, I expect to get it again. We are forcing on our other points of production as fast as possible, in order to make up as far as we can do for this falling off, and I am pleased to say, on the whole, the prospects are favourable for getting another parcel of tin shortly.

NUNDYDROOG (June 30).—Report of work done for the month of June.—The 520 north: Distance driven, 44 ft., by two Italians with a rock-drill; total length of level, 156 ft.; the lode is 2 ft. wide, and assays 1 oz. 2 dwts. 18 grs. per ton; judging from its size and appearance in the level above we expect it will open out here. The 520 south: Distance driven (up to the 9th inst.), 18 ft. 6 ins., by one Englishman with a rock-drill; total length of level, 132 ft. 6 ins. This level was suspended owing to our having struck the cross-course just at the point of contact; the lode was 1½ ft. wide, and worth 1 oz. 18 dwts. per ton. The 520 south, winze in bottom: Sunk since the 9th, 26 ft., by one Englishman with a rock-drill. The lode is a very fine one, 6 ft. 6 ins. in width, and its assay value is 3 ozs. 17 dwts. per ton. The 520 south, rise in back: Risen 21 ft., by one Englishman with a rock-drill; total height of rise, 22 ft. We have just holed this rise to the 450 winze; the lode is a strong one, 4 ft. in width, and its assay value is 2 ozs. 17 dwts. 18 grs. per ton. The 450 south, winze in bottom: Distance sunk, 32 ft. 6 ins., by one Englishman with a rock-drill; total depth, 43 ft. 6 ins.; the lode is 4 ft. wide, assaying 2 ozs. 1 dwt. 6 grs. per ton; we shall now commence to drive south to meet the 480 from Webb's. The 450 north: No. 1 stope, south ground, stoped 20 fms., by one Englishman with a rock-drill; the lode was 2 ft. wide, and worth 4 ozs. per ton; we have had to suspend this stope, having got up to the cross-course. The 480 north from Webb's: Distance driven, 62 ft., by two Italians with a rock-drill; we have just struck the lode here, and have it 4 ft. wide in the end; from appearance it is just as good as in the winze. The work done by the hand labour contractors is as follows:—The 450 north: No. 1 stope north, stoped 3 fms.; lode 3 ft.; assay value, 1 oz. 19 dwts. per ton. The 450 north: No. 2 stope north, stoped 3½ fms.; lode 2 ft.; assay value, 1 oz. 7 dwts. 6 grs. The 450 north: No. 2 stope south, stoped 3 fms. 3 ft. 6 ins.; lode 5 ft.; assay value, 1 oz. 0 dwts. 12 grs. The 450 north: Intermediate level north, driven 5 ft. 6 ins.; lode 6 ft. wide; assay value, 1 oz. 7 dwts. 6 grs. The 370 north: Stope in bottom, stoped 2 fms. 4 ft.; lode 2½ ft.; assay value, 16 dwts. 6 grs. The 370 north: Stope in back, stoped 3 fms. 1 ft.; lode 2 ft.; assay value, 1 oz. 13 dwts. 12 grs. The 370 south: Stope in bottom, stoped 1 fm. 4 ft.; lode 2 ft.; assay value, 1 oz. 8 dwts. The 300 north: Stope in back, stoped 3 fms.; lode 1½ ft.; assay value, 1 oz. 15 dwts. 18 grs. Taylor's shaft: Sunk for the month 31 ft., by three Italians with a rock-drill; total depth of shaft, 593 ft.; very good sinking was done here this month. We hope to begin driving at the 600 next week. Kennedy's shaft: Distance sunk, 11 ft. 6 ins., making a total depth of 145 ft.; men employed, three Italians with a rock-drill; the water is still very quick here, and greatly hinders our progress. Mill: The mill has done good duty this month. Health: Fever not so bad as it was; all the Europeans at work. Mill samples:—Rough quartz through stonebreaker, 3 ozs. 6 dwts. 6 grs.; smalls, 2 ozs. 15 dwts. 12 grs.—F. W. GREY.

ORITA (June 10).—The following are the details of the operations during the month of May:—Mine: The work referred to in my last has been carried out as expected. The pipe I managed to get jointed and secured, also water gates at distributor, by the evening of the 5th inst., when I turned on the water without the slightest hitch and ran till yesterday morning, when I had to stop to pass monitor ahead and clear roots of ground sluices. This afternoon I fixed the monitor and turned on water. We are now washing something like of old, when our returns were good. In fact, for a long time we have not made such good track in a few days. I will do my best to keep it up, but the pipe-clay is now mounting up. However, I expect to show a fair result from this run, which will terminate if all runs well about July 5. Channel: From the work done in deep cut, the water and tailings are now cutting down deep, but no sign of bedrock, only enormous granite boulders showing up, between which we have blue gravel, and in parts the porphyry rocks are again showing up in the gravel. We must do what we can at all times to help to increase grade from sluice up. Our sluice is plenty deep enough, but the work is from it up face of bank to get bed-rock cut down to grade line. This we will try and carry out without any very serious delay in our washings. Face on run of channel: In my letters of May 18 and 24 I referred to this section of mine, and owing to very hard gravel here I am excavating a new ground sluice (tailing into deep cut), and moving monitor to try if we can find a softer entrance. The greater part of work is done, and to finish on ground sluice we work day and night shift. I am most anxious to carry out this work, as when blocked with pipe-clay in channel water had better be turned on here. Branch: I may now get in some sluice here. The pipe from here will now enter from a branch from pipe leading to run of channel. This will leave pipe in a good position for both branch and fourth opening. Fourth opening: Since last writing you under this heading we have not turned water on here, as we have been busy with other work for channel and run. Outside work: Having so few breaks on water line makes it almost unnecessary my stating all is in fair order.—H. J. PRENDER.

OSCAR (July 17).—Hodgkinson's lode—300-ft. level: The quartz in the lode has been mixed with a good deal of country rock. It is, however, improving, and as we have a very fine lode in the winze assaying ½ oz. to the ton, and only 50 ft. ahead of the present end, we can with confidence look forward to an early improvement. The 200-ft. north: This level has been in disturbed ground for a length of 12 ft.; it shows signs of improving, and we believe we shall in a very short time be able to report its old value again. Cross-cut: We began this week to cross-cut towards Bluett's lode, which is about 20 metres west of Hodgkinson's lode. Williams' lode: We are sinking a winze in the end of the level, 150 ft. north of mouth of level; the quartz is very compact, about 18 ins. wide, carrying a little mineral. We believe this winze will open up some good gold bearing quartz. Other places no alteration.—J. DAW, jun.

PINOS ALTOS (June 24).—The company's manager writes as follows:—The 13th level east drift in the hanging-wall was run 8 ft. The 14th west drift was advanced 4½ ft.; this drift is in fair ore, rather spotted, but it will pay well in the mill. The last assays were:—Hanging-wall side, \$9.92; footwall side, \$43.90. The 16½ west drift was run 3 ft., and then stopped, as I wish to run a cross-cut further back to cut the ore found in the tunnel, and then drift and sink on it,

The 17th east drift was run 5 ft. I am keeping it turned towards the hanging-wall, as this seems to me the only chance of cutting ore, and if the ore is not found we can drift in the hanging-wall as on 13th level, and make more rapid progress. The winze east below the 17th level was sunk 5 ft. At 59 ft. below the 17th level at the bottom of the west winze I started a cross-cut towards the hanging-wall to cut the ore found in the tunnel, and this was run 8 ft. At about 7 ft. we cut into some very good ore, much mixed with waste, but which will pay to mill. To strike the ore found in the tunnel it will probably take a cross-cut of from 30 to 40 ft. in length. Assays from the cross-cut: Lowest, \$6.97; highest, \$85.00. At the beginning of this week I started another cross-cut in the same direction on the 17th level west so as to be able to open up the ground quickly if we find the same ore as below. The average number of pairs of men in the stopes for the week was 26½; half of them were employed in the east stope No. 2 below the 16th level, and the other half between the 13th and 14th levels west. The east stope is not looking at all well, and I am afraid will soon get too poor to work. We have considerable ore left yet on the west side of the mine above the 15th level, which I hope will be sufficient to keep us going until we can open up fresh ore bodies. The estimated result from the mill for the week ending June 20 is as follows:—Lost time on batteries, engine repairs, ½ hour; general repairs on batteries, 6 hours; total, 6½ hours. Ore worked: 631 tons crushed at \$24.25, \$15,201.75; 599 tons tailings at \$6.90, \$4,133.10, 32 tons outflow at \$12.26, \$392.32—\$4,525.42; weeks result, \$10,676.33. I am afraid from the way in which the tailings are going up that we shall again have to start the concentrators and roasting furnace, which have been stopped for two months, as it seems that the ore from the upper levels in the west is not so free as below. The west drift in the tunnel has continued in the same good ore up to date, although in the last few feet it has become baser. On account of a breakdown on the compressor, and afterwards the accidental death of one of the contractors in the tunnel, very little ground was made. I am anxiously hoping that this new ore will hold out, as we could soon open it up and reap the benefit of the work done in the tunnel. The summer rains commenced yesterday, and will now be a daily occurrence. Messrs. Fraser and Chalmers have telegraphed that they have at last shipped the new rock-breakers for the mill. I shall try and hurry them through Chihuahua, as I am in need of one now for the tunnel ore. Freights continue very scarce and high, but when the railroad is finished on which I see in the papers they are working I hope this difficulty will be over.

PORT PHILLIP.—The directors think the mine manager's report and plan of development at north shaft, just received, "highly encouraging."

June 6.—I have the honour to report that sinking the north shaft has attained a depth of 87 ft. below the No. 17 level, or a total depth of 1,687 ft. from the surface. The shaftmen working 16 hours per 24 are making good headway, country rock just now being composed of alternate layers of strong slate and quartz, the latter in one instance nearly 1 ft. thick, these indications may be fairly deemed promising. The accompanying tracing shows the depth of shaft, extent of west cross cut and other characteristics at No. 17 level. The cost of sinking since work commenced Feb. 18 last amounts to 67.5s. per ft. for labour and material, the latter including shaft timbers; the expenditure in this work has been lessened 7½ or 8½ per ft. by storing the coming water at No. 14 level and sinking without pumps. Opening sets for No. 18 level are on the ground, and unless some unforeseen accident occurs we hope that depth will be reached and cross cut started, seven or eight weeks from date, leaving 20 ft. for a well. No. 17 level: West cross-cut has been extended altogether 318 ft. from shaft, and is now exploring a belt of country intermixed with quartz veins, both alike mineralised "the first seen at this depth." After leaving the diorite dyke and cutting through 5 fms. of very hard sandstone, the contour changed to that already described, and which is decidedly more favourable than any previously seen at this level. Criterion claim—No. 6 level: Two parties of tributaries are engaged on the east lode, No. 2 section, one stopping above, the other working below the level; after being tried several times by previous tributaries and given up, the former party struck payable stone; two small crushings have been cleaned off, each yielding 12 dwts. per ton; a third lot is now going through the mill. Strongman's party working below the level is also breaking payable stone just now, and having holed into a level of the late Criterion Co. it is hoped the shoot of stone will be further opened up and traced to the No. 7 level. Yankee lease: Prospecting is being carried on at No. 5 level, on the west vein; after passing the cross-course near the boundary dividing this from the Port Phillip claim, the lode disappeared; the track, however, is being followed; quartz veins are now making in the footwall and giving out a little water. The lodes in this neighbourhood are all more or less affected by the cross-course just referred to; a tribute block recently let to Mitchell and Co., on Robinson's vein, will, we hope, shortly commence to break payable stone, ultimately leading to better results in this part of the company's property. Machinery at the shaft is in good working order; several repairs to winding engine have been attended to, a duplicate air pump, bucket and rod have been procured for pumping engine; the mine water used for condensing purposes contains a large percentage of lime in solution, quickly incrustating, necessitating a frequent interchange of working parts. Pitwork is also in good order; no stoppage has occurred to interfere with sinking; old stays in many places have been replaced by new ones, and additional bearers fitted to the top lift, and decayed ones removed.—T. HEWITSON.

SOUTH-EAST MYSORE (June 29).—Fortnightly report.—During the past two weeks the cross-cut east of the 500-ft. level north of main shaft has been extended 13 ft. 3 ins.; now, 67 ft. 6 ins. The cross-cut has been driven several feet in hard sterile rock, which of course means that we are through the mineral belt. This is now suspended, and the men put to sink a winze below the 500-ft. level; 120 ft. from shaft at this point the lode, although small, is worth from 7 to 8 dwts. of gold to the ton.—M. SCANTLEBURY.

TILT COVE.—East mine: Output for month, 2,900 tons of 4.60 per cent. wet assay. Bodens level: Ground driven for month, 59 ft.; total distance driven, 1,416 ft. No change to note. Taken by six men and three boys at \$57—60 per fm. Arrival at Swansea: The ss. Volo with 1,280 tons of regulus of 24 per cent.

YURUARI.—The secretary advises receipt of the mail from the mines, dated Chile, June 26. The agents of the company advise despatch of about 320 ozs. gold, value about 1,200%, which has come

to hand. The mine captain reports that drift No. 5 west, Water shaft, looks more promising than it has done, and is 2½ ft. wide. No. 6 drift is 2 ft. wide, and looks more healthy than since we commenced driving. We have now driven about 100 ft. to the east of the shaft. We are also continuing driving No. 9 drift west Cenicero, but our progress is slow, owing to the air being bad, as stated in my last. The 50 ft. still remains to complete the connection between the two shafts, and every effort is being made to complete this without delay. The secretary adds that instructions have been sent out to forward a full report with regard to the state of the mill and surface machinery, the mines, and each level and stope, which is expected to be received in about a month from date, and will be duly communicated.

REPORT OF MEETING.

RED REEF MINING CO., LIMITED.

THE COMPANY TO BE WOUND UP—A RECONSTRUCTION SUGGESTED.

THE adjourned extraordinary general meeting of the shareholders of this company was held yesterday at the offices, No. 30, Finsbury Circus.

Lord Hay, of Kinfauns, presided.

THE SECRETARY having read the notice convening the meeting, The CHAIRMAN said: Gentlemen, I have little to say in addition to what I said at the last meeting. We adjourned, if you remember, to give the vendors an opportunity of finding another property to place before you. As yet we have received no intimation from the vendors as to another property having been found, so the board have no other course but to recommend the liquidation. We recommended this course in Jan., again in May, and we do so again now. I do not think there is anything I can say either for it or against it, but Mr. Rogers now tells me he has some scheme which he will submit to you on behalf of the vendors.

A NEW PROPERTY OFFERED.

Mr. T. H. T. ROGERS: Mr. Chairman and gentlemen, you will remember on the last occasion I explained to you that some of the vendors, and other large shareholders in the company, were very desirous that this company should not go into liquidation, and with that object they were in treaty for the Main Reef property, in order to substitute a property for the one which the company thought it their duty to abandon. So far as this Main Reef property is concerned, after getting the fullest information possible, and going into its merits, we came to the conclusion that that property was not better than the property that the company has already abandoned. Since then we have had various

OTHER PROPERTIES UNDER OFFER TO US,

and, so far as the Transvaal is concerned, the properties are almost as numerous as the sand on the sea shore, but to get anything valuable or worth working is very difficult. We have now, however, the particulars of a property which I think will meet with your approval. I will explain to you shortly what this property is, and then, if it meets with your approval, the question will be whether you will wind this company up absolutely, or wind it up with a view to re-construction, and if you adopt the course of re-construction you will then have to decide the method of carrying it out. The particulars I have to put before you are these:

PARTICULARS OF THE NEW PROPERTY.

This property is not in the Witwatersrandt district but in the Zoutpansberg, and it is within 120 miles of a railway station, and there is a good road up to the property. It is bounded by the Thebina River, which is a river which, in the dry season, is about 4 yds. wide and 1 ft. deep; so that even in the driest season there is

WATER ENOUGH FOR ALL PURPOSES.

In addition to that in the immediate neighbourhood the property is heavily timbered, and that is considered to be of some value. This property belongs to two working miners, who went out from Cape Town. In fact, they are known to a firm of merchants of very high standing in the city. They went out about two years ago to prospect in this particular district, and having selected this property which is about 24 claims, they set to work to make excavations and developments. I have got here a small sketch of the property which will give you some idea of the situation. In working the reef they have worked down the line of the lode. At the surface it was found to be about 2 ft. 6 ins. deep, at a lower depth 3 ft., and at a depth of 65 ft. it is still increasing, and proved to be 3 ft. 6 ins. All the ore taken out has appeared to be of a valuable character, and I thought it might interest gentlemen who are experts, if I brought various specimens from the mine in order to enable you to form an opinion as to whether it is a desirable property to take over. Those specimens are here. I may just mention to you that they have not gone to a very great expense in getting assays, &c., but they assure us it is

ONE OF THE RICHEST PROPERTIES IN THE TRANSVAAL,

and they show their *bona fides* by not asking for cash for the property but only for working capital, and the return of the money they have expended upon the property, which is about 850%. I think they could be induced to take something less. As a specimen assay they have taken about 4 lbs. of one of these blocks (referring to the specimens on the table) and crushed it very finely and handed half a pound to the Cape Town assayers, who have assayed it at 7 ozs. to the ton. Then, again, I may tell you some of the specimens are not in any way picked specimens, but the ordinary materials as taken from the lode. Some of these I have brought show extraordinary richness, but I am told nearly all these specimens show something like 2 ozs. to the ton if crushed. Those are shortly the particulars of the property, and if you think it is worth while to take it over, I can only say

WE CAN GET IT ON THE MOST FAVOURABLE TERMS.

It is simply a question of finding the working capital, and, as I explained at the last meeting, the parties I represent are most anxious

the shareholders in this company should not lose their money, and they are prepared to subscribe liberally towards the working capital assuming you think well to adopt the scheme of re-construction. I should like to hear before I go further what you think of this property, what you think of the ore which is here, and the chances of working it at a profit. If you are satisfied that the property is a genuine one, I can promise on behalf of my clients that they will subscribe liberally. If you come to the conclusion that it would be wise to re-construct and take over this property, we will consider then as to how this scheme of re-construction is to be carried out. Of course it may be carried out in two ways. A scheme of re-construction must either come from the board of directors or through the liquidator. In any case this company would have to be wound up. We propose to let the shareholders in the old company come in on the most moderate terms, that is, 2s. 6d. or 3s. in the £. That would be the scheme we would have to formulate hereafter: and it is now merely a question whether this re-construction is to come from the board or from the liquidator.

Mr. HENDERSON: What is the position of the old company? Are all the calls paid up?

The CHAIRMAN: No; there are still calls unpaid, and actions are pending in respect to them.

Lord MARSHAM: What is there left of the capital of the old company?

The CHAIRMAN: The old company, practically speaking, has no capital. If the actions pending are successful, doubtless there would be some money, but we have doubts whether the people can pay.

A SHAREHOLDER: I presume you have quite made up your mind that the Red Reef property is not worth going on with?

The CHAIRMAN: We have really lost the property. It has been forfeited for the rent due. I think what we ought to do first is to

DECIDE ABOUT THE OLD COMPANY.

The re-construction scheme cannot come from the board because we know nothing of the property or the scheme which has been submitted. Therefore it resolves itself into voluntary liquidation with a view to re-construction. To do this I suppose the proper way would be to close this meeting and hold another meeting. The present board would naturally have nothing to do with it unless they were re-elected by the shareholders in the new company, when perhaps some of them might feel inclined to serve, but, personally, I should not.

A SHAREHOLDER: Have you any claim against the vendors?

The CHAIRMAN: No, we have not.

Mr. ROGERS: The vendors have simply sold a property which unfortunately does not pay for working. It is one of those very low-grade ores, and practically valueless. Now the vendors who have sold us this worthless property are anxious to make amends, and they offer us this new property.

The CHAIRMAN: That concludes the business of this meeting. We will now proceed to the special meeting. I propose "That the company be wound up voluntarily forthwith."

Mr. LITTLEHALES seconded the motion, which was carried unanimously.

QUESTIONS.

The CHAIRMAN: As a shareholder, I should like to ask Mr. Rogers one or two questions. First of all as regards the working capital. You say your clients would subscribe largely to the 10,000% working capital required, can you give me an idea of the amount they would subscribe?

Mr. ROGERS: I do not know definitely the amount, but I am informed they will subscribe largely.

The CHAIRMAN: 10,000% seems to me a large amount to find unless Mr. Rogers has a client who will find the greater portion of it. You say that the most of these samples show an assay of 2 ozs. Can you tell me what is the cost of treating the ore?

Mr. ROGERS: I am told it is free gold.

The CHAIRMAN: Do you mean that that is the net profit.

Mr. ROGERS: No, but the cost would not be heavy.

Mr. HENDERSON: Where the mine is situated anything over an ounce would pay. The average cost of treatment is from 12s. 6d. to 13s. The difficulty is this, you can easily pick stones and get them assayed 40 ozs. to the ton, therefore the shareholders have to be satisfied that this is a good average assay.

The CHAIRMAN announced that a confirmatory meeting would be called in due course, when a liquidator would be appointed.

The proceedings then closed.

THE MINING EXCHANGE, LIMITED.

RESOLUTION CONFIRMED.

AN extraordinary general meeting of the members was held at the Mining Exchange, No. 9, Old Broad Street, on Wednesday, for the purpose of confirming the following resolution for the alteration of the rules and bye-laws of the Mining Exchange, which was unanimously passed at an extraordinary general meeting, held on June 25, 1891:—

RESOLUTION.

"That the rules of the Mining Exchange be altered by the addition of the following rule:—7A.—The committee for the time being may, in their absolute discretion, and in such manner as they may think fit, notify, or cause to be notified to the public, that any member has been expelled, or has become a defaulter, or has been suspended, or has ceased to be a member, and the name of such member. No action or other proceeding shall, under any circumstances, be maintainable by the person referred to in such notification against any person publishing or circulating the same, and this rule shall operate as leave to any person to publish, and circulate, such notification, and be pleadable accordingly."

Mr. J. H. Crofts,

a member of the committee, in the absence of Mr. Thos. Thompson, the chairman, presided, and moved the confirmation of the resolution.

Mr. WHITLARK seconded the motion, and it was carried unanimously.

THOMAS THOMPSON,**STOCK AND SHARE DEALER**

ESTABLISHED 1862.

**NOTE ADVANTAGES WE OFFER TO INVESTORS
AND SPECULATORS.****LOCKWOOD, WHITLARK AND CO.,****5, THROGMORTON AVENUE, LONDON, E.C.**

We make Mines a special study, and invite correspondence, whether
business results or not. We can always give reliable information.

We open any number of all classes of Mining Shares at close
market price of the day on 10 per cent. deposit, and carry them over
as long as clients wish at low contango rates.

We close speculative accounts at any time, and pay profits instantly,
irrespective of account day. We sell shares at current prices for forward
delivery at one, two, or three months on 15 per cent. deposit.
We are members of the Mining Exchange, and subject to the rules and
regulations of that institution.

Send for our prices before dealing elsewhere.

Options at low rates for account, one, two, or three months in
Mining, Land, and Miscellaneous Shares.

We deal in every description of Miscellaneous Shares.

We publish a South African Share List daily at 4.15 p.m., containing
useful information as to claims held, dividends paid, &c., post free.

may be necessary.

Glasgow Reader.—Keep them for a small rise only.*Touchy.*—There is a liability still of 6d. per share, but as the previous call has
only just been paid you need not fear. The mine is well managed, and we think
eventually will turn out as anticipated by the directors.*Z. Y. X.*—Buy them now. They are exceedingly cheap we consider, and
should go very much better.*Salty (B. W.).*—Will no doubt go lower in the face of reports now being issued.
There is a screw loose somewhere.*Manor.*—Do not advise you to "bear" the shares mentioned. On their merits
they should be bought for a small and quick rise.*John R. G.*—Hold your shares. There is every chance of a rise in them.*Shareholder (Leeds).*—A small profit should be taken in the shares mentioned.
Do not wait for the possible large one. It generally fails to show itself.*Quaker.*—If you do not join the re-construction your interest is of little value.
On the other hand by applying for your proportion you have a fair chance later
on of getting a return of the money you invested. The mine is certainly doing
better.*W. E. R. (Gorleston).*—At the low-price now ruling we cannot advise a sale.
Keep your shares.*Hatchet.*—There is a good chance of a recovery in most of the shares you men-
tion. Advise you to wait.*S.S.S. (Magdalen).*—Certainly not.*Sorrowful.*—The certificates may have been prepared, but until a "special
settlement" takes place you cannot get the difference. It will, of course, be
duly notified by the Stock Exchange.*West Riding (W. M.).*—Not very flourishing just now, but we think by waiting
a little your shares will be of more value.*J. W. E. (Seaton).*—Very good as a speculation.*Favourite (B. T.).*—Yes. For several months yet. We think the shares a fair
speculation.*Verdict.*—Sell at once, and cut the small loss, otherwise, we are afraid you will
suffer more.*K. R. Fowler.*—He has acted according to your instructions, and it rests with
you whether you should hold or sell. We cannot see how he is possibly to blame.
The concern is a good one.**SOUTH AFRICAN TRUST AND FINANCE COMPANY, LIMITED.****SUBSCRIBED CAPITAL, £255,000.****BOARD.**

LONDON: SATURDAY, JULY 25, 1891.

*The "MINING WORLD" is not the property of a Mining
Speculator nor under the control of any clique.***PALMAREJO SHAREHOLDERS ALARMED.**

THE minds of Palmarejo shareholders were considerably disturbed
by the letter we published last week, setting forth in brief but
trenchant sentences something like the real position of this under-
taking. According to the chairman's speech, a fortnight ago, all was
proceeding as merrily as a marriage bell, but our correspondent
showed that the toll of the bell in question was of the funereal kind.
It was not without good reason the directors in these columns last
week were asked what money they had—the inference being that
the position was such as that which has now given birth to the
joint-stock montrosity called "The Mineral Securities, Limited." Palmarejo
has seen many phases since it was launched upon the sea of joint-stock life. First, there was the Palmarejo
Mining Co.; next there was a sort of off-shoot called "The Mexican
Mineral Railway;" and now we have "The Mineral Securities,
Limited." The ultimate development of all these schemes no one
can tell, but shareholders are not wanting who say that it will be the
passing of Palmarejo property from the hands of the original share-
holders to those who have become associated with the various con-
cerns to which the chronic impecuniosity of the original company has
since given birth. In any case, when a company issues an appeal for
more capital and offers 25 per cent. as the rate of interest, it is
evident that the financial position is strained to what looks uncom-
monly like the breaking point.

We have seriously to remonstrate with the chairman for not having
fully stated at the meeting a fortnight since the actual financial position
of the company instead of alluding to it, as the secretary truly says,
"in general terms," but to nearly every shareholder reading our full
report of what took place on July 9, the circular, dated July 20, will
have come as a bolt from the blue. It is a case of—"look on this
picture and on that." The picture painted by Mr. Pigou on July 9
was that of a company with its mill all but completed, its mine with
large quantities of ore ready for treatment, its conduit all but ready,
and the railway on the eve of being finished; the picture painted by
the circular of July 20 (only 11 days after) represents the condition of
the company as that of the last stage of impecuniosity, and as

showing that "any delay in remitting the money required will cause the gravest injury" to the whole concern.

The secretary, with great simplicity, says: "It will be seen that these additional requirements of 15,000*l.* or 16,000*l.* for each company, or about 31,000*l.* in all, only became known to the respective boards of directors at a period subsequent to the issue of the circular convening the meeting of the Palmarejo Mining Co., and could not, therefore, have been referred to in that circular." Quite true; but why were they not alluded to at the meeting? Dates are essential in this connection:—

June 25.—Notice is issued calling Palmarejo meeting for July 9.

June 29.—Mexican Mineral Railway Co. receive a telegram that their expenditure will be in excess of estimate.

July 3.—The telegram was received (*vide* secretary's letter):—"On July 3 a telegram was received from the manager at Palmarejo intimating that the cost of the mill and other works at Palmarejo and Zapote (now practically finished) has exceeded the estimate by 10,000*l.*, and that this sum would therefore have to be replaced in order to furnish the necessary mill supplies, &c."

July 9.—Meeting of Palmarejo shareholders is held, but the precise information contained in the telegrams is not conveyed, and the financial position only alluded to (*vide* the secretary's letter, confirmed by our *verbatim* report on July 11) "in general terms."

July 20.—Prospectus of the Mineral Securities, Limited, is issued, asking Palmarejo and Mexican Mineral Railway shareholders for 32,000*l.* at 25 per cent.

July 22.—Secretary's explanatory letter referred to above.

We repeat that no company in any other stage than that of direct impecuniosity would think of attempting to raise money by the method the directors have put forth, and at a rate of interest of 25 per cent. The directors, according to their own showing, were in possession of information on July 9, which ought on that date to have been conveyed to the shareholders. Why was it not so conveyed? Giving the chairman the credit for the best intentions, is it necessary to remind him that meetings are called in order that shareholders may be informed, not as to a carefully prepared selection of the facts, but as to the full facts. Having at the time information to the effect that to the enormously exceeded previous estimates of the Palmarejo works, and the railway in connection therewith, there must be added in the one case 10,000*l.*, and in the other 15,000*l.*—why were the shareholders not told of this at the meeting? Shareholders will be tolerant indeed if they do not demand a full explanation of this extraordinary omission. They know only too well that every estimate made in respect to previous works has been miserably below the mark, and that the company has been handicapped with preference charges to an extent almost unparalleled in the history of mining. Palmarejo must be a veritable Golconda to leave to the shareholders any kind of profit after its prior claims are provided for. The shareholders even now have no sort of guarantee that the further amount required will not be exceeded by the actual needs of the works. In fact, nothing seems certain about Palmarejo except that every estimate of expenditure may be taken as lamentably short of the real sum required, and so the shareholders have been led from one step to another until they see nothing before them but a future that is dark—so dark, indeed, that large numbers of them have put their shares upon the market, and depressed prices, as the record in our Mining Market only too plainly shows. The secretary endeavours to explain the low price of the shares as owing to the want of this money; but shareholders at the meeting were certainly left under the impression that there was no urgent need for it; that there would be no necessity to ask them for a sixpence, and, in fact, as he himself says, the information was only conveyed "in general terms." No; this explanation about the fall in the shares will not do. It is more probably due to the fear entertained by the shareholders that the seats at the board are occupied by men of good intentions, rather than by men of business, and that the introduction of fresh blood, of the truly commercial kind, is necessary to extract the company from the chaos into which its affairs seem to be drifting. The whole position is really degenerating into a farce, which onlookers may laugh at, but which is a serious matter to many an investor who beholds his 1*l.* share quoted at a few shillings. How many more companies will be required, each of them putting a fresh barrier before the claims of the ordinary shareholders, ere Palmarejo settles down to work in the ordinary way, and does its business on the lines the original prospectus so gushingly laid down? Palmarejo was represented as a virgin mine, but it now poses before the public as the mother of many joint-stock children, though the future of its offspring is not more promising than its own. Its original shareholders, however, are fast being placed in the position of the "submerged tenth," and their interest in the company is, step by step, being obliterated by prior charges, and latterly by money raised on usurious terms of interest.

MYSORE GOLD MINING CO.

By "ARGUS."

PERMIT me to direct the attention of your readers to the present exceptionally low price of the shares of the Mysore Gold Mining Co.

Towards the end of this year the amount of quartz dealt with

monthly will be largely increased by 30 additional head of stamps, now in course of erection, but if we even take the proceeds of the last published monthly sale of gold as the average monthly return for the current year the result must be most satisfactory.

The gold produced in May last was sold for 22,457*l.*, or at the rate of 269,484*l.* for the year. The total charges for last year, including "sinking fund," amounts written off, &c., amounted to 85,735*l.* Everything considered, there is no reason to suppose that these expenses will be increased for the current year, as last year they were abnormally swelled to the extent of 8,500*l.* by the high rate of exchange during the silver boom. Therefore, the result of the current year will probably be as follows:—

Sales of gold for year 1891	£269,484
Less total charges as above	85,735
Nett profit for 1891	£183,749
Dividend for year on total capital of 225,000 <i>l.</i>	
at 80 per cent. per annum	180,000
				£3,749

Seeing that the additional milling and tailing machinery, when in full operation towards the end of the year, will increase the monthly returns by at least 2,500 ozs. of gold, the above estimate cannot be considered extravagant.

Last year the price of these shares touched 6*l.* 17*s.* 6*d.* at a time when the reserves of ore were estimated to amount to 50,000 tons. Since then the resources of the mines have been developed in a masterly manner, proving the enormous wealth of the property, which increases in value as depth is attained. At the end of last year the reserves of ore had increased to 80,100 tons, and this has since been largely added to; in fact, there is sufficient ore in sight to feed the mills for more than two years, and yet to-day the shares are standing at 5*l.* 7*s.* 6*d.*, at which price, should the above estimate be near the mark, an investor would receive upwards of 15 per cent. for his money, seeing that a quarterly dividend, about to be declared, is included in the price.

THE STOPPED BOND CASE.

It is by no means surprising that the case of Ruffer and Sons v. Sebag and Co. has attracted a large amount of public attention during the past week, for it has brought to light a Stock Exchange practice, which is, happily, as much opposed to the law of the land as it is to the dictates of common honesty and fair dealing. The plaintiffs and defendants in the action have had such intimate business relations for many years past that by mutual consent it had been agreed that the buying and selling "contract notes" should not mention the jobber's name. In other words, the parties acted as principals, and not as agents. Some time since Ruffer and Sons asked their brokers, Messrs. Sebag and Co., to buy for them a certain number of Spanish bonds, and when these were delivered it was discovered that one of them, representing a purchase consideration of 698*l.* odd, was a "stopped bond"; that is a bond upon which the Spanish Government refused to pay interest, owing to its having been stolen some years ago from a *bona fide* holder. It is, of course, obvious that the plaintiffs did not agree to pay nearly 700*l.* for a worthless piece of paper, but for a good, interest-bearing bond. And yet, in the effort of the defendants to enforce delivery of this "stopped bond," they were supported by Mr. Rokeby Price, the chairman of the Committee of General Purposes, and by several members of the "House," on the ground that such a bond was, according to the custom of the Stock Exchange, to be regarded as a good delivery. Mr. Rokeby Price stated in cross-examination that he would knowingly sell a "stopped bond" to a man who did not know it was stopped. It is absurd for Mr. Price to refuse to admit the defect. In this case the Spanish Government is the arbiter, and they have absolutely refused to recognise the bond as valid. And more than that, the Stock Exchange committee has week after week published the number of this bond in its *Official Intelligence*; thereby, one would assume, intending to warn members against having anything to do with it. In these circumstances it is really extraordinary that a body of gentlemen following an honourable calling should have for a moment attempted to defend a practice which has only to be stated to be condemned by every man of common sense. The position of a stopped bond has been likened to that of a stolen Bank of England note; but the analogy is not evident. A Bank note is simply a convenient representation of a certain amount of gold, whereas a Government bond is a formal acknowledgment of interest-bearing debt. A more accurate comparison would be furnished by the position of a pawnbroker, who is obliged to restore stolen property upon which he has innocently lent money. When Messrs. Sebag received the "stopped bond" they should have refused to accept it, as their clients have done successfully, in spite of the customs of the Stock Exchange. If the Committee of the Stock Exchange like to fight the Spanish Government on the question of the validity or invalidity of the bond, let them do so; but in the meantime, they only make themselves ridiculous, not to put too harsh a construction on their action, by attempting to over-ride the law of the land, and every consideration of fair-dealing and common-sense.

CAMERONES COPPER CO.

THIS company has passed through a trying year, but nevertheless has been able to show a profit of 11,513 $\frac{1}{2}$ l., from which the most serious deduction that has had to be made is one of 4,662 $\frac{1}{2}$ l., representing loss on exchange very ably explained by the secretary to Thursday's meeting. Needless to say, for this loss the directors cannot in any way be held responsible, and when matters right themselves in Chili, that is to say, when the dreadful struggle that is now desolating the country is at an end, this loss will most probably be recouped. Even as it is the directors carry forward a clear profit of 1,246 $\frac{1}{2}$ l. Mr. Macandrew, the experienced chairman of the company, explained the accounts in considerable detail, and incidentally gave some important information, as for example, that the total cost of production is under 40 $\frac{1}{2}$ l. a ton. This, at the existing price for copper, will leave a profit of from 10 $\frac{1}{2}$ l. to 12 $\frac{1}{2}$ l. a ton, and in normal times, when peace is restored, when labour accommodates itself to the natural law of supply and demand, and when the mines are fully at work the output can be considerably increased, we fully believe from a consideration of all the facts that a career of prosperity will attend the company if managed with the care and ability that have distinguished the present board. The company has passed through a period of disappointment, and trial—most companies do so before they become prosperous—but we can detect in no department of Camerones affairs signs of inherent weakness, but many of considerable promise and strength.

POTOSI AFFAIRS.

THE re-construction of this company may now be regarded as an accomplished fact, and though the applications for shares have not been equal to what the directors had a right to expect, the financial position is sufficiently sound to justify them in proceeding with the development of a property in which they have never lost faith, and as to the value of which evidences are accumulating on every hand. It is a noteworthy feature in connection with this company that the directors have remained faithful to it in a manner beyond all praise, and that has inspired confidence in the mine and in them, on the part of all who have made themselves acquainted with the facts. Potosi has passed through many financial phases, but in every one of them the directors have not merely pointed the way, but walked in it themselves. To every issue of capital they have been the largest subscribers and every evidence that men could give of sincerity of purpose and of doggedness of determination to bring a mining company to a successful issue Potosi directors have displayed. Once more, under auspices which we cannot regard but as favourable, the directors propose to make an attempt to bring the company into a successful position. It is impossible to predict with certainty that they will be successful, but this much may be taken for granted that the shareholders' money will be spent wisely and well on the actual working of the mines, and that if success be within human grasp they will achieve it. It would be a matter of real rejoicing to us, who have so closely followed Potosi affairs from the commencement until the present time, if the company were, after all the troubles and the trials with which its career had been chastened, to develop into a substantial success. In that day the services of the directors will not be forgotten, and we can only deplore that any of the shareholders should have refrained from joining the re-construction when it was so manifestly to their interest to do so.

PROSPECTS OF THE AMERICAN ASSOCIATION.

THE directors of the American Association have passed through an active and eventful year. Armed with the mandate of the shareholders at the last meeting they endeavoured to obtain the construction of a railway from Knoxville to Cumberland Gap, so as to make a connection with the Louisville and Nashville Railroad. The necessity for this line is obvious, for however valuable may be the company's land from the mineral point of view its utilisation without the railroad would be almost an impossibility. The railway was proceeded with, but the greatest difficulty was experienced owing to the prevailing commercial depression in the United States in marketing the bonds, and other difficulties supervening, the directors had practically to take this financial bull by the horns and carry out the work themselves. A combination of circumstances has continued to delay the completion of the line and also to increase its cost. The commitments of the association in connection with the railway are 150,000 $\frac{1}{2}$ l. Into the full statement of the financial position, as given by the chairman, we need not enter. Ultimately it may become the interest of the association to sell the railroad, but the present moment would be a most unsuitable one to attempt to do anything of the kind. In order to put the association in a position to wait for better times it is desired to raise debentures to the amount of 300,000 $\frac{1}{2}$ l., of which, if the shareholders find 200,000 $\frac{1}{2}$ l. of the proposed new issue, those connected with the management will find at least one-half of that amount. The association can claim to have built up a property which is unique even in the United States, the home of rapid and successful enterprises, which are often of unparalleled magnitude and created with marvellous rapidity. It is no figure of speech to

say that Middlesborough and the American Association are the talk of commercial circles, both in America and England, and its phenomenal progress is alike the envy and the admiration of other companies doing a similar business. The debentures for which the shareholders are asked to subscribe are well secured. Testimony was borne at the meeting this week, of which we give an extended report, to the value of the railway, and to the importance it will be to adjoining companies to get hold of it if a want of faith and a lack of financial courage on the part of the shareholders allow them to do so. It is quite clear that without the subscription for the debentures the position of the company is rather precarious, and the property, managed with so much ability, and exhibiting all the signs of progress, is to some extent at the mercy of outside persons; but with this money subscribed there is every reasonable ground for regarding its future with confidence. In the face of all the facts the duty of the shareholders towards this debenture issue seems clear.

DEVON CONSOLS AND ITS MANAGEMENT.

THE literature with which Devon Great Consols shareholders have this week been favoured is of a somewhat voluminous kind. It embraces—(1) a lengthened circular from the directors; (2) a similar document from Capt. Isaac Richards, the late manager; and (3) a statement from the former secretary, Mr. W. H. Allen. To understand the position clearly all three circulars should be read—that of Mr. Allen first; that of Capt. Richards next; and, finally, that of the directors. Into the unfortunate matters that have led up to the retirement or removal from office of the manager and secretary we have a positive repugnance from entering. The usage of public companies is for shareholders to elect directors and hold them responsible for the proper conduct of the concern, and in similar manner the directors choose their executive officers and deal with them in the same way. Whilst the shareholders have the right to remove directors who in any way displease them or fail to give them satisfaction, directors have a similar right with regard to the executive officers they appoint, and with this right no interference can be allowed, or it would be a case of "chaos come again." The shareholders will be chiefly concerned to know from the circular of the directors that further economies are being introduced, that notwithstanding, production is to be increased, and that an advantageous contract for the make of arsenic to the end of June has been made. They will also be glad to know that attention is to be devoted to getting more miners, of which the mines have been in want for some time past. Capt. Clemo now signs the reports, and the one we publish this week is of a rather more encouraging character than usual.

MIDAS GOLDFIELD CO.

THE directors of the Midas Goldfield Co. have a firm belief that the cloud of adversity, which overshadows the company at the present time, will soon give place to the sunshine of prosperity—at any rate, they are prepared to show their faith by their works in a manner which ought to give confidence to the most pessimistic shareholder. We are informed that the directors and their friends hold half the share capital of the company, and it was stated at the meeting on Monday last that the board are prepared to take up their proportion *pro rata* of preference shares, which it is found necessary to issue, in order to provide funds for the further development of the property. 70,000 $\frac{1}{2}$ l. worth of gold has already been taken out of the property, and the reports from the mine manager are anything but discouraging. There are reasons for supposing that quartz mining will prove more productive than working the alluvial, to which attention has been devoted hitherto; and several reefs are known to exist, in which, according to Mr. Allen, the Government Mining Engineer out there, the company possess a very valuable property. The shareholders sanctioned the creation of preference capital to the extent of 20,000 $\frac{1}{2}$ l., but for present purposes from 4,000 $\frac{1}{2}$ l. to 5,000 $\frac{1}{2}$ l. is all that will be required.

VENEZUELAN-AUSTIN—PROPOSED RE-CONSTRUCTION.

THE debenture issue proposed by the directors of this company, and to which they themselves were prepared to subscribe more than their quota, did not meet with general favour, and, frankly speaking, we did not expect it would. We dislike re-constructions as much as Mr. Lee, the esteemed chairman of the company, and recoil from them with the same aversion, but experience has shown that they are the only means by which fresh capital can be found for companies in want of it. In all other cases the burden is left to be borne by the directors and their immediate friends; in this it is shared proportionately, or the interest of those who hold back is lost. The latter alternative is a stern one, but necessity has no law. We are glad, then, that the directors have so far overcome their repugnance to re-construction, as to propose one with a small liability, which, borne by all, can press heavily upon only a few of the very largest shareholders, and thus a property which has in it many chances of success will be preserved for the proprietors. The directors remark that the property is of such great extent, and so small a portion of it in relation to the whole has

been worked, that they quite feel that the concessions, generally, merit a more careful exploration and a further trial, and hope, therefore, that there will be a unanimous vote in favour of the resolutions which will be submitted at the general meeting. This will give Venezuelan-Austin a lease of for life two more years, and much in that interval may happen to improve the price of the shares as well as to demonstrate the value of the property.

EAST BROKEN HILL CONSOLS.

THE directors of this company have not yet had time to test the value of the two blocks acquired from Australian Broken Hill Consols, but the letter from the managing director on the spot, read at the statutory meeting on Wednesday, was of an extremely encouraging kind. It describes the ore taken out as all of the value mentioned in a former letter—that is 49 ozs. of silver to the ton, and 70½ per cent. of lead, and Mr. Power anticipates success on reaching a reasonable depth with his explorations. The next meeting held by the company ought to be one of great interest, for then sufficient time will have elapsed to have passed promises through the crucible towards results, but meanwhile the outlook is decidedly hopeful.

AFFAIRS IN SOUTH AFRICA.

Kimberley, June 22, 1891.

THE DE BEERS CO.

THE De Beers Co., and its effect on the Wesselton Mine agitation and the *débris* washing question, is a constant source of conversation amongst all classes of the community, and not a few predict that all is not gold that glitters, even in the concerns of this gigantic monopoly. Just now they are preparing for the forthcoming half-yearly meeting, and, naturally, the directors are doing their best to present as healthy a report as they possibly can. It is reported that they are accumulating a large reserve of diamonds, which will figure in the balance-sheet as a valuable asset. In doing so the directors will do well to allow a sufficient margin in placing the value per carat on this reserve, for the very good reason that the market for this class of goods is exceedingly fluctuating. It is well known that the company has been the cause of the downfall in the price of *débris* diamonds. Parcels that readily sold three months ago at 15s. per carat will not now realise 8s., and those who are in the know have been heard to declare that unless the directors are very careful this will reflect on the company, and bring down the price of their goods also, it being well known that they are now sorting "small stuff," which they would have passed over two years ago. Complaints are also rife that in preparing their reports the directors take into account the "blue ground on floors," and place a very high figure on it as an asset, whereas experience teaches that until that ground has been washed, no living man can say what it is really worth. All who have worked on these fields, from the early days up to the present time, will tell you that there is blue ground and blue ground. That is to say that some blue ground is worth 30s. a load, whilst other blue ground is not worth 30 pence. Even experts are daily deceived in this matter, and have been for years past. I have seen hundreds of loads of blue ground which an expert estimated as being exceedingly rich, and on being washed it only averaged a quarter of a carat per load. One of these days, at one of the half-yearly meetings, there will be a row over this very question, or I am very much deceived. And now I come to another part of the subject. It is rumoured that shareholders at home are complaining of the extravagant salaries that are paid to the higher officials in this company. Here the grumbling has been both loud and deep for a long time past. Shareholders are, of course, aware what these salaries are, but for the information of your readers, allow me to refer to that of the general manager only. His fixed salary is 5,000l. a year. Once a year he has been voted a bonus of 2,000l.; he has a handsome house to live in, rent free; the house is lighted with electricity from the works free, and there are other nice little perquisites. Shareholders may well grumble. The other higher officials receive salaries in proportion.

ECONOMICAL MANAGEMENT.

Notwithstanding the continued depression that exists throughout the goldfields, the cloud has its silver lining. The monthly output is steadily increasing, as the monthly returns prove, and there is every prospect of its reaching 60,000 ozs. before the end of the year. Another pleasing feature is that a regular organised and economical management is being carried out by all the leading companies. Here is a return made by three companies, showing the working expenses per ton:—

Simmer and Jack: Mining expenses, 8s. 5d.; transport, 4½d.; milling, 5s. 8½d.; general charges, 10½d.; extraordinary charges, 9½d.; maintenance, 1½d.; mine development, 1s. 5d.; total, 17s. 8½d.

Crown Reef: Mining expenses, 12s. 3½d.; transport, 7½d.; milling, 4s. 4½d.; general charges, 3s. 5½d.; maintenance, 3s.; mine development, 1½d.; total, 17. 4s. 8½d.

Jumpers: Mining expenses, 10s. 0½d.; transport, 10½d.; milling, 7s. 0½d.; general charges, 11½d.; extraordinary charges, 8½d.; mine development, 5s. 3½d.; total, 17. 4s. 11½d.

MASHONALAND.

People are beginning to complain bitterly that so far as gold digging

prospects in Mashonaland are concerned there is absolutely nothing heard. The Chartered Co. has now held occupation of the country for some months, and although prospecting parties have been out all that time, no genuine, reliable and satisfactory information has been obtained from any one of them. We all know that a deal of patience has to be exercised in these matters; at the same time the general opinion here is that things are not so very rosy in that part of the world. What the Chartered Co. is really doing no one seems to know, and I may here remark, that the other day Sir Thomas Upington, in the House of Assembly, publicly taunted Mr. Rhodes with the prediction that the company would "burst up" before 12 months were over. However, it cannot be denied that many persons have great faith in the future of Mashonaland. Messrs. Maundy and Toole have just arrived at Pretoria, having been a month on the road from Fort Salisbury. They report that fever is abating, and that there is an enormous traffic on the road. They are on their way down here on special business. Then with regard to the Pungwe route, Major Johnson has arrived at Durban, and reports the route to be now open, and the Portuguese officials most courteous. The journey from Beira to Mashonaland now takes 14 days, and the Major adds that in about two months time, transport and coaches will be properly organised, and the journey done in five or six days. With increased facilities for travelling, we may get at the truth with regard to the alleged auriferous deposits, about which not a few here seem to have grave doubts.

BWLLFA AND MERTHYR DARE STEAM COLLIERIES (1891), LIMITED.

THIS company has been formed to acquire the Bwllfa and Merthyr Dare Collieries situated in the Dare Valley, in the county of Glamorgan. The collieries produce smokeless steam coal, an article the demand for which is increasing every year. The area of the property is about 1,100 acres, and its situation renders easy access to the great coal shipping ports of the Bristol Channel. The collieries are equipped with engines and plant capable of dealing with 1,000 to 1,200 tons a-day. The nett profits for the years 1889 and 1890 were 23,023l. and 30,035l. respectively. The colliery property is held on lease for 56 years from Jan. 1, 1883, at moderate royalties averaging under 6d. per ton, the dead rent being only 1,650l. per annum on the two collieries. The purchase-money for the collieries, including the valuable fixed plant (but excluding the movable and working plant), 43 workmen's cottages, brick works, &c., has been fixed by the vendors, who are the promoters of the company (subject to the existing mortgage debentures of 45,000l., at 6 per cent. per annum, redeemable 1910), at 55,000l. For the goodwill and connections of the collieries, the vendors have agreed to accept the 4,000 deferred shares of the company, which will not entitle the holders thereof to any dividend whatever in any half-year until a cumulative dividend at the rate of 7 per cent. per annum shall have been paid on the preference capital issued in each and every half-year previously. After payment of the dividend at the rate of 7 per cent. per annum on the preference shares, and setting aside an amount for depreciation of plant and for reserve fund, the balance of profits in each half-year, after payment of a dividend at the rate of 7 cent. per annum on the deferred shares, will be divided as follows:—One moiety as additional dividends on the preference—limited, however, to a further 5 per cent. per annum—and the balance as a further dividend on the deferred shares. The capital of the company is 130,000l., divided into 9,000 7 per cent. (cumulative) preference shares of 10l. each (with further participation in profits as mentioned above), now offered for subscription, and 4,000 deferred shares of 10l. each. The subscription lists will close on or before Tuesday next.

HERCYNIA COPPER CO., LIMITED.

THE prospectus of this company, to which we referred last week, has now been issued to the public, and bears upon its face the stamp of genuineness, which, we venture to think, will be duly appreciated by investors. In these days, when shareholders are asked to subscribe to undertakings which they know nothing about, and to mines in districts of which they have never before heard, and which are far removed from civilisation, it is really refreshing to have a company introduced to the public to work a property which is so situated as to be within reach of any shareholder who wishes to pay a visit to it, and that possesses all the advantages that civilisation can afford in the way of transport and labour. The property consists of 39 important and valuable copper and silver mining concessions, comprising an area of about 10,000 acres, and situated in the Hertz mountains. The company has been formed to purchase these concessions from the Prussian Government, subject to the payment of the usual dues and taxes, amounting to about 5 per cent. on the ore raised. It also acquires the contiguous freehold property, machinery, plant, buildings, smelting furnace, and other mining appurtenances, and it is proposed with the capital now asked for to work the property on a large scale. The work already done on the property is considerable, and perfect ventilation of the workings has been ensured by sinking 27 air shafts connecting with the different adits. As intimated above, the facilities for transport are ample, a railway connected with all the principal German towns traversing the property, the nearest station being only 700 yds. from the principal shaft. Mining labour is procurable at from 2s. to 3s. a day, and brown coal is plentiful at the very moderate cost of 12s. per ton. These are facts that should not be lost sight of, as they go conclusively to show that the mines can be worked at a very low cost, and that the produce can be transported to the best markets of Europe without difficulty or delay. The reports of mining experts and assayers are extremely favourable, and deal with facts and not theories. Mr. Bennett H. Brough states:—"On an average the shale throughout the region contains 2 to 3 per cent. of copper, with ½ lb. of silver to each cwt. of copper produced." Mr. William Topley says:—"A liberal allowance

for the worked area, and for the area where no copper slate occurs, will leave over 8,500 acres of productive area. There can be no reasonable doubt of the continuity of the copper slate over this 8,500 acres." The report of Messrs. Johnson, Matthey and Co. (assayers to the Bank of England and the Mint) gives 8.50 per cent. of copper, 1 dwt. of gold, and 4 ozs. of silver per ton of 2,240 lbs. of copper slate. Mr. H. Cheesewright, M.Inst.C.E., Mem.Soc.Eng., taking the reports of Messrs. Oxland, Topley, and Bennett H. Brough as a basis for his calculations, estimates the net profit at 30,000*l*. That is taking the price of copper at 50*l*. a ton, and the percentage of that metal at 2½ instead of 3, which is the result given by Mr. Oxland. The purchase price has been fixed by the vendor at 125,000*l*., of which 17,500*l*. is payable in cash, 67,500*l*. in ordinary shares, and the balance in cash or preference shares at the option of the directors. The capital is 165,000*l*., divided into 9,750 8 per cent. preference shares of 10*l*. each, and 6,750 ordinary shares of 10*l*. each. The present is an issue of the 9,750 preference shares, the whole of the ordinary shares being taken by the vendor. The preference shares are entitled out of the profits of each year to a preference dividend of 8 per cent. per annum, and to one-third of the surplus profits after paying an 8 per cent. dividend on the ordinary shares. So soon as the preference shares shall have received dividends aggregating 100 per cent., the preference rights shall cease to exist, and both classes of shares shall rank *pari passu*.

THE MONEY MARKET.

CITY, FRIDAY EVENING.

THE SITUATION.

JUST as the financial situation—what with the failure of the English Bank of the River Plate and the German demand for gold—was becoming strained, and an advance in the Bank rate to 3 per cent. was expected on Thursday, Messrs. Rothschild materially altered the aspect of affairs by sending into the bank 300,000*l*., and the following day a further 450,000*l*. of the Russian gold lately withdrawn, but never sent to Russia, since its shipment was countermanded. This, with an influx from Australia, strengthened the reserve by nearly a million on the *Gazette* week, or with the reflux of notes and coin from circulation, considerably over a million, and, as the return shows, an improvement in the proportion of 3 to 42 per cent., which would have been better still but for an additional liability under deposits; the position has improved. A further decrease in the private securities of three-quarters of a million must again be attributable to the liquidation of Messrs. Baring's estate, as otherwise it is inexplicable. Thus rates for discount have fallen away, Bills being now about 2 per cent., and money remains as much a drug as ever, being quite unobtainable at almost any rates. It would seem that there was a desire to prevent the necessity for an advance in the rate, but the return of the gold is easily accounted for by the understanding come to between the Russian Government and Messrs. Rothschild for completing the conversion of the debt from 4 to 3 per cent., broken off abruptly some time ago, and the fact that the conversion of the internal Orient Loans has been abandoned for the present in view, no doubt, of the threatened failure of the harvest, exports on the one hand being stopped, and imports on the other being ordered, which of course will have to be paid for to a pretty considerable total, and try the financial resources of the Great Empire. The suspension of the English Bank of the River Plate is indicative of the situation created in the Argentine Confederation by the crisis, and the declaration of a six months' *moratorium*. The failure is through no fault of the Bank, and it has brought down with it an old South American house at Liverpool.

The suspension of the unfortunate English Bank of the River Plate has accentuated the nervousness of the Stock Exchange, and at least once this week the markets have been in a panicky condition. There have been continuous attempts to realise stock, and but few buyers, for there can be no question more failures are ahead. However, since the futility of the endeavours to sell have obtained recognition, the tendency has improved, and a feature was Consols, which recovered from 95 to 96. Uruguayan Bonds have suffered heavily from an enforced *moratorium* in Monte Video, and Argentine Sterling Loans again are worse, because the gold premium is up to 300 per cent. The weight of carrying the enormous Argentine responsibility is getting intolerable, and some steps towards alleviating the burden are absolutely imperative. The continental markets appreciate to the full the grave difficulty, especially in Berlin, where further disturbance is being caused by dearer money. Chilean Bonds are irregular, owing to very conflicting advices concerning the revolution, while Internationals are flatter, especially Mexican, Portuguese, and Spanish, for obvious reasons. English Railways continue to absorb most attention, and to fluctuate a great deal. The dividends announced this week are fairly good, likewise the traffics, and the market was not dissatisfied with the remarks made at the different meetings. On the whole, values have appreciated, and Brighton "A" has been a feature. At the same time, the character of their recent daily traffic has been no less a distinction. Canadian Railways are dull, Mexican (Vera Cruz) flat, and Argentine and Uruguayan Railways show another heavy relapse. United States Railroads were tolerably firm supported by a dividend of 2 per cent on the 5 per cent. Income Bonds of the Atchison Co., and generally favourable advices from New York. Banks are lower, notably London and Brazilian, River Plate and Hong Kong, &c. Nitrates are better on restriction of output. Miscellaneous unsettled and Breweries only partially stronger.

Money continues unobtainable, and to-day the nominal quotation was ½ per cent. Discount quotations are still receding, three months' bills being now negotiable at 1½, ½, and six months' at under 2½. Bar silver has fallen ½d. to 45½d. The Bank of England received 45,000*l*. in gold from Lisbon, but 30,000*l*. was taken on export account for Hamburg.

A better tone obtained to-day in the markets, with rather more activity nevertheless. The Funds, although largely bought in the morning,

gave way, and touched 95½, ½, for cash at the close, with 95½, ¾, for account, being ¼ and ½ lower respectively. The Two-and-a-Half per Cents. also receded ¼. Foreign Stocks were dull on Continental prices, and a fall of 1½ in Portuguese. Spanish receded ¾; Egypt Unified, ¼; and all Argentine, both gold and Cédulas, ½ to 1 per cent. Uruguayan Bonds were freely offered, the Unified falling 2½, and the Six per Cent., 3 per cent. Home Railways were exceptionally strong on the North-Eastern and Midland dividends at the rate of 6 and 5½ per cent., against 9½ and 5½ respectively. The former has risen 2 per cent., the distribution being ½ per cent. better than expected, but Midland was unaffected. Brighton "A" advanced 1½ on the closing of "bear" accounts, and others rose ¼ to ½ except Great Eastern and North British, while South-Western Deferred relapsed 1 per cent. and Great Northern Ordinary Deferred rose to an equal extent. The American Market was heavy, prices falling ¼ to ½ all round, with 1½ in Mexican Central First Income bonds. Denver North and Canada Pacific rose ½ and ¾, and Grand Trunks were good at a rise of ¾ to 1½, with ½ to 1 per cent. in Mexican issues. Buenos Ayres and Pacific again fell 5 per cent. In Miscellaneous Securities, Guinness's stock rose 1 per cent. Bell's Asbestos and Salt Union both improved ¼; otherwise the tendency was flat.

Annexed are the final quotations to-day:—Consols Account, 95½, 95¾; Egyptian Three-and-a-Half per Cent. Preference, 91½, 91¾; Egyptian Unified, 96¼, 96½; French Four-and-a-Half per Cents., 104¾, 105¼; Hungarian, 89¼, 89¾; Italian, 89¾, 90¼; Mexican, 82¼, 82¾; Peru Corporation, 8¼, 8¾ per cent.; Peru Preference, 22¾, 23¼; Russian, 1889, 96¾, 97¼; Portuguese, 33¾, 33¾; Spanish, 72¼, 72¾; Turkish, 1871, 95½, 96; Turkish Defence, 93¾, 93¾; Caledonian Railway, 115¾, 116; Great Eastern, 88¾, 89; Great Western, 160¾, 161¼; Brighton "A," 145½, 146¼; North Western, 173¾, 174¼; Metropolitan, 83¾, 84; Metropolitan District, 29, 29½; Midland, 154¼, 154½; North British, 41¼, 41¾; North Eastern, 157¼, 157¾; South Eastern "A," 81¾, 81¾; Mexican Railway, Ordinary, 38¾, 39¾; Grand Trunk, 9¾, 9¾; Grand Trunk First Preference, 63¾, 64; Grand Trunk Second, 43¾, 43¾; Grand Trunk Third, 23¼, 23¾; Canadian Pacific, 85, 85¼; Denver, Preference, 45¾, 45¾; Erie, 19, 19¼; Milwaukee, 64¾, 65; Lake Shore, 111, 111½; Louisville, 72¾, 72¾; Atlantic First, 29¾, 30¼; Ontario, 16¾, 16¾; Ohio, 18¼, 18¾; Norfolk and Western, 49¾, 49¾; Reading, 14¼, 14¾; Reading Bonds, 78, 79; Union Pacific, 43¼, 43¾; Wabash Preference, 23, 23½; Ottoman Bank, 12¼, 12¼; Anglo-Telegraph, 41¾, 41¾; National Telephone, 4¾, 4¾; Hudson's Bay, 115, 115½; Suez Canal, 10¾, 110; Guinness, 325, 327; Allsopp's Ordinary, 25, 27; Bryant and May, 14, 14½; Eastmans, 6, 6¼; Salt Union, 5¾, 6.

THE DEVON GREAT CONSOLS CO., LIMITED.

IMPORTANT CHANGES IN THE MANAGEMENT—SERVICES OF THE MANAGER AND SECRETARY DISPENSED WITH.

SECRETARY'S STATEMENT.

MR. W. H. ALLEN writes, July 16:—"I regret to have to inform you that my services as secretary to this company have been dispensed with by the board of directors, who were so recently appointed as May 26 last. I think it right to apprise you of this, as after 17½ years' service in this company (and my uncle having previously served the company as secretary from its commencement in 1844 until his decease) this action of the directors seems unwarrantable and unjust, especially as no reason has been assigned."

MANAGER'S STATEMENT.

Capt. Isaac Richards writes, July 22:—"I trust you will pardon the liberty I take in addressing you on a question which, to myself, is of vital consequence, and is also of great importance to the company. On the 10th inst. I received the following resolution from the directors:—Resolved—"That Capt. Isaac Richards' services as an agent to this company be forthwith dispensed with, and that for July month, with three additional months' pay, be handed to him by Mr. Moses Bawden, the purser, and that Capt. Isaac Richards give to the purser a receipt for the same, and to hand over forthwith to the purser all books, papers, and documents, and everything else he may have in his possession belonging to the company." In reply to this resolution, which came upon me with the utmost surprise, I wrote the directors, desiring to know the reason of my being summarily dismissed, as I naturally felt it to be an act of great injustice. Herewith I append their reply:—"Your letter of the 10th inst., addressed to the directors of this company, has been submitted to them, and I am desired to say that after fully considering the exhaustive discussions which took place with you, the directors, and the other agents at the mines, on the 2nd and 3rd inst., respecting the mines, works, and management, the directors came to the conclusion that in the interests of the company it was desirable to dispense with your services forthwith, and accordingly a resolution to this effect was sent to you on the 9th inst., with a cheque for 61*l*. 4*s*. for four months' pay (viz., July, Aug., Sept., Oct.), and, as stated in that resolution, you were required to hand over forthwith to the purser all books, papers, and documents and everything else you might have in your possession belonging to the company. Whilst the directors, however, adhere to this decision, they desire me to add that the house, &c., and grounds you now occupy will be required by the company, and that the same must be vacated on or before Aug. 7, 1891.—Yours truly, GEORGE HADLEE, Secretary, *pro tem*. In the above letter, the directors refer to a recent visit to the mines, but on that occasion no allusion was made in my presence to a change of management. Scarcely twelve months ago my services were highly spoken of, and in addition to the management I was entrusted with the purser's office of the mines, in which capacity I acted until Mr. Bawden's re-appointment last month. For this I received no compensation whatever, whereas Mr. Bawden had previously been receiving 17*l*. per annum, besides perquisites. I have no desire to indulge in self-praise; but in the present instance, having been engaged in these mines for a period of nearly 46 years, I feel it is necessary to place the following facts before you to aid you in the proper consideration of the question. During the development of these great mines I have been engaged in the laying out of the whole of the surface arrangements, including the levelling for the large water courses and their entire construction; the designing of the dressing-floors and the appliance of the machinery in connection therewith; the surveying and construction of the railway from the mines to the Mor-

wellhamquay, in conjunction with Capt. Williams, one of the late agents; the laying out of the precipitate works, which for a number of years yielded valuable returns; and I venture to remark that the arsenic and reduction works, now of such magnitude, and which for years have been the mainstay of the mines (having yielded nearly 400,000Z.), would not have been erected but for my strong and long-continued recommendation to the directors. The designing and erection of these extensive works were carried out under my personal supervision, and have been from the commencement entirely under my management. For years, besides attending to the general management, I have also conducted the analyses of the copper and arsenical ores throughout the mines. It is not my intention to enter into any question as to the propriety of re-appointing Mr. Bawden as purser, against the expressed wish of the shareholders, but I feel convinced that if the directors, who have recently been elected, had been placed in possession of the actual truth, or if I had been afforded an opportunity of explaining the position I, as manager of the mines, occupied under very serious and painful circumstances, instead of consenting to my discharge they would have supported me in the performance of my bounden duty to the company. Having always striven honestly and to the best of my ability to further the interests of the company for so long a period, and having done nothing whatever to forfeit their respect, I submit these particulars for your consideration and independent judgment, and have the fullest confidence in leaving the matter entirely in your hands.—I. RICHARDS.

DIRECTORS' REPLY TO FOREGOING.

July 22.—At a board meeting held to-day I was desired by the directors to inform you that they visited the mines and arsenical works, &c., on the 2nd and 3rd inst., and after thoroughly going into various matters, especially regarding the important questions of monthly expenditure, the monthly production of minerals, and the equally important subject, the development of the several mines, they came to the conclusion that in the interests of the company the services of Capt. Isaac Richards as an agent at the mines should be dispensed with, and accordingly the resolution of the board to this effect has been carried out. Mr. M. Bawden, residing on the mines, has been re-instated as purser at a considerable reduction in the amount of his remuneration, and it is expected he will be enabled, in conjunction with the other agents, to greatly assist in making material reductions of costs, and in otherwise introducing changes of an economical character. Attention will also be directed in endeavouring to obtain more miners to increase the output of copper and mundic ores. The late secretary, Mr. W. H. Allen, has sent to the shareholders a circular communication stating that his services have been dispensed with, and that "the action of the directors seems unwarrantable and unjust." The directors have been for some time of opinion that his services should be dispensed with, and it is unnecessary to here acquaint the shareholders with all the circumstances which led them to this determination, but if this were done they are of opinion that the shareholders would agree with them that what may "*seem unwarrantable and unjust*" in the opinion of the late secretary is, on the contrary, not only just and warrantable, but necessary to the welfare of the company. The directors, who were elected in May last, were entrusted by the shareholders with the duty of watching over their interests in the management of these extensive mines and works: they have given almost daily attention to the affairs of the company, and they are determined, without fear or favour, to discharge their duty faithfully in every respect, but to enable them to do so they must have those in the employ of the company in whom they have confidence, and who will not only work energetically and harmoniously, but in every respect act for the true interests of the company. The directors have the satisfaction to state that an advantageous contract for the make of arsenic to the end of June last has been made. The report from the mines this week (a copy of which is herewith annexed) sets forth the value of the various points of operation.—GEORGE HADLEE, Secretary, *pro tem*.

July 24.—P.S.—Since the directors at their board meeting on Wednesday, 22nd inst., authorised the issue of the foregoing circular, they have received the communication from Capt. Richards, addressed to the shareholders. In it he states that the question is of vital consequence to himself, and is also of great importance to the company. The directors feel, as some of the shareholders may do, the vital importance to Capt. Richards at the age of nearly 70 years in having his services dispensed with, but with regard to the "*great importance to the company*," this latter subject is just what the directors had to consider, and not what Capt. Richards did or did not do 20, 30, or 40 years ago! The directors have had to consider in the interests of the shareholders most carefully as to the present and future management, the expenditure and returns of mineral, and whilst Capt. Richards was afforded every opportunity of giving to the directors information, and explaining anything he desired when the directors were at the mines on the 2nd and 3rd inst., the unsatisfactory answers to the questions they put were such that they had no other alternative but to dispense with his services at the following board meeting, and although a monthly agent, and only entitled to a month's notice, they paid him for July, Aug., Sept. and Oct. The animus which it is quite evident is shown in Capt. Richards' circular, regarding Mr. Bawden, is to be regretted. Shareholders in Nov. last and since have expressed their wish that Mr. Bawden should be re-instated as purser, and he has the full confidence of the directors, believing as they do that results will be attained by his holding the position, which will prove satisfactory to the shareholders.—G. HADLEE, Secretary, *pro tem*.

HOLLOWAY'S OINTMENT AND PILLS.—Health's Defences. None save the strongest can with impunity pass through the sudden transitions from wet to dry, from cold to muggy weather so prevalent during the autumnal and early winter months. Influenza, bronchitis, cough, sore throat, or quinsy will attack those most watchful of their health; but they can readily arrest any of these complaints by rubbing Holloway's Ointment twice a day upon the skin over the affected parts, and by assisting its corrective action with appropriate doses of his pills. This well-known, safe, and easy mode of treatment efficiently protects the invalid both from present and future danger without weakening or even disturbing the system in the slightest degree.

THE OPHIR CONCESSIONS, LIMITED.

DIRECTORS AND SHAREHOLDERS ADJUST THEIR DIFFERENCES.

At the annual general meeting of the company, held at the Cannon Street Hotel, on Mar. 19 last, an amendment to the original motion "That the directors' report, the accounts, and balance-sheet, be received and adopted," having been moved and lost, a written requisition for a poll was subsequently handed to the secretary, and the meeting adjourned, in order that the chairman might appoint a day on which it should be taken. The secretary says:—I am now desired by my directors to inform you that, after numerous interviews and conferences—at the instance of the dissident shareholders—the requisition has been finally withdrawn, and an understanding arrived at by which two gentlemen, Mr. W. O. Robinson and Mr. H. H. Bridgman, C.C., F.R.I.B.A., who have a very large interest in the company, and who formed part of the minority, have been added to the board. During these protracted negotiations the action of your directors has necessarily been greatly hampered, and they have been unable to complete the arrangements which were pending, or to initiate any fresh undertaking for the development of your property, but the matter in dispute having now been amicably settled, and the convention between this country and Portugal duly ratified and satisfactorily arranged to the interests of your company, your directors have the pleasure to state that they are now pressing forward arrangements for the definite location of your remaining claims, and are sanguine that reefs of almost equal value to those assigned to your sub-company, the Sabi Ophir Mining Co., Limited, will shortly be located and registered. Your directors also beg to inform you that they have been advised by the solicitors of the company that they have received certain of the papers belonging to you from your late solicitor, and are in correspondence with him with respect to the remainder, on receipt of which the completion of the contract entered into for the sale of 200 claims will be proceeded with, and its execution duly notified to you. I am further desired to inform you that, taking advantage of the depression caused by the action of the British South Africa Co., your directors have acquired 200 further claims on most favourable terms, and the arrangements for the registration of the contract are now in course of settlement in Lisbon, where the services your directors were able to render to the Portuguese Government and the Mozambique Co. of Lisbon have received the fullest acknowledgment, and have met with the highest consideration. Your directors consider the position and prospects of the company are now in a most satisfactory condition, and they look forward to a bright and successful future.—H. B. GREENWOOD, Acting Secretary.

THE AUSTRALIAN BROKEN HILL CONSOLS, LIMITED.

THE *Silver Age* of Broken Hill, dated June 9 last, contains the following:—"The Turtle Lump."—A change of name is desirable in the case of the Australian Broken Hill Consols Mine, and, without doubt, "the Silver Wonder of the World" would meet the case. It is an astonishing mine. It has been a surprise from the first, and promises to continue so till the end of the chapter. This valuable property was scornfully rejected by Australian speculators, who now bite their fingers in vexation every time the returns are published. It was off "the" line of lode and therefore no good. Every now and then some extra magnificent heaps of silver were unearthed, and the wonder was great when the eight fine lumps, illustrated in the second picture, were accumulated. They weighed collectively 17 cwt. and averaged 52 per cent. of pure silver, which may be seen all through the stone in white patches. Other phenomenal finds were made, but the eight pieces of ore retained their pride of place till a few days ago when the splendid specimen, shown in the first sketch, was mined. It derived its name of the "Turtle Lump" from its resemblance to the back of a turtle. In the picture it is standing on its edge, and the white shown is pure silver. The block weighs 16 cwt. and contains 80 per cent. of silver. The value of the silver alone is in the neighbourhood of 3,900Z., but as a specimen it is worth more. No other piece of silver like it has been found in the world, but no surprise would be caused if it were speedily cast into the shade by a better piece from the Consols. The mine is a veritable treasure trove."

FLAGSTAFF, LIMITED.

A FRESH DISCOVERY—SALES TO COMMENCE FORTHWITH.

The directors send the shareholders a copy of a cablegram received from the mine from Prof. Vincent, and say:—"It will be satisfactory to you to know that the discovery in question bears out indications noted in the mine for some time past, and verifies the expectations of the manager that a large body of ore would be found in this vicinity. You will notice that a slight delay has been occasioned in the shipment of ore by separating it into three classes instead of two, but consignments are now on the way to the smelting works, and the result of the first sale may be expected next week. The surface work refers to the new and more advantageous site for the engine-house and machinery selected last autumn, the title for which has now been secured. The directors expect the output of ore to be materially increased when the machinery is in running order." Translation of cipher cablegram received on July 16:—"Important discovery. We have struck yesterday, face seventh level, first-class ore, 6 ft. wide. I believe this will increase immensely the yield. Sixth level also looking first-rate. Our progress is very slow owing to sorting into three classes, but now shipping. Sale next Wednesday. On the surface, work is being pushed ahead. The machinery will be up early in August. Have secured title of land.—VINCENT."

JUDGMENT in the case of a firm of solicitors, well known in connection with companies, which was brought before the Court by the Incorporated Law Society was given last Monday. The charges had reference chiefly to matters connected with the Etheridge Co. The judges after carefully reading through the whole of the evidence gave judgment completely exonerating the firm from the charges made, and the application was dismissed with costs.

REPORTS OF MEETINGS.

THE AMERICAN ASSOCIATION.

THE GRATIFYING PROGRESS OF THE PROPERTY IS DESCRIBED, AND THE IMPORTANCE OF THE RAILWAY SHOWN—NEED OF THE DEBENTURE ISSUE.

AN extraordinary general meeting of the shareholders of this Association, Limited, was held on Monday, at Winchester House, Old Broad Street, for the purpose of considering and, if thought proper, passing the following resolution, viz.:—

"That the directors be, and hereby are, empowered to issue debentures to the value of 300,000*l.* on such terms and in such manner as they may deem most expedient for the interests of the company."

Mr. E. A. Pontifex

(chairman of the company) presided.

The SECRETARY (Mr. C. Barclay Holland) read the notice convening the meeting.

OBJECT OF THE MEETING.

The CHAIRMAN said: At a general extraordinary meeting which was held in July, 1887, the shareholders expressed a unanimous desire that the directors should undertake to obtain the construction of a railway from Knoxville to Cumberland Gap, and of a tunnel through the Cumberland Mountain, so as to make a physical connection with the Louisville and Nashville Railroad. The directors entirely coincided in the opinion that the shareholders expressed as to the necessity of undertaking this enterprise, since, without it, whatever might have been the value of our coal and iron lands, it would have been a very long time indeed before they could have been brought into such extensive working as would enable them to become adequately remunerative. We, therefore, accepted the mandate which you had conferred upon us, and set about devising means by which the railroad should be constructed in accordance with your wishes. For this purpose we, of necessity, adopted the custom which prevails in America, by which a railroad is built by a construction company formed for that object, the money for which is provided by the issue of a certain limited number of bonds per mile, which limitation is defined in the charter incorporating the railway company. A construction company was, in accordance with this custom, formed in America, but, owing to financial depression, the company became unable to pay the contractors, and we were threatened with a foreclosure. In these circumstances it was thought by those most competent to judge that the best policy of the association would be to take over the whole of the property and assets of the construction company, and to carry on and complete what remained of the construction of the line. It likewise became necessary for us to undertake the

FINANCIAL RESPONSIBILITY FOR THE MANAGEMENT

of the working and the general conduct of the operations of the railroad. At that time we were informed that the bonds of the railway company could have been easily placed at a satisfactory price, and we also counted upon receiving the promised aid of 45,000*l.* from the city of Knoxville. The financial depression, however, occurred just at the wrong moment, and we found it impossible to float the bonds which the railroad company under its charter had a right to issue, and the city of Knoxville, as we think most unfairly and unjustly, refused to carry out their contract to take 45,000*l.* of the stock of the railroad at par. The municipality have not in expressed terms refused to carry out their agreement; on the contrary, we are told that a large number of the most respectable citizens desire to carry it out. But as we referred to the Law Courts to enforce our rights, the necessary legal steps for this purpose have been taken, and we have every reason to believe that a satisfactory settlement will soon be obtained. In the meantime, we are deprived of the aid which we relied upon, and we are also deprived of the proceeds which we expected to derive from the sale of the bonds of the railroad. In these circumstances the railroad company were compelled to borrow considerable sums of money to enable them to pay their way, as well as to complete the extension of the line.

DELAYS.

These extensions are financially a disadvantage to us, as we can only bond to the extent of \$15,000 a mile beyond the original length of the railroad, say 68 miles, which latter we can bond to the extent of about \$20,000 per mile. Added to this was the fact that the Middlesborough tunnel—as is often found in such cases—cost quite half as much again as was estimated. A further serious delay, involving much extra expense, was occasioned us by what we thought the very arbitrary and unjust action of the Louisville and Nashville Road Co. They claimed that we had no right to build our own line from the northern end of the tunnel into our town of Middlesborough, and they resisted our efforts to construct it by every means in their power. So effectively did they do this that they delayed us at least six months in making the connection in question, and caused us a great deal of expense, besides the delay and loss of business. Ultimately, through a threat that we would tear up the contract by which they had the use of the tunnel, they withdrew their objection. Then there have been further additions to the costs of the railroad, which could not have been anticipated. It may be convenient here that I should state as briefly as possible what our resources and expenditure have respectively been. Our share capital amounts to 400,000*l.* The premium which we received on the last issue of shares amounted to 75,000*l.*, and we owe loans now of something over 150,000*l.*, making a total of about 627,000*l.* Against this we have expended out of the funds of the association, on the construction of the railroad, 304,000*l.* (it has actually cost about 500,000*l.*, the balance having been paid from the issue of the bonds which the railway sold.) The land and properties which we have purchased in America have cost us 241,000*l.* We had to subscribe to the issue of the Marietta and North Georgia bonds, which were made one with those of the Knoxville, Cumberland Gap, and Louisville, 13,000*l.* We have spent on the Belt Railroad, in excess of the returns received from the bonds sold, 6,000*l.*; and our total other expenses in America and London of every kind and sort for the last four years have amounted approximately to 60,000*l.*, which just balances the amount of the capital and loans which I have just now given you. It

may be asked, if our loans amounted only to 150,000*l.*, why we propose to take powers to borrow so much as 300,000*l.* But, in the first place, taking powers to borrow and being able to borrow is not quite the same thing, and it may be that we shall not get all the money we ask for. In addition to the loans that have to be repaid, we estimate that

THE RAILROAD REQUIREMENTS

to the end of Dec. will amount to nearly 19,000*l.*, as the equipment of the railroad will amount to probably 20,000*l.* additional, and we shall have two years' coupons to pay upon the bonds of the Knoxville, Cumberland Gap, and Louisville Railroad, which have already been issued, amounting to 23,000*l.* We are liable, in addition, for the payment of the interest on the bonds issued by the Middlesborough Belt Railroad Co., and if to this be added what we shall require for making capital and for the encouragement of new industries, we shall require pretty nearly the entire sum that we are likely to receive by the issue of the 300,000*l.* of debentures, which we ask you now to permit us to create. Having dealt with the reasons why the necessity has arisen for the raising of further capital, and having given you the reasons for the amount at which we propose to fix the issue, it remains for me to say a word as to the security we have to offer for the due repayment of the bonds. In our circular, of which you all have a copy, it is stated that the value of the assets of the corporation might be summarised as follows:—About 80,000 acres of land taken at the average cost price of \$15 per acre, 224,362*l.*; sundry other properties in America, 9,000*l.*; stocks, bonds, and shares, taken for the purpose of this valuation at 50 per cent. of their par value, 250,000*l.*; total, 503,362*l.* The amount we are now proposing to borrow is, in effect, the amount required to recoup the association for money outlaid on the construction of the railroad, and it is therefore to the railroad we must look, and we may look to it with confidence in the near future, for providing the money necessary to pay the interest on the bonds. At the present moment the railway is earning a little more than its fixed charges, and that upon a traffic which is entirely outside that which it was constructed to carry—namely, our coal and iron. Up to the present time it has not carried a ton of ore for commercial purposes, and until three months ago it was practically impossible for it to carry any coal and coke. The net earnings upon the railroad already amount to \$3,000 to \$6,000 a month. We are told by those most competent to form an opinion that every month adds to the value of our railroad, and that in the course of a very few months (certainly within a year) we shall be in such a commanding position, due to the increase of traffic which the development of our property will then have produced, that we may command such terms from any intending purchaser as it would now be hopeless for us to hope to be able to get, especially in view of the present financial condition existing both in America and England. Thus, if eventually it may be considered desirable, or even necessary, to sell the railroad, this clearly is not the moment to do so, and it is to enable us to wait for the right moment that

WE PROPOSE THE ISSUE OF DEBENTURES.

Some shareholders have made it an objection to the issue that a first charge will thus be created upon the profits to be derived from our enterprise; but if, as I hope, every shareholder will take his proportion of the issue, this will right itself. I should exceedingly regret that any shareholder who has born the heat and burden of the day up to the present moment should in this way fail to obtain the just reward of his enterprise and patience. (Hear, hear.) We have built up a property which is unique even in the United States, the home of rapid and successful enterprises, which are often of almost unparalleled magnitude, and are created with marvellous rapidity. Middlesborough and the American Association are the talk of commercial circles both in America and in England, and I feel assured that our shareholders will not part with their inheritance at the very moment when they have the right to expect to enter their kingdom. I now move the resolution for the creation of debentures, and I will ask Mr. Pollock to second my motion, because he has been over there, and knows the property intimately. (Applause.)

Mr. POLLOCK accordingly seconded the motion, and said that they had

A MAGNIFICENT ESTATE IN THE KENTUCKY AND TENNESSEE,

and they did not intend to do anything by which they should be deprived of it. He hoped that the shareholders would direct themselves to the maintenance of that property and of their position before the world, because he believed that their action at the present moment in America was being very closely and critically watched, as their railroad would be a most acceptable property to their competitors. When he told them that the carrying on of the war for the disposal of the railway would have resulted in a loss of 150,000*l.* or 200,000*l.* they would agree with him that it would have been wrong for them as a board to have accepted any such policy without taking the shareholders into their confidence. He believed that the present issue would see them out of all their afflictions, and he did not believe that they should again have to come before them for any further vote on account if those debentures were created, as with money so obtained they would not only be able to maintain their own position, but they would be able to assist the position of industries in Middlesborough and the surrounding country, as so much depended on their example. Those

DEBENTURES WOULD BE ADMIRABLY SECURED.

They would be a first mortgage on their property, they would be a floating charge on their other assets, so as to redeem the debentures and return their property to them without any debt upon it, and because he believed that they had now on this side the real control of the positions in a way which perhaps they had never had before. In conclusion, he stated that if the shareholders were willing to find 200,000*l.* of the proposed new debentures, he, on behalf of himself and his clients, would find the other 100,000*l.* (Applause.)

Mr. CLARENCE CARY, the president of the Knoxville, Cumberland Gap, and Louisville Railroad, said that the railroad was a very good property, and was in good condition. The railroad had been built through a difficult country, and last winter—that being the first year after the construction—it suffered a great deal from the extraordinary floods at that time, but since then they had been ballasting it steadily, and putting it into a fine physical condition for the next winter.

Coal and iron shipments had set in, and they had been doing very well with local business.

Replying on a short discussion, Mr. POLLOCK remarked that his friend, Mr. Clarence Cary, was responsible for the management of the railroad. He did not believe it could be in better hands; that no man had worked harder for it, or followed its fortunes more closely. He had, too, been a director of the American Association since its incorporation, and he held to-day the interest in it he had always held, and in the surrounding institutions. This mortgage which was now proposed would be a registered mortgage on the association's property, and, as they could not create other than a floating charge upon bonds and stocks and shares, it would be a floating charge upon all their other assets. The policy of the board would be, so far as in them lay, as they sold those assets to pay off the debenture stock. That was a policy of getting out of debt as soon as they possibly could. The directors proposed to issue the debentures at a reasonable discount, and to redeem them, at all hazards, within 25 years at par. Should the association prosper, as it was hoped it would, they would have the right, at six months' notice, to pay off the whole of the debentures at a slightly increased premium. The resolution was then agreed to, with but two dissentients. A vote of thanks to the chairman terminated the proceedings.

EAST BROKEN HILL CONSOLS, LIMITED.

MANAGER SENDS AN ENCOURAGING TELEGRAM, FOLLOWED BY A CONFIRMATORY REPORT—THE ALLOTMENT.

A MEETING of this company was held at Winchester House, on Wednesday.

Lord Sandhurst

(chairman of the company) presided.

Mr. L. J. WOODMAN (acting secretary) read the notice of meeting.

WORK ENERGETICALLY PUSHED FORWARD.

The CHAIRMAN: Gentlemen, you will be aware that we are obliged, as directors, to issue a notice for a meeting of our shareholders in accordance with the Companies' Acts. We are obliged to put the shareholders to the trouble of coming, although there is no business to be transacted by those present, and although no resolutions can be moved. I think I might take this opportunity of saying that, in regard to the property of East Broken Hill Consols, the work has been very energetically pushed forward, and we have kept the shareholders informed of every detail which has come to hand through the public press. There is a report that came from Mr. Klug, who is the mine manager of Australian Broken Hill Consols, which we issued to our shareholders on May 5 last, and we received the telegram from Mr. Power, the managing director, to say that he had struck the cap of the lode at 10 ft. below the surface, and that on his assay of 2 cwt. of quartz he found 49 ozs. of silver, and 70 per cent. of lead. (Cheers.) I think it would interest the meeting if I asked the secretary to read a letter which has just been received from Mr. Power before the date of this meeting was fixed, which fully confirms the statement I have just made on his authority as contained in the telegram, and gives us information, which certainly is of interest to the shareholders. I would now ask the secretary to read the letter from the managing director on the spot.

GRATIFYING REPORT FROM THE MANAGER.

The circular was here read as follows by Mr. L. J. WOODMAN:—

Old Exchange, Pirie Street,
Adelaide, South Australia,

June 16, 1891.

Dear Sirs,—Mining: My last letter under this head was dated 9th inst.

I now enclose fortnightly tabular and press report, and the various newspapers going by this mail contain some notices of this property. I am happy to say that further sinking upon the galena ore in Block 98 proves that we are into a very promising cross lode.

This is an additional cross-lode going down west of the cross-lode marked in Capt. Klug's sketch, and very close to it.

The ore taken out so far is all of the value stated in my last letter (49 ozs. of silver to the ton, and 70½ per cent. of lead), and looking at the fact that we have two cross-lodes close together, with a branch lode not far off, and at least two east and west lodes, there can be no doubt that when we sink to reasonable depth in this ground we shall be repaid.

I postponed wiring you as to the new discovery until we proved the ore to be more than a surface deposit, and now having ascertained that it is a lode, I have just cabled you as per copy of telegram enclosed.

We shall go on sinking further upon this lode, but the proper way to permanently work it will be from the south engine shaft, which is not many feet distant. Meantime, what ore we raise I shall sell at fair value to the Australian Broken Hill Consols unless we come upon it soon in large quantity, in which case I shall probably make a shipment to you, if such a course should be likely to prove more profitable than sending it to market here.

As far as we can make out at present the lode runs north-west, with a slight underlay south-west.

Yours faithfully,
(Signed) E. POWER.

To the chairman and directors
East Broken Hill Consols, Limited.

To distinguish the new cross lode from the cross lode marked in Capt. Klug's sketch, I have named the latter, cross lode No. 1, and the new lode, cross lode No. 2.

The CHAIRMAN: That is confirmatory of the telegram which we received some time ago, and which was published. As I said before, this is merely a statutory meeting. There is no business to be transacted, and, therefore, I do not think I need detain you further.

THE CAPITAL.

Mr. COOMBS: Have all the shares been allotted to the public, or how many?

The CHAIRMAN: All the working capital stated to be required by the prospectus (50,000*l.*) was subscribed, and more than that by the public, and I might also say that the company did this—about 60,000*l.* was subscribed, 50,000*l.* being for working capital, and the remainder was paid to the parent company, whilst this company exercised its right of option as laid down to pay the remainder to the parent company in shares.

Mr. WHITE: In that case I presume all the shares were issued.

The CHAIRMAN: Yes; the shares are issued.

Mr. WHITE: I presume you do not intend to go to the Stock Exchange for a quotation? because it will be necessarily deferred, you not having issued two-thirds of your shares to the public.

The CHAIRMAN: I do not see any particular advantage in going to the Stock Exchange for a quotation, and you must know there are many successful mines which have not done so. (Hear, hear.) At the same time, if it is the wish of the shareholders, I shall be glad to communicate with the secretary of the Stock Exchange, and see what can be done.

Mr. WHITE: I beg to propose a vote of thanks to the chairman and the board.

Mr. GRIFFITHS: I second the motion. We do hope to be able to give you a much heartier vote of thanks on the occasion of the next meeting, for we trust that by that time you will completely have deserved it by making such returns as will enable you to pay dividends. (Cheers.)

The motion was carried unanimously.

The CHAIRMAN, in returning thanks, said: I can assure you no one desires more cordially than I do that the dividend time which has been foreshadowed may be brought about. At the same time, I am bound to say that as far as the realisation of the anticipations we formed when we commenced this company, it certainly looks very promising indeed. I have to thank you for your attendance, and can only say that but for the requirements of the Act we should not have called you together quite so soon, that is to say, not until we had something of more importance to tell you.

LATEST REPORT.

June 11.—Main engine shaft: Sunk 15 ft.; total, 15 ft. This shaft has been started upon the continuation of the main lode from Block 96 of the Australian Broken Hill Consols. The lode formation under the cap proves so far to be quite as good as at same depth in Block 96. Foundations for new winding plant to be erected here well in hand. South engine shaft: Sunk 10 ft.; total, 75½ ft.; country getting more jointy, and water increasing. The new winding machinery works very satisfactorily. Engine and boiler house nearly completed. In excavating foundations for engine house a vein of galena running parallel with cross lode was uncovered, and we are now sinking upon it to ascertain extent. Two hundredweight of this ore already raised from the cap gave on bulk assay 49 ozs. of silver and 70 per cent. lead to the ton. Dam completed all but fencing.

ALLIANCE BANK.

VARIATIONS IN THE BANK RATE AND CURRENT EVENTS AFFECT PROFITS, BUT 8 PER CENT. PER ANNUM IS DIVIDED AND THE RESERVE GREATLY INCREASED.

THE half-yearly meeting of the shareholders was held on Tuesday at the Cannon Street Hotel.

Sir Lyon Playfair, M.P.

(chairman of the bank), presided.

The CHAIRMAN, in moving the adoption of the report and accounts, said at the last half-yearly meeting he mentioned the directors' view that as the current six months were not likely to be very profitable for banking, it was desirable to carry over a substantial amount. The profits of the last half-year had been lessened, as the directors anticipated. There were nine published accounts of London banks, and the reduction of profits shown by those nine accounts, including their own, as compared with the profits of the corresponding half of last year, was 106,000*l.* There were various causes for that reduction. One obvious cause was the low rate of bank interest, which averaged 3*l.* 11*s.* 9*d.*, as against 4*l.* 5*s.* 1*d.* in the corresponding period of last year. That was the lowest rate that had occurred since 1887. Then there was considerable variation in the Bank rate, that being a reflex of the general distrust as to

THE COMMERCIAL FUTURE.

In face of such distrust the banks had to hold their assets well in hand, and to be cautious in regard to loans and discounts. That was a wise and necessary policy, but, of course, it led to a diminution of profits. Further, during the last half-year the public did not furnish the usual amounts in the current and deposit accounts, the total decrease in the nine banks being 3,000,000*l.* The causes of that decrease were not far to seek. Large investments had been made in Argentine securities, very large sums of money had been sent to the United States for industrial undertakings, and very considerable amounts had been invested in breweries and other industrial undertakings in this country. Of course, the use of all that money for such purposes caused

A CONTRACTION IN MONEY FOR BANKING PURPOSES,

and lessened the amounts of current and deposit accounts in banks. The general observations which he had thus made with regard to London banks which had published accounts applied to their bank, but they were in the fortunate position of being able to maintain their dividend at 8 per cent. per annum, carrying forward 11,590*l.* to the next account. It was desirable to carry over that substantial sum, for no one could predict the future of the coming six months. Business was unsettled in various foreign countries; in their own country there was still distrust with regard to investments, and the confidence which they all wished to see restored in commercial transactions had not yet come back. At the same time there was no reason to be alarmed at the present state of British industry. Working men in most industries throughout the country were well employed, and at good

wages, and so far as they could examine the imports and exports there seemed to be no reason for immediate apprehension as to the future of British industry. Strong pressure had been put by the Chancellor of the Exchequer on banks to increase their cash reserves.

RESERVES.

The banks responded to that wish, and determined to publish accounts monthly instead of quarterly, in order to show what reserves they had; but it must be recollected that that meant that they would have to keep more money unemployed, which would lead to a diminution of banking profits.

The motion having been seconded by Mr. DANIEL MACKENZIE, a discussion ensued, after which the motion was adopted, and the dividend recommended, namely, 8 per cent. per annum, was declared.

FRYERSCREEK GOLD MINING CO., LIMITED.

A RAPID LIQUIDATION, WITH 30 PER CENT. OF THE CAPITAL RETURNED.

AN extraordinary general meeting was held at No. 6A, Austin Friars, on Wednesday, for the following purposes, viz:—(1.) To receive from the liquidator a report and statement of receipts and expenditure, showing how the winding-up has been conducted. (2.) To fix the liquidator's remuneration. (3.) To pass an extraordinary resolution directing the way in which the books, accounts, and documents of the company and of the liquidator shall be disposed of.

Mr. J. H. A. Smith

(liquidator) presided.

The notice convening the meeting having been read, the report and accounts were taken as read.

COURSE OF THE LIQUIDATION.

The LIQUIDATOR: You will recollect, gentlemen, that towards the end of 1889 the shareholders decided to stop the works, and authorised the directors to take the necessary measures for selling off the property in the colony. At the end of 1890 no offer having been received, it was decided to take stronger steps, and on Jan. 14 last the company was put in liquidation and I was appointed liquidator. I immediately wrote to Mr. Clark, our colonial agent, with instructions to sell off the property, and close up the liquidation as rapidly as possible, but in any case to get the matter settled before Mar., as we were very anxious to avoid the expensive regulations of the last Companies Act of 1890. At the time of the liquidation we found the Government had forfeited the lease of the property in consequence of breaches of covenant of its working clauses, and consequently we had only the machinery to sell. We had applied to the Government for protection and exemption from the labour clauses, but the working man vote being very strong in the colony, they were unable to accede to our request, and consequently the lease was forfeited.

TRIBUTE TO MESSRS. HARVEY AND CO., OF HAYLE.

The machinery was supplied by Messrs. Harvey and Co., of Hayle, 22 years ago, and at the time of the liquidation was probably as good as any that was ever sent out from this country. (Hear, hear.) During the whole of that period we may say that we never had a week's loss in time from breakages or accidents to the machinery, or from the necessity of having to stop for repairs, beyond the ordinary wear and tear. We, therefore, rightly looked upon that as a valuable asset.

Mr. SCHOFIELD (chairman of the late company): If the mine had been as good as the machinery we should have done well. (Cheers.)

The LIQUIDATOR: Unfortunately the mine was not so good, but the machinery certainly deserves the commendation I have given it. The castings being heavy they would have cost a great deal to remove to another mining field, and we were, therefore, obliged to make the best of the machinery on the spot, and did eventually succeed in selling it, partly by private contract and partly by public auction, with the result you know from the report I have sent out and the dividend warrants you have received, which will show you that we have been able to

RETURN 30 PER CENT. OF THE CAPITAL,

and that the liquidation has been practically completed within six months of its being placed in my hands. The figures in the accounts give the details, and, therefore, it will be unnecessary for me to detain you longer. I beg to move "That the report and accounts now presented by the liquidator be and are hereby passed and adopted."

THE CHARGES OF THE COLONIAL AGENT.

Mr. SCHOFIELD: The only items to be complained of in the accounts are the heavy charges for commission, for which, of course, there was no responsibility attaching to the liquidator here. I consider his share of the accounts highly satisfactory, and the result he has attained better than might have been expected under the circumstances. So far as he is concerned, there is no reasonable ground of complaint whatever—quite the contrary. We have, however, complained about the agent in the colony, for I consider the charge of commission in realising the machinery to be excessive. We have no power or control over him, and, therefore, are obliged to submit to his excessive charges, and must content ourselves with expressing our disgust. I second the motion.

The motion was carried unanimously.

LIQUIDATOR'S STIPEND.

The LIQUIDATOR: The next question is the remuneration of the liquidator. You will see by the accounts that we have divided up as closely as the fraction of a penny will allow, and the remaining balance is 129*l.* 18*s.* 6*d.*, out of which the expenses of calling the next meeting, which it will be necessary to do by advertisement, registration fees, dividend warrants, circulars and the like, will have to be defrayed. We are unable to convene the final meeting until the whole of the assets have been distributed, and this cannot be done until this meeting settles the liquidator's remuneration. The amount of the fee is a matter for you gentlemen to decide.

Mr. SCHOFIELD: I move, "That the whole of the balance remain-

ing (129*l.* 18*s.* 6*d.*), after providing for the remaining expenses of the liquidation be, and are hereby voted to the liquidator as his remuneration for winding up the company."

Mr. LEAK seconded the motion, which was carried.

Mr. LEAK proposed, "That the books, accounts and documents of the company and of the liquidator thereof be retained by the liquidator for a period of three months, from date of registration of the final meeting having been held, and that at the expiration of the said period of three months the books, accounts and documents of the company and of the liquidator be destroyed."

This was carried, and the meeting ended with a vote of thanks to the liquidator.

THE NEW ZEALAND ANTIMONY CO., LIMITED.

THE POSITION AND PROSPECTS—VIEWS OF COLONIAL DEPUTIES AND LONDON SHAREHOLDERS—A FINAL SCHEME TO BE NEGOTIATED.

THE adjourned meeting of this company (adjourned from Apl. 17 last) was held on Tuesday, July 14, at Winchester House, Old Broad Street, to consider present position of the company, and to meet the gentlemen who were deputed by the New Zealand shareholders to confer with the London board.

Mr. James Gibberd

(chairman of the company) presided.

The CHAIRMAN: Gentlemen, in the absence of the secretary, I presume you will allow me to read the notice convening the meeting.

VOICES: Hear, hear.

The CHAIRMAN then read the notice as follows:—"Notice is hereby given that the adjourned ordinary general meeting of Apl. 17 last will be held on Tuesday, July 14, 1891, at Winchester House, Old Broad Street, London, E.C., at two o'clock in the afternoon, when the directors will report upon the present position of the company, which is a most serious one. Two of the gentlemen who were deputed by the New Zealand shareholders to confer with the London board will attend the meeting.—By order, EVERARD CALVERT, Secretary." Continuing, the chairman said that it would be remembered that at the last general meeting the shareholders were informed that the colonial shareholders had appointed three gentlemen to form a committee to confer with a London board as to the best course to be recommended to be pursued in the interests of the shareholders. Those gentlemen had now arrived in London after some considerable delay, but, unfortunately, in the meantime the affairs of the company had not been at a standstill. He regretted to say that the appeal made by the directors to the shareholders at the time for some further assistance had not met with anything like the amount of support that they anticipated they would receive; indeed, the money they received was only one-fifth of what they desired, and, under the circumstances, they had thought it right and fit to return that money, but meanwhile

A PETITION HAD BEEN PRESENTED FOR THE LIQUIDATION OF THE COMPANY

in Wellington, and another petition for its liquidation here, and it was not now proposed to recommend a re-construction scheme. The gentlemen deputed to represent the New Zealand shareholders were present in the room that day, and he had no doubt would be happy to answer any questions that any of the shareholders wish to ask. He (the chairman) thought that the shareholders would perhaps allow him before calling upon those gentlemen to occupy a few minutes in going over the history of the company from its formation up to the present time—(hear, hear)—and giving them some idea of the difficulties against which they had had to contend, and which had prevented success being achieved; and first and foremost he thought he might place the high price paid for the mine in the first instance, and the small amount of reserve capital left for working and further development. (Hear, hear.) He did not really know how the money went; that was a matter for which

THE OLD BOARD WAS RESPONSIBLE.

He only knew this—he was informed that the amount received by the vendors was 21,000*l.*, and yet they had amongst the documents of the company a receipt for 58,000*l.* odd. He did not know, and he could not tell the shareholders, where the difference between the two amounts went. The result, however, was, as he had stated, that they had a very small amount left as working capital, and the experience of the company had been the experience of 19 out of 20 mines, that more money had to be raised when the small sum available had been exhausted. The next mistake he thought was the appointment of Mr. Fitzherbert as their mining inspector. It seemed to him that Mr. Fitzherbert was appointed for Mr. Fitzherbert's sake. (Laughter.) The mistake in the survey by Mr. Fitzherbert, and the driving of the wrong tunnel, had cost the company very dearly. Had this mistake not been made they might have been in a very different position at the present time. The next error was, in his opinion, the contract with the Messrs. Cookson for the sale of the company's produce. That contract had cost the company in fines alone no less than 2,500*l.*, and they had further had to sell the antimony at a considerably lower price than it would have fetched in the market. Next came the error in the erection of the Frue vanners, and the mistake in this direction was, he thought, attributable to their manager, Mr. Wearn, who was only a partly educated man, or he would have gone to the trouble to make a calculation with pen and paper that would have prevented the outlay of this money uselessly. They certainly had also to blame Sir Walter Buller in this particular, who should have tested the accuracy of the estimate formed on this point by Mr. Wearn, for at that time Sir Walter Buller was the managing director in the colony, and was paid to undertake that duty. The result of this was that they had now out in the colony a lot of machinery that had cost about 2,000*l.*, and which was only capable of turning out about 10 tons per month of the percentage of 40 or 41 per cent., which was of very low value in the present state of the market. Passing from this, they had next to consider that they were in a most distant part of the world, subject to very heavy charges for transport, and paying the maximum rate for wages, and in addition to that they had a mine

which was described by Sir Walter Buller—with what truth he (the speaker) could not say—of practically low grade ore. In addition to all this they had also to face the

ENORMOUS FALL IN THE PRICE OF THE ORE,

which alone was almost sufficient to bring about the present serious state of affairs. Eighteen months ago the price that they received for 50 per cent. ore was 28*l.* per ton, then it went down to 22*l.*, at which it stood for some months, then it fell to 20*l.*, 18*l.*, 16*l.*, 14*l.*, 12*l.*, and 10*l.*, and the last shipment which came over sold for only 8*l.* per ton for 50 per cent. ore, subject to a deduction of so many shillings per ton for each unit below 50 per cent. In addition to this there had been the dispute between the colonial and London boards in regard to the percentage of value of the ore, and there had been a great discrepancy between the assays made in the colony and those made by independent firms here. The London board had considered that the sums that the colonial people wished to draw against shipments were excessive, and far beyond the market value of the ore. With reference to the possibility of ever making the mine pay, they had to bear in mind that the present price of antimony could not be a permanent one, but at the same time they had in New Zealand the great difficulty of expensive transport and labour, while in Japan and Portugal labour was plentiful and cheap, and the quantity of antimony much larger. He did not desire to go further into the late board's action, which had already been threshed out. He wished to say that the new board—the present one—had done all in their power to further the interests of the shareholders, and to bring about the prosperity of the company, and the only result had been disappointment and humiliation. Later on it would be his duty to propose a liquidator, but at present he would content himself by inviting discussion. He might, in conclusion, state that one of the shareholders, Mr. Turnbull, has received a private letter from his agent in the colony in respect to a proposal of the shareholders there, which, perhaps, he would allow to be read to the meeting.

ANCIENT HISTORY.

Mr. N. REID, one of the colonial deputies, upon being called on by the chairman to address the meeting, stated that he had no desire to enter into a long detail as to the present state of affairs. He was no longer an officer of the company, and at previous meetings in London, his action having been severely criticised, he did not wish to make remarks which in the heat of the speech might be objectionable. The chairman fully knew his views on the subject. At a meeting presided over by Sir Walter Buller, Mr. Gibberd (then present chairman) had taken occasion to strongly criticise his (the speaker's) conduct. He would like to be allowed, however, to offer a few words on one point touched upon by the chairman that day, viz., the expenditure of the money. The amount of the working capital was 25,000*l.*, and of that they knew 16,000*l.* was spent in the colony, but the directors here (the old directors) were responsible for the other 9,000*l.*, and that was a matter upon which he (the speaker) could offer no information. He reported that their present chairman knew his views, and said that he desired to be spared any speech, and asked the chairman to explain his views.

The CHAIRMAN said that the views of the colonial delegate appeared to be that the company possessed a valuable property, and that if the right tunnels and drives had been made, the position would have been very different to what it was now.

Mr. SIMPSON thought Mr. Reid had said very little after coming all the way from New Zealand, and he urged him to make known to the shareholders what was latent in his mind.

The CHAIRMAN also spoke in the same strain.

Several SHAREHOLDERS urged Mr. Reid to state all he knew of the history of the company.

RETICENCE.

Mr. REID repeated his former statement that he was not inclined to make a speech, and added that he had said all he could as to the expenditure of money in the colony. The 9,000*l.* spent here was what needed explanation.

The CHAIRMAN said he could not explain what happened before his time, and all he could say was that the expenditure during the past 12 months had been kept down as much as possible, and the chief reason of their non-success was the very low price to which antimony had fallen in the market. Every penny spent during the past 12 months had been 250*l.* for directors' fees, and the necessary office expenses.

Mr. REID proceeded to attack Sir Walter Buller, and stated that when Sir Walter Buller took over from him (the speaker) the management of the company there was a respectable balance at the bank, and the position was good. They knew what it was now, and what had taken place since.

THE COURSE OF EVENTS.

The CHAIRMAN said that one thing that had taken place since had been that 50 per cent. ore had fallen in value from 28*l.* to 8*l.* per ton. This alone was enough to account for the present state of affairs. Then the absence from the mine of Mr. Wearn had caused things to go irregularly, and the monthly shipments to be sometimes missed altogether.

Mr. LOMAS, in a lengthy speech, strongly stigmatised the conduct of the old board, and found fault with the management of the company from the commencement. He expressed the view that the company possessed a mine of very low grade ore, and that it would never pay, and he was in favour of liquidation being carried out. He referred to the fact that the company was formed in 1887 to acquire the property from

THE ENDEAVOUR INLET CO.,

and that Mr. N. Reid was one of the directors of that company, and afterwards became a director of this company. Surely those connected with the old company ought to have known the true possibilities of success for this company. Then there was the futile attempt to float the Endeavour Inlet Gold Co., which was to have repaid their capital and dividends over and over again. It appeared to him that the directors had neither known nor cared how the poor shareholders on this side had suffered, though a tale had been told of the sufferings of the *employés* on the other side by reason of the reduced salaries.

The CHAIRMAN said Mr. Lomas had no right to say the directors did not care how the shareholders had suffered; it was untrue.

Mr. LOMAS withdrew the remark, and said perhaps it was a mistake. He was proceeding to go into Sir Walter Buller's connection with the company, but was met with cries of "Vote" and "Time."

A SHAREHOLDER: What has that got to do with the question?

Mr. LOMAS urged the shareholders not to find another penny, and used very strong words. (Uproar.)

The CHAIRMAN called the meeting to order, and asked Mr. Lomas to listen quietly to one remark, viz., that

THE DIRECTORS DID NOT ASK FOR FURTHER CAPITAL TO BE RAISED.

He wished that to be understood as his opinion.

Mr. LOMAS: A very proper opinion too.

A SHAREHOLDER urged Mr. Reid to give them further details.

PERSUASION.

The CHAIRMAN thought that Mr. Reid could not resist the expressed wish of the meeting, even though he might feel a little hurt and angry at the past.

Mr. REID said he did not come over strictly on the business of the company, but on private business, and he was reluctant to say anything at all. Ultimately, in reply to shareholders, he gave particulars of Sir Walter Buller's connection with the company, and maintained that he was responsible in a great measure for the present position. (Hear, hear.)

On the question of the disparity in the assay values in New Zealand and London,

The CHAIRMAN said that they could not do more than they did to get a correct assay here. They took two samples from every parcel of ore sent over here, and an assay was made by Mr. Claudet and one by Mr. Riley, and they had always differed from the colonial assay, and it was quite impossible for the smelters here in London to take the colonial value when men like those he had named gave such a different opinion.

Mr. LEVIN (another of the deputies from the colony) stated that the three deputies were himself (who was not a shareholder), Mr. E. J. Reid, manager of the Colonial Bank of New Zealand, and Mr. N. Reid, former manager of the company. He proceeded to review the position, and found fault with the old management. He also complained that in getting rid of Sir Walter Buller by resolution of a previous meeting they had "swopped horses while crossing the stream," and he thought had they kept Sir Walter Buller as a director they would have been able to put the saddle on the right horse for the success or non-success of the company from

ALPHA TO OMEGA.

It appeared, however, from what the chairman had said that day that the crux of the thing was the diminished value of antimony ore in the market.

The CHAIRMAN: That is so.

Mr. LEVIN thought that what they had to consider was what course they were going to adopt that day.

Mr. ARBUTHNOT said that he was one of the committee appointed at a previous meeting some time ago to consider the position of the company, and at the last meeting an adjournment was arrived at to decide what should be done after a conference with the Colonial representatives. There were two courses to be pursued, either to wind up at once or to find more money for carrying on the mine. He might state that he, for one, was not disposed to throw more money after that already spent.

A SHAREHOLDER urged that some business should be done—some decision arrived at that day.

The CHAIRMAN suggested that the portion of Mr. Turnbull's private letter relating to the company should be read.

Some further discussion of an unimportant nature took place, and eventually Mr. WEST read a portion of the private letter that had been received by Mr. Turnbull from his agent in the colony, in which it was stated, "The shareholders here (New Zealand) have telegraphed offering to keep the mine open if they are allowed to use and work the ore for the purpose."

A SHAREHOLDER asked whether they could formulate a resolution upon the basis of that suggestion.

The CHAIRMAN said that he did not know, as, perhaps, in the time that the letter had taken to reach England from the colony it might be too late.

A SHAREHOLDER thought that anyhow the position could not be worse.

Mr. SIMPSON saw some hope in the proposal, while to wind up would be to lose everything.

Mr. LOMAS asked whether a call could be made upon the shareholders by those which worked the mine?

The CHAIRMAN: No.

Mr. CORPE: A shareholder who had visited New Zealand for his health gave, at the chairman's request, a description of his visit to the company's property, and stated that he personally had great confidence in the future of the property if it was continued to be worked, and he was very hopeful that success would be achieved.

A discussion took place of a lengthy nature as to what immediate steps should be taken having regard to the present position.

A SHAREHOLDER thought if such a motion were carried, the shareholders would become deferred shareholders.

The CHAIRMAN: Yes, just so.

Another SHAREHOLDER thought the offer too good to be true.

The CHAIRMAN said that they could not allow the mine to lie unworked, but were compelled, in order to continue their lease, to keep a certain number of men at work; if they did not do so, the lease would lapse.

A SHAREHOLDER suggested that having heard of a course of action pursued by Sir Walter Buller, that some resolution should be placed on record of

CENSURE AND DISAPPROVAL

of the course pursued by him.

After some further desultory conversation,

Mr. GUNDRY said that in order to bring matters to an issue he would propose

A RESOLUTION

based upon that portion of the private letter that had been read to the meeting.

A SHAREHOLDER suggested that the company should be supplied with a copy of that portion of the letter.

Mr. TURNBULL agreed to supply a transcript of that portion.

Mr. GUNDRY then proposed the following resolution:—"That this meeting authorises the directors to enter into negotiations with the shareholders in New Zealand to keep up the working of the mine on the basis of the suggestion contained in the letter from Mr. Capper to Mr. Turnbull read to the meeting."

Mr. DUCROZ seconded the motion, which was put to the meeting and unanimously carried.

The proceedings closed with a

VOTE OF THANKS TO THE CHAIRMAN

for presiding.

MIDAS GOLDFIELD CO., LIMITED.

CAPITAL TO BE INCREASED BY THE CREATION OF £20,000 PREFERENCE SHARES.

THE annual ordinary general meeting of the above company was held at Cannon Street Hotel, London, on Monday, to receive the directors' report and accounts for the year ending Feb. 28, 1891, to transact the ordinary business of the company, and to consider and, if thought fit, approve the following resolution, with a view to giving effect to a recommendation of the directors as to the increase of the capital of the company and the issue of preference shares.

RESOLUTION.

"That the capital of the company be increased to 200,000£. by the creation of 20,000 new shares of 1£. each, to be called preference shares, to which shall be attached the special rights and privileges following, that is to say:—(1.) The holders of such preference shares shall be entitled to a cumulative preferential dividend at the rate of 10 per cent. per annum on the capital for the time being paid up in respect of such shares respectively. (2.) Whenever the profits of the company in respect of any year shall be more than sufficient to pay the preferential dividend as aforesaid for such year, and also a dividend for such year at the rate of 10 per cent. per annum on the other (ordinary) shares, the holders of the preference shares shall be entitled to one half of the surplus profits. (3.) That such preference shares shall rank as regards capital in priority to the ordinary shares, and in the event of the winding-up of the company, the surplus assets shall be applied first in the repayment of the capital paid up in respect of the preference shares in priority to any return of capital in respect of the ordinary shares."

Mr. Warren William de la Rue

presided.

Mr. GUY ROBINS (secretary) read the notice convening the meeting.

DIRECTORS INTEND TO TAKE A LARGE PORTION OF THE NEW SHARES.

The CHAIRMAN: Gentlemen, it is a source of great regret to us that we have not a more favourable state of affairs to present to you, and as you will see from the report which we have circulated amongst you, it is absolutely necessary to raise fresh capital so as to carry on the business of the mine. We have very carefully considered the best steps to adopt to achieve this end, and I think that you will agree with us that what we have proposed is the most satisfactory settlement of the difficulty that we are at present in. I do not wish to urge upon any of you to take up these preference shares, but it is absolutely essential that some fresh capital should be subscribed, and every shareholder will have the opportunity of taking as many preference shares, *pro rata*, as he chooses to do. I may say that I and my co-directors intend to take up our proper proportion of the preference shares, as it seems to us that, in view of the enormous amount of work which has been done at the mine, the company must be in a better position now than it ever has been.

QUARTZ VERSUS ALLUVIAL.

After the experience that we have gone through we have come to the conclusion that very likely the quartz will yield a much better return than the alluvial, and I believe that Mr. Allen—whose judgment may be relied upon to a great extent—has always advocated working the quartz. Anyway, as we have told you in our report, when we found the returns falling off we at once telegraphed to the other side—to the local committee—to stop all deadwork, and we have been since then in active telegraphic communication with them with the view of ascertaining how much capital would be required to develop the quartz mine. They at first wired back that they would want at least 10,000£ to start with, but upon our representing to them that we did not wish to incur the expense of crushing machinery, and asking them whether it would not be possible to have the quartz crushed—at any rate for some time—by the companies which are formed, I believe, in Australia for that purpose, they wired back to say that that could be done, and for the first instance they thought that if they had 4,000£ in hand, it would be sufficient to deepen No. 1 shaft. You may, on reading the report of the local committee of Mar. 11, infer, as we did, that they would, in the first instance, wish to deepen No. 3 shaft for working the quartz; but it is evident that they re-considered that proposal—no doubt because they think that a more immediate return, with a less expenditure, can be obtained from No. 1 shaft. If in the deepening of No. 1 shaft the quartz proves a success, we shall then proceed to develop the mine from No. 2 shaft, which the mine manager and local committee both advocate very strongly. We practically place before you all the information we ourselves possess, and it is for you to judge for yourselves whether you will come in with us and support the company by taking up some of the preference shares. I am here to answer any questions that may be put to me, and I shall be very pleased indeed to throw any further light upon the subject that I can do. I beg to propose "That the directors' report and the accompanying statement of accounts submitted to the meeting be received and adopted," and I will ask Mr. Bryant to second it.

Mr. WILBERFORCE BRYANT (director): I have great pleasure in seconding the report.

QUESTIONS.

Mr. FELTON: The directors' fees seem to me excessive, considering that we are doing nothing at all. Would you feel inclined to forego your fees? How is it that we have to pay income-tax if we do not make any profits? I have heard it said that this mine was a farce. I hope it will not end in a melodrama, or a tragedy, but it looks as if the company were about to commit suicide.

The CHAIRMAN: We, unfortunately, could not avoid paying income-tax, because we have made a profit each year except this year. The profit we have hitherto made has been sunk in deadwork, but we had to pay tax on that profit. As to the directors' fees, I personally should be only too delighted if anybody will assume the position that I hold. I am on the board at very great inconvenience to myself, and have been for some years. If any shareholder will take my position, I will not only hand him over my fees, but I will give him a bonus in addition out of my private purse. I do not think, considering the worry and trouble that we are at present subject to, that it is possible for you to form a board without adequately paying them. I could not ask my co-directors, and I am not prepared myself to work without proper remuneration, but it is open to the shareholders to step into our places.

The motion was carried unanimously.

The CHAIRMAN then moved the special resolution as above.

Mr. HUGH ASTLEY seconded the motion.

Mr. DUNCAN suggested that the following words should be added to the resolution: "That such preference shares shall in the first instance be offered to the shareholders registered on the books of the company on July 20, 1891, at par, in the proportion of one preference share for every nine ordinary shares held by them."

The CHAIRMAN thought it better not to cumber the resolution in that way, but undertook that the shares should be offered *pro rata* to the present shareholders.

A SHAREHOLDER: Why not re-construct the company?

The CHAIRMAN: We have fully considered that, and do not think it advisable.

The resolution was carried with one dissentient.

LARGE HOLDING OF DIRECTORS.

Mr. ASTLEY: Mr. Wilberforce Bryant is the director who now retires and offers himself for re-election. I beg to propose that he be re-elected, and in so doing I should like to say one or two words to the shareholders. Melodramas and suicides have been referred to as likely to happen to us, but the position is, after all, not quite so tragic. The directors and their friends hold half the share capital of this company, and they have never sold a share. I know no company which is so well held as this; and being one of the directors, I have the very greatest pleasure in proposing that he be re-elected. I am only too glad that he gives us his services, and that we have so good and solid a man on the board.

Mr. SINCLAIR MACLEAY: I have much pleasure in seconding the motion, and I fully endorse all that Mr. Astley has said.

The motion was carried unanimously.

Mr. W. BRYANT: Gentlemen, I am very much obliged to you for re-electing me unanimously. The mine has not turned out as we anticipated it would at the time of its formation. Still, we are not without hope that a turn will come for the better before long. We have taken out of the property up to 70,000£ worth of gold up to the present time, and the reports from the mine manager are certainly not discouraging. In a very short time he expects to get back to the place where they originally got gold at a great depth. Of course, there is a serious uncertainty in all gold mining, and we can only hope that it is as he says. We have more than one string to our bow; we have several quartz reefs in the mine, and Mr. Allen, the Government mining engineer out there, considers that we have a valuable property in those quartz reefs. Unless I had very good ground for supposing that we should ultimately get a good return from the mine, I should object to subscribe for these preference shares, but I intend to take my proportion of them, and I believe that those who are really interested with us will take, at any rate, a good proportion of the shares. (Applause.)

Messrs. Cooper Brothers and Co. were re-elected auditors, and the proceedings then closed.

WHEAL BASSET.

A SMALL BALANCE IN HAND.

A THREE-MONTHLY MEETING of the adventurers in Wheal Basset was held on Thursday on the mine,

Mr. W. McKeand

presiding.

The accounts showed that the labour costs had been 5,827£; coal, freight, and carriage, 1,459£; merchants' bills, 775£; stannary assessment, 3£; bank charges, 75£; sundries, 7£; total debits, 6,150£. On the credit side were for 101 tons 2 cwt. 3 qrs. 15 lbs. of tin, 5,560£; extra carriage, 9£; discounts, 32£; spare materials, 145£; burnt leavings, 89£; total, 5,837£; leaving a loss on the three months' working of 312£. There was a balance in hand of 88£.

The report of the committee, which was signed by the chairman, stated that they were pleased to draw attention to the improved financial position of the mine; they had hoped to have met the cost for that meeting, but they had, however, to show a loss of 312£. 10s. 5d. It would be observed that the returns of tinstuff had been increased by 801 tons, resulting in an increase of 22 tons 13 cwt. 1 qr. 11 lbs. of tin. Their tin had realised an average price of 55£. per ton, as compared with 53£. 11s. 4d. at the last meeting. The labour costs had been increased 220£; that was due to the employment of about 30 tributers. The coal bill showed a decrease of 182£, owing to a reduction in the price.

The CHAIRMAN remarked that they had done somewhat better than at the last account. The loss last quarter was between 1,800£. and 1,900£., but this time it was reduced to 312£., and there was a balance of 88£. They could not help feeling pleased with the quarter's work, and hoped that now when they were making some discoveries in the bottom of the mine they might continue to do without demanding those continual calls which they had been making there. He proposed the adoption of the accounts and reports.

The motion was seconded by Mr. MAYNE, and carried.

CORRESPONDENCE.

We do not hold ourselves responsible for the Opinions or Statements of our Correspondents.]

PALMAREJO AFFAIRS.

To the Editor of the MINING WORLD AND ENGINEERING RECORD.

SIR,—Is the Capt. Drake who figures in connection with this company's affairs the same Capt. Drake who suddenly left Eberhardt Mine, of which he had been the *unsuccessful* manager for many years?—I am, &c.,

A CURIOUS EBERHARDT.

SIR,—Will you kindly allow me a line in reply to the letter published in your last issue from "Awoken," as I am rather anxious that he should not be under any misapprehension.

It is true that I received his letter, and perused the same with great interest, but, by an oversight, he unfortunately omitted to enclose his card, to which he refers in his postscript, and therefore I could not enter into communication with him, as I should have done.

Had I been able to be present at the meeting I think I should have been able to refer to some matters that would have been interesting to the general body of the shareholders.

Now that "Awoken" is wide awake, will he kindly forward me his card?—I am, &c.,

J. STEWART WALLACE.

Copthall House, Copthall Avenue,
London, E.C., July 20, 1891.

SIR,—As a Palmarejo shareholder, who has never either bought or sold a share since his first investment, I venture to appeal to you to afford *bona fide* investors, like myself, an opportunity of stating my feelings concerning the management of the property, details of which have been brought to light by the recent circular issued by the company, from which I learn that we are called upon to find another 32,000*l.* or what? From the dates given by the secretary in his most astounding letter to certain papers, on the 22nd inst., I understand that the chairman had a telegram in his pocket acquainting the board of the deplorable condition of the company's finances, and that he did not convey the information to the shareholders in meeting assembled.

If this is an admitted fact, the mere statement of it carries its own condemnation, and needs no comment of mine to enforce the importance of the omission from a shareholder's point of view. If anything were needed to convince me of the total unfitness of the present board to conduct our affairs, it would be the fact of the appointment of Mr. Drake, whom your correspondent last week informs us is Mr. Applegarth's partner, as manager of this much-mismanaged company. For five years we shareholders have been more or less patiently waiting for some return upon our investment (I speak of those shareholders who, like myself, have taken up a certain holding and stuck to it, not to mere speculators), and now we find that his associate, or partner, is to be placed in power. It would be interesting to know who has been selling shares between the date of the receipt of the telegram upon July 3rd, and the issue of the last extraordinary circular by the company. It is evident that somebody has been wise in time. I think that a special meeting ought to be called to consider the conduct of the board and the affairs of the company generally.

Already there are ominous whispers of "re-construction" in the air, which are not reassuring to *bona fide* investors like myself.—I am, &c.,

SICK AND SORRY.

July 24.

SIR,—A letter published in your last issue *re* "Palmarejo" will be a revelation to many shareholders. I have read the circular in which the directors calmly ask for 32,000*l.*, for which they propose to pay 25 per cent. interest.

The rule is that large interest means poor security; but, unless there be something very wrong with the affairs of the company, it seems monstrous that the shareholders should be pledged, without having had the slightest opportunity of expressing a voice in the matter, to pay such an exorbitant and usurious rate of interest.

I once knew a company which issued 20 per cent. debentures, and I need not say that the undertaking speedily thereafter came to grief; but the proposal to pay 25 per cent. interest upon a loan is quite exceptional within the limits of my experience. The secretary, in writing to certain newspapers a letter, which has appeared, mentions that a telegram conveying the information as to the sudden and unexpected needs of the company was received on July 3, and he seems to think that this is quite sufficient explanation for not acquainting the shareholders with the fact at the meeting, which was held some six days later!! This explanation may be deemed sufficient by the usual perfunctory director; but it will hardly be satisfactory to the shareholder of average intelligence. I note the fact of the appointment of Mr. Applegarth's partner, Capt. Drake, as manager. It is not one that will be viewed with much favour by the shareholders. There is no doubt that the board of this company requires strengthening, and I think that Mr. J. Stewart Wallace will be wide enough awake to satisfy even "Awoken," and have no doubt but that his appointment, and that of one or two other directors, who have no Applegarthian leanings, will be very satisfactory to the shareholders.—I am, &c.,

VIGILANS.

SIR,—I have read with considerable interest the letter of "Awoken," and am only surprised that some of the long-suffering shareholders in this company have not "awoken" long ago, and ventilated their grievances in the columns of your influential paper. When the present board came into power in 1888 it was thought that our troubles were nearly over, and that we were within measurable distance of a dividend, but it would appear that in throwing over Mr. Bladon we have made a mistake, and jumped out of the frying pan into the fire. Mr. Bladon certainly was not the man to let the grass grow under his feet, and did not keep his fellow shareholders in the dark,

as the present management has done. The initial difficulties were occasioned by the loose and inadequate estimates of cost supplied by Mr. Applegarth.

Mr. J. Stewart Wallace at the meeting of Oct. 25, 1888, had enough foresight to put his hand upon the weakest point, and saw that the gentleman, who combined the offices of expert, vendor and promoter, Mr. Applegarth, did not show to advantage under Mr. Stewart Wallace's cross-examination.

The new board was pledged to cut adrift from the Applegarth party; yet what do we find? Mr. Applegarth's partner, Capt. Drake, is re-appointed as manager of the mines. The majority of the shareholders have long ago made up their minds that Mr. Applegarth, with his erroneous statements as to cost, and inadequate estimates, is the primary cause of all the troubles of the company, and to put this man's partner in as manager of the undertaking seems to be an insult to the common sense and intelligence of a long-suffering body of shareholders.

I hope that we shall soon see Mr. Stewart Wallace upon the board, where his blunt common sense and untiring energy will soon have their effect upon its counsels.

We have had about five years of Mr. Applegarth and his friends; let us now try a new departure.—I am, &c.,

ARGUS.

AARONS REEFS, LIMITED.

SIR,—The directors of this company, through their solicitors, have issued writs for the recovery of the call of 4*s.* per share, made on the 5th and payable on Mar. 19.

An action is now pending in the Chancery Division by a shareholder of the company "against the company," on the ground that the prospectus was fraudulent in numerous particulars.

As it is very desirable that all who have received writs should contest the action of the directors, I shall be glad if you would allow any such to address me in the first instance as Alpha, c/o Editor MINING WORLD, when I will at once communicate with them in my own name, and see if some steps can be taken to secure combined action.—I am, &c.,

ALPHA.

July 23.

GOLDEN GATE AND GOLDEN FEATHER CO.S.

SIR,—All kinds of adverse rumours having recently been circulated with reference to these properties, I, being interested in them, thought it prudent to obtain a report upon them by some good independent expert, unknown to the companies, or to anyone connected with them.

I, therefore, communicated with Mr. R. H. Campbell, of Etna, Siskiyou County, California. This gentleman, who has been known to me for many years, is a thorough practical miner, the sole owner of the Quartz Valley Gold Mines of California, and a member of the Senate of that State. He is known to be an exceptionally competent and reliable man, and, moreover, quite disinterested.

Mr. Campbell kindly undertook to make the inspection for me as a friend, and after going over the properties, he has just cabled to me as follows:—

"Will commence work on pay gravels about middle of next month. Likely to show a very great profit. Every prospect of a complete success."

If you would kindly publish this letter it would, I think, tend to remove the anxiety of any shareholders who may have given credence to the false reports that have been set afloat to their detriment.

The original of the above cablegram has been handed to the secretary of the companies for inspection by any person interested.

I enclose my card, and beg to remain, yours faithfully,

CHARLES ROBERTS.

July 23.

THE FALL OF PRICES.

SIR,—I think that your correspondent, "A. B.," is right in much that he says about Victory affairs.

My own interest in the mine is only a very small one, 200 shares, but probably many shareholders feel as "A. B." and I do, viz., that at present matters seem to be drifting from the frying-pan into the fire. Now, if "A. B.'s" suggestion about Messrs. Taylor is acted on we shall all know where we are, and it would soon transpire, under their able management, whether there is any hope for Victory or not. I, for one, cordially support "A. B.," and trust many more will do so. There are mines, the shares of which are worth pounds a-piece in the market (and deservedly so), that have passed through similar vicissitudes to Victory. Surely one should not say die in mining matters, until at least the *mine itself* has had a fair trial. Has this been the case with Victory? I must refer to another matter.

Your correspondent, Mr. Douglas, calls upon me to point out the passage in his letter on which I based my remark that I thought he might do worse than carry out his intention of not investing any more in mines (I did not say "dealing"), and expresses his indignation about me in a lengthy epistle.

It was the last paragraph of his letter, published in your issue of July 4, which had left that impression as to Mr. Douglas's intention on my mind. I find, however, on referring to it again, that it is Mr. Douglas's friends, and not Mr. Douglas himself, who intend not to invest in mines.

I am sorry that I misinterpreted that paragraph, and thus inadvertently attributed to Mr. Douglas personally the intention of his friends.

I made no further allusion in my letter to Mr. Douglas, nor did I discuss or traverse any of his statements.

I only recounted my own experience as a mining shareholder, and am sorry, I am sure, if that of Mr. Douglas has been so different that mine appears incredible to him.—I am, &c.,

A CONTENTED SHAREHOLDER IN 16 MINES.

July 21.

MIDLAND RAILWAY DIVIDEND.—The directors have declared a dividend for the past half-year at the rate of 5½ per cent. per annum, carrying forward 14,000*l.*, comparing with a dividend of 5½ per cent. and 24,731*l.* forward a year ago.

MOUNT MORGAN EXTENDED GOLD MINING CO., LIMITED.

BETTER NEWS FROM THE MINE.

THE directors have received the following from their local committee (per Mr. R. Ballard, M.I.C.E.), dated Rockhampton, Queensland, June 1:—We are pushing on the eastern drive from No. 3 Immanuel; the ground is very hard, and occasional bunches of mundic are showing. There is no gold in the stone, although at the face, 188 ft., we have found minute traces in the general samples, which I attribute to the small occasional patches of mundic. We had decided to carry this drive on until we had got under Classen's shaft, but on May 21, after deliberation, we decided to turn the drive in an almost due easterly direction to a point immediately underneath winze J. The bottom of winze J is a little deeper than the bottom of Classen's shaft. The ventilation from the bottom of winze J is along Classen's drive and up Classen's shaft, while the down-cast into winze J enters through No. 2 tunnel, in which winze J is situated. When winze J is sunk another 50 ft. it will connect with our cross-cut immediately under it, and establish magnificent ventilation for all Immanuel workings, and give us the privilege of doing that which for three years we have been entirely prevented from attempting, in consequence of the influx of water, viz., the exploration of the country in the locality of the auriferous copper vein E by the sinking of winze J, which gave fair prospects during sinking as far as we could get, supported by the prospects in the same neighbourhood at the end of Classen's drive. This was the vughy country, in which we met with foul air and other indications of an important lode. It is very tedious for you to have to wait for me to connect No. 3 Immanuel with a point underneath winze J before going ahead with sinking No. 3 Immanuel, but I am really bound in your interests to do it, because this is the only way I can explore vein E at a reasonable cost, as by this means the Immanuel will be enabled to do all the pumping for both explorations—the only method compatible with our limited means. Let us, therefore, set forth, now it has been definitely decided what remains to be done. We hope to extend our eastern cross-cut for a further distance of 85 ft. This will take us to about July 20, after which we have to build our dam across the west end of the cross-cut, forming a pump reservoir in the cross-cut for the Immanuel water, and also for the water from E vein. There is nothing then that can stop us from going on down with No. 3 Immanuel, and at the same time, and with very little additional expense, with winze J, into the cuprous auriferous country which we hope to find in that neighbourhood. I hope before we advance 50 ft. further with the eastern cross-cut to get fairly into E vein. I send you a tracing which shows the exact position of affairs in the said cross-cut. E vein in tunnel No. 1 appears to be about 50 ft. in width, having given for the whole of that extent an average of 2 dwts. of gold, 8½ dwts. of silver, and 2 per cent. of copper. By the present arrangement we shall secure this advantage that, by the beginning of August, we shall be not only going on down with the Immanuel with nothing to prevent us from deep sinking, but we shall also be going on down with winze J in which there are prospects, and very good ones, of at least 140 ft. of perpendicular sinking, through what has promised, wherever we touched it, to prove an excellent lode below the water level. The sinking in J winze will be perfectly dry for 50 ft. down to

the level of the cross-cut, and all explorations on that vein down to that level will cost us nothing for pumping, which has hitherto been the block to any attempt to work vein E, and should we be encouraged to sink winze J to any further depth, which I certainly anticipate, we shall only have to lift the water to the level of the cross-cut whence it will find its way to the surface by means of the Immanuel pump.

LA PLATA MINES, LIMITED.

THE NEW COMPANY CLOSES ITS FIRST YEAR WITH A PROFIT, AND THE DIRECTORS ISSUE AN ENCOURAGING REPORT.

IN their annual report, which will prove agreeable reading for the shareholders, the directors refer with pleasure to the great improvement which has been brought about in the position of the undertaking by means of the re-construction, so successfully carried out at the beginning of the year now under review. The programme agreed to, and authorised by the shareholders, has been adhered to. The two instalments of 3d. each per share enabled the directors to clear off the liabilities of the old company, including the debentures, and no charge whatever now exists on the property of the company. The mined developments were provided for out of the third instalment on the shares; a large proportion of that call remaining in reserve at the end of the year. The cash capital in reserve and uncalled on the 400,000 shares issued, with 4s. credited as paid, was over 8,000l. at the end of the year. This position remains practically unaltered up to the present time. For the first time in the history of the concern, since it has been an English company, a clear profit is shown on the year. Although formerly the mine yielded large returns the profits of that department were swamped by the unfortunate losses in the smelting business which was put an end to in 1887. The smallness of the amount brought forward as profit is due mainly to the ground not having been sufficiently opened out and drained. The company has up to the present been debarred from deriving profit from the important discovery in the Gnesen Mine in consequence of the continuance of water in the workings. Mr. Argall refers in his report to a probable market for the slag with local smelters. The smelting works with the ground around them remain as a valuable asset of the company. There is good reason to believe that ere long we may be in receipt of an important additional revenue from this source, either from a rental as in 1889, or from the sale out and out. In the latter case, the directors purpose retaining all mineral rights as it is thought the site may become valuable as mining ground. The directors refer to the large economies made in both the Leadville and London expenditures. The total amount in London for the 12 months to June 30, 1889 (prior to the re-construction), including 1,022l. 5s. interest and bonus on debentures, was 2,121l. 17s. 10d., against 637l. 17s. for the year now under review. The shareholders are also to be congratulated on the small expense of the last re-construction, which, notwithstanding the increased scale of registration fees, amounted to only 248l. 13s. 6d., no fee having been paid to the liquidators. The work in the White Cloud Claim (Red Mountain district) was begun after the accounts now submitted were closed. A statement will be made at the meeting by the chairman on this new and highly important property. The report is signed by Mr. HENRY RICHARDS, Secretary.

REPORTS OF MEETINGS.

THE CAMARONES COPPER MINING AND SMELTING CO., LIMITED.

PROFIT OF £11,513—THE CIVIL WAR IN CHILI—AFTER FULL
DISCUSSION RESOLUTIONS ARE PASSED UNANIMOUSLY.

THE third ordinary general meeting was held at Winchester House, Old Broad Street, on Thursday, for the purpose of receiving the directors' report and accounts to Dec. 31, 1890, and to transact the ordinary business of the company.

Mr. William Macandrew
(chairman of the company) presided.

Mr. NOEL WEST (secretary) read the notice of meeting and minutes of the last meeting, and the report of the board was taken as read.

RESULT OF THE YEAR'S WORKING.

The CHAIRMAN: Gentlemen, in asking you to receive and adopt this report and these accounts, the board come before you with considerable regret, and admitting some feeling of disappointment that they are not able to recommend a dividend on this occasion, for, certainly, when we last had the pleasure of meeting you we did think we would have been able to recommend a distribution of some sort; but as you will have seen from the accounts, there is not yet enough money for such a purpose. We have, therefore, only been able for the first time to present to you a statement of revenue with a profit and loss account, and the results are before you. I do not know whether you will derive any satisfaction from the fact that we have made the respectable, though insufficient, profit on the trading for the year of 11,513. From that have had to be deducted the expenses of the administration of the company in London, which accounts for an item of 2,670. We have further provided out of the profits, as you will see, 3,341, on account of debenture service, and that brings me to an item that we very greatly regret, which is a serious loss on exchange, amounting to no less than 4,262. Had it not been for this loss on exchange (which is a matter quite beyond our control), it is quite possible a small dividend might have been declared. You are aware that the cause of that loss on exchange is the depreciation of the currency which preceded

THE CIVIL WAR THAT HAS BEEN RAGING IN CHILI

now for six months past. The rate has been brought down from 2s. 2d., at which it stood, to 1s. 10d. in Dec., and, I think, as low now as 1s. 3d., or 1s. 4d. to 1s. 5d., but it varies from day to day. That heavy depreciation of exchange represents the sum that has been carried to the debit of profit and loss account. It is so far satisfactory to feel that having made these charges, and having faced this loss on exchange, it, in all probability, will be recouped as soon as peace is restored in that country, because the rate is likely to go up again as fast as it has gone down. We have still left a balance of 1,246, which we propose to leave at the credit of the account for the time being. I may now call attention to the items in the balance-sheet. You see the capital of 200,000, has all been paid except 222. The shares represented by this amount have been forfeited. The persons who ought to have paid upon them have disappeared, and we are unwilling to dispose of the shares at a discount, and prefer meanwhile to leave them as they are, as the matter is unimportant. Then we have the 50,000, debenture money, which was explained on the last occasion, at which time we had about 40,000, collected. It has since all been collected. That, as you know, was money found by the directors and a very few of their friends. The shareholders, as a body, did not contribute towards that issue, and the consequence is that the debentures are in the hands of nine or ten people at the present moment to the amount of 50,000. This money has enabled the company to go on so far, and although somewhat insufficient in amount, yet it has served its purpose well. We explained last year that that was part of a mortgage for 100,000, of which at that time we had only issued 50,000, and called up 40,000. Since then we have issued an additional 20,000, held as security for some uncovered and floating debt on the items that come below, and that makes now, although it does not appear on this account, 70,000, that has been issued on account of this mortgage. It leaves 30,000, still undisposed of, and possibly it may be disposed of when circumstances are favourable and the money is required. The sundry creditors in London figure at 11,561, which are temporary advances we have, which are covered by the deposits of these 20,000, bonds. In Chili there was an amount at that time owing to our agents and others of 4,859, that is, on current working account, and the debenture interest appears as a liability in the

balance-sheet, for the reason that what was due to Dec. 31 last was only paid on Jan. 1. The bills payable and the drafts in transit are advances on produce shipped and about to be shipped, and are represented by values on the other side. There will be produce to cover that amount, and, therefore, that is not a debt of the same character as that to sundry creditors. On the other side we have the property which stood at 228,598, on Dec. 31, 1889, and we have an additional sum of 17,279, which has been spent during the year in plant and in development of the mine, bringing the total cost up to 245,878, at that time. I may mention in connection with this that what you may call outlay on dead work and plant is practically complete, but, of course, in a mine we are never altogether complete, because the working developments have to continue as the mine is opened up, and I cannot say that this amount of 245,878, is an absolutely final figure, but, at any rate, it represents as near an approach to finality as we can get in accounts of this nature. Anything that will have to be added to that amount will be quite trifling, because the additional expenditure has now come to an end. Then we have the stocks amounting to 33,006, and the bar copper in transit at that time, which has since been received and sold, 8,116. I do not think the other items call for any particular remarks, and I presume you understand now what these accounts show. I now come to what will be quite as interesting to you, namely,

THE FUTURE.

You will ask—what about the prospects of the mine? Well, I have here a memorandum, made out as far as we can do it, as to what has been done since the date of these accounts to the latest we have—in other words to Apl. 30. During these four months we have raised 3,000 tons of ore. We have shipped and sold 700 tons of bar copper, and there existed on hand 76 tons more, making nearly 800 tons of bar copper. Everything that has come to England has been sold with the exception of 15 tons, which was so rich in gold that it was found difficult to sell it. It is not likely to occur again on account of the difficulty of getting the gold out of it. You would like to know something about the price of copper, and I think I can give you some information. We were in great hopes that we would be able to produce copper at the price of 35, or 36, a ton, and I have not the slightest doubt that as soon as we get into normal conditions of development, and especially of peaceful working, which is denied to us at present—I say, I have no doubt that that anticipation will be realised, because I find upon a very strict examination of the cost of copper and of what has been turned out during 1890, that the cost of copper produced ready for shipment is under 40, a ton. To that has to be added charges to bring it to this country in order to make a fair comparison between that and the price ruling. Our average selling price has been 56, 10s., and the consequence of that has been a profit of 12, a ton upon what we have dealt in. (Cheers.) Now we have been working under great disadvantages. There can be no doubt whatever that as soon as we get into a state of peaceable carrying on of our business we will be able to introduce very great economies in the production of copper. I think that branch of the subject is not at all unsatisfactory. I was somewhat surprised to find that the figures came out so low, because I expected a heavier cost of production under the circumstances. (Cheers.) We can safely depend upon 10, or 12, profit and possibly more.

THE WAR IN CHILI.

Our expenditure has been very greatly increased by the operations of the contending parties in that neighbourhood. Our mines, as you see on the large and interesting plan on the wall, are situated within a very short distance of Vallenar—the very place where, according to the telegrams, the latest fighting has occurred. Since that fighting has commenced we have had no communication from our agents, and do not know what has been the result, or how far we may have been injured. This we do know, that our men have been interfered with, and we have been denuded of them, not for the first, second, or third time. In order to get any men together on the works at all, we are obliged to send out and obtain them at increased prices, with all sorts of gratifications and premiums, and even then cannot keep them. You may well suppose what the expense must be. Then comes the question of provisioning. The place is a desert, and our men have to be provided for by us. We cannot get the provisions sent down the coast, for there are most dreadful decrees of prohibition, although the whole of the desert coast has to be fed from the South, but the acting President prefers to see his subjects starve rather than allow provisions to be sent to them. Of course there are active and able men in these various places, and, among others, none more so than our representative, and from Peru, which is the first country which lies to the north and San Francisco, large supplies are got in, and are being gradually distributed all over the coast, amongst other places to these mines, so that one way and another they are getting through this famine. Our communications, however, have been very much interrupted. We could not send telegrams through, or conduct the proper correspondence, and until that state of things improves it is perfectly impossible to make a forecast of what may be the result of our working this year. I wish that we were in a position to say

something more definite, but it is quite clear that the output will be altogether smaller than we had well founded grounds for anticipating. I think that the only other point I need refer to particularly is the

NON-PAYMENT OF THE JULY COUPON

on the bonds. The money, as you will see from the accounts, has all gone into the mine before reaching the hands of the directors. In fact, it never did reach their hands, or otherwise you may depend upon it it would have been retained for the purpose of meeting the mortgage debt. Being put into the mines, we now find ourselves in a position that I do think is somewhat precarious, from the fact of an unpaid coupon on a mortgage debt being outstanding. We certainly are at the mercy of the bondholders, but I am happy to repeat that the bonds are held by a few people, mainly by the directors, and after them by their friends, and it is not at all likely that any course of action will be taken by them until plenty of time had been afforded us to pull round financially. (Hear, hear.) These are the only remarks that occur to me to make at present. The state of the copper market is hopeful and satisfactory. It seems to have taken off the production of the world at what we consider fair prices, and we are quite content to work on at these prices, and to get some results out of them. I shall be glad to answer any questions that may be put to me about the business, and conclude by moving "That the directors' report and accounts to Dec. 31, 1890, presented to this meeting be and the same are hereby received and adopted."

Mr. ALFRED MARSHALL (director): I second the motion.

QUESTIONS.

Mr. THEODORE CARTER: May I be permitted to ask a question? Beginning at the end I would ask—who has assumed authority to put the money into the mine that ought to be remitted here for the payment of the coupon on the debentures? I suppose that the 30,000*l.* for the remainder of the debentures will be called up, or subscriptions will be invited for them, as required for any further extension of the mine, but that is not very likely, seeing that you have told us that the 245,878*l.* approaches finality as near as possible. I see the stocks, stores and produce are put down at 15,234*l.*, but nothing is said about depreciation. I suppose a fair amount has been written off for depreciation on those stocks. Then I would like to ask a question about the difference of exchange—4,262*l.* How does it arise? Are the profits made usually by the sale of copper there, or here by the sale of copper in London. If copper is sent to London it would be sold at sterling prices; if sold in Chili, and the profit is made there, you are then remitting at 15*d.* instead of 26*d.* I see you are selling copper in England, and am anxious, therefore, to know why the copper is sold out there if it can be sold here.

PAST AND PRESENT OUTPUT COMPARED.

Mr. HORACE TAHOURDIN: I have listened with great pleasure, Mr. Chairman, to your very able and lucid speech, but there is one thing you have not touched upon that I should like to have explained. In the prospectus I see that this company was taken over as a going concern, turning out at that time 1,500 tons of copper ore per month. You expected to double that quantity, and there is an estimate of profit given on that basis. I observe that in the last complete year (you had not then been troubled with the revolution in Chili) you had only raised about 6,755 tons. I should like to ask you to give some explanation of that, because it is very much less than the output represented upon which the property was bought, even when no further outlay had been made upon it.

Mr. TAYLOR: Are we likely to have another telegram the same as we had last time? You congratulated us on it, and told us we might go home very happy. (Laughter.)

QUESTIONS ANSWERED.

The CHAIRMAN: I went home very happy myself. With respect to the question asked as to who had authority to retain the money that ought to have come forward: the whole of the earnings and income have to pass through local hands—those of the general manager and agents. In order to do the necessary work at the mine, the general manager, beyond doubt, drew more bills upon these agents than he should have done. For that I do not excuse him. He was told that the money was required here, and that it should be remitted to meet this coupon, but instead of that it went into the mine. It had not the approval of the directors, and has been a cause of great annoyance to them and repeated telegrams. The excuse is that it was absolutely necessary to do certain things to keep the mine going. With respect to the additional bonds—(30,000*l.*)—they may be dealt with when required, but not until required. When I made use of the word finality, I qualified that by saying that absolute finality was a thing you could not get in any mine, because you have continually not only to keep up the plant and machinery, but to put money in as you develop new tunnels and drive new shafts which, to a certain extent, represents capital expenditure, and to a certain extent revenue expenditure. When the time comes for doing anything of that sort this distinction will be very carefully kept in view, and everything that ought to be charged to revenue will most assuredly be charged to it, and will so appear in the accounts. If we did not do that we would be very soon brought up by the eminent firm of accountants who are our auditors, and who would not allow anything of the kind suggested to pass.

DEPRECIATION.

I have been asked whether anything has been allowed for depreciation. That is a matter to come on later. Up to the beginning of these accounts it was nothing but expenditure. There was no income at all—still less profit from which to depreciate. Depreciation is mentioned by the auditors at the foot of the balance-sheet, and very properly so. They say that there will be "a proper proportion of the cost of the development of the mines and the working and administration expenditure," and proper provision will be made for it. Not only that, but as regards the whole total of 245,878*l.*, that must eventually be extinguished out of the produce of the mine, but in the meantime the net result of the working is this sum of 1,246*l.*, which we have neither put to depreciation nor to dividend. That question is not before us. The directors recommend that it should be left at the credit of the account, but depreciation in no case will be lost sight of, and neither will dividend. There is, however, a line to be drawn between these two items. I thought I had made the matter of exchange quite clear, but in any case it is a difficult

point to explain to the meeting. I have been asked in connection with it about selling produce on the coast, and selling here for sterling. There are many reasons why a sale on the coast is preferable to shipment here, because we get in the first place the equivalent value in currency of the sterling. The price rises with the exchange, and *vice versa*. As to the loss on exchange, the secretary will give you a fuller explanation.

Mr. NOEL WEST (secretary): It arises from this, that the books of the company in Chili have been kept in currency at 26*d.*; consequently, all the money that went into the company's books was in dollars—simply dollars, those dollars being, as I have said, valued at 2*s.* 2*d.* in bringing these accounts into sterling, but it is very clear that the copper which was valued at \$24 per quintal bore its relationship to exchange. That \$24 was the price it had when dollars were at 1*s.* 10*d.* Consequently, the currency representing these stocks of copper, instead of being valued at 2*s.* 2*d.*, is valued at 1*s.* 10*d.*, or a difference of 4*d.* on every dollar, and that makes the large difference of 4,262*l.* on the whole. (Hear, hear.)

Mr. CARTER: Then the difference of exchange arises on the valuation of the copper in stock?

Mr. WEST: Yes, in stock, and unrealised.

Mr. TAHOURDIN: Why have you not sold it?

Mr. WEST: It was not available.

EXCHANGE DIFFICULT TO EXPLAIN.

The CHAIRMAN: It is sold as soon as marketable, but there is a great deal to be done between the copper lying at the mine, and getting it into a commercial state. I am much obliged to the secretary for having given this explanation, which he has done much better than I could. It is a technical and difficult matter to understand about exchange, and extremely hard to explain clearly to a meeting. It requires considerable study on the part of people who have to deal with the details.

Mr. CARTER: I have had 30 years' experience of South American exchange, and I knew when the matter was put clearly I would be able to understand it, and I am quite satisfied.

The CHAIRMAN: The other question as to the output can be replied to very easily. We ought, by this time, to have doubled the quantity, but the difficulties have been of an exceptional character, and have been explained at successive meetings. We hope, and expect, to attain the estimate of the prospectus as soon as we have fair play, but we have no possible chance of doing it as long as the civil war lasts.

Mr. TAHOURDIN: You had not the war last year.

The CHAIRMAN: But last year I explained that a large amount of deadwork had to be done. We could not pick the eyes out of the mine, and had we attempted to do so, where would we have been now?

Mr. TAHOURDIN: Then we must take it that there was not an output of 1,500 tons a month.

The CHAIRMAN: All the testimony we were able to collect showed that there was.

Mr. STOBART: The directors were deceived, because the results are so contrary from what the prospectus states. You have been asked, sir, was your agent at the mine authorised to keep the money, and why he used it there instead of sending it to England, as he should have done, according to your orders and wishes. That means that he is the master of the directors, instead of being their servant. Therefore, it is a question whether the directors are masters of this company or the people out there. If you knew how to put your foot down you would probably get your orders carried out.

The CHAIRMAN: I entirely agree with that, and in the result the manager has retired. We are obliged to act by agents, and endeavour to get the best men we can.

The report was unanimously adopted.

A DIRECTOR OF "ESSENTIAL QUALIFICATIONS."

The CHAIRMAN: I move the re-election of Mr. Daniel C. Griffith, one of my colleagues, who, being eligible, offers himself for re-election. Mr. Griffith is a gentleman of most essential qualifications for the board, and assists us very greatly in technical matters, and I really do not know what we should do without him. (Cheers.) Matters that are beyond the apprehension of an ordinary director, matters appertaining to metallurgy and chemistry, are quite within his sphere, and he is a most excellent and competent adviser. It is with pleasure I move that he be re-elected. (Cheers.)

Mr. READ (director) seconded the motion, which was carried unanimously.

Mr. CARTER proposed the re-election of the auditors, Messrs. Price, Waterhouse and Co., at the remuneration of 50 guineas. He said the shareholders were quite satisfied that so long as they looked after the accounts they would be presented properly so far as this side was concerned.

Mr. JOHN MORRIS seconded the motion, which was carried unanimously.

THANKS TO THE CHAIRMAN AND HIS COLLEAGUES.

Mr. MORRIS: I think under all the circumstances we should express our general satisfaction with the statements made to-day. (Hear, hear.) It is easy to see that there have been insuperable difficulties in carrying on his business, and, as far as I can judge, it seems to me the directors and their friends have shown their strongest confidence in the ultimate success of the undertaking by the large advances they have made to the company. I shall have much pleasure in proposing a vote of thanks to the chairman and directors.

Mr. TAHOURDIN: I have equal pleasure in seconding the resolution, and although I ask the chairman a question which, perhaps, to a certain extent might seem to show a little want of confidence, yet I am so strongly impressed by the very lucid speech he made that I feel now the directors mean to carry the company to a successful issue, and I, for one, believe they will do so. (Cheers.)

The motion was carried by acclamation.

The CHAIRMAN: Anything like an apology for a question is unnecessary. I courted enquiry and received it with pleasure, whilst endeavouring to meet it with the best answers I could. I was not able to give so good an answer on the question about exchange as the secretary, but I have valuable colleagues right and left. If it had been a technical matter I would have asked Mr. Griffith to say something. In my own name and that of my colleagues, I have great pleasure in assuring you that we will do our

best to get over existing difficulties and serve the company to the utmost of our ability, but you must not expect a satisfactory state of things until the civil war has terminated. Such a struggle is positively dreadful to think of. (Hear, hear.)

The meeting then closed.

COROMANDEL GOLD CO., LIMITED.

SHAREHOLDERS DECIDE TO AMALGAMATE WITH KAPANGA— TESTIMONY TO THE VALUE OF BLAGROVE'S FREEHOLD.

AN extraordinary general meeting was held on Tuesday, at the Offices, in Dashwood House, Old Broad Street, for the purpose of considering and, if thought fit, passing, with or without modification, the following resolutions:—

RESOLUTIONS.

(1.) "That the company be wound up voluntarily, under the provisions of the Companies Acts 1862 to 1890." (2.) "That pursuant to Section 161 of the Companies Act, 1862, the liquidator be, and he is hereby, authorised and directed to transfer to the Kapanga Gold Mining Co., Limited, all and singular the lands, hereditaments, mines, mining, water, and other rights, leases, buildings, plant, machinery, stores, and all other the property and effects of this company, of every description whatsoever, in consideration of the allotment to the liquidator or his nominees of 65,000 shares in the capital of the said Kapanga Gold Mining Co., Limited, each credited with 18s. 6d. as paid thereon, the payment and satisfaction by the said Kapanga Co. of the debts and liabilities of the company, and of the costs of the winding-up, so far as the assets of this company available for that purpose may be insufficient to satisfy the same, and of any other sums which may become payable by this company." (3.) "That each member of this company shall be entitled to an allotment of one share in the Kapanga Co., with 18s. 6d. credited as paid thereon for and in respect of every fully-paid share held by him in the company, and that the liquidator be, and he is hereby, authorised and directed to procure the same to be allotted to every member of this company claiming as his nominee under the contract hereinafter mentioned, provided always, that to entitle the members of this company to an allotment of such shares, application in exercise of the said right must be made for the same in writing in the form and manner, and within the time prescribed by the liquidator, accompanied by a payment of 3d. per share on the number of shares upon application, and with an undertaking to pay 3d. per share on allotment, and 6d. per share six months after allotment, and 6d. per share 12 months after allotment, if required." (4.) "That the liquidator be, and he is hereby, directed to dispose of so many of the 65,000 shares as shall not be applied for by the members of this company under the last preceding resolution, and also of the shares for which applications are not made within the time and on the terms aforesaid, and in making such disposition of the said shares, the liquidator shall not be treated as a trustee for, or in any fiduciary relation to, the said members or to the Kapanga Co., but shall have full discretionary power of selling and transferring the same to any person or persons at such price or prices (if any), and on such terms and conditions as such liquidator may think fit; and it shall not be necessary to first offer such surplus shares to the shareholders of the company, and the Kapanga Co. shall be entitled to retain all shares not applied for or taken by the liquidator or his nominees within three calendar months after the time they shall intimate to the liquidator that the shares are ready to be issued. Any purchase-money which the liquidator may obtain for shares to which members of this company, other than dissentients, would have been entitled had they applied for the same as aforesaid (less the costs and expenses of realisation), shall belong to and be paid to such members by the liquidator." (5.) "That the cash in hand, or monies due to this company, shall be applied by the liquidator in or towards paying off the debts and liabilities of the company and the costs of winding it up and of carrying the arrangement embodied in these resolutions into effect; and the surplus (if any) shall be handed over to the said Kapanga Co." (6.) "That for carrying into effect the arrangement embodied in the foregoing resolutions, the liquidator be authorised, pursuant to section 161 of the Companies Act, 1862, to enter into a contract with the Kapanga Gold Mining Co., Limited, in the form to be submitted to the confirmatory meeting, but with power to concur with that company in any modification of the same which he may consider necessary or expedient." (7.) "That the liquidator be authorised to enter into a contract with any person or persons for the purpose of obtaining subscriptions, or guarantees of subscription, for any such shares aforesaid, upon such terms and conditions as he may think expedient." (8.) "If members of this company, holding in the aggregate more than 10,000 shares, shall dissent from this scheme within the time and in manner prescribed by said section 161 of the Companies Act, 1862, the liquidator, or the Kapanga Co., shall be at liberty, by notice in writing to the other, to abandon this scheme and rescind any agreement which may have been entered into in pursuance thereof, and the liquidator shall in that event be at liberty to pay all the costs and expenses then incurred of and incident to the carrying out of the scheme, out of the assets of the company, and may, if he consider it expedient, apply to the Court to stay further proceedings in the winding-up."

Mr. W. Molesworth St. Aubyn

(chairman of the company) presided.

Mr. W. J. LAVINGTON (secretary) read the notice of meeting.

OBJECT OF THE MEETING.

The CHAIRMAN: I am sorry there are so few shareholders here to-day, but we must make the best we can of it. I think we have only one common object in view, and that is the well-being of the Coromandel Gold Co., and to do the best we can for it under the circumstances. The notice of meeting which has just been read by the secretary gives full information of the business which the meeting has been called together to transact; and it became necessary because the affairs of the company rendered it incumbent on the directors to do the best they possibly could to place their affairs on a more satisfactory basis than exist at the present moment.

COMPANY EMBARRASSED BY ITS OWN SHAREHOLDERS.

When the present company was formed, at the re-construction it was thought probable that a considerable amount of calls then in arrear would be collected, and be applicable to meeting the liabilities. Unfortunately, that probability was not realised; hence, it became indispensable to meet such debts from the capital of the new company, and the sum left has been found inadequate to bringing it into a profitable state. It will be in the recollection of the shareholders, that towards the close of last year an attempt was made to provide capital by the sale of a portion of the company's property, known as Blagrove's Freehold; the attempt proved abortive, owing to the lack of support by the shareholders, whose united contributions towards the fund amounted to under 50%. It then became requisite to take other steps. Pending the decision as to what those steps should be, the directors were obliged to borrow a small sum to keep the company in a condition to make the best efforts to extricate itself from the difficulties with which it was surrounded. I need hardly say that the matter has for some time been under our very careful consideration, and the result was communicated to you by a circular bearing date May 7 last, and this day's meeting is to give effect to the same.

AMALGAMATION TERMS.

The result of the resolutions you are asked now to consider is, in a few words, that the property of the company shall be sold to the Kapanga Gold Mining Co., Limited, for 65,000 shares of 20s. each, paid up to 18s. 6d. a share, such shares to be issued *pro rata* to the shareholders in lieu of the 10s. shares now held by them, and the 1s. 6d. liability to be called up, 3d. on application, 3d. on allotment, and the remaining 1s. in four calls of 3d. each, spread over a further 12 months—the Kapanga Co. for this amount assuming and paying the debts of this company. The advantages that will accrue to you by this amalgamation are, in the first place, that your property will be developed by a company having ample capital at its command; and, in the next place, by a participation in the results of the working, not only of Blagrove's Freehold, but of the Kapanga Co.'s mines, to the extent of one-fourth of the profits obtained and divided; while, on the other hand, unless this, or some equivalent plan, of providing capital is carried through, the company must wind up and sell the property to pay its debts. We are clearly of opinion that the proposed amalgamation is upon the whole the best for your interests, and we have no hesitation in recommending it to you for adoption. I have shortly and plainly laid before you the proposals, and the effect of their acceptance or rejection; but before formally submitting the resolutions we shall be glad to hear any suggestion from any of you whose interests we desire to serve. (Hear, hear.) I move the first resolution (as above).

Mr. HENRY WILSON (director): The remarks made to you, gentlemen, by our chairman, I think, are of such a lucid nature that it requires nothing to be said to commend them to you. Your board has been actuated by a singleness of purpose which has led them, if possible, to preserve this property intact for the benefit of the Coromandel shareholders. The various schemes that were placed before the shareholders to that end have met with a very poor response. The result is that the method now placed before you has been suggested, after mature consideration, in the interests of the shareholders. It means, as you will readily understand, that

COROMANDEL WILL BE AFFILIATED WITH KAPANGA CO.

I cannot see any cogent or valid reason why objections should be taken, and, therefore, it is that I second the resolution. (Hear, hear.)

Mr. F. G. LANE: What is the feeling of Kapanga shareholders?

The CHAIRMAN: As far as I have had personally an opportunity of hearing the observations and remarks made by Kapanga shareholders, there is no objection whatever to it.

The first resolution was carried unanimously.

The CHAIRMAN: I will put the remainder of the resolutions (as above) *en bloc*.

Mr. CHARLES CLARK (director) seconded the motion, which was carried unanimously.

MR. ARGALL MAKES AN IMPORTANT STATEMENT.

Mr. SUTTON: We hear outside that Mr. Argall, the engineer of Kapanga, has expressed his view that on the Blagrove's Freehold there is rich auriferous ground, and it is also said that that is the reason why Kapanga wishes to assist us, and is willing to amalgamate with us. I believe the actual fact to be that Coromandel Co. has never had the means to develop Blagrove's Freehold. Persons on the mining market appear to know something, and when they do know something it is worth while our paying heed to what they know.

The CHAIRMAN: What you state is quite correct.

The SECRETARY: I have here a letter from Mr. Argall, dated May 23, in which he says, "I firmly believe that if worked systematically Blagrove's Freehold will turn out trumps. No doubt we shall come across deposits of gold at shallow depths."

Mr. GOLDSMID: When will the meeting of Kapanga shareholders be held, because we cannot do much more until they are consulted.

The CHAIRMAN: We will hold the first meeting of that company before the second one of this takes place. We have 28 days within which to confirm this resolution.

JUSTICE AND THANKS TO DIRECTORS.

Mr. SUTTON: I think it is our bounden duty, although we have not been a successful company, to return our thanks to the chairman, to Mr. Henry Wilson, and to Mr. Charles Clark for their unfailing exertions to secure our prosperity. Although, personally, I have lost nearly 1,000l. by this company, I feel that the gentlemen I have named have worked as hard for us as they possibly could. At the same time we have been an unsuccessful company, but it has not been in the power of the chairman, or of his colleagues, to put gold into a property when it was not there. Our thanks are due to them for the care and diligence they have shown, and we know in mining that we never can absolutely rely upon success. Perhaps, after all, in this Thames Valley district we may meet in Blagrove's Freehold with a success which has been denied to us elsewhere.

A BRIGHT FORECAST.

Perhaps we may even strike a rich reef there, and that our hearts may be rejoiced by the chairman sending out to us a dividend of 2s. 6d. per share. (Laughter.) I thank the directors for their dili-

gent attention to our affairs, although we are an unsuccessful company.

Mr. GOLDSMID: I second the resolution with pleasure.

Carried unanimously.

The CHAIRMAN: I fully appreciate the remarks made by the hon. shareholder, and can only say this, that although up to the present time we have not been successful, I hope that the realisation shadowed forth by Mr. Sutton will be before long realised, and I am sure no one will be more pleased than I will be to sign cheques for you all round for even more than 2s. 6d.

POTOSI CONSOLS, LIMITED.

MR. WEBBER, OF EL CALLAO, EXAMINES AND REPORTS FAVOURABLY UPON THE MINE—THE COMPANY STARTS UNDER GOOD AUSPICES— $\frac{1}{2}$ OZ. TO THE TON WILL PAY.

THE first ordinary general (statutory) meeting was held at Winchester House, on Monday.

Mr. S. F. Somes

(chairman of the company) presided.

Mr. J. BRYCE WILKINSON (secretary) read the notice of meeting.

ACTING ON MR. WEBBER'S REPORT.

The CHAIRMAN: Gentlemen, you are perhaps aware that this is nothing but a formal meeting. We are bound, in order to put ourselves right with the Act, to call a statutory meeting, simply for the purpose of announcing that the new company, Potosi Consols, has been incorporated, and that it is a going concern. We have no news from the mine, except that Mr. Rowse, who is the manager referred to in the circular we sent to you giving you Mr. Webber's report on the property, is now in possession, and no doubt carrying out that gentleman's instructions. His advice is most valuable, and it is our intention to follow it in continuing to work this property. The company's agent, Mr. De Lemos, happens to be over here, but, unfortunately, is prevented from attending this morning. I saw him last week. He is one who has known the property from the very first, and still is hopeful about it, and believes that we shall yet be able to do something with this hitherto unfortunate undertaking. The shareholders have not come in so well as I could have wished. There still remain out about 100,000 shares.

STATE OF THE RE-CONSTRUCTION.

We have of preference shares nearly the whole taken up—that is, 64,528 out of a total number of 65,558, so that within comparatively few the preference shareholders have come in, but the ordinary shareholders have only taken up 178,584 shares. We sent circulars reminding them and extending the time for application to July 15, but up till now that is the whole number that has come in. Consequently their right to allotment is forfeited, and these shares remain to be placed for the benefit of the company. If we, fortunately, get some good news by and by I have no doubt we shall have little difficulty in placing the remainder, probably in one lot. There would be many willing to take shares in a company, with such prospects as this, with only a liability of 2s. 6d. If there is any prospect for the company at all, we shall be sure to be able to allot these shares by and by. Having so many shares on our hands to some extent cramps our means, but yet we have plenty to carry on what we intend to do at present, which is simply to develop the Potosi Viejo lode. That is the established lode there, but Mr. Webber also suggests the development of No. 2 lode, which Mr. Pryor discovered. We must, however, cut our coat according to our cloth. We shall proceed with Potosi lode, and from time to time see what the appearance is underground. If we see, as we believe we shall, that it is advisable to put up a mill to show what we really can do with the quartz that is brought out, we shall not hesitate to do so. There are no resolutions whatever to be proposed—in fact, there is nothing to be done in the shape of business, and we simply meet to tell you that the company is incorporated and going on. I should mention that we have only two real dissentients who have written formal notice of their objection, but very little importance may be attached to that. If they think fit to take steps they will be very badly advised, as our solicitor will be ready to tell them, as he tells us, that we have not much to fear from any action they may take. We have put ourselves perfectly right in all that we have said and all that we have done, and now it only remains for us to hope that good news will come before long, and that we shall be able to get rid of these shares. If there are any questions shareholders would like to ask, I shall be happy to answer them.

QUESTIONS.

Mr. J. M. STOBART: As to forfeiting these shares, can you legally do it?

The CHAIRMAN: Oh, yes! The solicitor will explain.

The SOLICITOR (Mr. Lattey): The right to allotment has lapsed.

Mr. STOBART: Then if these people do not take the shares, they have no claim on the property the new company is about to acquire?

The SOLICITOR: Absolutely none.

The CHAIRMAN: The law is perfectly clear on that point. Those who have not come in have themselves forfeited their claim to their allotment, and consequently it rests with the liquidator to do as he pleases with the shares. Most of the shareholders have taken up their full complement. I have done so and so have my colleagues, and the outsiders are chiefly those who hold small numbers. There are some who are ready to come in, and have signified that they are willing to do so, but they have had to write to someone abroad, and of course the liquidator will have power to deal with these cases.

Mr. DUPREE: I should like to ask if you think it probable that the remaining shares unapplied for will be allotted or disposed of. I take it the success of the re-construction depends in a great measure upon the placing of those shares.

The CHAIRMAN: No doubt. At present the right to allotment is being sold at 2d. or 3d., and no doubt it depends upon our getting a little encouraging news from the mine, whether we can or cannot place these shares. If we get such news it is highly probable the whole of such shares will be taken in one block.

Mr. STOBART: With regard to dissenting shareholders, do they hold any large number?

The CHAIRMAN: 2,200 altogether, and their case is really of no importance, and one that need not trouble us. (Hear, hear.) They have put themselves out of court.

The SOLICITOR: The agreement provides that those who do not apply for their shares within a limited time have lost their right, and the liquidator is at liberty to dispose of them as he thinks fit. If anyone came forward to buy the whole lot at 3d. per share I should advise the acceptance of the offer.

Mr. STOBART: My point is this, that I do not want these people to hold back as long as it suits them, and then, if good news should come, to turn round and say that the new company acquired the property at an improper or inadequate price.

The SOLICITOR: The law gave you the right to dissent from the agreement and seven days within which to make that dissent known, so that the liquidator cannot be accused of entering into an improvident bargain. He might have been called upon to pay out dissentients in cash instead of shares, or dissentients might have elected to do nothing. A large number have done that, covering 100,000 shares. But these are not really dissentients: there are only two dissentients—those who have given notice. If they proceed to put us to the cost of arbitration I will endeavour to saddle them with those costs. Re-construction is not a matter of novelty now. We lawyers are beginning to know what it means, and you will find you have been protected. Good news will mean this—that we shall want money, and on the strength of it we shall have no difficulty in allotting these shares. If we do not do so the money we have will be sufficient to keep us on until good news comes.

The CHAIRMAN: We know the lode has yielded good quartz, but Mr. Webber, who is described as anything but a sanguine man, does not look for much high grade ore; but I should mention that when Mr. Webber was there he, of course, was only able to see where the workings had been stopped, and the particular points from which all the best quartz had been taken; so that he could simply see what was left, and could not give a reliable opinion as to the probable production from the whole of the lode. However, he considers it "full of promise," and that there is

EVERY REASON TO HOPE THAT POTOSI WILL YET BE A SUCCESS.

I would call your particular attention to the last paragraph in Mr. Webber's report as follows:—"I think no doubt ought to be entertained about $\frac{1}{2}$ oz. rock yielding the Potosi Co. a good profit, with careful, practical management." He has managed El Callao for some time, and knows perfectly well what expenses are in Venezuela, and is not a man who would put them under what he believes really sufficient. In former years nothing under 1 $\frac{1}{2}$ oz. to the ton would pay expenses. Let us only come upon stuff giving 1 oz., and we shall yet show fine results for the company.

Mr. DUPREE: I presume the mine is being actively worked.

The CHAIRMAN: Mr. Rowse, who succeeds Mr. Pryor, is, no doubt, at present actively at work. Of him Mr. De Lemos speaks in the highest terms, not only as a practical miner, but as an engineer; and should it be decided by and by to erect a mill, he considers Mr. Rowse quite competent to carry out the work. I was glad to hear from Mr. De Lemos, who has very recently visited the mines, that we have plenty of plant and material there adapted for use, and there would be no need for us to send any important portions of the machinery for a mill.

A SHAREHOLDER proposed a cordial vote of thanks to the chairman.

A SHAREHOLDER, in seconding the motion, said: I think we may be perfectly satisfied that if we do not make much money,

WHAT WE HAVE NOW SUBSCRIBED WILL BE HONESTLY USED,

and if the efforts of the directors fail it will be because the quartz is not there.

The CHAIRMAN: I can fully confirm that.

At the ordinary half-yearly general meeting of the shareholders, held at the Cannon Street Hotel, on Tuesday, the 21st July, 1891, the Right Hon. Sir Lyon Playfair, K.C.B., M.P., in the chair, the following report was presented :—

The Directors have to report that the net profits of the Bank for the past half-year, after making deductions for interest on deposit accounts, current expenses (including subscription to life insurance fund), bad and doubtful debts, and rebate on bills not yet due, amount to 31,996*l.* 0*s.* 6*d.*, which, added to 12,099*l.* 11*s.* 10*d.*, the balance brought forward from the previous half-year, makes a total of 44,095*l.* 12*s.* 4*d.* now to be disposed of.

Out of this sum it is recommended that 32,000*l.* be appropriated to the payment of a dividend at the rate of 8 per cent. per annum, free of income tax : that 505*l.* be placed to the credit of redemption of premises

fund, and in reduction of furniture account; and that the remainder, 11,590*l.* 12*s.* 4*d.*, be carried forward to the credit of the next account.

The Directors who retire by rotation, in conformity with the provisions of the articles of association, are Mr. William Dunn, M.P., Mr. Daniel Mackenzie, and Mr. Edward George Price; all of whom being eligible, offer themselves for re-election.

The Auditors, Messrs. Thomas A. Welton and John F. Clarke, also retire at this meeting, and offer themselves for re-election.

By order of the Board,
Bartholomew Lane, E.C., THOS. J. SCOTT, Secretary.
15th July, 1891.

N.B.—The dividend will be payable on and after Saturday, the 1st August.

We have examined the foregoing accounts in detail, with the books and vouchers of the Bank, and find them to be properly drawn up, so as to exhibit a true and correct view of the state of the Bank's affairs. Further, we have ascertained by actual enumeration the correctness of the items of cash and bills of exchange in hand, and have inspected the securities representing the Bank's own investments in Government stocks, &c., and also those held on account of advances and loans, as well as those belonging to customers, and we find them to be in due accordance with the books and accounts of the Bank.

THOS. A. WELTON (Welton, Jones & Co.), Auditors

THOS. A. WELTON (Welton, Jones & Co.),
J. F. CLARKE (Turquand, Youngs & Co.), } *Auditors.*

The Chairman authenticated the "Register of Transfers" by impressing thereon the Common Seal of the Company.

It was proposed by the Chairman, seconded by Mr. Mackenzie, and resolved unanimously, "That the report and accounts, as presented, be received and adopted."

The Chairman then declared a dividend for the half-year ending 30th June, 1891, at the rate of 8 per cent. ^{per annum}, free of income tax, payable on and after Saturday, the 1st August.

It was proposed by the Chairman, seconded by Right Hon. H. H. Fowler, M.P., and resolved unanimously:—"That Mr. William Dunn, M.P., Mr. Daniel Mackenzie, and Mr. Edward George Price be, and they are hereby re-elected Directors of the Company."

It was proposed by the Chairman, seconded by Mr. Stobart, and resolved unanimously :—"That Messrs. Thos. A. Welton and John F. Clarke be, and they are hereby re-elected auditors of the Company."

It was proposed by the Chairman, seconded by Mr. Dunn, M.P., and resolved unanimously: "That the thanks of the meeting be given to the general manager, the managers, the secretary, and other officers and staff of the Bank for the care and diligence with which they had performed their duties during the past half-year."

It was proposed by Mr. Jeffries, seconded by Mr. Stobart, and resolved unanimously: "That the thanks of this meeting be given to the chairman and the directors for their careful attention to the business of the Bank during the past half-year." (Signed) LYON PLAYFAIR,

**CAMBORNE
SCHOOL OF MINES.**

SESSION, 1891-2.

CHAIRMAN OF COMMITTEE.
JOSIAH THOMAS, Esq.

PRINCIPAL.

Mr. J. J. BERINGER, A.R.S.M., F.I.C., F.C.S.

SECRETARY.

Mr. H. T. ROBINSON.

THE above School has been formed for
giving instruction in subjects specially
applicable to mining students, and in a
district where the practice of mining may
be observed at the same time.

The subjects taught include Mining, Ore-
dressing, Vanning, Assaying, Chemistry,
Geology, Mineralogy, Steam, Metallurgy,
Plan Drawing, Engineering, &c.

The managers of the principal mines in
the neighbourhood will afford facilities to
students of the School for studying practical
mining.

Prospectuses, and any further informa-
tion, may be obtained of the PRINCIPAL or
SECRETARY.

*The Session commences on Monday,
21st September.*

QUINLAND—LONDON.

MINING MARKET.

CITY, FRIDAY EVENING.

A GENERAL EXODUS FROM THE MINING MARKET— THE POSITION SUMMED UP—AUTUMN PROSPECTS— FLAGSTAFF AND EMMA COMMENCE SALES IN EARNEST.

THE Mining Market, for all the business that was done to-day, may be said to have closed on Thursday afternoon, though in reality the Exchange closed its doors to-night, not to open them again until Tuesday morning next. It was about Thursday afternoon, however, that the place where brokers most do congregate became deserted, and it was shortly afterwards that they were seen with their *sacs de voyage* wending their way to the various termini that lead, "far from the madding crowd on life's highway," to those resorts of tranquillity and ease, where clients cease from troubling and the dealers are at rest. Such spells as these, short as they are, come as a veritable solace to the wearied City man after the multifarious anxieties, troubles and worries of his daily life.

Truth to tell, the anxieties, troubles and worries of the mining broker for the past few weeks—we had almost said few months—have been of a most exceptional kind. Looking back upon the period thus somewhat elastically described, we are bound to own up to the fact that it has never been exceeded for the depth of its dullness, or for the inanimation of its prices. We have had times of depression before, but they have passed away within a shorter period than that which is now within our purview. We have had times when prices ruled far too low (as everyone knows they do now), only there has been a rebound to the point often of inflation, but in the present instance the gloom has been settled and unrelieved by anything that has at all risen much above, what we may be pardoned for calling in such a connection, par. We have endeavoured in former articles to show that this is not owing to mining *per se*, but rather to the uncertain state of affairs that heralded and that followed commercial events, of which the Baring episode may be regarded as the pivot. A correspondence has been going on in our columns respecting the fall of prices—some readers attributing it to one cause, and some to another, and without attempting to adjudicate upon what they say, we cannot but believe that mining

has suffered from the event we have alluded to, and also from the desire which followed it to turn into cash everything in the nature of securities that could be so turned. If our correspondents, who attribute the depression of mining prices to the distrust which some notable swindles have engendered, would tell us of any description of securities which has not fallen quite in the same proportion as mining, they would immensely strengthen their argument. They have not done so for the simple reason that they cannot. Where is the man who, looking at his securities at the end of June, can satisfactorily regard them from the point of view of prices quoted a year ago? If there is one who can do so his experience is quite exceptional, and we should like to know the nature of the investments into which he has put his surplus profits.

Is this depression going to continue? That is the important question. Yes, say the croakers who are going about the City moaning and groaning, and shaking their heads, like the commercial Solomon Eagles they are. No, says all past experience, for though the period of depression may last unusually long, it will pass away, and business will revive. Prices will go up, and those who had the foresight (and, of course, the cash) to take advantage of the present state of affairs will, in our judgment, reap a bountiful harvest. If the mines were collapsing; if the news from India were bad; if the worst of the South African ventures were not being eliminated, and the good ones were not now gradually coming to the front; if American mines were not doing much better than for some years past; and if, generally (with, we are sorry to say, the solitary exception of home mines), the position, from the purely mining point of view, were not satisfactory, we should be disposed to join our lamentations to those of the croakers. But we cannot do so, because the facts are against them, and men of sense, looking at them straight in the face, can realise the position, and, better still, can profit by it.

The meetings of the week have been important, and the salient points of most of them are dealt with in our leader columns. Balkis has a fresh board; Uranium is to be re-constructed; Zaruma is making profits; La Plata is doing the same; Venezuelan-Austin is to be re-constructed; Hill's Waterfall to wind up; and Don Pedro bids fair to resume its former success when, over a lengthened period, it paid dividends of 100 per cent. The market has been much exercised to-day by the case of the Ooregum preference shares. All the arguments have been heard, and judgment has been reserved. No one seems to care to give a decided opinion as to which way the case will go.

The dividends declared this week include 4s. by New Guston, 1s. by Yankee Girl; 11s. by West Kitty and 1s. by Richmond. In regard to the market there is scarcely any tale to tell except that South Africans, with hardly an exception, are lower, that Australians, including Broken Hill Consols, are all weaker; that the Copper Market has been without life and that the Indian section has been without business.

In regard to general foreign shares Flagstaffs and Emmas have been fairly dealt in on the announcement of sales, and the promise of further ones to follow. There have been enquiries with better business for Graskop, Colorado, Montana, and one or two others, but generally speaking the market has been dull, and particularly for Palmarejo shares, which, on the announcement of the "selected meeting" held by the board on Monday, dropped still further. Considerable surprise has been generally expressed on the market at the want of business acumen shown by the directors in dealing with the financial situation.

Cornish shares are considerably better, and it is with much pleasure we note the fact. Carn Brea, Cook's Kitchen, East Pool, South Crofty, South Frances, Tincroft, West Frances, Wheal Basset and Wheal Grenville are all up. So satisfactory a record we have not been able to present for many a week. Of course, there are the "downs," and these include West Kitty, which has lost the satisfactory dividend declared, in market value, and Dolcoaths are also weaker; along with South Condurrow. Talking of Wheal Basset, the position is held to have considerably improved. At West Wheal Grenville meeting the resolution to wind up was confirmed, and the directors were complimented upon the courage they showed in deciding to stop operations at the time they did, and thus save the shareholders from the final call of 5s. a share.

It would seem, by Mr. Commissioner Kerr's ruling, that jurisdiction to recover calls lies where the contract to take the shares is made. Unless shares are taken from the company direct, how is this to be found out? When a transfer is presented for registration, the company cannot tell where the contract with the buyer was made. It may have been made in a railway train, or, for the matter of that, in Paris, or in some other foreign mining market.

Next week is likely to be a broken one, and no revival of business can be expected at least until its close.

KAFFIRS.

In consequence of the market for South African shares being neglected, prices have fallen all round. Durban Roodepoort and Pioneers lead the way with a fall of 7s. 6d., and many others in a lesser degree. Wolhuter are better to the extent of 5s.

Business.—A rise is shown in Aurora of $\frac{1}{8}$; May Consolidated, 6d., and Wolhuter, $\frac{1}{4}$; whilst the following have fallen: Sheba, $\frac{1}{8}$; City and Suburban, $\frac{1}{8}$; Durban Roodepoort, $\frac{3}{8}$; Forbes Reef, 6d.; Geldenhuis, $\frac{1}{8}$; Great Gold Zone, 6d.; Henry Nourse, $\frac{1}{8}$; Johannesburg Pioneer, $\frac{3}{8}$; Kimberley Roodepoort, $\frac{1}{8}$; Langlaagte, $\frac{1}{8}$; Luipaards Vlei, 6d.; Modderfontein, 6d.; Robinsons, $\frac{1}{8}$; Royal, $\frac{1}{8}$; Simmer and Jack, $\frac{1}{4}$; Spes Bona, 2s.; Stanhope, $\frac{1}{8}$; Witwatersrandt (Knight's), 6d.

AFRICAN LANDS.

With the exception of British South African Chartered, which are slightly firmer, most shares are quoted lower—Oceanas having fallen 10s., while London and South African Explorations, Goldfields of South Africa and Bechuanaland are also lower. The markets leave off flat.

Business.—A rise is shown in British South African Chartered of $\frac{1}{8}$; whilst a fall has taken place in Bechuanaland $\frac{1}{8}$; Goldfields of South Africa, $\frac{1}{8}$; London and South African, $\frac{1}{4}$; Oceana, $\frac{1}{2}$; Silati River, 1s.; and Transvaal Gold, 1s.

DIAMONDS.

This class has been again neglected, and in a few selling orders from Paris, De Beers shares again drooped, although they do not close at their worst. North Eastern Bultfontein have also fallen, but have been lower than they close.

Business.—A rise is shown in Bultfontein Consolidated of 6d. whilst a fall is to be noted in De Beers of $\frac{1}{8}$; and North Eastern Bultfontein, $\frac{1}{4}$.

Making-up Prices, July 28.	DIAMOND SHARES.	To-night's Prices.

$\frac{1}{2}$	Burma Ruby Mines 15s. paid ..	$\frac{7}{8}$ — $\frac{9}{8}$

AUSTRALIANS.

The chief dealings in this market have been in Australian Broken Hill Consols, which at one time changed hands at 30s., but quickly receded to $\frac{1}{4}$; they close a shade firmer. Gympie Great Eastern shares, which last week had every appearance of going firmer, relapsed at one time to 6s. 9d., 7s. 3d., on receipt of a telegram from the mine stating it was flooded. They, however, do not close quite so low.

Business.—There is no rise to note, whilst a fall has taken place in Australian Broken Hill of $\frac{3}{8}$; Day Dawn Block, $\frac{1}{8}$; Day Dawn Block P.C., 9d.; Gympie Golden Crown, 6d.; Gympie Great Eastern, 3s.; Scottish Australian, $\frac{1}{8}$; and Wentworth Proprietary, $\frac{3}{8}$.

INDIANS.

This market has been very depressed, and the chief cause appears to be the selling of bonus shares, and the uncertainty as to the Ooregum case, which is now awaiting judgment before the House of Lords. Champions have been offered under $\frac{3}{4}$; Mysore, $\frac{5}{16}$; Goldfields at 21s.; and Ooregums at 13.

Business.—There are no rises to record, but a fall has taken place in Balaghat of 6d.; Champion Reef, 2s. 6d.; Gold Fields of Mysore, 2s. 6d.; Mysore Gold, $\frac{1}{8}$; Mysore West, 3d.; Nine Reefs, 3d.; and Nundydroog, 6d.

COPPER SHARES.

The market for this class has been very restricted, and in nearly every instance lower prices rule—Capes, Masons, and Rio Tintos suffering to the extent of 10s.

Business.—There is no improvement to be noted, but a fall is recorded in Copiapo of $\frac{1}{8}$; Capes, $\frac{1}{2}$; Mason and Barry, $\frac{1}{2}$; Rio Tinto, $\frac{1}{2}$; Tharsis, $\frac{1}{8}$.

GENERAL FOREIGN SHARES.

Tesoro Golds have again risen, and close this week 1s. 9d. to 2s., having gained 6d. during the week. In view of the prospects these shares ought to go much higher.

A somewhat large business has been done in Golden Feathers, and shares at one time changed hands at 21s. 9d., but to-day

sellers have come on the market, and shares close at 18s. 6d. to 19s. 6d. Golden Gate shares have changed hands at 2½, but close 1¾, 2. Market weak.

De Lamar shares have been enquired for, and are now quoted x.d. the dividend warrants were posted on Tuesday last. Don Pedro have been well supported, and the shares appear good to hold. The impression created by the meeting was wholly favourable.

Palmarejo have still been pressed for sale, and prices have again fallen. Tolima A have been enquired for and improved 5s. Yankee Girls. These shares have been rather dull, and at one time were offered at 2s. 3d. premium.

American Belles have again been offered for sale, and the price is weaker. Callao Bis are a shade lower, but purely on market operations. New Gustons are down, but simply because they are quoted x.d. since yesterday. Flagstaffs are slightly off.

Gravel Gold are lower, because the washing has been delayed about two months.

Business.—A rise is shown in Colorado Silver of 3d.; Edwin Bray, 1½; Graskop, 3d.; Montana, 6d.; and Tesoro, 3d., whilst a fall has taken place in American Belle of 2s.; Callao Bis, 3d.; Dickens Custer, 3d.; Elkhorn, ½; Emma, 3d.; Flagstaff, 9d.; Golden Feather, 1s.; Gravel Gold, 4s.; Jay Hawk, 6d.; Leeds Copper, 3d.; Lisbon Berlyn, 3d.; New California, 3d.; New Guston, ½; Palmarejo, 1s.; Pestarena, 6d.; Silver Mines of La Luz, 3d.; St. Augustine, 1s.; Tolima "B," ¼; and Yankee Girl, 2s.

The following list shows the principal changes which have taken place:—

LATEST FROM THE MINES.

COLONIAL MINES.

AUSTRALIAN BROKEN HILL CONSOLS.—Telegram from the managing director July 24:—"Two tons of ore containing 6,366 ozs. of silver raised during the fortnight. Fault now cutting out from the rich vein. There is a great improvement in prospects."

BRITISH BROKEN HILL PROPRIETARY.—The company reports that during the week ending Thursday, the 30th inst., there were 603

tons of ore treated, including 174 tons of iron ore, yielding 96 tons of lead, containing 5,427 ozs. silver.

BROKEN HILL PROPRIETARY.—During the week ending Thursday, the 30th inst., there were 4,504 tons of ore treated, yielding 676 tons of lead, containing 180,160 ozs. of silver, and that the surplus on hand is 275,119 ozs. silver. The usual dividend of 2s. per share, amounting to 96,000£., on the 960,000 shares, has been declared and will be payable in London and Melbourne on Aug. 19.

NEW QUEEN GOLD.—A cablegram gives result of crushing for past fortnight:—"350 tons; yielding 465 ozs. gold."

WENTWORTH GOLDFIELDS PROPRIETARY.—A cablegram from Mr. J. J. Cooper, M.E., the consulting engineer, states:—"Ore from Phoenix No. 1 vein assays 136 ozs. to the ton. Have struck rich ore in Crinoline vein (Shamrock shaft) 184-ft. level, assaying 170 ozs. to the ton. Rock-drills have been procured, and are now at work. I will telegraph weekly report next Wednesday. Gold is being raised from Jackass shaft equal to specimens in London."

FOREIGN MINES.

ALASKA TREADWELL.—The fortnightly report from the manager, dated June 27 last, states that everything is proceeding satisfactorily at the mine and mill, and that the bullion yield for the month will probably be the same as heretofore.

ANTIOQUIA.—The directors have received advices for May, viz.:—"Produce, 400£.; cost, 519£. 11s. 2d.; estimated loss, 119£. 11s. 2d."

CALLAO BIS.—The directors have received the following telegram: 580 tons, 873 ozs. gold; 23 days; no change in mine."

CASTILLON.—The directors have sold 50 tons silver-lead ore to La Société des Mines de Pontgibaud at 8£. 8s. 4d. per ton. f.o.b. Bordeaux.

ELKHORN.—Cable from the mine:—"Bullion produced for week ending July 25: \$7,030. Mill shut down one day for repairs."

EMMA.—22 tons of ore and 33 tons of concentrates, sold during the month of June, realised \$3,634.76.

GOLDEN FEATHER.—Cable from Col. Frank McLaughlin:—"Whole river running through canal yesterday morning. Working very satisfactorily. Everything going all right."

GOLDEN GATE ALLUVIAL SYNDICATE.—Cable from Col. Frank McLaughlin:—"Whole river running through flume yesterday morning. Flowing splendidly. Everything going on all right."

GOLDEN GATE.—The company have cleaned up the last fortnight's crushing, 344 tons yielding 832 ozs. gold; value, 3,000£. A dividend of 1s. per share is declared, and 850£. carried to reserve.

HARRIETVILLE.—A telegram from the mine, dated July 29, is as follows: "Cleaned up July 24; Mons Meg Mine, 680 tons, 262 ozs.; Tiddledee Mine, 238 tons, 50 ozs.; amalgamating pans, 27 tons, 33 ozs. Mons Meg shoot, south shaft, become poor. Guerdon looking well."

KETCHAU (PAHANG).—The reduction of the ¼ cwt. specimens of ore (from the No. 2 winze in the Mount Siam mill shown at the general meeting held on the 26th ultimo) prove the rock to have been worth nearly 60s. (sixty shillings) per lb. weight avoirdupois.

NEW GUSTON.—Warrants for an interim dividend of 4s. per share, payable at Lloyd's Bank, have been posted.

NEW RUSSELL.—A telegram has been received by the company announcing the arrival on the mine of Mr. C. Stuart Bailey, chairman of the Gold Ores Reduction Co. and also director of the Russell Co.

PACIFIC.—The following telegram has been received from the manager in Colombia:—"Work progressing favourably; three veins uncovered showing good prospects."

RUBY.—Telegram received to-day (July 28) from Eureka:—"3 tons tribute ore shipped; 3 tons tribute ore smelted, producing to company \$90."

YANKEE GIRL.—Warrants for an interim dividend of 1s. per share, payable at Lloyd's Bank, have been posted.

AFRICA.

LATEST FROM THE GOLD AND DIAMOND MINES.

SIMMER AND JACK.—Warrants for the interim dividend due June 30 were posted to shareholders on the London register on the 24th inst.

NORTH-EASTERN BULTFONTEIN.—Telegraphic advices announce work done for the four weeks ending 25th inst.:—"Washed, chiefly tailings, 44,000 loads; diamonds produced, 4,850 carats. Tested blue-ground taken from shafts, 525 loads unripe, produced 92 carats; taken from the open, 40 loads unripe, produced 10 carats; increase of blueground on floors, 29,300 loads."

TRANVAAL GOLD EXPLORATION AND LAND.—Manager's advices June 29:—"Mining: Ophir Hill, Theta vein: Ore extracted, 50 tons; assay value, 5 ozs. 2 dwts. per ton. Brown's Hill, Nu vein: Ore extracted at No. 1,209, 50 tons; assay value, 5 ozs. 9 dwts. per ton; and at Nos. 1,211 and 1,220, 75 tons; assay value, 1 oz. 13 dwts. per ton. Prospecting: This work was being thoroughly prosecuted near the eastern boundary at Edin Hill and on Brown's Hill. Mill: The battery and pans worked as usual during the week, and after stoppage for the monthly clean up would be again started. A few loads of ore had been hauled from Theta and Nu mines."

PIGG'S PEAK.—Mine report for week ending June 27:—"Devil's reef—Prospecting drive: Drove for the week 11 ft.; total, 51 ft."

Ground much harder, and no gold in panning. Remaining boys making road to get machinery from the old battery to Devil's reef. Tamblin's reef Shaft: Sunk 1 ft. 6 ins.; total, 39 ft. No change since last report. Cross-cut driving north: Drove 6 ft. 6 ins.; total, 14 ft. 16 ins. No gold in panning. Suspended work for the present. McGready's works—Shaft: Driven 20 ft. 6 ins.; leader 1 ft. wide, and shows fair rock in panning; cuttings, 170 ft. Peak—Pigg's drive: Drove for the week 8 ft.; total, 222 ft. No change since last report. England's reef: Work has been resumed at this point, and we are getting some very encouraging prospects. Prospecting: Nothing new to report.

WENTWORTH GOLDFIELDS PROPRIETARY.—A telegram from the consulting engineer states:—"During the week we have sunk 100 ft., and driven 35 ft. In Happy-go-Lucky vein (Phoenix shaft) the ore is improving as we advance. We are repairing the Reform shaft as quickly as possible, and the poppet heads are in course of erection."

GELDENHUIS MAIN REEF.—By letter received this mail it is reported by the manager that where he is now at work on the incline shaft the reef has greatly improved, and assays from 1 to 3 ozs. of free gold per ton.

CENTRAL MONTROSE ESTATE.—In his report for the month of May the mine manager gives the following particulars of the work done:—The 380-ft. level (being the deep adit to cut the reef at that level) advanced 3 ft.; total length, 618 ft. The 280-ft. level (on the reef) advanced 17 ft. 6 ins.; total length, 842 ft. 6 ins.; reef narrow. Cross-cut north advanced 14 ft.; total length, 20 ft.; discontinued. Cross-cut south on the new ore body 16 ft. 6 ins.; grade of rock improving. Eastern stopes: 505 tons mined. The milling returns received by cable have already been published. The crops and grass on the estate have been greatly damaged by locusts.

COMMERCIAL NOTES.

METALS.

THE Metal Market has been fairly active during the current week.

Bank rate remains $2\frac{1}{2}$ per cent. Bar silver closes at 46d. per oz.

COPPER has been easier. G.M.B. warrants, on continued heavy sales, declined from 52 $\frac{1}{2}$ 15s. to 51 $\frac{1}{2}$ 10s. for cash, and from 53 $\frac{1}{2}$ 7s. 6d. to 52 $\frac{1}{2}$ for three months, the larger proportion of sales being for forward delivery. Yesterday a slight improvement took place, closing at 52 $\frac{1}{2}$ cash, and 52 $\frac{1}{2}$ 12s. 6d. three months. To-day's prices are 52 $\frac{1}{2}$ cash and 52 $\frac{1}{2}$ 10s. three months. We quote English tough 56 $\frac{1}{2}$, 57 $\frac{1}{2}$; best selected, 57 $\frac{1}{2}$ 10s. to 58 $\frac{1}{2}$ 10s.; strong sheets, 65 $\frac{1}{2}$ to 66 $\frac{1}{2}$; India sheets, 60 $\frac{1}{2}$ 10s. to 61 $\frac{1}{2}$ 10s.; yellow metal, 5 $\frac{1}{2}$ d. to 6 $\frac{1}{2}$ d.; ore, &c., 9s. 9d. to 10s. 9d. per unit.

TIN has been quiet. Straits declined from 92 $\frac{1}{2}$ to 90 $\frac{1}{2}$ 17s. 6d. cash, improving again to 91 $\frac{1}{2}$ 7s. 6d., and closing yesterday at 91 $\frac{1}{2}$ 5s. cash. To-day's prices are 91 $\frac{1}{2}$ 2s. 6d. and 91 $\frac{1}{2}$ 10s. three months. Three months has ruled about 10s. over spot, and Australian 10s. premium over Straits. The Straits shipments have been about 2,000 tons; arrived here in July, 2,302 tons; delivered, 1,395, of which 460 tons were to America; stock here, including landing, 3,242 tons. English ingots, 94 $\frac{1}{2}$ 10s. The Dutch market has been steady at $\text{fl. } 55$ for banca and $\text{fl. } 54\frac{1}{2}$ billiton. The 28,400 slabs banca sold yesterday at an average of 54 $\frac{1}{2}$ per 50 kilos, or 91 $\frac{1}{2}$ 15s. per ton. Billiton afloat, 1,294 tons. Dutch deliveries for July, 615 tons.

TINPLATES in better demand, but prices unsettled. Ordinary coke, 13s. 6d. to 14s. Liverpool.

SPELTER steady. We quote ordinary brands 23 $\frac{1}{2}$ 12s. 6d. to 23 $\frac{1}{2}$ 15s. ex ship here.

LEAD dull and easier. We quote soft Spanish, 12 $\frac{1}{2}$ 5s. to 12 $\frac{1}{2}$ 7s. 6d.; soft English, 12 $\frac{1}{2}$ 7s. 6d. to 12 $\frac{1}{2}$ 10s.; L. B., 13 $\frac{1}{2}$; sheets for export, 13 $\frac{1}{2}$ 7s. 6d. to 13 $\frac{1}{2}$ 10s.; home trade, 14 $\frac{1}{2}$.

QUICKSILVER steady but inactive. Rothschild's, 7 $\frac{1}{2}$ 15s.; seconds same price.

ANTIMONY dull. Hallett still asks 48 $\frac{1}{2}$ for export to America, but ordinary brands and delivery are quoted nominally, 45 $\frac{1}{2}$ to 46 $\frac{1}{2}$.

RICHMOND CONSOLIDATED MINING CO., LIMITED.

DIRECTORS ISSUE A REPORT IN WHICH THEY REMIND THE SHAREHOLDERS OF £869,267 PAID IN DIVIDENDS AND OF ENCOURAGING FEATURES WITH REGARD TO THE FUTURE OF THE COMPANY.

IN their interesting report the directors of this company remind the shareholders that on a capital of 270,000 $\frac{1}{2}$ the amount of dividends paid to date is 869,267 $\frac{1}{2}$ 10s. Of this company Mr. George Hopkins, C.E., has been chairman almost from the commencement, and a director all through. The balance-sheet and statement of accounts are for the year ending Feb. 28, 1891. Mining and smelting operations have been paralysed during the greater part of the year in consequence of the action of the United States Government in respect of the timber suits. 1,346 tons of ore have been raised from the Richmond Mine, and 28 tons purchased, together 1,374 tons, containing by assay about 690 ozs. of gold, 20,854 ozs. of silver, and 150 tons of lead. This ore was sold at Salt Lake and Eureka for 6,830 $\frac{1}{2}$ 14s. 3d.; the expenses of mining and freight were 4,440 $\frac{1}{2}$ 17s. 5d., and after paying 1,595 $\frac{1}{2}$ 12s. 10d. expenses of management and general expenses at Eureka, the mining profit for the year, with sundry receipts, amounted to 784 $\frac{1}{2}$ 0s. 7d. The furnaces were shut down during the whole of the year; the small amount of ore raised from the mine making it undesirable to start them. 9,584 $\frac{1}{2}$ 17s. 10d. was standing to the credit of revenue on Feb. 28, 1890, out of which a dividend of 2s. 6d. per share, free of income tax, amounting to 6,750 $\frac{1}{2}$, was paid on Jan. 1, 1891. 1,750 $\frac{1}{2}$ 10s. 7d. has been received for interest on investments, making the net revenue for the year, after payment of London expenses, 916 $\frac{1}{2}$ 18s. 3d. The amount standing to the credit of revenue on Feb. 28, 1891, is 3,751 $\frac{1}{2}$ 16s. 1d., out of which the directors recommend the payment of a dividend of 1s. per share, free of income tax, carrying forward the sum of 1,051 $\frac{1}{2}$ 16s. 1d. to the next account. The shareholders were informed in Dec. that the United States Government had withdrawn from the prosecution of the timber suits which they had brought against the Richmond Co. The expenses incurred by the company in respect of these suits amounted to 2,116 $\frac{1}{2}$ 7s. 10d. which has been paid out of the reserve fund. The directors publish the instructions issued by the United States Government for regulating the cutting of wood from public lands in future, and it is a great pity these instructions were not given before, as much time and expense would thereby have been saved. Since the withdrawal of the timber suits explorations have been carried on in the Richmond Mine, and 2,300 $\frac{1}{2}$ 5s. has been expended thereon, but nothing of importance has been found. At the Williamsburg Mine extensive developments have been made, the shaft is now down 400 ft., and levels are being driven from it. Mr. Probert (whom everybody will be delighted to know is still to the fore) writing on May 25, 1891, says:—"I had hoped to have been able ere this to have announced a good discovery in the Williamsburg, but after running about 20 ft. on a seam of good ore varying from 1 in. to 2 ft. in width in the southerly drift from the new main level, it suddenly cut out. The fissure continues, and the ore may make again further on. The ore was of good grade, some of it assaying as much as 99 ozs. in silver, and 65 per cent. in lead, and seemed to be of a different character from the ore formerly mined at the Williamsburg. I consider the discovery, small though it is, of special interest, as showing that the ground at the depth of 400 ft. and on the true dip of the vein is not barren. Some ore has also been found by raising from the same main level towards the old chambers, and Mr. Morrison reports about 100 tons of low grade now in sight there, with indications of more." The cost of these works is 2,813 $\frac{1}{2}$, which has been charged to the reserve fund. Other mines have been examined with a view to purchase, but Mr. Probert has not yet found any he can recommend. The reserve fund now stands at 42,483 $\frac{1}{2}$ 0s. 2d. The report, which is signed by Mr. Hubert Akers, as secretary, is quite as satisfactory as any shareholder on a consideration of the circumstances could have expected.

LETTERS OF ALLOTMENT for the 7 per cent. preference shares of the Bwlfa and Merthyr Dare Steam Collieries (1891), Limited, have been posted.

HILL'S WATERFALL MEETING.—We have in type a full report of the meeting of this company held to-day, which pressure of space compels us to hold over until next week.

BRITISH MINING INTELLIGENCE.

DEVON GREAT CONSOLS (July 30).—Watson's: In the 172-fm. level east of the engine shaft the lode is 2 ft. wide, containing a little copper and mundic ores. In the 160-fm. level east of the engine shaft the lode is large, 5 ft. wide, and is worth 4 tons of copper ore per fm. In the 160-fm. level west of the engine shaft the lode is 3½ ft. wide, composed of capel, quartz, and a little copper and mundic ores. The stopes throughout the mines continue to turn out their usual quantities of copper and mundic ores.—W. CLEMO.

DRAKEWALLS (July 30).—The sinking of the engine shaft is progressing satisfactorily. 3 ft. 8 ins. has been sunk during the past week, and the ground continues of a favourable character for the production of mineral, consisting of granite, strong capel, with occasional veins of tin. The lode in the 160 driving east has a very promising appearance, and is yielding 4 tons mundic per fm., and saving tin work. In the 160-fm. level driving west the lode is showing signs of an improvement, and is yielding a little saving work, both for mundic and tin. In the 147 driving east the lode is disordered by a small cross-course. The lode in the stope in the back of the 160 west is producing 10 tons mundic per fm., intermixed with tin. No. 2 stope in the back of the 160 west, 9 tons, and No. 3 stope, 7 tons of mundic, and saving work for tin. The stope in the bottom of the 147 east is yielding 14 tons of mundic per fm., with a little tin, and the stope in the back of the 132 west of the cross-course, 2 tons copper and 4 tons mundic per fm. Nothing has been done in the rise in the back of the 160 west during the past week, as we found it necessary to put the men to break mundic to keep the calciners and jiggers going. We shall, however, resume the rise again as soon as we get men.—H. RONDA.

LEADHILLS (July 28).—Brown's Vein: Five men are set to drive the 145-fm. level, now 162 fms. 2 ft. north of Jeffrey's shaft, at 120s. per fm.; vein above 4 ft. wide, charged with very kindly quartz and occasional spots of ore, and an improvement looked for soon. Five to stope above the 145 north of Jeffrey's shaft, at 37s. 6d. per fm.; worth 25 cwt. of ore per fm. Four to stope above the 145 south of Wilson's shaft, at 32s. 6d. per fm.; worth 40 cwt. of ore per fm. Four to stope above the 145 north of Wilson's shaft, at 27s. 6d. per fm.; worth 35 cwt. of ore per fm. Four to No. 1 stope above the 130 north of Jeffrey's shaft, at 45s. per fm.; worth 25 cwt. of ore per fm. Five to No. 2 stope, at 45s. per fm.; worth 30 cwt. of ore per fm. Five to No. 3 stope, at 50s. per fm.; worth 10 cwt. of ore per fm. Four to stope above the 130 south of Wilson's shaft, at 40s. per fm.; worth 20 cwt. of ore per fm. Five to drive the 115-fm. level now 44 fms. 5 ft. north of Jeffrey's shaft, at 115s. per fm.; vein 3 to 4 ft. wide, showing kindly quartz and ore worth 15 cwt. per fm. Five to stope above the 115 north of Jeffrey's shaft, at 45s. per fm.; worth 10 cwt. of ore per fm. Three to drive the 100-fm. level, now 21 fms. north of Jeffrey's shaft, at 105s. per fm.; vein above 4 ft. wide, charged with two strong ribs of quartz, and ore; worth 5 cwt. per fm. Two to stope above the 100 south of Wilson's shaft, at 42s. 6d. per fm.; worth 20 cwt. of ore per fm. Two to drive the 85-fm. level, now 217 fms. 4 ft. north of Jeffrey's shaft, at 120s. per fm.; vein upwards of 3 ft. wide, showing stone and quartz of good character, and sometimes stones of ore, but not to value. Eight to drive the 70-fm. level, now 78 fms. 1 ft. 9 ins. south of Wilson's shaft, at 100s. per fm.; vein about 4 ft. wide, mostly stone with quartz joints, which show improvement, but without ore. Four to No. 1 stope above the 35 south of Flat Rod shaft, at 32s. 6d. per fm.; worth 45 cwt. of ore per fm. Twelve to No. 2 stope, at 50s. per fm.; worth 25 cwt. of ore per fm. Sarrowcole vein: Five to drive Gripp's adit, now 17 fms. 4 ft. north of George's Roust vein, at 105s. per fm.; vein 4½ ft. wide, mixed with nice-looking quartz 24 ins. wide, and ore worth 25 cwt per fm.—T. NEWBIDDING.

PRINCE OF WALES (July 29).—During the past week the men in the 180-fm. level, both east and west, have been driving by the side of the lode; consequently, we have no change in it to report since our last. The lode in the 166 west, being hard and spare for driving in it, these men have also been driving by it in order to effect greater speed in advancing this level. In the cross-cut south the water appears to be issuing with greater force all over the end every foot we advance, which, we think, shows a near approach to the lode. We set another tribute pitch to six men on the Wheal George mundic lode.—S. ROBERTS, J. PROWSE.

ROMAN GRAVELS (July 30).—The 155 north is driven 12 fms. 5 ft., vein in present forebreast being quite 5 ft. wide, producing stones of lead ore. The 155 south-east is driven 12 fms. 4 ft., vein in present forebreast about 3½ ft. wide, very wet, and producing good blende stuff. We expect to cut the whole of the water down to this level from the drirage above very shortly. Another cavity is making its appearance at the 140 south-east, and men have been going forward for some days past on the hanging wall division, and leaving the footwall part of the vein intact; we value the former at 1 ton per fm. and improving. There is a quantity of stone in the centre of the vein, which accounts for the temporary falling off in its value. The 100 south is driven 8 fms. 3 ft. from No. 1 winze; the vein in the forebreast being 5 ft. wide, producing good blende stuff and becoming wetter. The lode in the 125 south is 3 ft. to 4 ft. wide, producing 1 ton of blende to the fm., and saving stuff for lead ore. The two stopes in back of the 140 north average 1½ tons of lead ore to the fm. We shall shortly commence a winze in this level to go down at a point where the vein is worth quite 2 tons per fm. The two stopes in back of the 125 south are worth 1 ton each per fm. The four stopes in back of the 110 south are together producing 4½ tons of lead ore to the fm. The four stopes in back of the 80 south are together worth 5 tons per fm. The two stopes on the east lode are each worth 1 ton per fm. We have sampled 20 tons of blende to-day for sale on Thursday next.—A. WATERS.

SOUTH DARREN (July 30).—The shaft is 56 ft. 6 ins. under the 142, having been deepened 3 ft. this week. The lode continues worth 15 cwt. of silver-lead ore per fm. The 130 end west is worth 12 cwt. of silver-lead ore per fm., not being so good as it was. A water-jet blast has been put to work here, and is giving good ventilation in the end. All work is going on satisfactorily.—J. MITCHELL.

TINDENE (July 28).—We are very pleased to state that in the 33-fm. level east on the north lode, we have been breaking some good work for tin, and it is letting out a quantity of water which has drained the workings in the bottom of the 23-fm. level, where we are sinking a winze, and when holed to the 33-fm. level will lay open a large piece of good tribute ground from which we shall increase our

returns of tin. In the 33-fm. level east of the south lode, it continues the same as for some time past, passing through profitable tin ground. We are pushing down the Tindene shaft as fast as possible to the 43-fm. level, where we hope and expect to lay open a good mine. J. CURTIS, W. STEPHENS.

VAN (July 30).—The ground in the cross-cut towards the south lode at the 150-fm. level continues the same as for some time past; spots of lead ore are visible in the forebreast to-day, and the end is being pushed forward by six men. The cross-cut south from Seaham's winze at the 150-fm. level is now driven 8 fms. 1 ft. across a strong lode the whole distance; the last 9 ft. has yielded saving stuff for blende, and the forebreast is in the same kind of ground. We have a rock drill at work in this end, and hope to find a more productive part of the lode carried contains a mixture of lead and blende ores. In the cross-cut going south behind this end, the lode is without change from last week, the forebreast shows blende with spots of lead. The other points in operation (six stopes) over the 150, 135, 105, 90, and 75-fm. levels are producing on the average 18 cwt. of lead ore per fm.—J. PAULL.

WEARDALE (July 25).—Ore raised for week, 88 tons; ore dressed for week, 95 tons; ore and slag smelted for week, 138 tons; producing 70 tons of pig lead.

WHEAL CREBOR (July 28).—The part of the lode carried in the 156 end driving east of shaft is yielding 4 tons of good quality mundic per fm. We shall increase the number of men driving this end as soon as we can do so. The lode in the end driving west at the 132 on the south part of the lode will yield 3 tons of mundic and a little copper ore per fm. All other points in the mine are the same as reported last week.—P. D. HOLMAN.

WHEAL UNY (July 29).—We are pleased to find that in the cross-cut south at the 244-fm. level we have cut into a lode 18 ft. south of the north branch on which we are driving. The lode for 5 ft. wide is worth 15s. per fm.; lode still to the south of us, and looks healthy for further improvement. If this turns out to our expectations it will make a grand future for Uny. The 230 ends east and west look much the same. The 203 end east and west look better. No other change to note.—J. WHITE, D. H. WILLIAMS.

FOREIGN MINING INTELLIGENCE.

ALMADA AND TIRITO.—Report for the month of June.—Mining—Explorations: Cross-cutting west from 137-ft. level Cruz Verde Mine to explore the 100 lode, 25 ft., on country rock, chiefly porphyry; total length of cross-cut, 41.6 ft. Driving south on 100 lode from the long San José west cross-cut tunnel level, 18.5 ft., on good-looking lode, but unproductive; total length of drift from cross-cut, 60.9 ft. Cross-cutting west at 12-fm. level, north of No. 5 winze, for the 100 lode, total length of cross-cut, 63.5 ft. The 100 lode was found 4 ft. wide, containing from 12 to 18 ins. of ore. Driving north end on 100 lode at 24-fm. level, 23.9 ft., in unproductive ground, showing only occasional stones of ore. The breast is now 57.9 ft. north of the cross-cut, connecting with the main lode a little north of No. 7 winze. Driving south on 100 lode, west wall, 24-fm. level, 19.6 ft., on slightly mineralised ground, not containing ore enough to pay for stoping. Cross-cutting east from main stope over 24-fm. level, in search of parallel branches of ore, 4 ft. Driving south end from stope over 36-fm. level, 100 lode, 5.5 ft.; total explorations, 120.2 ft. Development: Driving north and south from west cross-cut at 12-fm. level, 100 lode, 21.4 ft., on ground worth from 4 to 5 tons of ore per linear fm. Driving south from stope, over 24-fm. level, 100 lode (new shoot), 4 ft. Driving north on 100 lode from surface open-cut, at a point 5,093 north by 5,012 east, 461 ft. above adit level; total drirage, 40 ft.; of which about 25 ft. contain ore enough to pay for stoping; total development, 50.4 ft. Ore extraction: The ore ground stoped out during the month is estimated as follows:—From sides of main stope, 4 cubic fms.; from back of stope north and south of No. 7 winze, 11 cubic fms.; from back of new stope 24, 100 lode (north), 22 cubic fms.; from back of new stope 24, 100 lode (south), 6 cubic fms.; total estimated, 43 cubic fms. Ore reserves: The main stope, the stope in back of 24-fm. level, between Nos. 4 and 5 winzes and the stope in back of 36-fm. level, 100 lode, stand the same as at end of May, no stoping in their backs having been done in June. The stope north and south of No. 7 winze is 87 ft. long, about 12 ft. wide, and only 4 ft. thick, to the 24 level; the ore is very scattered, but of good grade. The ore on the eastern side of this stope has not been worked out above the 24. The stope in back of 24-fm. level, 100 lode (new shoot), is 105 ft. long, of which there are about 40 ft. very thinly mineralised; average height of back, 21 ft. above the 24 fm. level; average width of lode about 5 ft.; worth in ore, about 2 ft., or say, 8 tons per linear fm. There has been a considerable falling off in the productiveness of this lode; this, and the fact of our having found so little ore at the 12 over the stope, and none at the tunnel level, lead me to believe that the ore body does not live much above the present back. We hope it may hold out to a considerable distance downward. The little stope opened up southward on the west wall of the 100 ft. lode at the 24-fm. level is 28 ft. long, 11½ ft. high above the level; worth 8 tons low grade ore per linear fm. Reduction: The ores extracted during the month yielded at the spalling floors: Smelting ores estimated 80 tons; milling ores and smalls estimated 450 tons; the ore crushed amounted to 400 tons, with an average assay value of 32.9 ozs. per ton. The stamped ore chloridised amounted to 403 tons, averaging before roasting 38.5 ozs. per ton, after 33.5 ozs. per ton. The roasted ores served to the leaching vat were 450 tons, with an average assay value of 31.5 ozs. per ton. The tailings discharged to the dump averaged 2.9 ozs. per ton. The precipitate produced was: 2,691 lbs., with an assay value of \$10,395.82. The ores and products smelted were 227 tons, the product from which was 2,457 bars pig lead (78.6 tons); worth in silver \$11,409.28. The refined silver obtained and sold at the Alamos mint, through Mr. Ochaian, was 16 bars, with a total value of \$15,852.64. It should be borne in mind that the quantities of ores passing through the various branches of reduction are only roughly estimated by measurement. We have no adequate weighing apparatuses at hand, nor would the present condition and arrangement of our reduction plant permit of our weighing the ores without a serious extra expenditure in labour. Extreme scarcity of labour and water prevailed throughout the month under report, which caused serious embarrassments both underground and at surface, and prevented us from pushing the works on the proper scale. Financial result: The amount realised for silver

sold at the Alamos mint was \$15,852.64, and we obtained for 1,000 lbs. litharge sold, \$60.00; total receipts, \$15,912.64. The expenditure for the month was \$13,847.89, there being an excess of receipts over expenses amounting to \$2,064.75. The value of argentiferous stocks on hand was increased during the month by \$1,957, which, added to the above, makes the total net profit for the month, \$3,121.75, after charging to revenue account \$1,527.47 expended on underground explorations and development.

ARGENTELLA (July 23).—No. 2 Marine: We have on the foot-wall very strong strings of quartz and pyrites. It has the appearance of a strong masterly lode. We have not made much headway—the season much against us. Quartz reef: Without much change. Quartz and pyrites traverse the forebreast every metre forward. Ogliastrone Valley: The forebreast is still in the same kind of ground. How wide this band is I have no idea. No. 3 Rowe's workings: The eastern end is encouraging; the lode produces ore every metre forward. I have saved the ore from the winze for the mill. The stuff from the forebreast I am tipping on one side, so as to keep it to itself. I am confident in our success forward.—Capt. J. B. ROBERTS.

BALAGHAT-MYSORE (July 7).—Report of work done during the past fortnight:—North engine shaft—600 north: We hope to resume the driving of this level in a day or two. We have been very busy making a good sized plat here, and putting in the road. There is still a nice body of quartz in the end, about 18 ins. wide, worth 2 ozs. 2 dwts. 14 grs. The 500 winze north has been sunk 6 ft.; total depth, 83 ft. 6 ins.; the quartz is now about 8 ins. wide, worth 5 ozs. 4 dwts. 12 grs. The 500 winze south: Sunk 7 ft. 3 ins.; total, 13 ft.; the quartz at this point is small, being only 4 ins. at present, but assaying 5 ozs. 18 dwts. 20 grs. The 500 back stopes—No. 1: Quartz about 18 ins. wide, assaying 1 oz. 4 dwts. 8 grs. The 500 back stopes—No. 2: The quartz averages 1 ft.; value, 4 ozs. 5 dwts. 12 grs. The 500 back stopes—No. 3: Yield quartz of 1 ft. in thickness; assay value, 6 ozs. 5 dwts. 6 grs. The 410 winze north: The quartz is a little wider now, being about 1 ft.; value, 1 oz. 4 dwts. 8 grs. The 410 back stopes: Worth 2 ozs. 2 dwts. 23 grs., carrying quartz of about 1 ft. The 330 back stopes: The quartz is not more than 6 ins. in width; value, 1 oz. 0 dwts. 18 grs. The 270 south: We have not commenced to drive south yet, as we have had to open out the level for a considerable distance. We hope to be driving south almost immediately. The 205 winze north has been sunk 7 ft.; total, 21 ft.; there is a little quartz in the bottom, but not of much value. The 205 stopes north: The quartz here varies from 10 to 14 ins., worth 1 oz. 8 dwts. 14 grs. Haines' shaft is timbered down to the 330-ft. level, and we are now taking out some ground at the south end of the shaft below the 330, and cutting hitches for the timber in the north end. The 500 level: We are blasting out a plat at this part, and as soon as this is finished we shall commence to sink below the 500. New mills: We are proceeding with the erection of the old 10-head battery, which will be placed alongside our present 15-head battery.—A. S. B. OAKLEY.

BRATSBERG.—Report for week ending July 18:—Hoffnung Mine:—No. 2 adit level is worth $\frac{3}{4}$ ton per fm. No. 1 rise is yielding 1 ton per fm., and No. 2 rise $\frac{1}{2}$ ton per fm.; the lode at this latter point has become small. I am pleased to be able to report that No. 3 adit level is still improving, now yielding $\frac{3}{4}$ ton per fm. The rise in the back here is unchanged since last report. No. 4 level is producing good saving stuff, and shows good indications for the future. The rise in the back here is now sufficiently high for the advancing stopes to intersect, hence, we have suspended the lode at this point, being worth $1\frac{1}{2}$ tons per fm. The trial level at Murchison's section is worth 1 ton per fm., and the ore produced is of a very superior quality for this mine. Johannes Mine: The level driving west on Howard lode is yielding fully $\frac{1}{2}$ ton per fm., and the eastern end $\frac{3}{4}$ ton per fm., whilst the rise in the back is producing fully 1 ton per fm. for the width carried. Surface work and remarks: Owing to the delay in the arrival of the C. S. Atkinson we have been hindered rather in the transport of the ores to Strengen, owing to want of bags, and so we have in the meantime been delivering ore to the smelting company. All however, is now in full swing again. The C. S. Atkinson sailed on the 16th inst., and the Edward Arthur has been chartered to load the third cargo the end of this month.—J. D. HOLMAN.

BRATSBERG SMELTING AND REFINING.—Report for week ending July 18:—As reported last week, we expected the mason to arrive on Monday, but he did not put in an appearance before the following day, much to our disgust, but as he appeared to be a smart, clever fellow we set him to work, on his promising to begin at 6 a.m., and work as long as he could see, which promise he has kept, and the result of his work fully bears out his appearance, as he will be finished to-morrow, when we hope to make a start on the smelting on Wednesday morning. In the meantime the Frenchman has arrived, and has been making himself acquainted with the arrangement of the works, the character of our ore, matte, &c. He expresses himself well satisfied with everything, and has no doubt he will succeed from the first in obtaining copper. He says the difficulty we meet with, namely, the cooling of the charge, is the result of detail, or some small technicality, which he can show us at once how to overcome. We are looking forward to the trial with much interest, and will report fully thereon.—T. F. SMITH.

CALLAO BIS (July 6).—Advices from the mine as under:—Mine: Since June 21 the Independiente shaft has been sunk 6 ft.; total distance from surface, 166 ft. Sinking has been slow, owing to the ground being very hard. No. 3 west level: We have holed the raise in the back of this level to the winze above. We shall now drive this level again. No. 2 west level has been driven 36 ft.; distance from shaft, 270 ft.; lode 2 ft. wide, of little value. No. 2 north-east level has been driven 9 ft., from shaft 37 ft.; lode 2 ft. wide, poor. No. 1 north-east winze has been sunk 30 ft.; lode 6 ft. wide, of fair value. No. 2 winze on north south lode has been sunk 8 ft.; total distance, 48 ft.; lode 3 ft. wide, of fair value. Amalgam: From the cleaning of the outside plates, we have already on hand more than 900 ozs. of amalgam. They are to be retorted to-day.

(July 9).—We had on Monday last above 900 ozs. of amalgam, from cleaning of the outside plates only. Our retort being small, we could only retort in a single operation 703 ozs. of amalgam, and the result has been 247 oz. of retorted gold, say, over 35 per cent. We have besides left 355 ozs. of amalgam, so that if the inside battery plates give the same yield as last month. Our next bullion return will come to 800 ozs.

CASTILLON (July 27).—During the past fortnight a number of

our men, who held small farms in this neighbourhood, have been absent gathering in their crops, but, notwithstanding this, we have managed to keep our dressing floors fully supplied with crude ore. To-day, 150 tons blende have been forwarded to St. Giron's railway, towards next shipment, and fair progress is being made with a parcel of lead ore. The values of our stopes, &c., remain much the same as stated in my report of the 13th inst. Our machinery, generally, continues in good order, and is working satisfactorily.—J. EDWARDS.

CHAMPION REEF (July 7).—Fortnightly report. —Mysore section—Carmichael's shaft: Driving north at the 225-ft. level 18 ft. 6 ins.; total length, 70 ft. 3 ins. We have a small branch of quartz in the end which is very regular, and the surrounding rock in the hanging is very favourable and strongly mineralised. A drift north at this level has been started and driven 1 ft. 3 ins.; the rock is very hard and difficult to drive by hand labour. A rock-drill is now at work at this point and no doubt more satisfactory progress will be made. Ribblesdale's shaft: The cross-cut east at 240 ft. has been extended 14 ft. 9 ins.; total length, 29 ft.; the ground has still a good underlie to the west, and we have passed through several small stringers of quartz; the driving of cross-cut will be continued a few feet further until there is a change in the rock. Garland's shaft: Sinking 3 ft.; total depth, 245 ft. 6 ins. Besides this work the men have been engaged cutting for plat. The 240-ft. level: The north drift has been driven 16 ft. 8 ins.; distance from shaft, 36 ft. 8 ins.; the lode is improving at this point, and now carries fully 2 ft. of quartz, assaying 5 dwts. 5 grs. per ton; the lode at this point, no doubt, will continue to improve as the drift is advanced north towards the shoot. The drive of south drift at this level is 13 ft. 4 ins.; total length, 21 ft. The lode has opened to about 2 ft. wide, and carrying a foot of quartz. Dalyell's shaft has been sunk 2 ft. 6 ins.; total depth, 245 ft. The sinking is very slow, and we have a difficulty in getting good men for the work. As soon as convenient we shall discontinue hand labour at this point, and put on a good pare of men with a rock-drill. At the 240-ft. level the north drift has been advanced 11 ft.; total, 51 ft. 10 ins., and the south drift 10 ft. 9 ins.; total length, 44 ft. 3 ins. The lode in the south end has pinched to about 9 ins. of quartz, which assays about 4 dwts. per ton. Coromandel section: At Prospect shaft the 380 ft. drift north has been driven 5 $\frac{1}{2}$ ft. There is a small branch of quartz in the end about 6 ins. wide, which gives a trace of gold. In the 320-ft. level north the drift has been advanced 6 ft. 3 ins., but at present the end is very poor. The winze below this level has been sunk 6 ft. 9 ins. The lode during the last few feet has been rather small, but it is again opening out in the bottom of winze, and showing about 1 ft. of quartz. Driving at the 290-ft. level south, 5 ft. 6 ins.; total length, 174 ft. There is very little change in the lode since last reported, the width of quartz is about 1 $\frac{1}{2}$ ft., which only gives a trace of gold on assay. A cross-cut has been commenced west about 160 ft. south of shaft, which will prove if any portion of the lode is still remaining in the hanging. We have seven rock-drills now at work at the Mysore section, five of which are worked by the native coolies and two by Europeans. General and surface work: Besides the general surface work of the mine, an extra pare of men have been employed sinking a well. The building of stack and winding engine beds at Dalyell's shaft are progressing favourably, and the work in connection with the building of the office and stores is well advanced. Machinery working satisfactorily through the mine, and the health of the camp good.—R. C. JONES.

COLAR CENTRAL (July 7).—New shaft, 200 north, has been driven 9 ft., making a total distance of 17 ft. 6 ins. from the cross-cut. The quartz is now considerably split up and disordered, averaging about 6 ins., and worth 7 dwts. per ton. The 200 south: We have commenced to drive south on the lode. At present the quartz is about 4 ins. only, showing about 5 dwts. to the ton. In both drives there is a very good hanging-wall.—A. S. B. OAKLEY.

—Office note.—A recent telegram announces that the lode in the 200 north is 12 ins. wide, worth 3 dwts. of gold per ton, and in the 200 south, it is 18 ins. wide, worth 9 dwts. of gold per ton.

COLON.—Advices from the mines as follows:—Mr. Russell, who encloses invoice of 1 bar of gold, weight 45.52 ozs. obtained from hand washing, reports that he is at present at Bogota (the capital) with Dr. Iriarte, the company's lawyer, with whom he secured a long interview with the Minister for Home Affairs. Mr. Russell writes that he considers the interview was of a favourable nature, and that he hopes to get a resolution from the Minister revoking the suspension of working the monitors, and a decree from the President defining more clearly the mode of carrying into effect the law on this subject.

COLORADO (July 15).—The manager reports:—Brown Mine—Silver ore tunnel level: Four men drifting and stoping. A strong body of ore has been encountered in the back of Fonia and Co.'s pitch. Rockwell adit level: Six men drifting and stoping; drift driven 199 ft. Last sale gave:—168 $\frac{1}{2}$ ozs. silver per ton, 15 per cent. lead; 106 ozs. silver per ton—two classes. Brown tunnel level: Six men stoping and raising. Last sales gave 512 ozs. silver per ton, 38 per cent. lead; 107 ozs. silver per ton. Mammoth tunnel level: Four men drifting and stoping. Last sale, 71 ozs. and 45 $\frac{1}{2}$ ozs. silver per ton, in two classes. Gunboat lode: Two men stoping. Last sales gave 105 ozs. silver per ton, 31 per cent. lead. Terrible Mine—15th level east: Lode 4 ft. wide. Last sales, 60 $\frac{1}{2}$ ozs. silver per ton; 18 ozs. gold; 32 per cent. lead. 8th level west: Now driven 517 ft.; this drift showing continuous improvement. Last sale, 145 ozs. silver per ton, 11 per cent. lead. 1st level: Four men stoping on a rich vein of ore. Last sale gave 500 ozs. silver per ton, 29 per cent. lead; 172 ozs. silver per ton, 13 per cent. lead—two classes. 2nd level: Six men stoping west of Terrible tunnel. This pitch is very strong. Last sale gave 322 ozs. silver per ton, 21 per cent. lead; 122 ozs. silver per ton. About 18 tons of clean ore have been sold since last report. The mineral veins are showing continued improvement, and larger sales may be expected.

EAGLEHAWK CONSOLIDATED.—Extract from the *Garran-gower Times*, dated June 17: "The Eaglehawk Consolidated Gold Mining Co., Limited. Cross-cut at 650 ft., which is in bluestone, is making water freely, which is an indication of being in close proximity to a reef."

EMERALD MINES OF COLUMBIA.—The manager writes, June 14, as follows:—We have done this week, of the banqueo or level for the trench, 26 metres more, and commenced another 35 metres, meeting on this height with a vein 50 centimetres wide, running from south-west to north-east. I think I shall be able to finish the banqueo during next week, and take the water round that

way the following one. We also have continued lowering the canal at the foot of the Banco, in a length of 84 metres, working in eight steps of 60 centimetres each, in order to see whether this first best vein is getting wider again lower down. The reason for its having got narrower may be that the rock has turned harder again, while 6 metres higher up it used to be much softer and easier to work, where at the time the vein had been able to develop itself.

GYMPIE GREAT EASTERN (June 11).—Fortnightly report :—It is with regret I have to report that all the Glamire and Great Eastern lines of reefs are flooded since the 9th inst. This will occur now in time of floods, if the various companies on these lines do not expend 100%, or so each to put in concrete dams in the point where the flood water breaks into the underground workings. No one can estimate the time it will take to get the water out of the mines. I believe it will take 12 weeks, if not more. There will be no work in the mine until the flood water is bailed out. For the past nine days the cross-cut at the 730-ft. level has been extended 10 ft.; total, 456 ft. from the shaft. The country is about the same as last reported on. The north drive has been extended 7 ft.; total, 102 ft. There is a large body of quartz, with a little gold showing. The south drive has been extended 6 ft.; total, 75 ft. There is a fair body of crushing stuff, but I have seen no gold in it. The stopes over the level going north are all showing fair gold. Those going south the reef is small, but shows a little gold. The drive going south on this reef west of the dyke is in 9 ft.; in about 4 ft. more driving we shall have room to rise for the slate. The 690-ft. level: The stopes going south over this level all show a little gold. We shall wash up to-morrow. All the stone in the shoots on the surface will be crushed. There are 60 men employed—50 at the mine, and 10 at the battery. The winding engine and battery are in good working order.—J. JAMES.

INDIAN CONSOLIDATED (July 4).—Phoenix section: No. 1 level has been extended 8 ft.; ground hard. The lode still maintains its strength and appearance, with rather more quartz than when I last wrote. The stone broken from here in driving is being saved for a trial crushing later on. Tramway level has been advanced 17 ft.; the lode is now quite 5 ft. wide, with a lot of quartz showing. I am getting samples from both here and No. 1 assayed. Stopping A and B: The lode at these points is about 3 ft. thick, mixed rock and quartz of good milling value. C is still 5 ft. thick, and of the same character as before. D: We have filled up here, and are now breaking out over head. E: At present we are only breaking the upper portion of the lode, as there is a good deal of water in the stope, but a rise up from No. 2 is being driven which will drain this, and will enable us to get at the lower and better portion of the reef. F: We now have two contractors working here. The reef continues much the same. G is getting poor and small. Two new points have been started at H and I; the lode here is about 6 ft. thick, and of fair quality. Winze has been sunk 6 ft. during the fortnight, but we have been obliged to stop, as with the hand pump we are unable to keep the water down. The mill was re-started on 2nd after the clean up, and there being ample water now we are working 20 head. Everything going steadily and well.—C. A. PATERSON.

—(July 7).—Colar section: No. 1 new shaft was sunk 5 ft. on the underlie, and then suspended, as it was then deemed advisable to sink it deeper vertical; the men are now making preparations to lower the pump, and we shall commence sinking to-morrow. No. 2 new shaft has been sunk 20 ft. 6 ins., making a total of 40 ft. on the underlie; the lode is 1 ft. 6 ins. wide, composed of quartz and schist of low grade. The 210 west cross-cut has been driven 17 ft. 9 ins. for the week, making a total distance of 36 ft. 9 ins.; this is suspended, and the drill put in No. 2 shaft. Main shaft: The 240 main west cross-cut has been driven 20 ft. 3 ins.; total distance, 411 ft. 9 ins. There is no change to report at this place. The 240: No. 2 west cross-cut has been driven 15 ft. 6 ins.; total distance, 45 ft. 6 ins.; we consider this has been driven a sufficient distance west, and have now put this drill to cross-cut east.—M. STEPHENS.

LEEDS COPPER (July 16).—Kent's shaft: The 20-fm. level driving west of shaft has again improved, and producing better quality ore; vein 3 ft. wide, producing 2 tons 20 per cent. ore per fm. No. 1 stope bottom of level I have suspended owing to the vein becoming too small to work. No. 2 stope in the bottom west is continuing the same as it has been for a long time; vein large and producing 2½ tons 20 per cent. ore per fm. No. 1 stope in the back of the 20 west is also looking better; vein averaging 4 ft. wide, and producing 2 tons 15 per cent. ore per fm. No. 2 stope in the back of the 20 level is as reported last week, producing 1½ tons 15 per cent. ore per fm. The 15-fm. level driving west of shaft is in bed vein 3 ft. wide, producing 1½ tons 15 per cent. ore per fm. No. 1 stope in the back of the 15-fm. level producing 1½ tons 20 per cent. ore per fm. No. 2 stope in the back of this level is producing 2 tons 15 per cent. ore per fm. No. 3 stope in the back of this level is producing 1½ tons 15 per cent. ore per fm. McGee's shaft: The drive west of this shaft has had a considerable change, having struck bed vein as well as vein quartz; as a whole the drive looks well, and producing 1½ tons 20 per cent. ore per fm. The stope here is poor. Surface: We have now all the concentrating plant in position and are pushing on towards completion.—T. R. DAVEY.

LOMA.—The secretary reports advices from the mines as follows :—Ditch contract: Mr. Welton (the contractor) writes: I have now secured the services of Mr. Edward S. Jones, who has completed his work on the Rica ditch, and of Mr. F. Gosling, a surveyor, who has had much practice in grading railways at home. With these gentlemen under my personal supervision the board may rely upon the work being quickly carried out. By next mail I confidently expect to be able to report 3 miles of the smaller cutting complete. The mines: Mr. Prender (the company's superintendent) writes: We have had some large slides of bank, but no harm done to pipe or monitor. There is now in reach of monitor about enough gravel for 300 hours' washing; this we are now washing in, and, when finished, will start to clean down ground sluice. As we have a considerable area of bedrock to scrape down, I expect our clean down will take three weeks to carry out. After clean up we must get in sluice, and move all mine pipe. Jimenez reservoir is now completed, and as soon as waste gate and flumes are set in, we will fill it.

MONTE DEL ORO (July 21).—Fortnightly report.—Taylor's engine shaft: Capital speed was made during the past fortnight in driving the 316-ft. level north of this shaft, since 26½ ft. were driven; for this distance the lode has proved small, and it is composed of 3 or 4 ins. of flooan and slate with occasional stones of quartz, one

sample from which yielded a trace, and a second no gold. Good progress is also made in extending the same level south of shaft, 27 ft. being driven in the two weeks. In this end the lode is composed of about 6 ins. of quartz, and a sample taken from it shows a trace of gold on assay. Shaft No. 6: Owing to insufficient ventilation very little speed can be made in driving the 244-ft. level north of this shaft, the total length of which is now 547½ ft., showing an advance of 10 ft. in the fortnight; the lode carries 6 ins. to 8 ins. of quartz, from which two samples were obtained, assaying respectively 3 dwts. 6 grs. and 1 dwt. 7 grs. of gold per ton. Towards winze No. 11 from the back of this level the miners have risen a further 17½ ft., making the total rise 36½ ft., composed of quartz; the lode averages from 2½ ft. to 3 ft. in width, and both the samples taken assayed 15 grs. of gold per ton. From the 186-ft. level north of the shaft a cross-cut 28½ ft. long has been driven west, communicating with Low's engine shaft. Low's engine shaft: The total depth of this shaft from surface is 110½ ft., of which 13 ft. were sunk in the two weeks. Having now reached the required depth for the 186-ft. level, the men are engaged in squaring down the shaft and completing the timbering to the bottom.—J. ROBERTS.

MOSMAN.—Mine manager's report for month ending June 13 :—North Australian Mine: This mine continues to yield stone of very fair quality, in limited quantity only; the reef in the various stopes varies from 1 in. to 12 ins. in thickness, the rock on either side being very hard. We are doing no work except stoping. The quantity of stone raised since last report is about 70 tons; total raised for crushing, 170 tons. A portion of this has been reduced and looks, so far, for about 3 ozs. per ton. We have experienced some heavy wet during the past four weeks, which has had the effect of greatly increasing the flow of water into the mine, so much so that the pumps for several days could not be stopped for a minute; the quantity is diminishing again now. Eastward Ho! Mine: The 1,100-ft. level winze has been sunk 6 ft., by two men; total depth, 32 ft.; the reef is about 12 ins. thick, of poor quality. Wyndham Mine: During four weeks the underlie shaft has been sunk 32 ft.; total depth, 819 ft. The shaft is now being sunk a grade of 48 degs., and when connected with the 1,000-ft. level will be 1,035 from the surface. The 550-ft. level north has been extended a further distance of 21 ft.; total length from shaft, 125 ft. The reef during the past few days has greatly improved both in size and quality; there is now fully 18 ft. of stone carrying fair looking mineral. The 550-ft. level south has been driven a further distance of 18 ft.; total from shaft, 117 ft. The reef continues small, being only 6 ins. in thickness, of about 1 oz. per ton. The 400-ft. level south has been extended 5 ft.; total from shaft, 83 ft.; the reef is 6 ins. in thickness. From the stopes some fair quality stone is being raised, but the bulk is poor. During four weeks 130 tons of quartz have been raised; total in the paddock 240 tons, which I estimate will yield something over 1 oz. per ton. The mill has been engaged on stone from outside companies during past three weeks, and the usual four months overhaul lasted nearly a week. The stone from the North Australian Mine is now going through. The machinery is in fair order.

NEW CALIFORNIA.—Mine report for first half of July :—The 2,100 and 2,200-ft. levels east and west of shaft: We have still to report the 2,100 and 2,200-ft. levels as under water, despite all our efforts to gain on it; neither have we in the past fortnight been able to make any advance in the 2,000 west from the fact of the water having reached the plats at that level. At this, time, however, we can see our way to getting down to the bottom levels before the end of the month, which will put a better complexion on affairs. The 2,000-ft. level west intermediate drift—Stopes east of No. 2 winze and rise: The intermediate drift to prove up the ground between the 1,900 and 2,000-ft. levels is going through very promising ground. The lode is 2 ft. wide in the back of the drift, and in the last few feet advance the footwall has straightened up considerably, a change which we have been looking for for some time, and which should lead to pay in the next few days. The lode in the stopes east of this place is 2½ ft. wide, but of rather low grade. The rise is going up to connect with the intermediate drift. The 1,500-ft. level west, south vein, winze at cross-cut, and the 1,500-ft. level west, south vein stopes and winze at east of junction: The winzes commenced on this spur have opened up some good ore, and stoping has been started on the bottoms.—F. RICKARD.

NEW DEVALA-MOYAR (July 6).—Main shaft: We have sunk here 4 ft.; total, 39 ft. We are still in soft ground, but we have been stopped by water. We are making arrangements to get the water pumped out. Rainfall for week, 15.46 ins. No. 1 winze: This point has been sunk 3½ ft.; the reef is turning over and dipping vertically, but it is not of any value yet. We are carrying the hanging-wall with us. The 186-ft. level—Drive west: This level has been driven 3 ft.; total, 9 ft.; reef as yet poor. Crushing: We have cleaned-up, and obtained 133 ozs. sponge gold from 670 tons quartz. I found in the bars 1 oz. of coarse gold, more like nuggets than anything else. I also obtained 3 ozs. 8 dwts. sponge gold from the pans; total, 136 ozs. 8 dwts. Crushing has been started again.—R. B. JOHNSTON.

NEW EBERHARDT (July 12).—The mine manager reports as follows :—Eberhardt: I beg to hand you number of feet made at the several different points up to the 10th inst. Drift south from top of No. 2 upraise advanced for the week 4 ft.; total feet since resuming work, 7 ft.; total length to date, 20 ft. Material passed through quartz, lime and spar; the general appearance of the ground shows favourable for ore. Drift north from top of No. 2 upraise advanced 4 ft.; total length, 4 ft. The material met with in this drift is much the same as that found in driving south, but carrying a little more quartz. Cross-cut west on tunnel level advanced 8 ft.; total, 8 ft. The face of cross-cut is in hard lime; this is being run to connect with winze for air. Cross-cut west advanced for week 6 ft.; total length, 9 ft. The material met with in this cross-cut has been broken lime of a dark grey colour, such as is often found near ore, with small stringers of quartz and spar running through the rock.

NEW GOLD HILL (July 11).—I am in receipt of your favour of June 27, and await further instructions. Winze: I shall not mail this letter until Tuesday morning, as I am expecting something important to report from the winze. As reported each week it has been growing poorer, and I have expressed an opinion that we were passing through the shoot of ore. But there are chances that I am mistaken, as the ore has improved wonderfully in the last 3 ft. of sinking, both in size and quality. In fact, it has run as high as 1 oz. per ton. I am going to be cautious about reporting this, as it may be only the fog end of the shoot we are passing through, in which case

it would be misleading to consider it of much value on account of the limited amount of ore it would yield. However, this is very encouraging, and, if no more, indicates that we may look for good ore in the 300-ft. level beyond the winze. We are down 59 ft. below the 160-ft. level, having sunk 4 ft. for the week. The vein is 3 ft. in width at this point, and well mineralised. Ore report: Ore on surface, July 4, 171 tons; mined from winze, week ending July 11, 10 tons; total ore on surface, July 11, 181 tons.—R. EAMES, jun.

OOREGUM (July 7).—Fortnightly report:—We beg to hand you the mine report for fortnight to date. Wallroth's shaft: Sinking below the 360-ft. levels was commenced on the 1st inst.; the lode is 5 ft. wide. The ground will be measured, and a sample taken and reported in the next. We have completed the plat at the 360-ft. levels, and the timbermen are now engaged laying skip road below the 280-ft. level. The 360-ft. level south advanced 10 ft. 6 ins.; total, 66 ft. 6 ins.; lode 2 ft. 6 ins. wide; value, 5 ozs. 17 dwts. 18 grs. per ton. The 360-ft. level north advanced 3 ft. 1 in.; total, 30 ft. 9 ins.; lode 2 ft. wide; value, 2 ozs. 14 dwts. 10 grs. per ton. The 280-ft. level south advanced 21 ft. 4 ins.; total, 675 ft.; lode 4 ft. wide; value, 2 ozs. 14 dwts. 10 grs. per ton. No. 1 winze, 280-ft. level south, sunk 8 ins.; total, 52 ft.; lode 1 ft. 6 ins. wide; value, 4 ozs. 18 dwts. per ton. No. 2 winze, 280-ft. level north, sunk 4 ft. 2 ins.; total, 45 ft. 2 ins.; lode 9 ins.; value, 1 oz. 12 dwts. 16 grs. per ton. No. 3 winze, same level, sunk 4 ft. 7 ins.; total, 58 ft.; lode 6 ins. wide; value, 5 dwts. 10 grs. per ton. The 215-ft. level north advanced 2 ft. 6 ins.; total, 81 ft. 3 ins.; lode 1 ft. 3 ins. wide, worth 4 ozs. 8 dwts. 2 grs. per ton. Low's shaft: Sunk 1 ft. 8 ins.; total below the 350-ft. level 19 ft. 4 ins. All three Englishmen employed in sinking this shaft have been, and still are, ill and under medical treatment. The 350-ft. level south advanced 17 ft. 6 ins.; total, 183 ft. 2 ins.; lode still pinched. Winze in bottom this level sunk 2 ft. 10 ins.; total, 7 ft. 4 ins.; lode 3 ft. wide; value, 1 oz. 10 dwts. 21 grs. per ton. The 350-ft. level north has been driven 2 ft.; total, 81 ft. We are now driving on the cross-course to pick up the lode, which has been heaved about 40 ft. to the east. Winze in bottom this level sunk 3 ft.; total, 11 ft. 6 ins.; lode 2 ft. 6 ins. wide; value, 3 ozs. 3 dwts. 3 grs. per ton. Winze in bottom 270-ft. level north, cleaned-up and sunk 1 ft.; total, 43 ft. 6 ins.; lode 1 ft. 3 ins.; value, 10 dwts. 21 grs. per ton. Winze 270-ft. level south sunk 4 ft. 8 ins.; lode 1 ft. 3 ins. wide; value, 8 dwts. 17 grs. per ton. The 200-ft. level south advanced 4 ft.; total from cross-cut, 28 ft. 4 ins.; there is a branch of quartz in present end about 6 ins. wide. Probyn's shaft sunk to end of month 6 ft.; total below 450-ft. level, 115 ft.; lode 5 ft. wide; value, 1 oz. 1 dwt. 19 grs. per ton. On the 1st inst. we commenced the 550-ft. levels north and south, which will be measured and reported in the next report. Rise in back 450-ft. level north, 8 ft. 6 ins. risen; total, 20 ft.; lode 4 ft. 6 ins. wide, assaying 3 ozs. 5 dwts. 8 grs. per ton. The 450-ft. level south advanced 27 ft. 4 ins.; total, 275 ft. 11 ins.; lode 3 ft. wide; value, 2 ozs. 5 dwts. 17 grs. per ton. No. 1 winze, this level, sunk 13 ft. 6 ins.; total, 28 ft. 6 ins.; lode 6 ft. wide; value, 2 ozs. 3 dwts. 13 grs. per ton. No. 2 winze, same level, sunk 3 ft. 6 ins.; total, 13 ft. 6 ins.; lode 3 ft. 6 ins. wide; value, 4 ozs. 10 dwts. 18 grs. per ton. No. 2 winze, 366-ft. level south, sunk 6 ft. 4 ins.; total, 30 ft. 6 ins.; lode 1 ft. wide; value, 1 oz. 12 dwts. 16 grs. per ton. No. 3 winze, same level, commenced and sunk 2 ft.; lode 3 ft. 6 ins. wide; value, 1 oz. 11 dwts. 14 grs. per ton. The 300-ft. level south advanced 4 ft. 6 ins.; total, 292 ft. 2 ins.; lode 1 ft. wide; value, 15 dwts. 6 grs. per ton. Stopes: Wallroth's shaft: Back 280-ft. level south, cut 12 fms.; lode standing averages 2 ft. 6 ins. wide; average assays, 1 oz. 7 dwts. 5 grs. per ton. The 215-ft. level north, cut 8 fms.; lode standing averages 2 ft. wide; average value, 5 ozs. 3 dwts. 10 grs. per ton. The 215-ft. level south, cut 10 fms.; lode standing averages 1 ft. 6 ins. wide; average assays, 1 oz. 4 dwts. per ton. Low's shaft, back 350-ft. level, cut 8 fms.; lode standing 1 ft. 6 ins. wide, value, 2 ozs. 14 dwts. 10 grs. per ton. The 270-ft. level south, cut 7 fms.; lode, 1 ft. 6 ins. wide; value, 5 dwts. 10 grs. per ton. Suspended. Bottom of 200 south, cut 6 fms.; lode, 3 ft. wide; value, 13 dwts. 6 grs. per ton. Probyn's shaft: Back 366-ft. level, cut 1 fm.; lode, 1 ft. 6 ins. wide; value, 2 ozs. 14 dwts. 10 grs. per ton. The 300-ft. level south, cut 18 fms.; lode standing averages 4 ft. 6 ins. wide; average value, 2 ozs. 19 dwts. 21 grs. per ton. The 230-ft. level south, cut 10 fms.; lode standing averages 2 ft. 6 ins. wide; average value, 2 ozs. 4 dwts. 22 grs. per ton. The 166-ft. level south, cut 6 fms.; lode, 4 ft. wide; value, 1 oz. 1 dwt. 19 grs. per ton. Surface: Nearly all the parts of the engine for the tailings machinery have been delivered. The loadings for same are completed, and the six pans and three settlers already on the mine will soon be in position. Within three months from this date we hope to have the above at work, the remaining 12 pans and six settlers now in transit will then be erected. The excavations for the new mill are nearly completed. Our return for June was 2,902 ozs. of gold from 1,354 tons of quartz. Health: We have still a considerable amount of sickness in the camp; four Europeans in hospital.

PACHUCA (July 10).—I am pleased to inform you that last night in the west drift we struck a branch of ore 1 ft. wide, and from its appearance the branch seems to be widening as the drift advances, although as yet I cannot be sure of this. I have just assayed a sample of 100 lbs. from the drift with the following result:—No. 1 first-class, 50 ozs. per 3,000 lbs.; No. 2, second-class, 24 ozs. per 3,000 lbs. We are saving out this ore, and shall keep you posted as to developments. Am going to mine again at once, and stay all night. The ore strongly resembles that at Santa Gertrudis.—BAWDEN.

RUBY.—The chief engineer at the Ruby Mines reports that owing to the heavy rain very little mining work has been done during the past month. The mines in the Mogok Valley are closed for the present, but as soon as the weather improves they will be opened out again on a very much larger scale. Meanwhile, excavation in the Pingtoun quarries is being energetically carried on.

YURUARI.—The secretary advises receipt of the mail from the mines, dated Chile, July 10. In it Mr. Pryor encloses assays taken at the various points where development operations were proceeding. These show extraordinary variations in the lode, say from 2 dwts. up to 2½ ozs. per ton. Capt. Rogers in the mine report, says: The water shaft has not been sunk since my last report, awaiting communication being established between No. 9 Cenicero, and No. 6 east water shaft, so that we can get rid of the water. No. 6 drift has been driven 32 ft. during June, and the west drift 42½ ft. Here the quartz had improved, the lode being now 2 ft. wide. No. 5 drift has been driven 32 ft., the lode being 2½ ft. wide. This and No. 6 west are the most favourable points at present, and, taken in conjunction with the

further sinking of the water shaft, I fully anticipate that the lodes will improve, judging from all indications. No. 9 drift Cenicero has been driven only 13 ft. as the air here is now very bad. There still remains about 35 ft. to complete the connection." Mr. Pryor says that he expects this will be completed by the end of the month, when more vigorous operations can be carried on, and stoping and crushing be resumed.

REPORTS OF MEETINGS.

DON PEDRO GOLD MINING CO., LIMITED.

DIRECTORS PRESENT ACCOUNTS AND GIVE A GRATIFYING STATEMENT AS TO THE POSITION OF THE WORKS—A REASSURING REPORT IS READ, CONFIRMED BY A TELEGRAM—MR. TOUZEAU AGAIN AT HIS POST.

AN extraordinary general meeting was held at the Great Eastern Hotel, Liverpool Street, E.C., yesterday, to receive the balance-sheet and mining account.

Mr. F. D. Dixon-Hartland, F.R.G.S., J.P., M.P.

(chairman of the company), presided.

Mr. JOHN E. DAWSON (secretary) read the notice of meeting.

ACCOUNTS.

The CHAIRMAN: Gentlemen, this meeting, as you are aware, is called in accordance with our pledge that the accounts should be presented as soon as we possibly could get them, and those accounts, as you notice, are for two years. We were very sorry we were unable to get them before, but we had not the management at the mine that we could desire, and the manager did not get them up in the way we expected. In fact, he eventually left us, almost without notice, to take another appointment, and therefore, we have only just been able to get the accounts presented to you to-day. As far as we can see they are perfectly satisfactory, and such as we have no hesitation in presenting to our shareholders. You will find there has been no waste—all the money having been properly and rigorously spent on the property, and for the good of the company.

IMPORTANT SAVING.

There is no cloud without its silver lining, and I think I may congratulate you upon this, that if our debts had been paid off properly by the manager when due we should have had to pay them at about 25 per cent., or ¼ more. The exchange has gone down so much in Brazil, that at the present moment we are able to pay our debts with 25 per cent. less English money than we should have done 12 months ago. Therefore, we, as a company, obtain a substantial benefit. I dare say you will expect me to say a few words as to what has taken place since the last meeting, and I am glad to say that the directors can again meet you with smiling faces. We have done everything we can to push matters forward since the last meeting. We were

MOST GENEROUSLY MET BY THE SHAREHOLDERS,

who took 23,000 of the 25,000 shares we proposed to allot to them at par, and that is sufficient to see us safely through, and we do not anticipate that we shall want any more money from the shareholders. Mr. Touzeau, who did his work so wonderfully well, as we told you when you met him at the last meeting, and who brought us the success we were able to chronicle on that occasion, has gone out to Brazil, we having made a fresh arrangement with him, and he left the beginning of this month for the mine. We have received a telegram from him, which I will read presently, to say he has arrived there, and we have not the slightest doubt that his work will be as satisfactory in the future as it has been in the past. The last mining report you received in the circular. The position of affairs up to the time the circular was sent out is therefore known to you, and all we have to add at the present time is from a letter received from the mine manager, which came July 27, and is dated June 30, and also the telegram before referred to from Mr. Touzeau.

WORK NOW IN PROGRESS.

The principal part of the mining manager's letter is as follows, and what I read will be the most important points:—"The new drive from the 50-fm. plat: This was started on June 11 to be driven to strike the line or footwall of shaft, and then rise to meet the shaft with all possible speed. As it is most important this should be accomplished without delay, you will see by the sketch that we have driven 3 fms. 3 ft., leaving a total still to be driven of 7 fms. 2 ft. This drive is letting down the water freely from the face of the shaft. The exact distance we have to excavate the shaft is 7 fms. 5 ft., which we hope to accomplish in a short time. When complete the tramcar will go from surface direct to the rich deposits of gold, and when loaded will be sent to the surface without any dumping whatever. No. 4 drive has been advanced 6 ft.; the lode remains of a high standard. The 50-fm. cross-cut has been advanced 7 ft. in a mass of mineral. The lode is improving as we extend east. More rough dark gold samples are taken as we proceed." As to the telegram from Mr. Touzeau—he was asked by us to report his feelings with regard to the mine when he arrived—whether they were exactly the same as when he was last there. This telegram arrived yesterday, and is dated Marianna, July 28, 1891:—

"Quite satisfied. Great progress has been made in the mine, also with surface works. 50-fm. cross-cut still continues in very rich ore. The former sampling of the lode amply maintained." I think that letter and that telegram are most satisfactory. In dealing with Mr. Touzeau you are dealing with a man whose character you can depend upon, and who will only send you reports on which you can place reliance. We have an

IMPLICIT BELIEF IN WHAT MR. TOUZEAU HAS SAID,

and we still have the same feeling of confidence in the future of the mine that we had at the last meeting. We hope before we meet you

again we shall be having gold home in considerable quantities. I now beg to move, "That the statement of accounts presented to this meeting be received and adopted." (Cheers.)

A DIRECTOR'S OPINION OF THE PROPERTY.

Mr. MORGAN LLOYD (director): Mr. Chairman and Gentlemen, I am very happy to second the motion made by your chairman. I have watched the progress of the mine throughout, and many a time I felt very doubtful as to ultimate success, but ever since I saw Mr. Touzeau on his return I have been fully satisfied that all we heard with regard to the mine is more than realised by actual experience. There is nothing I can see now to prevent the mine becoming a very great success, because all that is required to be done is simply to put up the reduction works, finish the Gordon shaft so as to have access to the original lodes underneath, and if that is done and the sampling is that which is represented by Mr. Touzeau, which I for one thoroughly believe I should think the future of the mine will be as successful as its past has ever been. Experimental trials have been made on the north side of the mountain, not in the Maquine Mine, but on the grounds belonging to the company, and a considerable amount of gold has been found. Whether that will prove as grand a success as the Maquine Mine is more than we can tell you at the present, but I believe I am not mistaken in the reading of a report which came in lately, that about 100 ozs. of gold has been raised from the north side, which is a new place altogether. Under these circumstances I have no doubt as to the future. I have much pleasure in seconding the resolution.

QUESTIONS.

Mr. DASHWOOD: You mention here there are certain calls in arrear, 5,500*l*. I presume they have been paid up by this time, as the accounts are nearly a year old?

The CHAIRMAN: Accounts have been issued which have been disputed, but there is no loss to the company upon it.

Mr. DASHWOOD: You mention here 12,825*l*. debentures outstanding, can you tell us the amount outstanding now?

The CHAIRMAN: 18,250*l*. The whole of those have the right of conversion to shares.

A SHAREHOLDER: Have any debentures been issued since the C debentures?

The CHAIRMAN: No.

A SHAREHOLDER: I notice this balance sheet only comes up to Sept. 30, 1890, so that the accounts are ten months old. I should like you to give us some idea of the expenditure during the last ten months, because we notice a balance from mining account 53,805*l*. That only includes the expenditure at the mine up to Sept. 30, 1890.

The CHAIRMAN: We shall try and get the accounts for the current year ready by Jan., now that we have got a new manager. The expenses are about from 700*l*. to 800*l*. a month.

The SHAREHOLDER: Would you mind stating what funds we have in hand to meet current expenses?

The CHAIRMAN said after the whole of the machinery had been paid for, and everything that had been ordered, they would still have 2,650*l*. left without making any call.

A SHAREHOLDER asked what proportion of the 23,000 shares issued had been paid in full.

The CHAIRMAN: As near as can be 10,000 are paid up in full, leaving 13,513 to be paid up if necessary.

A SHAREHOLDER asked whether the item of calls in arrear represented shares forfeited.

The CHAIRMAN: Yes, they are forfeited.

The motion was then put to the meeting and carried unanimously.

THE GORDON SHAFT.

A SHAREHOLDER: Can you tell us what time the Gordon shaft will be completed.

Mr. JOHN E. DAWSON (secretary) said the last report stated they had practically 8 fms. to sink. They had gone down 2 fms. below the 40-fm. level. That was dated in June and they were down now probably another 3 fms.

The CHAIRMAN: We hope to be getting gold out in considerable quantities by Christmas.

A SHAREHOLDER asked whether the machinery that was going out was to be driven by water or steam.

The CHAIRMAN: By water. As we mentioned at the last meeting Mr. Dawson in connection with Mr. Touzeau had introduced a system by which the

WATER COULD BE UTILISED

in a different way to what it was before. There are other means of increasing the power if necessary.

A SHAREHOLDER: How far are we from any traffic by railway?

The SECRETARY: 20 miles.

A SHAREHOLDER: When do you intend to apply for an official quotation to the Stock Exchange?

The CHAIRMAN: We have been waiting for the issue of the full number of shares. If the shareholders wish a quotation for a certain number we can apply for it, but we are bound to give the number of shares.

GOOD ADVICE.

The SHAREHOLDER: We cannot sell our shares without a quotation.

The CHAIRMAN: No; and I advise you not to do so.

In answer to another question,

The CHAIRMAN said the shareholders had the right up to Dec. 31 of paying up in full for their shares.

A SHAREHOLDER: I think you stated at the last meeting that you had increased your shares by 1,500. Is that so, for they do not appear on the register.

The CHAIRMAN: I have increased my holding to that amount.

Major COTTON suggested the names of the directors should appear on the report.

The CHAIRMAN said the names had always appeared on the directors' reports, but this was merely a statement of accounts.

Mr. MORGAN LLOYD, in answer to a question, said they were now working at Gordon's shaft, from above and below which would, of course, make considerable difference in the rate of progress.

On the motion of Mr. KEMPSON, seconded by Major DALBY, a vote of thanks was passed to the chairman and directors for their attention to the affairs of the company.

The proceedings then closed.

WELFORD AND SONS, LIMITED.

THE 20 PER CENT. DIVIDEND IS MAINTAINED.

The fifth annual general meeting was held yesterday at the Cannon Street Hotel.

Mr. F. H. Fowler

(chairman of the company) presided.

Mr. H. TROTMAN (the secretary) read the notice calling the meeting.

The CHAIRMAN said the report was of so clear and of so satisfactory a character that it hardly called for any remarks from him, and he did not know that he could say much to add to the clearness of the affairs that were placed before them. The bare facts were that during the last 12 months they had increased their surplus for the purposes of distribution amongst the shareholders from 25,410*l*. to 32,649*l*. (Cheers.) These naked figures were better, he thought, than any speech he could make to them if he talked till midnight. This was satisfactory, because it showed to the directors that during the past year the extensions they had made in the business had been the right thing to do, and it also showed that the prosperity of the company year by year for the last four years, which had now culminated in this fifth anniversary, had continued and increased. The directors had paid the shareholders during the past year an *ad interim* dividend—which they had received—and the balance now left available was 19,252*l*., which had to be divided amongst them, and the directors thought—he knew, of course, that they might, if they had chosen, paid a little larger dividend—the directors thought that the best plan to pursue was what they had done. (Hear, hear.)

A GOOD DIVIDEND.

They had a large, respectable and unprecedented dividend pretty well as things now went, and he considered that it was wise to take what they had got, and not to want more and to weaken themselves by grasping at too much. (Hear, hear.) Therefore, the directors were satisfied to declare to the shareholders a dividend of 20 per cent. (Cheers.) They put by to the reserve fund a further 1,000*l*., and that would increase their reserves to 5,000*l*., and they carried forward a much larger balance than they did last year, namely, 2,252*l*. Doubtless this was all the story that it was the duty of the directors to tell the shareholders and to ask them to approve, and he did not know that he could add anything more to it, beyond saying that the board congratulated the shareholders most sincerely that their efforts and those of the staff by which they were surrounded, and the manner in which they did their business, and the character of the produce which they gave to their customers, was gaining the confidence of the public, and they were thoroughly and well supported. (Cheers.) As to their buildings they had found it necessary to go in for some extension for the completion of their stabling, and to give more accommodation at their chief dairy, but there had unfortunately been a strike amongst the carpenters, and the works were now *in statu quo*, and had been for the last three or four months. He hoped there would shortly be an end to this unfortunate strike, and that the buildings would ere long be finished, and that they would have increased facilities for the extension of their business and a better amount of accommodation for their *employés*. (Cheers.) He concluded with the formal resolution for the adoption of the report and statement of accounts.

Mr. ARTHUR TOOTH seconded the motion.

DISCUSSION.

Mr. JACKSON supported the resolution, and congratulated the board upon being able to present such a report as they did.

The motion was carried.

The CHAIRMAN moved the re-election of Mr. F. R. Welford, who was a very valuable director.

Mr. GLENN proposed, and Mr. ARTHUR TOOTH seconded the motion, which was carried.

Mr. GLENN proposed the re-election of Messrs. Welton, Jones and Co., as auditors of the company.

Mr. FISHER seconded the motion, which was carried.

A SHAREHOLDER: Are many of the shareholders customers of the company?

The CHAIRMAN: A great many.

The SHAREHOLDER: I should urge that they all be requested to become customers.

Mr. JOHN WELFORD (managing director): We shall be very pleased to take names and addresses, and to call.

A SHAREHOLDER asked what was the area over which the company's operations extended.

The CHAIRMAN, in reply, said that they had a very wide area indeed, and it was almost impossible for a customer to move from one part of London to another without them still being able to supply him. They had the network all round the City; they extended right up to Hampstead, and they had a vast field in the West End. They had Bond Street, and they

NUMBERED AMONGST THEIR CUSTOMERS THE ROYAL FAMILY, and the connections of the Royal Family.

Mr. FISHER moved a cordial

VOTE OF THANKS

to the chairman and directors for the able manner in which the business has been conducted during the past year.

Mr. TOOTH seconded the motion, which was carried.

The CHAIRMAN replied for himself and colleagues, and said that they took a great deal of interest in the welfare of this company, and as to Mr. John Welford (their managing director) he was indefatigable in the interests of the company, working morning, noon, and night, and he, therefore, would like to propose a special vote of thanks to him for the services that he had rendered.

Mr. TOOTH seconded the motion, which was carried.

Mr. JOHN WELFORD replied to the vote of thanks that had been passed to him, and stated that he would devote his efforts in the future as he had done in the past to developing the business of the company.

THOMAS THOMPSON,

STOCK AND SHARE DEALER

ESTABLISHED 1862.

8½, ANGEL COURT, LONDON, E.C.,
And MINING EXCHANGE, LONDON.

Bankers:—THE CITY BANK, LIMITED, and METROPOLITAN
and BIRMINGHAM BANK, LIMITED.

INVESTORS in all classes of Stocks and Shares should read
Mr. THOS. THOMPSON'S MINING AND INVESTMENT CIRCULAR,
free on Application.

Shares sold at Special Prices for forward delivery (One,
Two or Three Months) on deposit of 20 per cent.

Orders by Letter or Telegram promptly attended to.

Telegraphic Address:—"REMEMBRANCE," LONDON.

NOTE ADVANTAGES WE OFFER TO INVESTORS AND SPECULATORS.

LOCKWOOD, WHITLARK AND CO.,

5, THROGMORTON AVENUE, LONDON, E.C.

We make Mines a special study, and invite correspondence, whether
business results or not. We can always give reliable information.

We open any number of all classes of Mining Shares at close
market price of the day on 10 per cent. deposit, and carry them over
as long as clients wish at low contango rates.

We close speculative accounts at any time, and pay profits instantly,
irrespective of account day. We sell shares at current prices for forward
delivery at one, two, or three months on 15 per cent. deposit.
We are members of the Mining Exchange, and subject to the rules and
regulations of that institution.

Send for our prices before dealing elsewhere.

Options at low rates for account, one, two, or three months in
Mining, Land, and Miscellaneous Shares.

We deal in every description of Miscellaneous Shares.

We publish a South African Share List daily at 4.15 p.m., containing
useful information as to claims held, dividends paid, &c., post free.

Telegraphic Address: "PERSONIFY," LONDON.

NOTICE TO READERS.

Replies to Annual Subscribers will be sent by wire or letter, as
may be necessary.

Indian.—Balaghat, Mysore Reefs, or Indian Consolidated would suit you.
Edorado.—We advise you to hold for a recovery of prices and then to sell. We
think Shebas good to hold—one of the best of the South African mines.

B. S. Moran.—The operation you suggest would eventually result in a total loss.
Liner.—Do not invest in either of the concerns named. They are badly
managed, and must come to the ground sooner or later.

A. B. C.—It is not the only company the shares of which are depressed. Do
not sell.

Spiers.—There are no doubt some good properties there, and if properly
managed will turn out successfully.

H. F. P.—You would do well to average. If purchased now, they carry the
right of applying for new shares.

Wearly Holder.—Such concerns as you name spoil legitimate mining enterprises.
Reader.—Of course you must pay the calls as they are made. Your broker
cannot be expected to do so without first getting it from you, although the shares
were purchased for forward delivery.

Col. R.—As a speculative purchase only.
Big Holder (N. Wales).—Anything but encouraging. Think you should dispose
of your holding for what they will fetch.

W. R. D. (Lancs.)—We rather fancy those who have taken the matter up will
subscribe the whole amount.

Recovery.—Buy A. C. E. and F., but do not touch others.

J. B. U. (Seine).—It is not serious as far as we can gather, and will soon be
rectified. You should increase your holding while the shares are so low.

Bratford.—Simply promises that we fear will never be fulfilled. Have nothing
to do with them.

Ploughman.—It is in the same district. We rather advise you to leave the shares
alone just now.

H. J. Whiter.—Do not sacrifice your holding if you can possibly avoid it. The
markets are very dull.

Mine Shareholder.—They are considered cheap and you would do well to secure
some.

Uncertain.—Although you received the dividend before the "settlement" the
shares were dealt in *cum. div.* until the 30th. You purchaser is therefore entitled
to it.

Artist (S. S.)—Everything is going on well at the mine. The shares are being
knocked down by the "bears."

R. L. S.—We think they will go lower. Sell.

S. Dickens.—The shares are worth nothing on this market. There may
possibly be a chance to dispose of them in Australia.

Indicator (Birmingham).—You will perhaps do better by holding. We certainly
do not advise the sale of them just now.

Silverdale.—Sell both.

SOUTH AFRICAN TRUST AND FINANCE COMPANY, LIMITED.

SUBSCRIBED CAPITAL, £255,000.

BOARD.

B. B. TRENCH, Esq., Chairman.
Sir CHARLES METCALFE, Bart. | Major J. W. M. COTTON.
L. BALFOUR BURNS, Esq. | RICHARD SMITH, Esq.
Sir STUART S. HOGG. | EDWARD DICEY, Esq., C.B.

HEAD OFFICE,—19, ST. SWITHIN'S LANE, LONDON, E.C.

SOUTH AFRICAN OFFICE.

NATAL CHAMBERS, JOHANNESBURG.

GENERAL MANAGERS IN SOUTH AFRICA.

W. Y. CAMPBELL, F.G.S., and E. W. EVANS.

BANKERS.

THE LONDON AND SOUTH WESTERN BANK,
LIMITED, LONDON.

THE MANCHESTER AND LIVERPOOL DISTRICT BANKING
COMPANY, LIMITED.

THE STANDARD BANK OF SOUTH AFRICA, LIMITED.

The Company undertakes the following business:—
The skilled investment in South African Mining, Land, or other
securities for European investors.

Professional and confidential reporting upon companies, mines,
mineral properties, lands, and generally advising European share-
holders and others in South African ventures.

To act as agents on behalf of principals interested in South
African investments, and for the protection of their interests, and
where desired, to register shares in such undertakings, and to issue
certificates in exchange for same, thereby enabling European holders
to co-operate for their mutual protection.

Financing or advancing moneys to corporations, companies, syndi-
cates, or persons in South Africa.

The receiving of money on deposit.

The purchase and sale of properties, and all classes of South
African securities or interests.

A Mining Circular containing special information will be posted
weekly from the South African Office to all subscribers.

A SPECIAL CABLE CODE FOR PROMPT AND ECONOMICAL COMMUNI-
CATION BETWEEN THE SOUTH AFRICAN AND LONDON OFFICES.

Further information can be obtained at the Head Office of the
Company.

The Mining World.

LONDON: SATURDAY, AUG. 1, 1891.

The "MINING WORLD" is not the property of a Mining
Speculator nor under the control of any clique.

MORE ABOUT PALMAREJO.

OUR readers will attach what importance they like to the "com-
municated report" furnished by Palmarejo directors of the
meeting they called last Monday, and which we reproduce *in
extenso*. The company is "limited" according to joint stock par-
lance, and it appears that the directors prefer "limited" meetings
of shareholders, and reports of those meetings furnished
by themselves, rather than meetings of the entire body, and reports
provided by the accredited representatives of the press, who, how-
ever, on this occasion failed to gain admission to the meeting.
We do not propose to follow the chairman in all his meander-
ings into Palmarejo history. An article we published last week, and
letters that have appeared in several issues, including those
that appear to-day, and notably the one signed, "Now-wide-
awake," let the shareholders only too plainly know the actual
position of Palmarejo at this moment. Stripped of the apologetic
and explanatory language of the chairman, it is one of impecuni-
osity. Shareholders will, however, want to know why a
small section of their number should be taken into the
confidence of the directors, whilst they have been left out
in the cold. To the report of the committee appointed by
this coterie of shareholders, as well as to their exoneration of the
board from all blame, absent shareholders will attach the importance
they think it deserves, knowing that the committee emanated from
the board's invited list of shareholders, and that the report itself is
practically a production from the same source.

When will Palmarejo directors learn to show confidence in their
shareholders? Had they done so at the last meeting there might
have been some angry criticisms, but they would have avoided the
reproach of having information up their sleeves, which they did not
communicate to the shareholders. The meeting of "selected share-
holders" on Monday, is another proof of that want of confidence in
the shareholders as a whole, which stress of circumstances compelled
them to place in the few. Shareholders, with much more show of
reason, have a want of confidence in them from the financial
side because all their estimates have been beside the mark, and
the awful thought must often have occurred to the shareholders
in their reflective moments that if these directors have been wrong all

through the piece financially, have they been right in their views as to the actual value of the mine and its resources? On the latter point, however, one is relieved to know that they are supported by other testimony, and this is reassuring. We venture to think the shareholders will not subscribe for the debentures, and that if they are taken up it must be by the directors themselves, or by some of the finance companies to which they have had recourse in the past. All this, of course, means fresh barriers between the ordinary shareholders and the profits of the mine.

DON PEDRO MEETING.

THE position of Don Pedro Co., as explained by Mr. Dixon Hartland at yesterday's meeting, was satisfactory from every point of view. Shareholders will be delighted to know that Mr. Touzeau, who has worked so well for the company in the past, is again at his post, and in a telegram he expresses his satisfaction with the progress of the work during his absence in England, when it will be remembered he was present at a general meeting of the shareholders. His message conveys the welcome news that the 50-fm. cross-cut is still in rich ore, and that the former sampling of the lode is amply maintained. Telegrams from many managers, experience has led shareholders to view with some doubt, but as regards those from Mr. Touzeau, they will feel perfect confidence, because of his past record, and because they know that he is a tried and proved man. The discussion that followed was businesslike, and elicited, or at least emphasised, some important points of information. For example, we know now that the expenses may be reckoned at between 700*l.* and 800*l.* a month; that the funds in hand, after meeting all engagements are considered ample; that gold (*vide* the chairman) may be expected in considerable quantities by Christmas; that the railway is within 20 miles, and that the shareholders are advised by their chairman to buy rather than to sell shares. Those who know the history of the old Maquine Mine the best (and we set it forth a few months ago in full as the result of an interview one of our representatives had with Mr. Dawson, the secretary) have to-day the greatest confidence in Don Pedro. The mine was left rich at the point where the water overcame the former company, and the reports and telegrams show that it has now been found rich again. Don Pedro shares are worth buying. That is the opinion of the market and we share it.

THE POSITION IN CORNWALL.

FROM various articles and letters which have recently appeared in Cornish papers, it would seem that the good people, of what they delight to term "the county," are beginning to take to heart some of the plain truths we have been telling them for years past. We should like to see mining flourish in Cornwall as it used to do, but have been severely criticised, not to say maligned, whenever we have endeavoured to indicate the causes of its decay and to suggest some necessary reforms. Cornishmen, however, are still far from hitting the bull's eye, and though admitting the misfortunes which have befallen their chief industry in recent years, are firing random shots and attributing things to everything but their right causes. They speak of over speculation; the speculation indulged in by persons who had not the means to meet the consequences, when those consequences were unpleasant; the awakening of the public to the unsatisfactory position of several mines; and the discovery of tin in other parts of the world. They also refer to the payment of unjust dues, fines, and the like, and wind up by saying that the interest of the adventurers is the last thing given heed to. Possibly there may be some truth in all these statements, or most of them, but we quite agree with the general view of the writers, that it is high time that something was done to make Cornish mining "more attractive to outside investors." In the first place, the task will be a heavy one to remove the unpleasant impression that Cornish mines have made upon the public mind. The cost-book system, which seems to have been ignored by the local critics, is largely responsible for this. Its defects we have pointed out again and again, though we have uniformly admitted it is not without its advantages, and have even gone so far as to say that re-construction is the cost-book in another guise. The public will have none of it. If its advantages, however, were all that Cornishmen assert, it would have been adopted elsewhere, but as it is, it will probably live, die, and be buried in the county which gave it birth. By such a system, we submit, it will be impossible to make Cornish mines "more attractive to investors," and the attempt had better be abandoned. We have, however, another serious matter to which we wish, not for the first time, to call attention, and we do so with feelings of sincere regret. When Cornish mines are made "sufficiently attractive to investors," and when capital is drawn to the county—how are those who introduce it received? Are they extolled as benefactors of an ancient industry, by which Cornwall has made its name and fame? Are they received with sympathy and good feeling by the inhabitants, and criticised, in the spirit of kindness, by the Press? Painful observation forces the admission that they are not. Apart from those who have thrown themselves, or been thrown, into the seething cauldron of political strife, perhaps the best abused man in Cornwall to-day is Mr. R. W. Goold, chairman of Wheal Grenville Mine, who with his

colleagues, Mr. Lane and Mr. Bellingham, have brought more capital into Cornwall for mining purposes than it has received from any other persons for a couple of decades, at least. And yet we can scarcely take up a Cornish newspaper without being struck by the rancorous manner in which Mr. Goold and his colleagues are attacked in spite of their remarkably successful management of this important mine, and particularly whenever they make the slightest deviation from prevailing usages. For a long time we were unable to divine the cause. It was a puzzle by day, and the dreams of night did not clear it up. At last we hit upon the real reason, which is this—hatred of the outsider. The outsider may come and spend his last maravedi in Cornwall, but should he be successful, he will be attacked, not in open meeting, where he can give a reply and know his assailant, but in the Cornish Press, under all sorts of signatures. Why is this? Well, here presents itself another puzzle, and now we fancy we have solved this also—it is human nature from its least worthy side. This, in truth, is not the way to make Cornish mines "more attractive to outside investors." The discussion of this question, however, in the Cornish Press cannot fail to do good, and these tokens of repentance for the errors of the past may be regarded as good signs. We only hope the repentance has not come too late.

BALKIS UNDER NEW MANAGEMENT.

AS already announced in these columns, when Balkis was in the convulsions of a monetary panic a few weeks ago, the board, presided over by Col. Malleeson, gave way to an almost entirely fresh one, the members of which promised to make Balkis convalescent by a thick poultice of bank-notes. This promise has been fulfilled—the poultice has been applied, and Balkis, to use a sporting phrase, "comes up smiling." The new directors have succeeded in renewing the debenture issue for another three years, and in obtaining a loan of 10,000*l.* from a finance company. Balkis is, therefore, in the possession of some ready cash—more, in fact, we dare venture to say, than the late board ever had during the long and arduous period of their management of its affairs. The Malleeson board may not have done all that was possible in the way of mining, but they were perfect giants in matters of finance, for how they managed to keep Balkis on its financial legs so long will perhaps only be known in the day when the secrets of all hearts are revealed. Mr. Pearce Edgcumbe, who very ably presided at Tuesday's meeting, expressed his astonishment that the shaft had only been sunk 90 ft. during the entire management of the late board; but he would probably have been more astonished if he had known all the financial feats which the late directors, with the true gymnastic instinct, had performed to keep Balkis on the perpendicular. He commented freely on this, but when a shareholder, seeing Col. Malleeson in the room, asked that gentleman to give an explanation, and when the gallant colonel had risen like a modern Othello, speaking in the presence of a joint-stock senate, to give his plain unvarnished tale, it was with some surprise one heard the chairman rise to prevent that explanation from being given. Now, as the chairman had introduced the subject by a somewhat severe, though in all respects gentlemanly, criticism of the Malleeson board, such an example cannot be commended for imitation. To attack the management of a former board, and to say in as many words that no satisfactory explanation can be given when the person chiefly concerned is ready to afford it, is not a line of conduct that will commend itself to impartial judges.

Apart from this incident the Balkis meeting passed off well. It is satisfactory to know that an experienced miner like Col. Fludyer is on the board, and if he can only realise the idea of sinking Balkis shaft 30 ft. a month, there is every reason to suppose, not only that the shareholders will reap the reward of their patience, but that the recent change in the management will be more justified than it can claim to be, from the mere fact that the financial position has been made sound by the creation of fresh burdens in front of the ordinary capital. We shall certainly watch with considerable interest the progress of Balkis under the new management, in order to see in what respect it is superior to that which it has succeeded, and shall only be too delighted if the new directors can set an example to South African Mines generally of rapid sinking and development—an example which, in most cases, has hitherto been wanting.

IMPROVEMENT IN ZARUMA AFFAIRS.

THE Zaruma Co. has passed through a very trying year, and yet, as the chairman said, it has shown for the first time a substantial profit on the working. As a shareholder pointed out, expenses have been almost met by receipts. Now, if Zaruma can do this in a year when floods have suspended the delivery of the mails for weeks at a time, and hung up the stamps for a considerable period, what can it not do when the normal condition of things prevails? The board have asked a small committee of shareholders to assist them, and one was appointed at the meeting on Wednesday, but we rather fail to see how these gentlemen can do more for the company than the directors themselves have done. The immediate need seems to be a comparatively small amount of working capital to effect some improvement in the machinery, and to cease the hand to mouth way of conducting things that now prevails. As Mr. Provis, the consulting engineer, showed, the present workings are being conducted at a profit, but should any serious

accident occur, or should the fates prove unpropitious in regard to the rainy season, a position of embarrassment might ensue, which it is best to avoid by timely action. The committee will most materially assist the company if in any way they can enable the directors to ease the financial strain. There seems to be a good manager on the property, and the remark of a shareholder will be generally endorsed:—"You have proved that the gold is there, and the report you have presented is the most interesting and encouraging we have had." The profit derived from the ore treated last year was 9s. per ton, and this will be greatly increased by the improved arrangements the directors will make if the position be strengthened from the financial side.

URANIUM MINES.

It is proposed to re-construct the Uranium Mines, and we sincerely hope that the attempt will be successful. The property has never had a fair chance. It has been greatly misunderstood by the Press, and the plans of its directors have not been aided, but, on the contrary, have been thwarted, by persons whose assistance and co-operation might have been expected. Under all the circumstances, the Uranium Mines, Limited, would have been submerged but for the pluck and determination of its chairman, Mr. Massey-Mainwaring, and the courage of Mr. North, the managing director. These gentlemen, it would have been seen by the meeting held two or three weeks ago, threw down the gauntlet to the late manager, and the former actually declared that he would spend his last dollar rather than that Mr. Harris James should have his own sweet way. At the meeting held this week Mr. Harris James was not present, nor was there the slightest discordant note during the whole of the proceedings. A spirit of sympathy with the directors and of desire to help the re-construction was manifested. The chairman himself promised to take 1,000 shares, and if the other shareholders will only act with anything like the same spirit success will be the result. In the meantime the company has plenty of material and more orders than it can execute with its present plant. The new capital will be applied to erecting fresh plant and extending the business, so as to meet the demand for oxide of uranium, which is on the increase.

IMPROVED POSITION OF LA PLATA.

THE meeting of La Plata yesterday was the most successful it has held for several years. The position is altogether changed, and changed for the better. Profits have begun to take the place of losses, and instead of being swallowed up as heretofore, by what the chairman called "that wide mouthed concern the smelting establishment"—that devourer of La Plata profits is itself made to yield tribute, and the total income, let us hope, will be available in the near future for dividends. La Plata proper is getting into rich ore—in fact as the last return showed, it is in rich ore, and from this side the outlook is decidedly cheering. The smelting works have been leased and the tributaries continue to develop those parts of the mine where it is not to the profit of the company to work. A good deal of hope now centres in the White Cloud claim, which, on the initiative of the directors, the shareholders decided to work. At a depth of 300 ft. (and that should soon be reached, seeing that the sinking is going on at the rate of 75 ft. a month) it is expected rich ore will be met with. If it be not found, it will be contrary to all former experience of the district. The position of La Plata, as we said at the commencement, has greatly improved during the last few months, and the hard working directors are to be congratulated upon the fact.

VENEZUELAN AUSTIN.

At the meeting held yesterday, Venezuelan Austin shareholders decided unanimously to reconstruct the company. With equal unanimity we trust they will give logical effect to their votes by their subscriptions. The total liability under the reconstruction is only 2s., and the most serious part of the burden will fall upon the directors and their friends, who hold large blocks of shares, and who have plainly told the shareholders that if they do not subscribe they know who will. Shareholders should conclude from this that if it is good enough for other people to do for them what they might be expected to do for themselves, it is good enough for them to save those other people the trouble. But, after all, as Mr. Lee said in his extremely business-like and able speech to the shareholders yesterday, the root of the whole question is this—is the property worth a further chance? All the evidence indicates that it is. There are "about 3 miles of disclosed reef," and what the company has hitherto done, in spite of the most determined efforts of the board, and with the aid of the best recommended experts that could be got, has not amounted to much more than the development of a comparatively small portion of this vast territory. Under the advice of experts, money has been spent in various directions, but not with happy results, though, as the crushings have proved, not destitute of results altogether. In fact, the latter have been sufficiently promising to give encouragement to the directors to recommend the present re-construction. Given quartz of a fairly good value, the company has machinery to deal with 40,000 tons per annum, and can make substantial profits. Venezuelan-Austin is at

present passing through the same sort of experience that befell its near neighbour, El Callao. In the early days El Callao was in quite as bad a position at one time as Venezuelan-Austin is to-day, but by the energy of those connected with it subsequently yielded gold to the value of seven millions sterling, and became the premier mine of the world. There is no physical or geological reason why Venezuelan-Austin in its vast territory, should not possess some rich mines, and Mr. Lee is the man to achieve success if it be within the scope of mortal effort. He, with his colleagues, will do his duty, but will the shareholders do theirs? The streets of Jerusalem, we are told, were kept clean, because every man swept in front of his own door, and Venezuelan-Austin will be put upon a solid financial basis by each shareholder subscribing according for the number of his shares. If he does not he must clearly understand there are others who will.

AFFAIRS IN SOUTH AFRICA.

[From our Own Correspondent.]

Kimberley, July 6, 1891.

THE DE BEERS CO.

ALLOW me to correct a very slight error which crept into one of your leaders of May 30. You say that "the De Beers Co. finds it necessary in restricting the output to keep the De Beers and Kimberley Mines practically closed, drawing all the supplies it can dispose of from Dutoitspan and Bultfontein." The saddle is on the other horse. It is the Dutoitspan and Bultfontein Mines that are closed.

THE WESSINGTON MINE.

Litigation with regard to this mine is now in full swing. In the Supreme Court Messrs. Cowell and Laurence have succeeded in obtaining judgment, by which they each get a fifth of Ward's concession. And now three other claimants have come forward. I have known they have been in the field for some weeks past, but I only obtained reliable information yesterday from one of them. Messrs. Siebel, Walsh, and Eland claim that they are the original concessionaires from Mr. Wessels, and that they admitted Mr. Ward on payment of 2,000*l*. After some prospecting had been going on they seem to have lost faith in the venture, and left it in the hands of Ward. Ultimately, as we all know, he was successful, and now they are proceeding against him for their share. The case is to come on next term.

KOFFYFONTEIN MINE.

I have just heard that Messrs. Rhodes and Barnato have purchased this property, and have handed over the management of it to a Mr. Owen Hall, who has been one of the principal agitators in the late Wessington Mine affair.

A SERIOUS QUESTION FOR DE BEERS SHAREHOLDERS.

Sir T. Upington has succeeded in inducing the House of Assembly to appoint a Special Committee to enquire into the causes of the distress existing on the Diamond Fields, to which resolution Mr. Hofmeyr tacked on an amendment that the researches of the committee be extended by an enquiry into the effect of the opening of new mines on the trade and prospects of Griqualand West and the Colony generally. He has, doubtless, done this not only on account of the discovery of the Wessington Mine, but also because prospecting is going on now on such an extensive scale that the revelation of another mine may be looked forward to at any time, and, bearing that in mind, the very grave question arises whether such a discovery will not bring down the price of diamonds. The question is discussed here every day, and I propose to give what I consider to be the opinion of those who are well versed on the subject. It is admitted by all that another payable mine would bring down the price of diamonds. Taking a retrospective view, I find that during 1886, 1887 and 1888 there were 3,000,000 carats a year put into the market, the average price being something over 1*l*. per carat. Since 1888 no official returns of the output have been published, in consequence of the De Beers Co. having brought pressure to bear on the Board for the Protection of Mining Interests, and all information is refused, and this in the face of the fact that the board is a public institution, and paid 5,000*l*. a year out of the public revenue. Now, let us suppose that the opening of a new mine would bring the output again to the maximum in the past, namely 3,646,899 carats, and the average price brought down to the minimum in the past, namely, 19s. 5*d*. This would mean a very serious loss to the De Beers Co., seeing that by their last balance-sheet it would be impossible for them to meet their obligations, including their current enormous expenditure, were diamonds to fall to 22s. 6*d*. per carat in one year.

This being so, it is now openly discussed and contended that the inevitable result will be that Mr. Rhodes's grand amalgamation scheme will fall to pieces like a pack of cards, and the debenture-holders, in order to recoup themselves, would have to take possession of the mines, and carry on the work. Then comes the question whether the absence of control over the output and price which now exists would not be broken down by the formidable competition which everybody anticipates, and whether the prices would not be still further reduced. Those who have studied the subject declare that a new mine would pay at a much lower price, and they argue in this way. Any new mine with a yield of 20 carats to the 100 loads, equal to 4s. per load, would pay handsome profits. Such a mine

could be worked at a net profit of 1s. 8d. per load, and they further argue that if the important coal industry is considered to be in a satisfactory condition when a net profit of 6d. a ton is made, the diamond industry need not despair. Hence it is contended that not only would new mines make good profits, but they would be the means of supporting a large population, and at once benefit the people on the spot, the public revenue, and the Colony generally.

You will see by the above, which is a fair reflex of public opinion here, that the great monopoly which 12 months ago was regarded by all classes with fear and trembling, and any opposition to which was looked upon as next door to high treason, is now publicly assailed on all sides, and many highly intelligent and thinking men do not hesitate to go so far as to say that its monopoly days are numbered.

THE MONEY MARKET.

CITY, FRIDAY EVENING.

THE disturbed financial situation here and on the Continent arising from the miserable position into which affairs in the South American Republics has drifted, which has reacted in some measure upon both Portugal and Spain, countries themselves holding a weak financial status, has had a very marked effect upon all business here, and influenced our Money Market. Although there is no stringency because of the enormous amount of capital which has gradually been thrown out of employment as trade declined and confidence became shaken, the very low and nominal value for money is proof itself of the situation, and with the little business in discount prevents rates rising, in the face of the disinclination to take bills, especially large parcels. The quotation for good paper is nominally $1\frac{1}{2}$ per cent., and four and six months' drafts, 2 and $2\frac{1}{2}$ per cent., while money offers freely at $\frac{1}{2}$ per cent., without finding employment, so that many lend at $\frac{1}{4}$, and some actually give a small bonus where any particular security is required. The Stock Exchange Settlement has passed off with the greatest of ease, and the return of bankers' clearing now exhibits, compared with this time last year, a falling off of no less than 25,000,000. sterling. The demand for gold for Germany has exercised some influence, but has not as yet pressed upon the Bank, although the exchanges are favourable to the export. The general desire to realise has depressed prices in London, Paris and Berlin, and given rise to rumours of financial difficulties abroad, but here nothing serious is feared; one small London Banking Institution has been crippled in connection with Portuguese business and some of the "Trust" undertakings are finding the position, to say the least, irksome. The Bank return shows an improvement in the proportion of reserve of $1\frac{1}{2}$, to $43\frac{1}{2}$ per cent. the reserve having been increased 159,000, to 17,422,000. as against 12,272,000. a year ago. The other changes are favourable, but the reasons for them still obscure.

On the Stock Exchange there has been much distrust and suspicion, which is traceable in nearly all securities, excepting Home Railways and Canadian Railroads. The settlement was remarkably small, and only one insignificant default transpired, so that the disturbance is not attributable to that source. No, the prospective trouble lies elsewhere, and is of a far rooted character, which must be eliminated, unless the existing rottenness is to engulf everyone, or the markets are to continue to endure the present system of torture, for with speculation literally at a standstill, the nervous feeling becomes more painfully apparent day by day. It is impossible to pretend or fancy that the situation is exaggerated, for the above remarks are the plain unvarnished truth, and while, according to Lord Salisbury, the political horizon was never clearer than now, all that we have expressed upon the financial situation is clearly endorsed by the tendency of prices on the Continental and American markets. Trusts and other financial combinations have fallen this week from 5 to nearly 15 per cent., and Bank shares show corresponding depression. United States Railroads have mostly relapsed, although American trade increased last year \$82,000,000, and Mexican Railways have been subjected to a deal of forced liquidation, chiefly from the provinces. Foreign Bonds are weaker, save perhaps Mexican, Turkish, and Egyptian, and the almost bankrupt condition of certain Powers, is a very disquieting factor. The settlement merely imposed nominal rates of contango, but Uruguay, Argentine, Greek, and all South American Stocks exhibit a decidedly pronounced loss. The British Funds only have appreciated, and as Miscellaneous descriptions moved in the same direction as the general markets, the most isolated exception is Home Railways, which, if irregular, nevertheless held their ground, and developed speculative activity for Brighton "A" and sounder buying for North-Western Stocks, &c., for stock was scarce.

To-day the discount market has been quiet at about $1\frac{1}{2}$ per cent., a fraction either way being conceded to do business. There was no sign of relief to the plethora of capital offering, and much was lent for nothing against securities. The quotation, however, was nominally $\frac{1}{4}$ to $\frac{1}{2}$ per cent., and the rate on Consols from the 1st Aug. to the 1st Sept. was $\frac{3}{4}$ to 1 per cent.

At the Bank 65,000 sovereigns were received from Portugal; the demand for Germany continues, but is restricted to the open market. Bar silver was firm at 46d. per oz., but Rupee Paper was flat, $\frac{1}{4}$ lower.

No recovery has brightened the stock markets to-day, and the occurrence of three failures over the recent Settlement (making four this time) have rather increased the despondency. Consols have now given way, though the monthly liquidation, which commenced this morning, shows that stock is still over-sold, and the rate of money did not exceed $\frac{3}{4}$ to $1\frac{1}{4}$ per cent. per annum. English railways were fairly steady, and Caledonian and North British recovered, but the remainder gave way a little, and Brighton "A" was the leading security, by dropping from 147 to 146 $\frac{1}{2}$, because yesterday's traffic decreased nearly 2,500, and, moreover, because the weather is so unseasonable. Foreign Securities show a smart fall, and Turkish and Egyptian, along with Chilean, Uruguay and Argentine were most offered, but Portuguese and Spanish tended rather better. United

States Railroads fluctuated considerably, and were at one time subjected to a good deal of pressure by speculative sellers. Quotations sensibly recovered nevertheless from the lowest, especially in the "street," and therefore on balance, the variations are moderate and evenly divided. Grand Trunk and Mexican Railway issues were neglected, while Mexican Central Bonds and Inter-Oceanic Debentures suffered from sales. Banks and Miscellaneous further relapsed, though Bell's Asbestos and Eastman's Meat improved somewhat.

The directors of Messrs. Arthur Guinness, Son, and Co., Limited, after placing 100,000. to the reserve fund and 30,000. to the depreciation fund, have decided to recommend a dividend of 9. per cent. for the six months ended June 30 last, making, with the 6. per cent., paid in March, a total dividend for the twelve months of 15. per cent., free of income tax, carrying forward 68,427. 3s. 10d.

Allsopp's report is unfavourable reading, and forms a decided contrast to the above. It shows a profit of 105,348. against 140,105 last year, and allowing for debenture interest, and including previous balance. The available total is 57,868. The preference dividend takes 66,000., so that 10,000. is taken from the reserve, which will leave 1,839. to be carried forward, giving no dividend to the ordinary stock. About 76,000. of the 400,000. five per cent. debenture stock has been privately subscribed by the proprietors and customers, and the amount invested in further loans and purchases.

Annexed are the final quotations to-day:—Consols Account, 95 $\frac{1}{2}$, 95 $\frac{1}{2}$; Egyptian Preference, 90 $\frac{1}{2}$, 91 $\frac{1}{2}$; Egyptian Unified 95 $\frac{1}{2}$, 96 $\frac{1}{2}$; French Four-and-a-Half per Cents, 101 $\frac{1}{4}$, 104 $\frac{3}{4}$; Hungarian, 88 $\frac{1}{2}$, 89; Italian, 88 $\frac{1}{2}$, 89; Mexican, 83 $\frac{1}{4}$, 83 $\frac{3}{4}$; Peru Five per Cents, 84, 84 $\frac{1}{2}$ per cent.; Peru Six per Cents, 19 $\frac{1}{2}$, 20 $\frac{1}{2}$ per cent.; Russian 1889, 95 $\frac{1}{2}$, 96 $\frac{1}{2}$; Portuguese, 38 $\frac{1}{2}$, 38 $\frac{1}{2}$; Spanish, 70 $\frac{1}{2}$, 71; Turkish 1871, 94 $\frac{1}{2}$, 95 $\frac{1}{2}$; Turkish Defence, 92 $\frac{1}{2}$, 93 $\frac{1}{2}$; Caledonian, 115, 115 $\frac{1}{2}$; Great Eastern, 88 $\frac{1}{2}$, 88 $\frac{1}{2}$; Great Western, 160 $\frac{1}{2}$, 161; Brighton "A," 146 $\frac{1}{2}$, 146 $\frac{1}{2}$; North Western, 174, 174 $\frac{1}{2}$; Metropolitan, 81 $\frac{1}{2}$, 82 $\frac{1}{2}$ xd; Metropolitan District, 29, 29 $\frac{1}{2}$; Midland, 154 $\frac{1}{2}$, 155; North British, 41, 41 $\frac{1}{2}$; North Eastern, 157 $\frac{1}{2}$, 157 $\frac{1}{2}$; South Eastern "A," 81 $\frac{1}{2}$, 81 $\frac{1}{2}$; Mexican Ordinary, 33 $\frac{1}{2}$, 33 $\frac{1}{2}$; Grand Trunk 9 $\frac{1}{2}$, 9 $\frac{1}{2}$; Grand Trunk First Preference, 64 $\frac{1}{2}$, 64 $\frac{1}{2}$; Grand Trunk Second, 43 $\frac{1}{2}$, 43 $\frac{1}{2}$; Grand Trunk Third, 23 $\frac{1}{2}$, 23 $\frac{1}{2}$; Canadian Pacific, 82 $\frac{1}{2}$, 82 $\frac{1}{2}$ xd; Denver Preference, 42 $\frac{1}{2}$, 42 $\frac{1}{2}$; Erie, 18 $\frac{1}{2}$, 18 $\frac{1}{2}$; Milwaukee 63 $\frac{1}{2}$, 63 $\frac{1}{2}$; Lake Shore, 109 $\frac{1}{2}$, 110 $\frac{1}{2}$; Louisville, 70 $\frac{1}{2}$, 70 $\frac{1}{2}$; Atlantic First, 29 $\frac{1}{2}$, 30 $\frac{1}{2}$; Ontario, 14 $\frac{1}{2}$, 15 $\frac{1}{2}$; Ohio, 17 $\frac{1}{2}$, 18 $\frac{1}{2}$; Norfolk and Western, 47 $\frac{1}{2}$, 47 $\frac{1}{2}$; Reading, 13 $\frac{1}{2}$, 14 $\frac{1}{2}$; Reading Bonds, 77 $\frac{1}{2}$, 78 $\frac{1}{2}$; Union Pacific, 41 $\frac{1}{2}$, 41 $\frac{1}{2}$; Wabash Preference, 22, 22 $\frac{1}{2}$; Ottoman Bank, 12 $\frac{1}{2}$, 12 $\frac{1}{2}$; Anglo-Telegraph, 43 $\frac{1}{2}$, 43 $\frac{1}{2}$ xd; National Telephone, 4 $\frac{1}{2}$, 5; Hudson's Bay, 11 $\frac{1}{2}$, 14 $\frac{1}{2}$ xd; Suez Canal, 109 $\frac{1}{2}$, 109 $\frac{1}{2}$; Guinness, 329, 332; Allsopp's Ordinary, 25, 27; Bryant and May, 13 $\frac{1}{2}$, 14xd; Eastmans, 6 $\frac{1}{2}$, 6 $\frac{1}{2}$; Salt Union, 5 $\frac{1}{2}$, 6.

REPORTS OF MEETINGS.

LONDON TRADING BANK, LIMITED

A SUCCESSFUL YEAR.

THE twenty-sixth ordinary half-yearly general meeting of this company was held on Wednesday, at the Guildhall Tavern, Gresham Street.

Mr. Wightman Cooper

(chairman of the company) presided.

Mr. T. MORETON (in the absence of the manager, Mr. John Moysey, through ill-health) read the notice calling the meeting, and the report of the directors was taken as read.

The CHAIRMAN, in proposing the adoption of the report and balance-sheet, said it would be seen, taking the first item of capital subscribed, that there had been an increase as compared with the corresponding period of the previous year of from 36,000. to 40,000. in round figures. That was an increase of 4,000. in their normal capital, but the actual increase of capital paid up was only about 2,000. Their reserve fund of 1,100. had been increased by 200., which, although a small amount, marked the gratifying progress of their business. The other items on that side of the account did not call for particular comment. Taking now the asset side of the accounts they would find that the item of bills discounted and advances to customers showed an increase of some 3,000., or from 33,000. to 36,000., and that they considered their average increase, and one which showed the progress and development of their business. Now as regarded their investments, which were in Consols, railway debenture bonds, and ordinary stock and other securities, there had been an increase of a little over 1,000. during the past twelve months, and at the present moment they stood at 13,028. These investments formed the liquid assets of the bank, and were in home and American securities, and were for the most part easily realisable. These and their cash in hand and at the National Bank it would be seen to some extent met

"MR. GOSCHEN'S FANCY IDEA"

of keeping a little extra available reserve. And in this matter, leaving the large banks out of the question, he thought that they might consider that this bank ranked among the smaller banks as first-class. (Hear, hear.) At any rate they hoped so. They were in no particular hurry about getting rich—(laughter)—and these investments were only for maintaining the character of the business in the eyes of the public and not for speculative purposes. They gave confidence to their customers interested in the bank, both shareholders and depositors. He wished to emphasise the fact that they did no speculative business, but only ordinary commercial banking business, and they took no risks beyond what had to be accepted in the ordinary course of banking operations. (Cheers.) The development of the business during their 13 years' existence he considered had been exceedingly satisfactory, and proved them to have been a well conducted bank. The other figures in the accounts showed an increase in every item, which was most satisfactory, and the result of their business in the half-year under review had been such as to enable them to carry forward a larger amount by 60. than they did on the former occasion. They had added, as he had stated, 200. to the reserve fund, and they had made ample provision for bad and doubtful

debts The directors had very great pleasure in recommending to the shareholders the payment of their

USUAL DIVIDEND OF 5 PER CENT.

He had, therefore, great pleasure in proposing the adoption of the report, and the payment of the dividend of 5 per cent. (Cheers.)

Dr. GREENWOOD seconded the resolution, and stated that during the six months that he had been acting with the directors of the bank he had been exceedingly satisfied with its working. He had had exceptional opportunities of investigating the affairs of the bank, and had satisfied himself as to the soundness and value of their business—(cheers)—and he was doing all in his power to induce his friends to become shareholders or to place their money on deposit in the bank or to open a current account.

The resolution was put, and unanimously carried.

The proceedings terminated with the customary votes of thanks.

THE WEST BATTERY REEF GOLD MINING CO., LIMITED.

AMALGAMATION SCHEME DULY CONFIRMED—THREE MEETINGS WITH ONE OBJECT.

AN extraordinary general meeting of this company was held at the Offices, No. 8, Old Jewry, on Thursday, July 30, at 2.30 o'clock in the afternoon, in order that the subjoined resolution, which was passed at the extraordinary general meeting of the company, held on July 10, might be submitted for confirmation as a special resolution:—

"That the company be wound up voluntarily under the provisions of the Companies Acts, 1862, 1867, and 1890."

The notice added that "Should the aforesaid resolution be confirmed a resolution will be proposed for the appointment of a liquidator or liquidators of the company for the purpose of such winding up, and upon such appointment being made the following resolution will be proposed as an extraordinary resolution, that is to say:—That the liquidator or liquidators be at liberty, in pursuance of article 138 of the articles of association of the company, to distribute or cause to be distributed amongst the shareholders of the company the 35,505 fully paid shares of 1*l.* each in the Luipaards' Vlei Estate and Gold Mining Co., Limited, to be allotted to the company in pursuance of the agreement dated Mar. 5, 1891, and made between the company of the one part and the said Luipaards' Vlei Estate and Gold Mining Co., Limited, of the other part."

Mr. E. J. Carson

presided.

Mr. CHARLES S. C. WATKINS (the secretary) read the notice.

The CHAIRMAN proposed the first resolution.

Genl. BRUCE seconded.

The motion was carried.

The CHAIRMAN proposed that Mr. Watkins (the secretary) should be appointed liquidator.

The motion was seconded by Genl. BRUCE and carried.

Mr. DOUGLAS asked if there had been anything since the last meeting that had arisen to interfere with the due carrying out of the resolutions?

The CHAIRMAN: Nothing at all.

The third resolution was then carried, and the meeting ended.

THE MYNPACT (LUIPAARDS' VLEI) GOLD MINING CO., LIMITED.

AN extraordinary general meeting of this company followed, for the purpose of passing identical resolutions.

Mr. Cecil Quenten

(the chairman) presided.

The CHAIRMAN spoke of the more encouraging news recently to hand from the mine, which made the prospects for the shareholders, as members of the amalgamated company, more promising.

The resolutions were put *seriatim*, and carried.

BATTERY REEF GOLD MINING CO., LIMITED.

SUBSEQUENTLY a meeting of this company was held, it being the third party to the agreement for amalgamation with the Luipaards' Vlei Estate and Gold Mining Co.

Resolutions for effecting the same object as at the former meetings (reported above) were also carried.

The whole of the meetings closed with the usual compliment to the chairman.

SUTHERLAND REEFS, LIMITED.

AMALGAMATION WITH POTSDAM REEFS.

AN extraordinary meeting of this company was held recently, at Winchester House, for the purpose of considering the proposed amalgamation with the Potsdam Reefs, and for increasing the capital of the company.

Commander F. C. De Lousada

presided.

The CHAIRMAN said that he considered the proposed amalgamation would be a very good thing for both companies. The two properties were close together, and the same reefs ran through them. If the amalgamation was carried out, the expenses at the mine would be reduced, as would also the expenses in London, as there would be only one office rent to pay, and one set of directors. The Harmony Proprietary Co. had agreed to give them valuable water rights, if the amalgamation was approved by the shareholders, which would increase the value of their property. Their company would receive, under the amalgamation scheme, 30,000 shares in the new company. That would give them sufficient capital to purchase a mill, which was very necessary. The capital of both companies when amalgamated would be 20,000*l.*, and that would be sufficient for them to go on with for the present. He concluded by moving the resolutions for the amalgamation of the company with the Potsdam Reefs, which was seconded by Mr. JOHN PROCTOR.

The CHAIRMAN, in answer to several questions, said that the terms of amalgamation had been a subject of prolonged discussion between

the two boards, and they had arrived at the proposed arrangements, which they thought were the most equitable.

Mr. JOHN PROCTOR said that the amalgamation of the two properties would enable them to continue the driving of a tunnel, and they would be able to get their ore out better than at present. He had every faith in the outcrop of the reefs on their properties, and he believed that the amalgamation would place both companies in a decidedly better position than they were at present.

The resolutions were then put to the meeting, and carried with one dissentient.

A vote of thanks to the chairman closed the proceedings.

VALLEY GOLD, LIMITED.

CONFIRMATION OF RESOLUTIONS.

AN extraordinary general meeting of Valley Gold, Limited, was held at Cannon Street Hotel, London, E.C., on Tuesday, July 28, for the purpose of considering and, if thought expedient, of confirming the following resolutions, passed on July 9.

RESOLUTIONS.

1. "That the capital of the company be increased to 120,000*l.* by the creation of 20,000 preference shares of 5*s.* each, carrying a preferential dividend of 10 per centum per annum, and, subject to such preference, ranking with the ordinary shares for dividend." 2. "That such new shares shall be issued to such persons, at such times, in such manner, and upon such terms and conditions as the directors shall from time to time determine."

Mr. T. A. Meates

presided.

The SECRETARY read the notice convening the meeting.

The CHAIRMAN: Gentlemen, you have heard these resolutions read. They are merely confirmatory of the resolutions passed on 9th inst., and I will not intrude further on your valuable time this afternoon by recapitulating what I said on that occasion, though, of course, I shall be perfectly willing to answer any questions you may wish to ask. The Chairman then moved the resolutions as above.

Mr. NELSON seconded the resolutions, and they were carried unanimously.

A SHAREHOLDER asked whether a report of the proceedings of the previous meeting was going to be sent to the proprietors.

The CHAIRMAN said the last meeting was reported in the financial papers, but the directors did not feel justified in sending a formal report to the shareholders. Now that these resolutions were passed he could only express the hope that the shareholders would assist the directors by liberally responding to their appeal for fresh capital. The proceedings then closed.

BRITON FERRY CHEMICAL AND MANURE CO., LIMITED.

GOOD NEWS FOR CAPE COPPER SHAREHOLDERS.

IN a circular to the shareholders Mr. J. C. Leaver states that the directors have declared a dividend of 1*s.* per share, payable on Aug. 11, 1891, to the shareholders on the books of the company on Aug. 1, 1891. This completes the preferential amount of 25,000*l.* payable to the shareholders of this company previous to the Cape Copper Co. coming into participation of profits. The directors are of opinion that before any dividend should be declared in which the Cape Copper Co. will participate, it is desirable to wait until the close of the accounts at the end of the year, when stock can be taken and the exact amount of profit ascertained.

THE CASE OF THE OOREGUM PREFERENCE SHARES.

JUDGMENT RESERVED.

THE Lord Chancellor, Lord Herschell, Lord Watson, Lord Macnaghten, and Lord Morris resumed, on Thursday, consideration of the appeal of the Ooregum Gold Mining Co. and Mr. Charles Henry Wallorth, one of the largest holders of the preference shares issued at a discount of 15*s.* The respondent is Mr. George Roper the holder of ordinary shares, who got a judgment in the Courts below in his favour, which declared that the issue of shares at a discount was beyond the powers of the company, and that the preference shares were held subject to the liability of the holders to pay to the company in cash so much of the 1*l.* per share as had not been paid, and the register was ordered to be rectified accordingly.

Mr. Cozens-Hardy, Q.C., for the respondent, argued that the issue of shares at a discount was a reduction of the capital in a manner not authorised by the Companies Acts, and the transaction was not made valid by the registration of certain agreements come to by the company and the shareholders.

Lord Watson said it appeared to be the plain meaning of the statute that the capital should be definitely stated. In this case, if it were made clear to outside creditors that only 30,000*l.* additional capital was created by the issue of shares at a discount, and there was nothing to mislead them into the belief that 130,000*l.* was to be added, he did not see what mischief would be done either inside or outside the company. It was a totally different thing to leave it to the discretion of directors to issue at any discount they pleased.

Lord Macnaghten: The issue of shares in this way certainly might be made the means of fraud, although in this case everything was honest and straightforward.

Sir H. Davey, in replying for the appellants, said the argument of his learned friend came to this, that a company which was in difficulties might pay for its plant and machinery in shares to the engineers, but they must not pay bankers or capitalists in the same way who were willing to provide the working capital. Why not? A company, according to the theory of the other side, might issue depreciated shares for plant or to the engineers, but it could not do so to persons willing to furnish which the company might wish to apply in the purchase of plant, &c. That might be law, but it was not common sense, or in accordance with the practice or business habits of mankind, and this ought not to be laid down as the law unless the statute left the courts no other alternative. No creditor who desired to ascertain the financial position of the company could possibly be misled.

Their Lordships reserved judgment.

REPORTS OF MEETINGS.

THE VIRGINIA (TRANSVAAL) GOLD MINING AND DEVELOPING CO., LIMITED.

ENCOURAGING REPORTS—RE-CONSTRUCTION.

AN extraordinary general meeting of the above-named company was held at Cannon Street Hotel, on Wednesday last, for the purpose of considering and, if thought fit, passing the resolutions following, that is to say:—

(1.) "That it is desirable to re-construct the Virginia (Transvaal) Gold Mining and Developing Co., Limited, and that with a view thereto the company be wound-up voluntarily, and that Richard Lawrence Spicer, of 26, Budge Row, London, E.C., the secretary of the old company, be, and he is hereby, appointed liquidator for the purposes of such winding-up." (2.) "That the said liquidator be, and he is hereby, authorised to consent to the registration of a new company, to be named the Virginia (Transvaal) Gold Mining and Developing Co., Limited, with a memorandum and articles of association, which have already been prepared with the privity and approval of the directors." (3.) "That the draft agreement submitted to this meeting, and expressed to be made between this company and its liquidator of the one part, and the Virginia (Transvaal) Gold Mining and Developing Co. of the other part, be and the same is hereby approved, and that the said liquidator be, and he is hereby, authorised, pursuant to section 161 of the Companies' Act of 1862, to enter into an agreement with such new company (when incorporated) in the terms of the said draft, and to carry the same into effect."

The notice added: "Should the above resolutions be passed by the requisite majority they will be submitted for confirmation as special resolutions to a second extraordinary general meeting which will be subsequently convened."

Mr. Alfred Jones

presided.

Mr. LAWRENCE SPICER (the secretary) read the notice calling the meeting, and the above resolutions.

The CHAIRMAN said: Gentlemen, this extraordinary meeting has been summoned to take into consideration the present position of our property. As you are aware, from our circular of 17th inst., our capital is all but exhausted, and but for

UNTOWARD CIRCUMSTANCES

mentioned therein, we should have been enabled to commence crushing at this time. Your board feel that the encouraging reports received from the manager, Capt. Joseph Richards, and Mr. Sherriff, the agent of the company in Steynsdorp, and supported by the testimony of Capt. Hodge, who is a shareholder, and has lived near to the property for a lengthened period, and is well acquainted with it, and whom we are glad to see present here, of his own free will, to give you the benefit of his knowledge, make it desirable that this property should be tested, and, therefore, we propose recommending the scheme of re-construction in our circular. Finding our resources getting low, your directors called a meeting of the largest shareholders at the offices of the company on 25th ult. to consider the situation with a view of raising further capital; only a few attended, and so, in order to preserve to the subscribers what appears to be a valuable property, a scheme of re-construction has been formulated, which we hope will be acceptable. Being an extraordinary meeting, we have not published any accounts, but if any shareholder would like to see the balance-sheet made up to date we have several copies here, and can be seen by any shareholder. Including the debentures we have about 1,000*l.* in hand at the present moment; this will just carry us on until such time as the re-construction can be carried out. You will notice from a reference to our circular that upon closer inspection Capt. Richards found the turbine purchased with the mill was constructed for a 40-ft. fall, whereas our water rights on the Komatie show only 16 ft. fall. To use this turbine he found he would have to raise the dam and greatly lengthen the water races; he therefore considered it would be the truest economy for us to send out a low fall turbine, and to dispose, if possible, of the one bought with mill; this has been ordered, and we hope will shortly be dispatched. It must not be forgotten the whole of the machinery was sold to us at less than home cost, so that supposing we are unable to sell the turbine the company is a considerable gainer by the purchase. The Von Brandis Mine is being efficiently developed by our manager, Capt. Joseph Richards, with the following results up to date:—Lode in Dutchman's shaft, 1 oz. per ton; lode in Hodge's winze, 15 dwts. per ton; lode in Blignaut's shaft, 15 dwts. per ton. Writing on June 17, received since our circular was sent out, Capt. Richards says, "the lode in Dutchman's shaft is about 3½ ft. wide, and a sample taken across the lode, as nearly as we can, shows by pan washing 1 oz. free gold to the ton." In the letter to hand this week, Capt. Richards says he has "300 tons of payable ore ready for crushing;" that he has now reached about down to the 80-ft. level and is 101 ft. deep; it is being timbered and secured previous to sinking below the level. I cannot say much about the lode except that it continues to prospect as near as can be judged from 15 to 20 dwts. per ton, although there are some signs of disorder coming in, which may prove only temporary. The 80-ft. level north—Hodge's winze: On a branch, which to all appearances now will go out at Blignaut's shaft, this is what was wired to you on 27th inst. as worth 15 dwts. per ton, to-day itself shows colour of no commercial value, proving the changeableness of the lode at this point; but it is composed of quartz and gossan, and is about 2½ ft wide, of the most promising character, and I have no doubt at a deeper level it will, judging from present indications, greatly improve." Replying to a remark from the board as to variation in the assays,

CAPT. RICHARDS WRITES,

under date May 25:—"The assays vary, but I do not think there is any cause for anxiety. I consider that the mine is looking so exceedingly promising that we should congratulate ourselves the 80-ft. level, now the deepest point, is of the most promising character in the bottom; if anything, better than before. It is very discouraging to me, now that we have a really *bonâ fide* promising property in my opinion (and I have backed up my opinion in a substantial manner), that we should be short of funds."

At the date of last advices the mill was being transported from the Doornhoek to the Von Brandis, and Capt. Richards has men taking out foundations for mill and mortar boxes. Capt. Richards reports that the cutting of the water-race is progressing satisfactorily, and it is hoped by the time the turbine arrives, the mill will be erected and the water-race completed. Having laid before you all the information we have, and believing from the foregoing facts that

A REALLY PAYABLE PROPERTY

is being opened up by Capt. Richards, your directors recommend the scheme of re-construction, of which you have had particulars. I therefore beg to move the first resolution. A resolution having been passed at the last meeting in regard to getting the vendors of the Virginia to surrender further shares, every effort has been made to carry out your wishes; we instructed our solicitors on the other side to put same into force if it could be done without incurring great cost, but they advised us not to proceed, as the vendors, being scattered over South Africa, the costs would be very heavy.

Mr. COLCHESTER-WEMYSS seconded the motion.

A SHAREHOLDER asked, in regard to the vendors' shares, whether Mr. Chambers would stand in the same position as the vendors in regard to the surrender of shares.

The CHAIRMAN said as it was a legal question he would ask their solicitor to answer it.

The SOLICITOR said that, in regard to the vendors' shares, it would be for the vendors, as it would be for the shareholders, to exercise their option as to whether or not they would take more shares in the new company, paying, of course, their 2*s.* 6*d.* per share.

Mr. SYDNEY CHAMBERS said that as his name had been mentioned he would like to be allowed to offer some observations. In the original prospectus a statement was made in regard to the shares, and the payment to the vendors, but since this might not be in the recollection of the shareholders he would recapitulate it. It was provided that 5,000*l.* in cash should be paid to the vendors.

HE ACTED AS THE VENDORS' AGENT.

and of that sum of 5,000*l.* he remitted to them 2,400*l.*, and he kept 2,600*l.* from which he had to pay all the expenses of the company up to allotment. These expenses came to about 1,600*l.*, and it would be seen, therefore, that he had 1,000*l.* left in his own pocket; but as he distinctly stated when he joined the board that it was not his intention to keep a penny in his pocket unless it came out of the ground, he, consequently, with that 1,000*l.* applied for 1,000 shares, and they were allotted to him. Afterwards

THE QUESTION OF THE WATER RIGHTS CROPPED UP,

and the vendors were invited to return to the shareholders certain shares, and he must say that he considered the vendors treated the shareholders in a very unhandsome manner, they only returning 1,550 shares, whereupon he also returned his 1,000 shares, which made up the total of 2,550, to which their chairman had just referred. Thus it would be seen that of the 2,600*l.* that he had left (out of the 5,000*l.*), he spent on the expenses of the formation of the company and its promotion 1,600*l.*, and the other 1,000*l.* he used to apply for shares, which were afterwards wiped out, and the balance was what he had in his pocket, which was *nil*, and which was exactly the amount he had received for directors' fees during the last 12 months, after travelling between 6,000 and 7,000 miles to attend meetings. He asked the shareholders to consent to the carrying of the resolutions that had been read to them by the secretary that day. He strongly advised them to pass them, and in order to show his *bonâ fides* in the matter, and that he had confidence in the property, he wished to state that

HE WOULD BE PREPARED TO SUBSCRIBE FOR 4,000 SHARES

himself—(cheers)—and as to the question of vendors' shares, he would have no claim in regard to this matter unless he were to pay his 2*s.* 6*d.* per share.

The CHAIRMAN said he would now call upon the solicitor to explain the agreement in so far as it referred to the third resolution.

THE AGREEMENT EXPLAINED.

The SOLICITOR said that he would explain rather than read the agreement, which was necessary in regard to the third resolution, because it stated that the draft agreement was "submitted to the meeting." The agreement was set forth in the usual form, and provided that the liquidator should transfer the property of the whole company to a new company to be formed. The new company taking over the whole of the property, assets and obligations of the old company, and meeting all claims and liabilities. The consideration for the transfer of the property from the old company to the new, was 50,000 shares of 1*l.* each, with 17*s.* 6*d.* credited as paid, which would leave a liability of 2*s.* 6*d.* per share, and these shares were to be allotted to the old shareholders, who might apply for them in writing, at the rate of one share, with 17*s.* 6*d.* credited thereon, for every 1*l.* share held in the old company. Application for the same to be made within 21 days of the signing of the agreement, but power was also given to the liquidator in his discretion to

EXTEND THE TIME,

up to which he could receive applications for a period of two months, where he should deem it wise to do so in order to enable the shareholders in the Transvaal to signify their intention to share in the re-construction scheme.

Capt. WEBBE asked the amount that it would be necessary to raise in order to carry the concern to a success, and he also wanted to know whether any further claim could be made upon the shareholders beyond the 2*s.* 6*d.* per share which had been referred to.

THE POSITION OF DISSENTIENTS.

Mr. BUCHANAN said that he saw the solicitor was present, and he would, therefore, like to ask what the position would be of those shareholders who refused to subscribe for the new shares. What would be their legal position? Would they get anything whatever, or would they not? Because he did not wish to subscribe any more himself.

The SOLICITOR said that the position of dissentient shareholders was defined by the articles of association of the company in the first place, and, secondly, by a clause in the contract. It was article 146 of the articles of association—the original articles—and it provided that if at any time the liquidator of the company shall make any sale,

or enter into any arrangement pursuant to section 161 of the Companies Act, 1862, a dissentient member within the meaning of that section, shall not have the rights thereby given to him, but instead thereof he may by notice in writing, addressed to the liquidators, and left at the office not later than 14 days after the date of the meeting at which the special resolution, authorising such sale or arrangement was passed, require them to sell the shares, stock, or other property, option or privilege, to which under the arrangement he would otherwise have become entitled, and to pay the net proceeds over to him, and such sales and payment shall be made accordingly. Such last-mentioned sale may be made in such manner as the liquidators think fit. The matter was also dealt with by a special clause in the proposed draft agreement as follows:—"The liquidator may sell in such manner and on such terms and conditions as he may think fit any of the said 50,000 shares which may not be taken up under the last preceding clause hereof within 21 days from the date hereof or such extended time as aforesaid, and the net proceeds arising from the sale of 1,665 part of the shares so sold shall be applied in or towards payment of the costs and expenses of and attending the winding-up of the old company and transferring to the new company the assets of the old company as aforesaid. And the net proceeds arising from the sale of any further shares so sold shall be divided rateably among the members of the old company who would have been entitled to the shares sold if they had claimed the same under clause 4 hereof within 21 days from the date hereof."

Replying to a question,

The CHAIRMAN stated that the directors had already many

PROXIES IN FAVOUR OF THE SCHEME,

to the extent of something like 11,585 proxies.

A SHAREHOLDER asked the rate of interest on the debentures.

The CHAIRMAN: 10 per cent.

Capt. WEBBE wished to know the least amount that they could do with.

The CHAIRMAN said that their calculations had been made at the lowest ratio, and he also wished to point out that they could not come upon the shareholders for any more than the 2s. 6d. per share.

Capt. WEBBE said that the chairman had not yet stated the actual amount of money that they must have.

The CHAIRMAN said that something like 4,000% was the very lowest that they thought they could do with.

Mr. WEBB: That means 32,000 shares.

The CHAIRMAN: Yes.

Mr. WEBB: And at present you only have about half that.

The CHAIRMAN said quite so; but as the shareholders had heard others were ready to take more than their proportion, and they would also have to see what came in from outsiders as well as from the shareholders. Naturally, if they did not get enough money they could not go on.

The SOLICITOR, in reply to questions, said that there was absolutely no liability whatever upon the shareholders who took the shares in the new company beyond the sum of 2s. 6d. per share. No further call could be made.

The CHAIRMAN then put the first resolution, which was carried.

The second resolution was then moved by the CHAIRMAN.

Mr. COLCHESTER WEMYSS seconded the motion, which was carried.

The CHAIRMAN then put the third resolution.

This was also seconded by Mr. COLCHESTER-WEMYSS, and agreed to.

A SHAREHOLDER asked whether Capt. Hodges, who was present, had any local knowledge of the property. He understood that such was the case.

The CHAIRMAN said that was so.

A SHAREHOLDER said that they would like to hear some few words from him.

The CHAIRMAN concurred, remarking that not only had Capt. Hodges such experience, but a part of the workings was named after his (Capt. Hodges') son, who was employed there. (Cheers.)

AN EXPERT'S OPINION.

Capt. HODGES said he was willing to respond to the wish of the meeting that he should say a few words. He had known the Von Brandis property for several years—three years—and he knew that there was enough stuff there to keep the 10-stamp battery at work, and to employ a further 10-stamp beyond. (Cheers.) The reef was a good width, 3 to 4 ft., and the samples that he had taken from it had yielded as high as

1 OZ. TO THE TON.

and he never got less than from 10 to 12 to 14 or 15 dwts. The amount of water and the amount of mine timber there was very abundant, and that was a very important matter in the Transvaal, where such things were very costly. His deliberate opinion was that they had a

GENUINE MINE.

He did not know that he could say much more, but he would be very happy to reply to any questions. (Cheers.)

Capt. WEBBE asked if Capt. Hodges could give them any particulars as to the original property and its prospects—whether it was ever likely to turn out profitable if worked.

Capt. HODGES said he knew the property, and believed that it would pay if it were worked in depth. Scratching the surface, as had been done in the past, was no good at all. They must go deeper.

A SHAREHOLDER asked the distance between the old property and the Von Brandis.

Capt. HODGES said it was between 2 and 3 miles.

Another SHAREHOLDER asked how it was that the former owners of the Von Brandis Mine could not make it pay.

Capt. HODGES said that the question was a very easy one to answer. The former owners of the property were also the owners of some 10 or 12 other mining properties, and they did not devote their attention to any one in particular, but proceeded to scratch the surface of them all, and such surface-scratching was useless for any one property. He believed that if, instead of simply scratching the surface of the mine, they had sunk to depth in the Von Brandis, it would long since have been proved to be a valuable and profit-paying property. He knew the Von Brandis well, and he had confidence in its future.

In reply to a further question,

Capt. HODGES said that he would not like to say that the expenditure on the original property, or on the Von Brandis, had so far been of no value. The only fault was that it had not been carried far enough.

After some further conversational discussion, the proceedings were brought to a conclusion by a vote of thanks to the chairman and directors.

It was stated by the CHAIRMAN, in reply, that the confirmatory meeting would be held in due course, of which notice would be given.

The meeting then separated.

THE ZARUMA GOLD MINING CO., LIMITED.

A YEAR OF NO PROFIT AND NO LOSS, BUT OF SUBSTANTIAL WORK—CAPT. BRYANT CONFIDENT OF THE VALUE OF THE PROPERTY, BUT DIRECTORS IN NEED OF HELP TO WORK IT.

The annual general meeting was held on Wednesday, at Cannon Street Hotel.

Mr. Robert Durham

(chairman of the company) presided.

Mr. A. P. M. RIVOLTA (secretary) read the notice of meeting.

The CHAIRMAN: Gentlemen, I think the accounts before you do not call for much comment or explanation from me. You will observe that the expenses have been kept at the very lowest possible amount, and owing to that it has been satisfactory to note that we have made a profit, after working expenses at the mine, of over 3,000%, which shows about 9s. a ton profit. This is the first time in the history of the company that

WE HAVE BEEN ABLE TO SHOW A PROFIT,

and although in itself it is rather small it shows that there is gold in paying quantities at the mine. London office expenses are very small, and I think will compare favourably with any balance-sheets that are issued. I am quite sure that the work could not be efficiently done for less than is here put down. The item 470% for interest on debentures was for the amount of 4,700% of debentures issued at 90%, which we thought it best to put in the mining account for this year. As regards the work on the mine, the mill has been kept in very efficient working order all through the year, which is entirely due to the good management of Capt. Bryant, who has the direction of the mine. The expenses, you will observe, are not more than they were in the previous year, although the returns have shown an increase of 5,000% in gold, and the amount of ore crushed was also very much larger. Had these favourable conditions continued during the present year, we should not have been obliged to ask the debenture-holders to forego for the time their half-year's interest; but, as you will see by the directors' report and extracts from the manager's letters, unfavourable circumstances have occurred which have compelled us to lose about three months' working. That has affected the gold returns to the extent of about 3,000%, and hence our difficulties. I am glad to say we are not actually in debt, except to the debenture-holders for interest, but our funds are too low to carry out the recommendations of the manager as embodied in his report. For instance, he regards it as imperatively necessary that a new wheel should be erected to separate the hoisting and pumping machinery. At present the hoisting and pumping is done by the same wheel, which is not advisable. It is difficult to estimate exactly the cost, but I should think perhaps 1,000% would cover it. There is nothing else of importance that he recommends except an increase in the monthly cost. He considers that we ought to spend about 25 per cent. more than we do spend in order to get out sufficient ore so as to keep the mill in thorough working order. This, of course, when a company is short of funds, it is rather difficult to do. We have a very large property there, and many concessions, as you see, undeveloped, and if money were spent on developing them no doubt they would return a very good rate of interest. Some day, however, we will feel the benefit of the capital being expended there. The reduction officer there now seems to be adopting

A BETTER MODE OF TREATING THE CONCENTRATES.

He was not very successful at first, but later experiments show that he has been able to extract something like 80 per cent. of the gold contained in the concentrates, which, of course, if continued, will be very satisfactory. We have had some few tons sent home to England, which were sold at a very fair profit. They produced something like 40% a ton, and I think the profit was nearly 20%. It is, however, much better to treat them on the spot, if it can be done. Now, before asking you to adopt the report, I wish to mention that I should like the shareholders, if they feel so disposed, to

APPOINT A COMMITTEE OF TWO OR THREE OF THEIR NUMBER in order to confer with the board, and see with them what is best to be done under the circumstances. Of course, it is very difficult for the board to decide for the shareholders, and I think it is for the shareholders to say what they would like done. I will ask you first of all to adopt the report and accounts, and then we can proceed to the discussion of the committee, if thought desirable, afterwards. I beg, therefore, to move "That the report now presented, together with the statement of accounts appended thereto, be received and adopted."

Mr. FRANCIS S. SYMONS (director): I second the motion.

DISCUSSION.

Mr. DYETT dwelt upon the importance of small savings, which he said laid the foundation of large economies, and subsequently of dividends. He thought well of the proposal of a committee, but would like to know if the directors were acquainted with the mill and with the estate generally. He was led to suppose by persons on the Stock Exchange that he would make a fortune out of this mine, but time had shown that they knew nothing about it. He, however, knew Mr. Symons to be a practical man, and also what his opinions were of the concern. Now, if there was such a grand mine, why did they not do better? It was evident gold was in it, and in large quantities, and one part of the committee's duty would be to ascertain why it was not extracted in sufficient quantities to pay the shareholders. He

understood about 300%, was paid to the directors, which he considered a very moderate sum, though at the same time the company could not afford much. He would like some further explanation about the debenture interest, and why it had not been paid.

WHAT THE BOARD HAVE HAD TO CONTEND WITH.

The CHAIRMAN: The reason it has not been paid is on account of the unfortunate circumstances to which I referred. The water-line broke down in Feb., which stopped the mill from working for five or six weeks. After that, heavy rain set in, which Capt. Bryant fully dealt with in several of his letters, and notably in one dated July 23 which said "communication between this place and Guayaquil has been almost entirely cut off for several weeks. No telegraphic messages can be passed. We received no regular mail from May 9 to June 5." You see it has been an exceptionally rainy season. We have lost three months work through that.

Mr. DYETT: I know the rain has been very heavy, and am sorry for the difficulties of the position, which no one can say have been brought about by the management here or abroad. We are now told that, although we are getting nothing for our shares, about 1,000%, is necessary to re-construct some of the machinery, so as to separate the drawing and pumping machinery. Would you like shareholders to aid you, under the present circumstances, to consider how this 1,000% can be wisely spent? I fancy we should not mind an expenditure of even 3,000%, or 4,000%, if we could only be a little more certain as to the returns. I shall be very pleased indeed to assist on any committee that may be formed. I have nothing to do, and will render all the work I can. (Hear, hear.)

GETTINGS v. SAVINGS.

Mr. BROOKSBANK: I do not agree with what the last speaker has said about the "savings" — what I want to dwell upon is the "gettings." I want you to give us some assurance that there is gold in tolerably immediate prospects, so that we may hope for the debenture interest, at all events. I see there is a cash balance of 3,398%. What has become of that?

The CHAIRMAN: That has been expended during the present year in working.

Mr. BROOKSBANK: I suppose the bond-holders have the prior claim on that?

The CHAIRMAN: One half-year's interest was paid out of it.

A FAVOURABLE VIEW OF THE REPORT.

Mr. GRAY: Looking at these accounts, the result is not so unsatisfactory as it might appear at first sight. The balance to the debit of mining accounts was 25,730% last time, and the balance when you came to the end of 1890 was 25,539% — a difference of about 400%. If we take out the exceptional expenditure and the discount on debentures, practically you are no worse off at the end of the year than you were at the beginning. I know that is not satisfactory for a business enterprise, but it is something in these times if you cannot make money, not to lose it, and that is our position to-day. There are one or two items which we should like to see disappear, as, for example, 3,583% on account of directors' fees in the old company. If that item could be eliminated it would give the balance-sheet a better appearance. I generally conclude that you are just about the same as you were when you started a year ago.

ANOTHER FAVOURABLE VIEW.

Mr. N. H. NEW: I have read regularly every year the reports that have been issued by this company, and it has struck me that the present one is the most satisfactory and interesting that has been published since the company has been in existence, and that for two reasons. One is, as the last speaker has just stated, that the accounts just balance one another. That is, you have made no loss, although you have made no profit, during the past year, and likewise you have proved that there is gold to be obtained, and if you can only obtain it in sufficient quantities there will be a very handsome profit, according to the quantity of quartz you raise. Another very important feature in this report is the evidences that are given in the mining manager's statement of the veins of quartz, which he thinks will, if prospected, in all probability lead to very large and very satisfactory results. I think it a great pity that the company is in such a position, and that it cannot afford the expenditure of 1,000% or 2,000% in taking up one or more of these most promising points indicated in the manager's report. If that could be done I feel pretty sure, from what I know of the company, they will find it yield them a very handsome return for the amount they have spent. At all events they might spend a little in that direction, according to their means. I do not know exactly how the debentures are held, but if by friendly hands, in all probability no difficulty will arise, but if in hostile hands, it will be a serious thing if the interest remains unpaid. I think we ought not to be dissatisfied, but rather encouraged, by this report, and if in any way shareholders can help the directors I think it is only their duty, because I think in helping them they will help themselves.

The CHAIRMAN: According to the trust deed, debenture-holders cannot take any action unless more than six months' interest remains unpaid, and that is the case, but considering that more than three-fourths of the debentures are held by the directors and their immediate friends, I do not think that any hostile action is likely to be taken — at all events, we hope not.

Mr. BROOKSBANK: I think you might say something to re-assure the debenture-holders.

The CHAIRMAN: I can only say, whatever funds we get the debenture-holders will receive their interest, but at present we have no funds to pay them with. As the gold comes in we have to spend it in working expenses.

The report was then unanimously adopted.

DIRECTORS OF EXPERIENCE RE-ELECTED.

The CHAIRMAN: Three of the directors retire on this occasion. Mr. Franckel, Mr. Chambers, and Mr. Symons.

A SHAREHOLDER asked if the directors were practical men.

The CHAIRMAN said: As regards these three gentlemen, Mr. Franckel is intimately acquainted with Ecuador, and was one of the original vendors of the mine, and thoroughly knows the country. Mr. Chambers is not of much use to the board in London; but he is useful in Ecuador because he is H.M. Consul, and acts as our agent in Guayaquil. Mr. Symons, as most of you know, was connected with the Don Pedro and St. John del Rey Mines for many years, and

is a thoroughly practical man. I propose that these three gentlemen be re-elected members of the board.

Mr. BRINSLEY seconded the motion, which was carried unanimously.

On the motion of Mr. DYETT, seconded by Mr. NEW, the auditor, Mr. William Brown, F.C.A., was re-elected at the same remuneration as before.

COMMITTEE AGREED TO.

The CHAIRMAN: I now come to the question of the committee to consult with the board, and go thoroughly into the reports and letters, and express their views as to what should be done in the future. We could, perhaps, go on as we are for a little time, but it is a very hard to mouth sort of business, and if anything unforeseen occurred you might have to stop altogether, because when the returns stop the expenses go on almost the same. If you form this small committee the board will be able to give them every information, and they can come to some definite idea to put before the shareholders. Mr. Cheston, who is a large shareholder, and perhaps represents something like 20,000 or 25,000 shares held by certain friends, has expressed his willingness to allow his name to be brought before the shareholders as a member of this committee. (Hear, hear.)

After some further discussion, three other names were added to the committee — those of Mr. New, Mr. Moss, and Mr. Dyett.

A SHAREHOLDER asked whether, having regard to the fact that the company had a large extent of ground, they could not obtain funds by means of a sub-sale.

The CHAIRMAN said it would be first necessary to prove the parent company a success, but the suggestion had often been considered by the board.

Mr. THOMAS B. PROVIS (consulting engineer to the company): The concessions are from about 1,200 yds. long, and their total length on the lode is over 1½ miles, and then we have parallel lodes lying to the side of the main one. I have an idea that the committee we have just appointed fancy the mine is at a standstill, but that is not the case. Our mill we hope is now working, and

LAST MONTH OUR RETURN WAS 760%.

which is 200% above what we spent. The only question is whether some mishap may occur, of which, however, we have not heard. The expense mentioned in the early part of the report dealt with the coming year. The directors thought it better to put it in the accounts so that now the debenture-holders should understand the reason their interest has not been paid. With regard to the Jorupe Mine, I have a report written by me in 1886 when I was at the property. I then took a few samples, of which the manager has since taken many, and within a few pennyweights the average is the same. The suggestion about subsidiary companies has been often talked of, and we have sufficient ground for at least three companies, with ample space for each. The idea, however, is to make this company a success, in order to induce other people to take up what we have to sell. Beyond us, on the far side of the village, there were three French companies working for gold. Two syndicates were formed in Paris and one in Madrid, and they are working, with results that in some cases are very satisfactory.

Mr. NEW proposed a cordial vote of thanks to the chairman for the information given, and for the way in which he had conducted the meeting.

Mr. GRAY, in seconding the motion, said he was sure the directors had but one object in this matter, and that was to make the company a success. (Hear, hear.)

The CHAIRMAN returned thanks, and expressed his regret that he had not a better report to lay before the meeting. It is not, he said, from want of trying, but from sheer misfortune, that this company has not succeeded better. We have had several spasms of bad luck all through the existence of the company, but I hope now that we have a good manager (and he is a good manager I am quite sure) that the future will be brighter than the past.

MANAGER ABROAD NOT FORGOTTEN.

Mr. GRAY proposed a vote of thanks to Capt. Bryant, for whom, he said, it would be an encouragement to know that the shareholders recognised and appreciated his arduous services.

Mr. MOSS seconded the motion.

Mr. PROVIS desired to say a word in support of it, and said: I know the country, and I have also known Capt. Bryant for some years. I know also the difficulties he has had to contend with, which no one in this room can appreciate. To be in a place like that in the wet season must be trying in the extreme, and I am sure he will be very pleased to get a vote of thanks from this meeting.

The motion was carried by acclamation, and the meeting ended.

URANIUM MINES, LIMITED.

RE-ORGANISATION RESOLUTIONS CARRIED — THE CHAIRMAN GIVES AN EXAMPLE TO SHAREHOLDERS.

A SPECIAL MEETING of this company was held at the City Terminus Hotel on Tuesday.

The Hon. F. W. B. Massey-Mainwaring

(chairman of the company) presided.

Mr. A. J. LEESE (secretary) read the notice of meeting.

The CHAIRMAN: Gentlemen, you are aware of what has caused this fresh meeting to take place. It is, practically, the action of the gentleman as to whom you showed very plainly last time you had no sympathy whatever with him. He has been a thorn in the side of the Uranium Co. I do not see him here to-day, and I hope we shall never see him again. (Hear, hear.) The board put before you a re-organisation scheme at the last meeting. In one way that re-organisation scheme exists now, because the debenture-holders, who are the directors, and some of their friends are practically willing to hold the property, and go so far as to pay the money out of their own pockets for the purpose of keeping the mine alive till some re-organisation scheme can be adopted by you. It will be a great assistance to the directors if sympathy is shown by the shareholders in pushing forward this re-organisation scheme. The property is now in exactly the same position as it was before, so far as actual value is concerned. We are making the oxide of uranium every day, and are sending it

off weekly, and, in fact, at the present moment we are largely in arrears. We have

ORDERS THAT WE CANNOT SUPPLY.

Of course, the action of this gentleman has caused delay that would not otherwise have taken place. We should have carried through our re-organisation scheme last meeting, and now half way towards putting everything into ship-shape order. The only thing the debenture-holders had to do was to practically protect the property for themselves and for the shareholders at the same time. You may rest assured that so far as you are concerned you are perfectly safe in our hands. (Cheers.) I might indicate to you afterwards some of the lines upon which we put forward the re-organisation scheme. Whatever we do in respect to it must be of a merely formal nature to-day. We cannot take any possible steps to-day, but

THE PROPERTY IS SAFE, AND YOU WILL BE SAFE.

I strongly urge shareholders to follow my example, and come and help the company at this present moment by subscribing for some of these preference shares. I will not say anything more, but formally move "That it has been proved to the satisfaction of this meeting that the company cannot by reason of its liabilities continue its business, and that it is advisable to wind-up the same, and accordingly that the company be wound-up voluntarily."

Mr. EDE: I saw there was an application in the Court of Chancery for winding-up this company. Is that a protection to you before you attempt to wind-up voluntarily? Some companies require such an order.

Mr. T. H. NORTH: A petition has been placed on the file for the protection of the company, and can be withdrawn afterwards by consent.

Mr. WILLIAMSON: I beg to second the resolution put by you to the meeting. It will be advisable for shareholders to have an outline of the scheme we propose.

VIEWS OF THE MANAGING DIRECTOR.

Mr. T. H. NORTH: As the chairman has stated, it is necessary to formally pass the resolution which has been proposed from the chair, and seconded by Mr. Williamson, in order that the company may be wound up voluntarily. There are three ways of winding up a company—the inexpensive one being the voluntary way. You will see the circular states that if that resolution be confirmed a further resolution will be proposed for the appointment of a liquidator or liquidators. It will be in the course of business directly to propose liquidators, who will act without remuneration, and conduct the business of the company, as it is now being conducted. (Hear, hear.)

Mr. EDE: You will not employ a professional liquidator.

Mr. NORTH: Certainly not. Since the last meeting, when we had present Mr. Harris James, the late manager of the property—(laughter)—a gentleman who had a large number of shares, as I then informed you, given to him by the vendor, and who at the present moment holds 59 after having sold the balance—the action that he took at that meeting, by pointing out, what was the fact, that the notice was informally issued, brought us face to face with the fact that if we left the property unprotected during the period necessary for the calling of another meeting some of the creditors would be in possession of your assets instead of your directors, who are acting for you. The directors, being the principal debenture-holders, took action at once for the appointment of a receiver, in order that the property might be protected, and a petition was also placed on the file in the name of the company. Upon the passing of this resolution we shall, at the proper moment, take such action as we may be advised is prudent and proper with regard to that position. This resolution being passed, the present company, as a company, virtually ceases to exist, and the affairs pass into the hands of the liquidators. I shall shortly nominate the

CHAIRMAN OF THE COMPANY AND THE SECRETARY TO BE THE LIQUIDATORS.

They will conduct the business in the ordinary way, and the present directors will give all the help they have hitherto done to work out the affairs of the company, though the liquidation will be an exceedingly inexpensive matter. Then you will be approached as shareholders upon the re-construction scheme, which was placed before you at the last meeting, and I trust the present shareholders will show that they are willing to help the directors in the onerous business they have before them by coming forward to some extent, at any rate. You will acknowledge that the scheme put before you is not an unfair one for those who have put their money into this concern. (Hear, hear.)

Mr. EDE: To what expense shall we be put in re-construction?

The CHAIRMAN: The scheme we put forward at the last meeting explains everything.

Mr. GOLMICK: I think the deferred shares should be cancelled. If anybody has to suffer in this arrangement the vendor should.

Mr. NORTH: The vendor suffers very heavily. In the scheme the public shareholders get two 5s. shares for each £ they have in this company, but the vendor is written down in the proportion of four shares of 5s. for every five (17. shares.)

Mr. GOLMICK: The property was over capitalised from the beginning, and as most of the subscribed cash went to the vendor, he has received more than he should have done for the property.

The CHAIRMAN: Mr. North has a good deal of influence with the vendor, and authorises me to say that if the shareholders show an inclination to assist in the matter, he feels sure that the vendor will strike out those deferred shares. (Hear, hear.)

The resolution was carried unanimously.

The CHAIRMAN: I have now to invite your assistance, and, as a commencement,

I PUT DOWN MY OWN NAME FOR 1,000 OF THE PREFERENCE SHARES.

and hope that other shareholders will come forward and assist in the matter. It would aid us greatly if it were known in the room we received a large amount of support.

Mr. LIPPER: I will subscribe for 200 shares. (Cheers.)

Mr. DENNIS BUTLER: I also will subscribe for 200 shares. (Cheers.)

Mr. EDE: I should like to help, but require time for consideration, and hope you will send a circular to us.

LIQUIDATORS WITHOUT PAY.

Mr. NORTH: I beg to move "That the chairman and secretary, Mr. A. J. Leese, be appointed liquidators."

Major-Genl. JOHNSTONE, C.B. (director): I second the motion.

Carried unanimously.

The CHAIRMAN: I may remind you that we shall have to pay off one debenture-holder in cash. He is the solicitor for the defendant, who actually (although practically our enemy) had the goodness to take his costs in debentures. That 400% will require to be paid, and there are small debts amounting to not more than 100%. Any money that I have personally advanced I shall be glad to take in preference shares, and will give the company all the assistance in my power. We shall take care to communicate these proceedings to the absent shareholders. I can quite understand that shareholders as a rule require time before committing themselves to the number of shares they will take.

IT IS SO.

Mr. GOLMICK: I wish to impress upon the shareholders that the success of this re-construction depends wholly and solely upon ourselves—that is upon the *bona fide* shareholders.

The CHAIRMAN: The words of Mr. Golmick will not be lost upon the shareholders. Our solicitor informs me that the proceedings which have been taken can be stopped at any moment, as they are in a certain sense of a friendly character.

A SHAREHOLDER: What about your own lawyer? Has he taken proceedings?

Mr. NORTH: Our ex-solicitor is not satisfied—in fact, he is dissatisfied, but

WE ARE RIDING ON THE WHIRLWIND,

and we intend to conduct the storm.

The CHAIRMAN: I forgot that, gentlemen, for the moment. He is a gentleman who ought to have been of assistance to us, but has not been.

Mr. J. H. CLARKE proposed, and Mr. DENNIS BUTLER seconded, a cordial vote of thanks to the chairman.

The CHAIRMAN, in replying, said: I hope the next time I preside over you the company will be in a better position, and it will be so if the re-organisation be then an accomplished fact. The news is good, for we actually have orders for oxide of uranium, which we are not able to deliver, because we have not the plant to do so.

Mr. BUTLER: I hope you have the material.

The CHAIRMAN: Plenty of ore only waiting to be treated, but we have not the chemical plant to do it. I forget at the moment how many pounds weight we are in arrear, but it is a large quantity, and we are being pressed for delivery. I hope we shall be able to put up a larger plant, and execute orders punctually. The directors have not endeavoured to get more orders, for the simple reason that they have not been able to supply those they have. We hope to be able to work up to the full extent of the plant we shall put up.

VENEZUELAN AUSTIN GOLD MINING CO., LIMITED.

SHAREHOLDERS DECIDE TO RE-CONSTRUCT—DIRECTORS EXPLAIN THEIR POLICY, WHICH MEETS WITH THE ENDORSEMENT OF THE MEETING—MR. LEE IS THANKED FOR HIS ARDUOUS AND UNPAID SERVICES.

AN extraordinary general meeting was held at Winchester House, yesterday, for the purpose of considering, and, if thought fit, adopting resolutions proposed, as follows:—

RESOLUTIONS.

(1.) "That the Venezuelan Austin Gold Mining Co., Limited, be wound-up voluntarily, and that a liquidator be appointed for the purpose of such winding-up." (2.) "That the liquidator be hereby authorised to enter into an arrangement under section 161 of the Companies Act, 1862, with the Venezuelan Mines, Limited (hereinafter called 'the Purchasing Co.') for the sale and transfer to such company of the business, assets, and rights of this company upon the terms of receiving or obtaining for the members of this company shares or rights and interests in the Purchasing Co. in compensation or part compensation for such sale and transfer and on such terms in detail as he shall think fit, subject, nevertheless, to the following provisions, namely:—(1.) The Purchasing Co. shall take over the debts and liabilities and pay the costs of the winding-up of this company, and indemnify the liquidator and contributories of this company in respect thereof. (2.) Every member of this company shall be entitled (on condition that he apply to the Purchasing Co. within one calendar month from the confirmation of this resolution for the issue to him of the shares hereinafter mentioned) to an allotment and issue by the Purchasing Co. to him or his nominee of 10 shares of 17. each, credited as fully paid-up, in the Purchasing Co. in respect of every preference share of 107. in this company held by him, and one share of 17., credited with 18s. paid up thereon, and subject to a liability of 2s. in the Purchasing Co. for every three ordinary shares of 17. each in this company held by him, and (if necessary) the liquidator may arrange for the issue of certificates representing fractional parts of shares and entitling the holder of a sufficient number to the issue of a share. Each member of this company shall accept his proportion of the said shares or certificates as aforesaid in full satisfaction and discharge of his or her interest in the assets of this company."

Mr. J. C. F. Lee

(chairman of the company) presided.

Mr. F. O. SMITHERS (secretary) read the notice of meeting.

The CHAIRMAN: Gentlemen, I formally move the adoption of the first of these resolutions. Before we do anything it is desirable that I should explain everything, and explain also the policy upon which the board has proceeded. I will begin by telling you that the resolutions themselves have been framed in accordance with the latest decision of the House of Lords with regard to the re-construction of companies, about which you know better perhaps than most shareholders what fearful trouble we have had in the past. We think it quite impossible that such trouble can arise in the future from legal grounds—assuming that the resolutions are passed by a satisfactory majority, and assuming that the money is found. Now, the first point is to explain the resolutions themselves. We, as a board, have had a very dismal and a very weary experience, as you know. We have been working for many years for nothing, and if this thing is dropped

WE SHALL BE THE LARGEST LOSERS IN THE ENTERPRISE.

Therefore we have had to look at the past to somewhat guide us in the future. Now, one of the great complaints in the past was the enormous capital of the company. It does not require a man of much penetration to know how that came about. I think it is just as well not to state it at a public meeting, but there were reasons so obvious that they ought to occur to every shareholder, and they were certainly very well known to our largest block of shareholders, that is our old Nacupaishareholders. (Hear, hear.) Now the opportunity (at least we think it opportune) to take some measure to reduce what was called an "inflated" capital has arrived, and that is one of the reasons you find that the ordinary share capital is cut down from 650,000l. ordinary shares, which was the number issued, to 200,000 shares in the new enterprise; and although in the present Austin Co. the ordinary shareholders appear to hold a three-fourths interest, or a little more, it is in reality subject to a prior charge, that is, the prior charge on the preference shares. A most regretful thing it was that ever any preference shares were issued in this company. I regret it deeply.

I HAVE ABOUT 5,000l. WORTH OF PREFERENCE SHARES,

and the board around me, and the gentlemen who have left us are also large preference shareholders. We issued them in deference to a first-rate opinion, but no sooner was that done than everybody criticised and attacked us, saying—"Those preference shares are unsaleable; no one cares for preference shares in a mine; what everybody likes is a good gamble in the ordinary shares and a good run for his money, so as to make them worth 2l. or nothing." Now, all these criticisms sank very deeply into my mind, and into the minds of my colleagues, and if we could have done it we should have been very willing to have made an institution without preference shares at all. Now, in considering this plan of doing away with preference shares, we had to be guided very largely by considerations for existing rights, and we have endeavoured in the scheme before you to place the preference interest in what I think, speaking as a large shareholder, is a very fortunate position. I paid full price for my preference shares. There are many holders who paid a very small one, and I think that the objections (I must tell you frankly there have been objections on both sides of the table) seem to me rather to

JUSTIFY THE SOLOMON-LIKE DECISION WE HAVE COME TO.

Both parties have complained. The preference shareholder says he does not get half enough, and the ordinary shareholder says, "It will give the preference shareholders half this mine, and we shall not find you the money." I appeal to you, gentlemen, whether there is not in this a certain sign that the board have arrived at a wise, equitable and prudent compromise. In proof of this some of our largest shareholders have signed the form sent out. We wished to test the feeling of the large holders, because we thought it not improbable that prudent men, looking to their own interests, would follow the lead of large and important interests, and we have some amongst our shareholders, distinguished in the City for financial wisdom and character, who have signed almost *en masse*. All those that we could reach have done so, but some are away, who I have no doubt will sign. The signature means no more than this, that they give a moral approval to the action of the board. As to the ordinary shareholder, he gets half of the mine, whatever it may be worth in the future, on

PAYMENT OF 2s. A SHARE.

Speaking for myself, I shall have to pay a large sum as I am a considerable shareholder, but I will answer those who have objected. You cannot, in dealing with this preference interest, do away with it, except upon a very liberal basis. I do not advocate that from my point of view as a preference holder, but from a general point of view. I think when the scheme comes to be studied by the ordinary shareholders who say they will not subscribe, they will eventually change their minds in their own interests and join us. (Hear, hear.) That is as to the system itself, but the first thing really to determine is whether the mine and the property are worth this further effort. That really lies at the root of the whole question. Now, I have stood up here for several years the exponents of the opinions of men who were assumed to be high-class experts, and I think they were. I think there is nothing to be said against the moral character of anybody who has been an expert here, but the great danger is when they come to prophesy. That is

THE MISCHIEF OF EXPERTISM.

They begin to tell us something they really do not know, and we have been told by the highest authority that we must never prophesy unless we do know. Now the main error, in my judgment, from the first (for there has been a main error), in the management of this property, has been a too-extended sphere of operation. The property is very wide-spread. To sum up the length of the concessions—it embraces something like 2 or 3 miles of disclosed reef. If we had it in America—I say it seriously—it would be worth a quarter of a million in cash, but, unhappily, it is in Venezuela, where every man's hand is against us, and especially the hand of the Government, but I am glad to see there is likely (if one can believe what one reads in the papers) of some prospect of an arrangement being come to between Lord Salisbury and the Venezuelan Government. We have been largely indebted to our friend, the *South American Journal*, for keeping this question alive. I believe that paper has really awakened a feeling in Lord Salisbury's mind from

what I am told that the time has come to do justice in this dispute. If it is done, and if the Venezuelan Government will see the wisdom of reforming its ways and throwing this country open as a free trade country, and we can get mining supplies cheap,—work which is now costing 32s. per ton—I may prophesy here, because the matter is reducible to figures—will be brought down to something like 1l., and if it is, and we can crush 40,000 tons a year (as we can) we shall certainly be making a considerable sum. I do not know whether you consider I have said enough. I do not want to appear here as an advocate of your going on if you do not wish to. I shall be prepared to lose my money, and the time I have spent, leaving the thing and washing my hands of it, as the saying is, with a strong conviction that I have done my best.

CIRCUMSTANCES ALONE HAVE BEEN AGAINST US.

Those circumstances were that we rushed too suddenly into machinery, too suddenly into grand explorations, and I have the statements from a man who had not the slightest personal motive that I could discover, and who came over from Venezuela to tell the board the history of the past management. Now, in repeating some portions of this history, let me ask the Press particularly to take notice of this, that I do not reflect, or intend to reflect, in any way upon anyone, but

FACTS MUST COME OUT,

and he tells me that Capt. Meen, a gentleman whom we all on this side looked upon as a species of saviour of this concern, and who was going to do everything for us, threw away nearly 30,000l. in useless underground explorations. Now, how in the name of wonder a board in London could prevent that, I do not know. Here is a man of the highest character, of really great capacity—a man who is vouched for by the best authorities, but makes an error of judgment, which costs us 30,000l., and that has been a source of constant cost and loss to us since, that is to say, by continually following up his original scheme. It is well known to my colleagues, and to many outside, that when this company was first formed, I held it ought to have been nothing but an exploration company. I said, in effect, "You have 3 miles of reefs. Just explore the surface, and one good find will pay for everything," but I was overruled. A different policy was judged to be better, and here we are to-day; and now you have the facts. You must do what you like. I am not going to advocate anything. I am not, and my colleagues are not, going to enter into a Zaccani, Nacupai, or Venezuelan-Austin reconstruction like that which formerly landed us in half a dozen Chancery suits. If there is opposition of a strong and serious character to this scheme from any quarter we shall know what to do. We shall treat your interests as our own. We are too largely involved not to know how to deal with them, but it is my duty, having put these resolutions before you, and justified them in these few remarks, to put them to the vote. We shall then know where we stand in law, and, in fact, when a vote has been taken upon them. I have not much more to say on one side or the other, but we shall, before we conclude, hear what any member has to say in this room, and if there is a sound argument advanced against what we have put forward, we shall try to meet it in all fairness, and then leave the issue with you as to which way we are to proceed. I will now move the first of the resolutions as above. (Cheers.) Mr. W. S. ELLIS (director): I beg to second the motion.

DISCUSSION.

Mr. RUDALL: I should like you to refer to Austin No. 9, to know why it has not been worked. As an old Nacupai shareholder I was told there was an inexhaustible source of wealth therein, beyond the dreams of avarice. Does it still remain in our possession, and in the case of a new company being formed will some steps be taken to bring it into bearing?

The CHAIRMAN (smiling): I always call you "my old friend Austin No. 9." (Laughter.) Capt. Meen spent a great deal of our money in exploring the wrong end of it. I suppose he had miner's reasons for doing as he did, and I do not reflect upon him, but will only say if he had spent as much money in another part of it I think we should have had results. It seemed as if he were doing this to work it in connection with Potosi. There are always reasons for things, and there may have been a good reason here to use it with the Potosi mill, but in any case a considerable sum was spent in vain.

Mr. RUDALL: Are any crushings going on?

The CHAIRMAN: Yes, but merely from surface scratchings. We are testing the surface lodes. We had a telegram only yesterday advising nearly 300 ozs. from a few surface scratchings, so that we keep afloat and pay our way.

A SHAREHOLDER: Were those from the Pinta Americana?

The CHAIRMAN: The telegram does not say, and of course it cannot be in much detail. We are testing the concessions in different places.

A SHAREHOLDER: How much cash will this produce?

RESOLUTION CARRIED UNANIMOUSLY.

The CHAIRMAN: 20,000l. if the shares are all taken. I will now put the resolution. Those in favour; those against—I am happy to say it is carried unanimously.

The CHAIRMAN then proposed the second resolution as above.

Genl. STEWART (director) seconded the motion.

A SHAREHOLDER: The resolution mentions "debts and liabilities." What do they amount to?

The CHAIRMAN: We have no debts. We are obliged to put the resolutions in that form, and if there are any small amounts to be paid they will have to be provided for. In the sense of large liabilities there are none.

The SHAREHOLDER: There are no accumulated liabilities.

The CHAIRMAN: None whatever. We are practically paying our way.

A SHAREHOLDER: Are exploring works going on?

The CHAIRMAN: Yes. Exploring works have gone on, but the operations of an exploring company must be slow. We are, in fact, going to follow a Micawber policy—to see what will turn up.

A SHAREHOLDER: What is the position of the strike in Austin No. 9, about which you spoke at the last meeting?

The CHAIRMAN: They call it the Valley lode now. They are quietly working, but 800l. was wanted to develop it, and as we had not got it, the matter was not proceeded with further. We could do no more than scratch the surface.

A SHAREHOLDER: In the event of no re-construction, will there be any return to the ordinary shareholders?

The CHAIRMAN: The preference shareholders will get it if there is anything, but I am sure there will be absolutely nothing for the ordinary shareholders.

The resolution was carried with one dissentient.

DIRECTORS WILL NOT ALLOW THE PROPERTY TO BE SACRIFICED.

The CHAIRMAN: Before you go, I think I ought to tell you that in the event of the re-construction not going through, we are not devoid of resources to deal with the business, because the directors and their friends will try to do something to preserve the interests of the shareholders, and to prevent this company from becoming, even later on, the subject of anything in the nature of litigation. I will, therefore, tell you very frankly what we shall do. We shall lease this company to a working company. We do not mean to let it be wound up and sold for old bones. I have a project, in course of maturing, by which at least their interests will be largely preserved, and if you will not find the money, we think we know somebody who will. There are very many chances here. We cannot forget El Callao, that went through times quite as bad as ours,

AND THEN GOT SEVEN MILLION STERLING,

and they are within $\frac{1}{4}$ mile of us. (Hear, hear.) I want you to know that this is not our last card, and that we have another good one. We should lease the whole of this company to an operating company. If the shareholders will not find the money, we are not going to let the property be thrown away. (Cheers.)

Mr. SAMSON: Will you allow me, as connected with the *South American Journal*, to take advantage of this opportunity to speak on the Venezuelan boundary question, which is of so much importance to your company. I find that the whole of the opposition to settling this question arises not with the Foreign Office, but with the Colonial Office, and that the Governor, Viscount Gorleston, declares that should the British Government make any concessions, in reference to the Colony of Demerara, it will be settled. The Colonial Office seem to forget that they are neglecting the interests of the Colony of Trinidad, which depends largely upon Venezuelan trade, and, therefore, for the sake of Demerara we are keeping this sore open with Venezuela, and shall not make progress with the boundary question until the opposition I have referred to is removed. The whole settlement of this question, therefore, rests mainly with Lord Knutsford and the Colonial Office authorities. I should like to make a suggestion, which I have seen carried out in Californian mines, to the effect that in their offices they have either models or plans of their mines on a large scale, and often in perspective, so that shareholders can follow the mining reports that come periodically to hand. In every mining office in California they have a model or plan which enables the shareholders to follow more intelligently the mining report and which causes them to take a deeper interest in the operations. Might that not be done here?

The CHAIRMAN: When we have some money to spare we shall be glad to carry out the idea.

Mr. SAMSON: Some of you, perhaps, have influence at the Colonial Office which may help in this matter. I have been directing my attention to the Foreign Office, but now the reply comes back that the position is held by the Colonial authorities.

Mr. JACQUES VAN RAALTE: I must say I am rather disappointed with this meeting, for the reason that I expected it would be entirely unanimous. I am indeed sorry to see it has not quite been so. In my opinion, those who would seem to speak against such a scheme as this forget that if they are engaged in any mining enterprise they cannot deal with it as they would with an ordinary industrial institution, in which one can make sure of one's receipts as well as outlay. Anyone who holds shares in mines must be aware that the money he paid for them is a pure speculation; that he has a chance of losing the whole of it, or of one day gaining a very large sum indeed beyond what he has laid out. (Hear, hear.) Any man who does not understand that should not be a shareholder in any mining company. Now, gentlemen, I do not want to keep you too long, but for years past I have really been sometimes surprised at the

INDEFATIGABLE MANNER IN WHICH OUR PRESENT CHAIRMAN has attended to the interests of this company without any payment whatever. (Cheers.) Therefore, it is our duty to assist him in the present proposal, as well as now to tender to him our most hearty thanks. (Cheers.)

Mr. RUDALL seconded the motion, which was carried by acclamation.

The CHAIRMAN: We thank you very much for this vote of thanks, and, personally, I am greatly obliged to Mr. Van Raalte for the very handsome way in which he has spoken of my services. I am sure that the resolutions passed to-day have been in the truest interests of the company, and that it has been a wise decision to give this undoubtedly valuable property one more chance. We will do our best to give you a good run for your money by that chance if the scheme goes through.

The meeting then closed.

WEST KITTY.

DIVIDEND OF 11s. PER SHARE.

A SIXTEEN-WEEK MEETING of adventurers in West Kitty was held in the open at Polberro Account House on Tuesday.

Mr. Reynolds

presided.

The accounts showed 115 tons 8 cwt. 2 qrs. 10 lbs. of tin sold, at an average price of 58 $\frac{1}{2}$ 6s. 6d. per ton, for 6,754 $\frac{1}{2}$ 8s.; discounts from merchants, 15 $\frac{1}{2}$ 4s. 7d.; total receipts, 6,769 $\frac{1}{2}$ 12s. 7d. On the other side the expenditure had been 3,433 $\frac{1}{2}$ 1s., including labour costs and merchants' bills, 2,626 $\frac{1}{2}$ 18s. 1d.; dues to Mr. F. G. Enys (less income-tax), 293 $\frac{1}{2}$ 5s. 9d.; to the lords of Chytodden, 145 $\frac{1}{2}$ 19s. 10d.; to the lords of Tymarnhayle, 20 $\frac{1}{2}$ 13s. 1d.; to the Duchy of Cornwall, 20 $\frac{1}{2}$ 13s. 1d.; to G. C. Hancock, 29 $\frac{1}{2}$ 19s. 8d.; minimum and other rents, 22 $\frac{1}{2}$ 8s. 6d.; legal charges (renewal of leases), 263 $\frac{1}{2}$ 16s.; bankers' charges, 9 $\frac{1}{2}$ 6s. This left a profit on the quarter's working of 3,336 $\frac{1}{2}$

12s. 7d., and a balance in favour of the mine of 7,248 $\frac{1}{2}$ 19s. 8d. (Applause.)

The CHAIRMAN said during the last 10 years they had paid in West Kitty over 90,000 $\frac{1}{2}$ in dividends, and how long they would go on paying dividends he did not know. He congratulated them very heartily on the exceedingly good prospects of West Kitty Mine. It was a matter of great congratulation, so far as Cornwall was concerned, and especially so far as that district was concerned, that West Kitty had turned out so well as it had. They would see by the accounts that a profit had been made during the quarter of 3,336 $\frac{1}{2}$, and they could do what they liked with it, but the committee thought that a dividend of 11s. per share should be declared.

Mr. W. W. HOCKIN seconded, and the motion was carried.

Mr. BUDD moved that a dividend be declared of 11s. per share. This would allow them to place a little to the reserve, and he considered this dividend had been fairly earned. (Applause.)

Mr. LENNON seconded the motion, which was carried.

The meeting concluded with a vote of thanks to the chairman.

CORRESPONDENCE.

We do not hold ourselves responsible for the Opinions or Statements of our Correspondents.]

To the Editor of the MINING WORLD AND ENGINEERING RECORD

PALMAREJO.

SIR,—You have had so much correspondence regarding the affairs of this company, that I only venture to trespass upon your space to a very limited extent, and that is to say I have learned certain facts concerning the promotion of this company, which will probably be spoken of at the next meeting, if Mr. Applegarth and his friends continue to hold the slightest sway in the undertaking.—I am, &c.,

INSIDE THE RING.

July 30, 1891.

SIR,—Your correspondent, "Curious Eberhardt," wishes to know if the Capt. Drake, now manager of Palmarejo, is the same Capt. Drake who suddenly left the Eberhardt Mine some two or three years ago. He is. I was a shareholder in Palmarejo when this event occurred, and it impressed me so unfavourably, that I at once sold out every share in the company I possessed. I may mention that I was an original shareholder, and up to that moment had faith in the concern, but seeing how cavalierly Capt. Drake had treated Eberhardt, it occurred to me that he might stay with Palmarejo only so long as it suited him, and that he might leave it in the same prompt manner as he did Eberhardt. I still retain my shares in Eberhardt, and do not think that company has at all suffered from his absence. In fact, I think it has very much gained, because the old Eberhardt is now being worked under a man in whose judgment and experience I personally can place more reliance.—I am, &c.

EXPLANITUS.

SIR,—I appeal to your powerful aid to protect some 2,500 shareholders in Palmarejo and cognate undertakings from the midsummer madness which seems to have overtaken the counsels of their natural protectors, the directors. If any more stupid and ill-advised document were ever issued by a body of sane directors than that sent out by the board and "advisory committee" of the Palmarejo Mining Company I have yet to see it.

Nothing but a general meeting, and the appointment of an investigation committee, or the infusion of fresh (and good) blood on the board will satisfy the outraged spirit of the insulted shareholders. I attended a meeting on July 9, and believed everything was going on well (although it now appears the directors had contrary information in their pockets at the time they were beslaving the shareholders with hopes which they must have known to be entirely fallacious). I was astounded to receive the circular a few days later stating that such urgent need was required for 32,000 $\frac{1}{2}$ that the directors would pay 25 per cent. interest for it. How much more surprised was I, then, to learn from the last circular that 50,000 $\frac{1}{2}$ (instead of 32,000 $\frac{1}{2}$) was needed.—I am, &c.,

SARDONIC.

SIR,—I have perused with much interest the recent correspondence upon the affairs of this company. I cannot say, like "Sick and Sorry," that I have never bought nor sold a share since my original investment; but I do say this, that my family, including myself, still hold nearly 4,000 shares out of an original investment of some 4,300. I sold a few shares once, and am only sorry now that I did not clear out the lot.

I would like, however, to say a word for the directors; I have no doubt in my own mind that they have been misled all through by their representatives and advisers; but, still, this new (?) board was, I always understood, constituted to retrieve the errors of the old directorate, and not to perpetuate them; and, with the experience of their predecessors, they should most certainly have taken care to steer clear of former errors, even if they felt called upon to invent some new ones upon their own account; but, what do we find? the old state of things reproduced. It has all through been the local management—which must have mis-informed (or non-informed) the board—unless we are to believe that the present direction is exclusively composed of idiotic imbeciles! The charge of not informing the shareholders at the meeting of the 9th inst. of a matter of absolutely vital importance to the company, received on the 3rd inst., is, of course, quite indefensible; but, although the directors are undoubtedly much to blame in this matter, if they will give some guarantees for the future that they will once and for ever sever all connection with the former "experts (?) who reported upon the property, and will send out some ENGLISHMAN of well-known skill and probity, to superintend affairs, I, for one, should not care to see any radical change of the board, with, possibly, the exception of the appointment of one new director. I think a special meeting should be called as soon as possible, and a committee of consultation (if not of "investigation") appointed of shareholders owing not less than 500 shares each, who pledge their word that they are not now, nor ever have been, con-

ected with the promoters or Mr. Applegarth and his friends.—I am, &c.,

DISAPPOINTED, BUT NOT HOPELESS.

SIR,—I have viewed with some surprise, not unmixed with pain, the revelations concerning the above company, as set forth in the statements and circulars received, together with the correspondence which has appeared in your columns. I have but a nominal interest in the company, and I candidly state that my reason for rushing into print is solely for the sake of speaking a word for my old friend Mr. Francis J. Bladon, than whom a more honourable and business-like man never lived.

De mortuis nil nisi bonum is a proverb which the compilers of the last extraordinary circular from the Palmarejo directorate appear to have entirely ignored. In this circular, issued by a hybrid monstrosity consisting of the board, and a so-called "Advisory Committee," the old Palmarejo board (which went out of office some three years ago) is inferentially, if not directly attacked, and a weak and cowardly effort put forth to make it responsible for the shortcomings of its successors.

Now, most of the shareholders of Palmarejo are well aware that Mr. Bladon was the soul and spirit of all his boards, and that he accepted without fear or favour the proper complement of blame or praise attached to his efforts. I know for a fact, and am prepared to prove that he was irritated and grieved beyond measure by the dead wall of obstruction continually and continuously raised against his best efforts to obtain that advice and assistance from the persons responsible for the Palmarejo Co.'s affairs in its early days, which he had a right to look for, and I say without hesitation, Sir, that it is cowardly in the extreme for any person, or body of persons, two years after his death, and nearly three years since the severance of his relations with the company, to asperse his memory by any reflections. There are, Sir, still living in the City of London those to whom the name of Francis Joseph Bladon is a dear and honoured one, and I hope some of them will be at the next meeting of the Palmarejo shareholders ready to protect the memory of their old friend. I know, Sir, of my personal knowledge that long before the old board retired voluntarily, Mr. Bladon had made up his own mind as to the professional abilities of certain parties associated with the company, and had emphatically expressed his firm desire and resolve to detach himself from what he considered to be their malign influence.

When the new board was formed, Mr. Bladon was earnestly requested to remain, but declined to do so. He would have nothing further to do with the concern, when certain influences, which the new directorate were supposed to be pledged to "kill," were still more or less paramount. Those influences have been paramount until the present time, and their effects are now seen in the present condition of the company. I can, and will, should needs be, say much more upon this point, although I have no axe to grind, director to put forward, or policy to advocate; but, so long as I live, I will endeavour to protect the memory of my old friend from aspersion by a clique, which, though never having sufficient ability to recognise his genius, has had enough skill to try and asperse his memory, by throwing upon a dead man's grave a burden of faults and shortcomings which should and will have to be borne by the living.—I am, &c.,
FIAT JUSTITIA RUAT CÆLUM.

SIR,—The directors' proposal of 20th inst. of raising 32,000*l.* at 25 per cent. per annum having been generally scouted, and followed by a private meeting together of the large shareholders of this and the Mexican Mineral Railway Companies (how funny, Mr. Hart! "two distinct companies," "two distinct bodies," you know), when we were informed the amount required was again increased to 42,000*l.*, and an advisory committee was elected, all shareholders this morning receive an official report of this meeting, with a report of the advisory committee, and a joint appeal for 50,000*l.*—the exact sum named in my letter appearing in your issue of the 18th inst.! At the first blush the advisory committee's report reads well, but on reflection one sees that this is so by merely ignoring stubborn facts, and after the *exposé* of the real position I feel certain, with the present boards, this 50,000*l.* will not be raised. I know it is a pity; but soft words butter no bread, and it is far better to face the position. But is this 50,000*l.* even sufficient? Does it cover some working capital to be then in hand for contingencies after completion of the works, say by the end of the year? To solely rely on *expected* revenue is absurd. I feel very certain it does *not* provide for the 7 per cent. interest and 3 per cent. to the Mexican Explorations for the current year on our 100,000*l.* 1st debentures, viz., 10,000*l.* in all, and pray, *how is this going to be met?* From crushings to begin 1st November? What *utter* folly to rely on such a thing, and face another call for more money in the winter! I am prepared to say crushings even by using mules will *not* begin much, if anything, before January, and I very much doubt whether the railway will be completed before next February or March. Say 50,000*l.* is sufficient for the works, add 15,000*l.* for working capital, which in all common sense should be in hand, and add 10,000*l.* for service of the 100,000*l.* 1st debentures, and 75,000*l.* is the amount required to place the companies in a fair position. Can such a sum on second debentures, with prior debentures of 150,000*l.* of the two companies in front of them, be raised? I do not think so, and the only wise course is at once to re-construct, and boldly provide for everything, so that a plain course can be followed in the future by a thoroughly competent board of business men. And absolutely we naughty Palmarejoites are besides our own needs to include some 25,000*l.* for that distin-guished, no, no, extinct, oh! bother it, *distinct* company, the Mexican Mineral Railway. Now I do wonder whether *our* very (?) business-like directors have taken this opportunity to cancel that absurd arrangement as mentioned in my letter appearing in your issue of the 18th inst., respecting crushing other ore than our own, so that *we* receive a fairer proportionate interest. For in the light that we have recently been quietly prepared for \$25 or \$20 ore, this may be a most important factor in the future of this company. I also wonder whether our directors are also bearing in mind our agreements with the Railway Company of 24th October and 5th November, 1888, by which we guarantee them a minimum dividend on the shares of 8 per cent., and by which they also have the option of making us take a lease of the railway and

conduit, *our* paying them 15 per cent. dividend!! Surely these agreements should be varied now, and the position toned down, for our heavily weighted backs are indeed well nigh breaking. Also, seeing that in the directors' circular of 25th March, 1891, they estimated a daily crushing of 70 tons, has our understanding with the Railway Company of forwarding 80 tons daily been altered? Mr. Pigou chose to sneer (and to gratuitously hint at wreckers I wonder who has been wrecking *our* hopes) at the idea of *our* not helping the Mexican Mineral Railway Company. Of course, any sensible man knows the one company without the other is no use, but I do say the onerous conditions imposed on us by the Railway Company, and the way in which Mr. Hart defied us, entitle us before we help to insist under present circumstances on amalgamation, which is so easily provided for, or at least to vary the terms of the various agreements between the two companies.

Now let us recapitulate the position. To deal fairly with everything I have shown some 75,000*l.* is required. I believe re-construction alone will procure this. This means revenue and legal charges here, and in Mexico, and also providing for London office expenses to Dec. 31 next, say another 7,000*l.*, or a total of 82,000*l.* to provide. I contend we should amalgamate the two companies, choose a new board, and start afresh. Our capital, 400,000*l.*, plus the Mexican Mineral Railways, capital 75,000*l.*, and first and second debentures of 75,000*l.*, make a total of 550,000 to be exchanged pound for pound in shares of the new company, 1*l.* paid with a liability of 3*s.*, which would exactly provide the 82,000*l.* required above, leaving the new company with 550,000*l.* capital, and first debentures 100,000*l.* taken over from our present company. On these lines there may be success before us: on the present proposal I am convinced there will be further disaster in the future, and it is well to remember—

"The wheels of the gods grind slowly,
But they grind exceeding fine."

I am, &c.,

NOW WIDE-AWAKE.

July 13, 1891.

P.S.—In the present scheme for raising 50,000*l.*, a bonus of three fully paid shares is offered for every 10*l.* debenture taken. This means another 15,000*l.*, thus adding not 50,000*l.* but 65,000*l.* to our burdens. But I say it is illegal—shares have to be fully paid for at par or value given, and shares *given away* cannot surely be said to bring value into a company's coffers. If others than the company are providing the shares, *then, who is it, and why done?* Is it another proceeding, about which we are to know nothing, for some insider's benefit?

VICTORY MINE.

SIR,—On casually looking over some old papers lately I happened to come across one of yours of Apl. 13, 1889, on page 634 of which I came on the particulars of an interview that had been held with Mr. Larchin, and which I think it might be well to call the attention of the shareholders to again, and to ask Mr. Larchin whether he still abides by the opinions he then announced, and adheres to the statements (their truthfulness) which he then announced. He first gives a history of the mine, and then in the first column says much, that if not too greatly encroaching on your time and patience I would respectfully ask you to reprint as much as possible, and so oblige, yours truly,

July 31.

A. B.

I am very glad some attention is being called to the indifference, I can only call it, with which this mine is treated, and fondly hope that when Mr. Hallett's case is settled to see a stampede for shares, which, as your last week's correspondent says, may then cost what has lately happened to mines as unlikely as the Victories, viz., pounds each.

THE MINING EXCHANGE.

SIR,—I am instructed by my committee to forward you the enclosed copy of a resolution unanimously passed at a meeting of the members of the Mining Exchange, held on June 25, 1891, and duly confirmed at a meeting held on the 22nd inst., and to inform you that in pursuance of the said resolution my committee propose to notify to you the names of any members who may hereafter be posted as defaulters, or who may be expelled the Exchange.—I am, &c.,

W. T. HARGREAVES,
Secretary to the Committee.

9, Old Broad Street, E.C., July 27, 1891.

RESOLUTION

Unanimously passed at a general meeting of the members of "The Mining Exchange," held on Wednesday, June 25, 1891, and unanimously confirmed at a special meeting held on July 22, 1891.

Resolved:—"That the rules of the Mining Exchange be altered by the addition of the following rule:—7A—The committee for the time being may, in their absolute discretion, and in such manner as they may think fit, notify or cause to be notified to the public that any member has been expelled, or has become a defaulter, or has been suspended, or has ceased to be a member, and the name of such member. No action or other proceeding shall under any circumstances be maintainable by the person referred to in notification against any person publishing or circulating the same, and this rule shall operate as leave to any person to publish, and circulate, such notification, and be pleadable accordingly."

THE FALL IN PRICES AND DIRECTORS' FEES.

SIR,—Your correspondent, "Contented Shareholder in 16 Mines," seems to me a very selfish individual. He cannot seemingly understand anyone being discontented with the management (or mismanagement of mines, I would call it), unless they are losers. Now, I would like him to know that it is not because of my own losses I denounce the dishonesty in mining affairs. What I deplore is the fact that directors will go on publishing false and lying telegrams, reports, &c., and go on re-constructing companies, although they know there is not the slightest chance of these mines ever paying a cent to their shareholders. The reason that these abominable piratical fellows, called by courtesy, directors, do so is, of course, for the sake of fees. They draw their 200*l.* or so per annum whether the company fails or succeeds, so long as they can draw another fee out of their victims, and in order to do so publish false telegrams, very often on the day of a meeting, so as to give *velat* to

the proceedings and delude the shareholders as long as they can shell another shilling out. The only way to put an end to this is to abolish all fees to directors on any company which does not pay dividends.

But your readers will say, then the directors will resign. Let them do so, I reply; their places will soon be supplied by better men—by men who have a large interest in the company, and who will work for the sake of dividends, and not for the purpose of drawing fees. It is very amusing, speaking from a cynical point of view, to attend a meeting of a mining company in this country, where the directors are showing dividends, to see the shareholders so overcome by feelings of gratitude that they cannot almost control their feelings, and give vent to them except by voting more fees to their directors, who are already making their pile by *operating* on the market by buying and selling shares before they publish telegrams, hopeful or pessimistical.

When I see companies in Australia paying dividends fortnightly, and returning the capital over and over again, paying their directors, as in the case of the Brilliant, with 53%, and the Sunburst with 13% 10s., for their whole fees, it lets me see how Australian mines managed there are a success, and managed here, speaking charitably, a failure.

Let the shareholder in 16 mines inwardly digest and learn if he can, as it is quite evident to me that he is a novice in mining matters, when he speaks of resuscitating such a corpse as Victory. This company is bad to the core, and shareholders need not look for anything from the Victory as long as they have a man in it belonging to the old *régime*. I do not know if the Victory has any gold in its lodes (I do not think it has); but neither John Taylor and Sons nor any other engineers will ever make it pay with such an incapable board. I speak from an unprejudiced point of view, as I have no shares, and never had in this concern.—I am, &c.,

G. A. H. DOUGLAS.

21, Windsor Street, Glasgow, July 29, 1891.

THE NEW GUSTON CO., LIMITED.

THE MINE LOOKING WELL THROUGHOUT.

MR. HARVEY, the mine superintendent, under date July 3, reports on the mine, viz.:—No. 3 level, south drift: But little work has been done here during the past fortnight, the men having been employed elsewhere. From the turn, or where the ore was met with and risen on, the drift has been driven 52 ft. There is ore scattered in the forebreast. No. 5 level, boundary stope: This stope has been worked up to No. 4 level. No. 1 stope, north level: We have resumed operations in the stope over back of level, just inside the winze. Length of stope, 24 ft.; height, 12 ft.; ore from 2 ft. to 4 ft. thick, broken in places; value from 30 to 45 ozs. silver per ton. No. 6 level—New stope: Length of stope 34 ft.; height, 29 ft.; width of ore from 4 ft. to 20 ft. for 28 ft. in length; value from 60 to 320 ozs. silver per ton; gold from $\frac{1}{4}$ to 1 oz. per ton; copper from 3 per cent. to 8 per cent. This stope looks well. No. 6 ore body stope: Height of stope, 55 ft.; length, 50 ft.; width of ore varying from 2 to 14 ft.; average thickness of ore throughout the stope 10 ft.; value of ore from 90 to 2,000 ozs. silver per ton; gold from $\frac{1}{4}$ to $\frac{3}{4}$ ozs. per ton; copper, 3 per cent. to 6 per cent. This stope looks well. North drift: We have communicated the raise with bottom of winze sunk from No. 5 north level. At this point there is now a fine piece of stoping ground laid open, the ore standing solid and intact from No. 5 level to No. 6 level, a depth of over 90 ft. We have not yet determined the width of ore, although in places we have cut into it from 3 to $7\frac{1}{2}$ ft. I am pleased to say the ore has much improved in value, it being worth from 80 to 700 ozs. silver per ton, with $\frac{1}{4}$ to $\frac{3}{4}$ ozs. gold per ton. This place looks well. No. 7 level, No. 7 ore body: Length of stope, 45 ft.; height, 6 ft. over back of level. Width of ore, from 4 ft. to 18 ft.; value of ore, from 40 to 340 ozs. silver per ton; gold, $\frac{1}{4}$ to 1 oz. per ton; copper, from 4 per cent. to 8 per cent. We frequently meet with large patches of decomposed porphyry in stoping, but the appearance of the stope throughout is remarkably fine. Shaft: We recommenced sinking the shaft June 29; depth sunk, 9 ft.; total depth below base of No. 7 station, 28 ft. The mine throughout looks well.—B. MCNEILL, Secretary.

YANKEE GIRL SILVER MINES, LIMITED.

MINE CONTINUING TO LOOK WELL.

MR. HARVEY, the mine superintendent, under date July 3, reports on the mines, viz.:—Yankee Girl Mine.—No. 2 level: A stope has been started over the back of level on the ore (1 ft. thick passed through for a length of 16 ft.) which was referred to in my last; length of stope, 21 ft.; height over back of level, 13 ft.; width of ore, one ft.; value of ore, from 20 to 200 ozs. silver per ton. No. 4 level—Orphan Boy: Length of stope, 66 ft.; height over back of level, 86 ft.; ore scattered, from 2 ft. to 6 ft. thick; value of ore, from 30 to 160 ozs. silver per ton. No. 6 level—North-east drift: The raise has been carried up 10 ft.; total height of raise, 34 ft. Here the slip referred to in last report was met with, and has been driven on for 17 ft. The object of carrying this slip in the drift is to prospect the ground over and under it, the chances of discovering ore being exceedingly favourable close to change of ground occasioned by slip. Stope: Length of stope, 67 ft.; height 54 ft.; width of ore 15 ft.; value of ore from 40 to 1,900 ozs. per ton. Six-and-a-half level—Winze stope: Length of stope, 20 ft.; width of ore, 10 ft.; value of ore from 30 to 1,500 ozs. silver per ton. No. 7 level: Operations have recently been renewed here. No. 8 level: The south-west level has been extended 15 ft.; total length, 59 ft. The drift has also been securely timbered for 40 ft. For the distance driven, viz.: 15 ft., the drift has been carried through ore 12 ft. in thickness; value of ore from 20 to 40 ozs. silver per ton, with 8 per cent. to 25 per cent. lead. West ore body: Height of stope 28 ft.; length, 30 ft.; width of ore 3 ft.; value, 45 ozs. silver per ton; copper, 18 per cent. Robinson Mine.—No. 2 level—South drift: Drift extended 22 ft. through good milling ore 2 ft. thick. South drift—No. 1 stope: Length of stope, 87 ft.; height, 92 ft.; average thickness of ore, 4 ft.; value, 80 to 1,200 ozs. silver per ton. In one portion of the stope, for 15 ft. in length, the ore is 30 ft. wide. South drift—No. 2 stope:

Height of stope, 75 ft.; length, 42 ft.; thickness of ore from 1 ft. to 3 ft.; value, 35 to 1,000 ozs. silver per ton. South drift—No. 3 stope: Length, 125 ft.; height, 30 ft.; ore from 1 to 2 ft. thick; value, from 10 to 100 ozs. silver per ton. No. 3 level—South drift: Drift extended 17 ft., through good milling ore, 1 ft. thick. South drift—No. 2 stope: Height of stope, 52 ft.; length, 32 ft.; width of ore, 1 ft.; value, from 10 to 40 ozs. silver per ton. South drift—No. 3 stope: Height of stope, 32 ft.; length, 75 ft.; width of ore, 2 ft.; value, from 10 to 60 ozs. silver per ton. No. 4 level—south drift: Drifting has not yet been resumed owing to certain work having to be done first, to improve the ventilation. South drift—No. 1 stope: Height of stope, 46 ft.; length, 156 ft.; thickness of ore, 2 ft. 6 ins.; value, from 25 to 250 ozs. silver per ton; lead, from 10 per cent. to 40 per cent. There is one portion of the stope for 20 ft. in length where the ore averages 20 ft. in width. No. 5 level: 123 ft. from shaft station a cross-drift has been driven south-east 83 ft. Ore has been passed through worth from 5 to 20 ozs. silver per ton. At present in the forebreast there are strong indications for ore. The plant, machinery and progress of operations at surface are satisfactory. The mine continues to look well.—B. MCNEILL, Secretary.

AMERICAN BELLE MINES, LIMITED.

REPORT OF PROGRESS.

CAPT. HARVEY reports as follows:—No. 1 drift or adit level.—South drift—No. 1 stope: Length of stope 75 ft.; height above back of level, from south end of stope for 40 ft. in length, 4 ft. Height of north end of stope 7 ft. Width of ore, south portion of stope for 30 ft. in length, 2 ft. North end of stope 3 ft. thick for 10 ft. long. Value from 20 to 50 ozs. silver per ton. No. 6 level—south-east drift: Distance driven 18 ft. There is no change in appearance of drift to report. No. 7 level—No. 1 stope: Length of stope 62 ft.; height 50 ft. North-west part of stope, ore 7 ft. wide for 15 ft. in length. South-east portion of stope, ore 8 ft. wide for 20 ft. in length. Value from 30 to 60 ozs. silver per ton. No. 8 level—South drift: Drift has been driven 4 ft. There is scattered ore with quartz in the forebreast. South drift—No. 1 stope: Height of stope 29 ft.; length 20 ft. For 12 ft. in length there is a solid body of ore 8 ft. in width. Value from 30 to 50 ozs. silver per ton. South drift—No. 2 stope: A short distance back from face of drift we have commenced opening out for a stope. Length of stope 15 ft.; height 12 ft. Width of ore for 12 ft. in length, 8 ft. Good shipping ore is being broken here. Shaft: Shaft sunk 23 ft.; total depth below point for No. 9 station 79 ft., or 179 ft. below No. 8 station. We have 11 ft. more to sink for sump previous to cutting stations. The shaft, cage and cars have arrived on the mine. We are desirous for the contractors to complete their contract of sinking 11 ft. more previous to putting in cage road and effecting the necessary changes. National Belle Mine.—No. 2 level—north ore body winze: Winze sunk 35 ft.; total depth, 47 ft. The winze has been sunk 11 ft. vertical, following the dip of the ore. The character of ore sunk in is principally decomposed iron pyrites. No. 3 level—north ore body: With No. 1 air drill, a total distance of 77 ft. has been driven. With No. 2 drill, a distance of 48 ft. has been driven. In the cross-drift at the point where the quartz was encountered, a drift has been driven 48 ft. Here ore composed principally of decomposed iron pyrites has been met with for over 30 ft. Frequently boulders of lead and hard iron pyrites (carrying copper ore) are met embedded in the decomposed ore. The drift (117 ft. from shaft station) has been extended 22 ft. About 3 ft. back from present face solid ore was met with. Ore principally heavy cube galena, and hard fine-grained iron pyrites, intermixed throughout with small patches of lead and copper. The following results have been obtained from average samples taken from both points:—Fine ore per ton, silver 25 ozs., gold $\frac{1}{10}$ oz., copper 7 per cent.; galena per ton, silver 58 ozs., gold $\frac{1}{10}$ oz., lead 66 per cent.; hard nodules per ton, silver $7\frac{1}{2}$ ozs., gold $\frac{1}{10}$ oz., copper 5 per cent. There is no doubt but that we have the main ore body, which, so far as seen, is an improvement in value and character to that met with in No. 2 level.—B. MCNEILL, Secretary.

FLAGSTAFF, LIMITED.

ORE SALES COMMENCED.

THE directors have received a telegram from Prof. Vincent as follows:—"Have sold 75 tons first-class ore at 10%, and 40 third-class at 6%; 400 tons first-class shipping." In sending you the foregoing information, the directors desire to say that it was originally intended to assort the ore into two classes; but it has been thought better to divide it into three classes. This has principally caused the delay in selling. You will notice that the quantity now sold is but a small proportion of what is ready, a further 400 tons of first-class ore are now being shipped. The price obtained is practically that which, the directors stated at the annual meeting in April last, they expected the ore would realise.—R. S. ARCHBOLD.

REPORT FROM A. L. SWOPE, DATED JULY 11, 1891.

I have been very busy since my last report in sacking the ore, so have not been able to do much in the mine, but what little I have done there shows improvement of the ore both above and below sixth level. Above sixth there is now good ore, about 4 ft. wide, and below the level it is now first-class ore and even wider than that. I think we are going to have a big lot of good ore about this level, and it seems to be getting better as we open it up. I have the pleasure to report that in the face of seventh we are now in some pretty fair ore, with some crystals of lead in it. This place is still about 60 ft. yet before we get far enough to be under where we are getting the first-class ore in sixth, and is 100 ft. below sixth. I think we will soon have plenty of good ore in seventh as well as sixth. I have now over 1,700 of our new sacks filled with first-class ore. We shall need more than the 2,000, so Professor is bringing 500 more with him from Salt Lake to-morrow. I shall have enough for the first shipment to Sandy, all sacked, I think, by next Wednesday. Then I will put the men back to work, driving in levels six and seven, and also taking out ore. I expect to take out more ore each week hereafter, and level seven looks sure to be giving good ore. Everything is improving. The weather, which has been very bad, is now turning forth better, and we will soon begin putting up the new engine house and setting the air compressors as the machinery is all ready. Sorting the ore into three classes has been awful slow work, but it will sell a good deal better.

SATURDAY, AUGUST 1, 1891.

[ESTABLISHED 1871.]

REPORTS OF MEETINGS.

LA PLATA MINES, LIMITED.

LA PLATA EARNING MONTHLY INCREASING PROFITS—PROSPECTS OF SELLING THE SMELTING WORKS—HOPEFUL OUTLOOK FOR THE WHITE CLOUD CLAIM.

THE second ordinary general meeting was held at Winchester House, Old Broad Street, on Thursday, for the purpose of receiving and adopting the directors' report and accounts to Dec. 31, and to transact the ordinary business of the company.

Mr. J. T. Hopwood, J.P., D.L.

presided.

Mr. HENRY RICHARDS (secretary) read the notice of meeting.

LA PLATA IMPROVED.

The CHAIRMAN: Gentlemen, in the first place I beg to congratulate you upon the improved condition of our prospects, and our property, generally, in La Plata. I am almost sorry my colleague, Mr. Wallace, did not take the chair, because up to this time he has not had very pleasant communications to make to you, but at the request of the board I have the honour of addressing you to-day. The report of the directors and also of Mr. Argall deals so very fully with most of the details of the property, that it practically has left me not much to say, and I think the best plan I can adopt is to take paragraphs *seriatim*, and make such remarks as I think applicable upon them for your consideration. You have just heard from the minutes of the last meeting that the re-construction scheme was carried out in a very satisfactory manner. The shareholders came forward in a very handsome manner, and subscribed what they were asked to do—1s. a share on 400,000 shares, making roughly about 20,000*l.* We have adhered to the programme that we laid before you, and with the two instalments of 3*d.* per share have been enabled to clear off the liabilities of the old company, which consisted of about 8,000*l.* of debentures. We take no credit for having cleared them off, because you subscribed the money to do so, and we simply carried out your mandate. On mine developments we have spent considerable time and money, but have not exceeded the sum which you thought ought to be applied to that purpose, and which Mr. Argall said ought fairly to prove what was in the mine. If you recollect, when I had the honour of addressing you before I said, "If 10,000*l.* will not put this property on a paying basis I will not advise spending any more upon it." About 2,500*l.* has been spent on development. Of course we have not met with any large bodies of ore, but we have proved a great deal of ground, much of which is virgin, and we do not know what it may contain, but at all events the accounts were satisfactory, in some respects, I may say, very satisfactory. Now,

AS TO THE PROFITS—

the report states that for the first time since this has been an English company a clear profit has been shown on the year. I know there was a supposed profit of 11,000*l.* once before, but we found it fictitious. It was swallowed up speedily by that wide-mouthed smelting concern, which, I am glad to say, we scotched later on, and instead of its draining our revenue we hope it is henceforth to be a source of recoupment to a very considerable extent. The company, up to this time, has been debarred from deriving advantage from the important discovery in the Gnesen Mine in consequence of the rush of water into the workings. We were very unfortunate on account of the water getting into it from the Nisi Prius Mine, and it gave us a great deal of trouble. At last we have drained it successfully, and hope to hear shortly good results from it. This will cost the company nothing, because it has been carried out entirely by the Nisi Prius Mine. The smelting works remain as a valuable asset, and there is good reason to believe that ere long we may be in receipt of important additional revenue from the smelting works, either as a rental or from a sale out-and-out. If it is sold, we shall retain all the mineral rights which may turn out to be valuable, but of this I shall have something to say presently. Of course, we could not help noting in our report that there have been large economies in London and Leadville. We have, consistently with efficient working the mine, studied economy to the utmost extent, but you can carry that too far. You must have efficient representatives, and I know of no greater instance of an efficient representative coming to the rescue than Mr. Argall, when that water rushed in upon us from the Nisi Prius Mine. It was by his engineering skill and prudence that the water was got rid of so quickly, and the thanks of the district were due, and were tendered to him, for the work he did gratuitously, which saved all concerned a great deal of time and money. Touching the question of economy and directors' fees, you will notice your directors have been

receiving comparatively little. A certain sum is voted by the articles, but we have left a large portion in abeyance, and the work that we do is not at all represented by the money that some of us have received. When I tell you that one of our directors is never out of the office from morning to night, week after week, you will know what he alone does. He is there from 11 in the morning, and remains till between five and six in the evening. (Hear, hear.) I think that is more than a director is called upon to do, and I only mention it to show you how anxious not only he, but the rest of the board, are to do the work as efficiently and as profitable to the shareholders as possible. I have now to state several things, which, I think, you will receive with satisfaction.

POINTS OF SATISFACTION AND INTEREST.

In the first place, we have just received news from Mr. Argall that the mine is getting into rich ore. (Cheers.) Of this we have yet to receive the details, for the news only came a short time before the meeting. The lessees have been sinking and we have been rising, and either they or we—if it is *they*, it is done completely at their own expense, and if it is *we*, it is part of our development programme, but the result is that we are now in rich ore. (Cheers.) The next thing I have to tell you is that although our accounts only go up to Dec. last, you have regularly placed before you the usual monthly profit, and I am very glad to have to tell you that the profit for July is no less than \$2,000—400*l.* I may also tell you that the profit up to this time, not at Leadville but here, amounts to 1,300*l.*, as against 800*l.* for the whole of last year. Next, I have to tell you, in regard to the smelting establishment, that we have scotched this snake, which swallowed so much of our profits. In fact, it ruined us, and we had to re-construct on account of it. It has been idle for some time.

SMELTING WORKS LEASED.

But we have just concluded a lease for three years, at a monthly payment of \$600, or 120*l.*, so that your receipt from the rent of this smelting establishment will be upwards of 1,400*l.* a year. They have a three years' lease, with an option of purchase of 6,000*l.* I think these points will be satisfactory information for you. (Cheers.) I will now call upon Mr. Richards to read a paragraph from two letters received, and then I will conclude by addressing you upon the White Cloud Mine.

MR. ARGALL'S RECENT ADVICE.

Mr. HENRY RICHARDS: This is a letter on the Gnesen Mine from Mr. Argall, dated July 18:—"We have not been able to do any development work in this claim for a year, but Nisi Prius Co. is carrying on an extensive development, which will ultimately be of great benefit to us. Until they make connection with our drift, however, we will not be able to do any development work, as the ground will not be drained. The main drift going towards our working from the shaft has been suspended for over three months, pending the completion of a rise from that level to the contact vein above. I am informed that drifting towards our ground will soon be resumed." There is further mention of the Gnesen in the telegram received this morning:—"They have been rising on the vein three months." With regard to La Plata Mine, the latest news is also in the same telegram this morning. On July 13, Mr. Argall informed us that there was a great improvement in the mine, and now he says, "Mine getting into rich ore." Evidently we have derived some advantage from this new discovery, because the output from the time in July amounts to \$7,620, as against \$5,380 in June—that is an increase of about 400*l.* for July. We have reason to believe that this improvement in the mine relates to the ground under the McGee shaft. There were in the 4th level very large stopes at one time which produced big profits, and it has been all along thought that the mineral from those stopes would continue down to the 5th level. The 5th level was driven underneath, and some strings of mineral were found upon it. A rise has been put up, and at the same time the miners working in the stopes and following them down below the 4th level were sinking to hole or communicate with the rise which we are putting up from the 5th level, and we believe this new strike is in the ground which Mr. Argall describes as being a piece of ground of large extent, and quite undeveloped. (Hear, hear.)

WHITE CLOUD.

The CHAIRMAN (resuming): I wish to call attention to the new property we have bonded called the "White Cloud" claim. If you recollect we circularised all the shareholders putting this before them, and asking them if they would agree with us in thinking that this White Cloud claim was one that ought to be worked. Here is the result. Those who agree are represented by this packet of postcards (holding up an enormous bundle), and those who dissented by this one (holding up very few.) I daresay most of you know where the White Cloud property is. It is some distance from La Plata Mines. There the whole characteristics of the ground are different, and we have those large knoles of mineral appearing on the surface, regarding which, it has never been known yet that underneath the miners have not met with exceedingly good and rich ore. It seems to have proved so on all occasions. It did so in Guston,

Yankee Girl, and American Belle, and I am glad to say in other properties with which we are connected it is doing the same. Having put this question before you, and asked your permission, with the result shown, we have gone into this matter, and commenced working the claim upon very favourable terms, and I am glad to say that already the whole of the hoisting machinery is up. We have gone down in the shaft to the depth of 90 ft., and are in highly mineralised ground impregnated with grey copper. It is not copper ore, but is the matrix which contains the silver. It is called "grey copper," and is one of the richest minerals in that district. All the machinery is ready for hoisting, and we are sinking at the rate of rather more than 75 ft. per month. It will quite take that for the men to make wages so that the more they do the more they earn, and the results lately seem to approach nearer 90 ft. than 75. We ought in 300 ft. to tap really rich ore, and have every reason at that depth, to expect we shall do so. It will probably take three months to complete this shaft, and when finished, and after a certain amount of stoping and driving we shall be in a position I hope to ship the ore at once. You must know that in shipping that ore there is no trouble. We have not to put up a concentrating mill, because it is rich-grade ore. It is put upon trucks, and the railway is close at hand, and ready to take it to the smelting works with very little expense or trouble. We have also driven about 50 ft. in a tunnel, which will drain the mine from the surface at a depth of about 110 ft. Most of the water that troubles that part of the district percolates from the surface, and does not rise from below, and this will be of great help to us. Should there be water below the level it will be easier to pump because we save the 110 ft. mentioned. Mr. Argall, seeing a strip of ground not located, at once located it, so that we secured it and its advantages for absolutely nothing, and that will help us to drain the mine. I have laid before you now the chief features alluded to in the report.

A REMINISCENCE.

When I was in Parliament we used to welcome Her Majesty's Opposition with the greatest cordiality, because we knew that their criticisms would be fair, straight, and honourable. I hope we shall not have a too captious criticism to-day, but that it will be rather in the nature of suggestions of a valuable kind, which we will try to carry out to the best of our ability. We have worked most harmoniously as a board, and striven in every way to economise. We have given the utmost attention to everything that has gone on both at the mines and in London. I for a long time, although I was on the committee of investigation, declined to become a director, and it was only at your earnest and very frequently expressed wish, extending over 1½ years, that I consented to do so. I may say that although the idea was eagerly adopted by my colleagues, it was my wish that we should try a new district such as the Red Mountain where we have gone, and where, I trust, with your kind patience and help, we may yet find we have a very valuable property. I now move, "That the report of the directors and the accounts to Dec. 31, 1890, be received and adopted." (Cheers.)

A POINT OF IMPORTANCE.

Mr. V. W. JONES (director): I have great pleasure in seconding the motion, and may add one point which the chairman has omitted, as it is of importance to the shareholders. We have a statement from Mr. Argall that on account of the high-charges for smelting the low-class ores of the district cannot be sold at remunerative prices, and he has, therefore, kept them in reserve to the very large extent of over 7,000 tons. Now although the last profit has been the largest of any I have known since, I have had the honour of being connected with this company, it is important to remember that it has been gained entirely independent of these ores, and has been derived from the sale of the higher-class ores alone. This proves that the cable we have received to-day has not been one sent for the special benefit of this meeting, and it shows, by the profits of last month, that we must have got in better and large quantities of ore to have made a gain of \$2,000. (Cheers.)

DISCUSSION AND CRITICISM.

Mr. STEWARD: This is unfortunately the ninth meeting of La Plata I have attended, and if the phonograph of Mr. Edison was on the table, I think we should have heard from it precisely the same expressions as to the future that we have heard to-day. (Oh.) Ten years ago we were told the same thing, and the late Mr. Heiron kept on repeating it. That these hopes have not been realised has not been the fault of the shareholders who have contributed in those 10 years about 65,000*l.* to this mine, and if they have received dividend warrants they have been more fortunate than I have been. We can only discuss accounts to Dec. 31, but are glad to know things have improved since. (Hear, hear.) To that date we received 2,194*l.* for mine royalties and slag dump 994*l.*, the latter being a diminishing quantity, and due to improper smelting in the past, for if the ore had been properly treated, then it would not have been worth much now. Once before we leased this dump to a syndicate, with offices in Lincoln's-Inn Fields, but it totally failed. This beard seems to do nothing but lease; but is there any mysterious reasons why we should not do for ourselves that which other people do for us, and which they would not do if it did not pay them. Hence, if it pays them, why should it not pay us? While we continue a state of things by which we give 66 per cent. to other people for doing our work, we will never get a dividend. To pay 2½ per cent. would require 2,500*l.*, and we are getting 1,300*l.* or 1,400*l.* profit a year.

A VOICE: No, that is for the half-year. (Cheers.)

Mr. STEWARD: You have seven sets of lessees working the mine, and another set about to work the smelter, but of all mines I have ever been in except this, they have considered they ought to do their own work. Now our lessees may be

GEORGE WASHINGTONS OR JACK KETCHES,

but in either case they do not work the mine in a miner-like way. They pick up its eyes as I should do if I were in their place. As at present worked the mines cannot pay you. In fact, the company does not mine for itself, smelt for itself, or do anything for itself. I do not wish to speak personally, but we cannot pay Mr. Argall 700*l.* a year for simply letting leases. A man from Cornwall would do it for half the money. You must remember that there are such people as

shareholders, who have supplied you lavishly with money and have had no returns. I think the directors ought not to have put their remuneration in the articles (which, by the by, I have never seen), but left it to the shareholders, and I shall propose that all such questions be left to the shareholders, and that a committee be appointed to look into the question of working the property generally, fully and thoroughly.

Mr. JAFFEY: The last speaker said he rose in no spirit of criticism, but his speech scarcely bore him out. (Laughter.) I should like to ask what steps have been taken to collect the calls in arrear, and are those calls considered a good asset?

Mr. WARD, after urging that the accounts should be presented at least three months earlier, said: I agree with some of the remarks of Mr. Steward, and disagree very considerably with others. I was glad to hear Mr. Jones say the telegram read was not sent for the purposes of this meeting. Such telegrams make one's heart flutter, and I was, therefore, glad to hear the remarks made. As to a committee of inquiry, we have gone through that process, and has the result been so satisfactory that we want to repeat it? (Cries of "No.") It is totally unnecessary. The gentlemen who formed the first committee are now on the board, and we hope they will do better than their predecessors. I give them credit for trying to do so. According to the statement of the chairman to-day, matters seem to be assuming a more favourable appearance. I have never had a strong belief that this company would turn out a great success, but I hope it will be sufficient to allow me to get my money back again. I was one of the earliest shareholders, and have stood by the concern from first to last, but do not let us get into committees of investigation. Such a proposal is

DOWNRIGHT NONSENSE.

(Cheers.) I say that because I have been on three myself, and we never did any good. (Laughter.) If the directors do not manage properly, turn them out, and that is what you have done, for your old board is gone, and fresh directors are in their places. As to the remuneration of the directors, I fancy Mr. Steward is right; but as to that of Mr. Argall—am I to gather that we have leased everything, and are not employing anyone. If that be so there is no necessity for a manager, but if, as we understand by the chairman, it is otherwise, then we must have one. As to the question of pay, I do not believe you will get a good man for a small sum. You have no right to expect one, and you will be deceived if you do. You know very well there are those who would accept the post of Prime Minister for 1*l.* a week, but would you employ them. (Laughter.) I protest against the principle laid down by Mr. Steward. As to the articles, any shareholder can see them by paying 1*s.*, and if he does not care to do that, I think he has no right to come here and find fault. I do not think the shareholders will have any doubt or difficulty in voting for the adoption of this report. I take it, the directors will not accept any more than they are now doing until a dividend is paid, but when a dividend is paid, then I think they are entitled to more, and I for one shall not grudge it. (Cheers.)

NO SECONDER FOR THE AMENDMENT.

Mr. BARROW: Nothing more need be said. Nobody has seconded Mr. Steward's proposal, and, therefore, that may completely drop, so that all we have to do is to simply pass the report and accounts. (Cheers.)

The CHAIRMAN: Mr. Steward has mentioned that the phonograph would have repeated the statements I have made as those which have been given at former meetings, but the same instrument would also give a repetition of the speech that that gentleman has delivered here to-day. (Laughter.) I do not object to his criticism, and am only thankful that shareholders should have come here to-day in such large numbers and shown such manifest interest in what we are doing. As to improper smelting—nobody knows better than Mr. Steward that that was done long before this board existed. I was the first, years ago, to put a stop to it, and Mr. Richards made a note of it at the time in the committee of investigation. I called the shareholders together on my own responsibility, and put all this before them, and wished the smelting entirely done away with. The rest of the committee were not at the time of my opinion, but they soon came round to it. As to development on the tribute system—certain parts of the mine are being so developed, and they cost the company much less than they would do if worked by ourselves—in fact, tribute, as its name implies, is a source of revenue to us. All the ore that is got out is sold to purchasers by Mr. Argall, who superintends the whole matter. We will endeavour to have a meeting earlier in future, but our desire was to give the shareholders as much information as possible, and you know our monthly profits even to the end of this very month, amounting for the six months (not for the 12 months, as Mr. Steward stated) to 1,300*l.* Mr. Argall receives from La Plata about 300*l.* a year, and has also the management of White Cloud. The rest of his salary will be charged to that. The articles were submitted, and shareholders who so desired could have seen them. You cannot expect the directors to do work and take responsibility for absolutely nothing. I really think the company is turning the corner. As to the calls, most of the money has come in, and we have no reason to suppose any of it will be bad.

The report was adopted, the only dissident being Mr. Steward.

THE LEASES.

Mr. JONES: I would remind the meeting that the leases are only of short duration, and Mr. Argall has the instructions of the board, that if he sees any place in the mine that will pay a larger amount of profit by working on the company's account than by tributaries, he is to work for the company, and renewed instructions to that effect from the board will be sent to him after this meeting. The lessees have nothing to do with the ore, all of which is dealt with by Mr. Argall, they receiving their tribute, and we our royalty. The directors, for your benefit and for their own credit, wish, and will do their utmost, to make the mine a success. (Cheers.)

MR. STEWARD SATISFIED.

Mr. STEWARD: Mr. Jones has answered my question and nobody else has.

The auditor, Mr. James Harris, was re-elected, and the meeting did

not end until Mr. BARROW proposed, and Col. NOWELL seconded a vote of thanks to the chairman and directors, and which was cordially adopted.

LATEST TELEGRAM.

The results for the month of July as cabled by the manager are as follows:—"Mine output, \$7,620; dump output, \$1,667; profit for the month, \$2,000; the mine is getting into rich ore."

BALKIS CONSOLIDATED CO., LIMITED.

NEW DIRECTORS CORDIALLY RECEIVED BY THE SHAREHOLDERS
—FINANCIAL POSITION SOUND—ENERGETIC STEPS TO DEVELOP
THE PROPERTY.

THE fifth ordinary general meeting was held at the Cannon Street Hotel, on Tuesday, to receive the reports and accounts; to elect a director and auditors in place of those retiring; to confirm the election of a director; and for other general purposes.

Mr. E. R. Pearce Edgcumbe

(chairman of the company) presided.

Mr. R. ARNOT (secretary) read the notice of meeting.

THE NEW BOARD.

THE CHAIRMAN: Gentlemen, I rise to move the first resolution, which asks you to adopt the report and balance-sheet, and I wish just to say a few words—first, upon the change in the board; next, with reference to the condition of the company's finances; and, lastly, as to the position of our mine and property at the present time. First, as to the change in the board:—You will have noticed in the report, and seen in the Press, that there has been a change in the board since you were last called together. Six weeks ago I was like those whom I see in front of me—and an ordinary shareholder—and for some time past I was one of those who was dissatisfied with the results that had been accomplished by the existing board. (Hear, hear.) I am dissatisfied at the present time with what has been done in the past, and cannot do other than express my opinion, because I never made a secret of it as a shareholder, and have seen no reason to change it since. Of course, there may be excuses, and there may be reasons why things should not have gone as we should have wished, but at the same time, I think that considering the number of years this company has been in existence the mere fact that the past management has not succeeded in getting more than 100 ft. beneath the surface of the soil does condemn its administration. I hope that those associated with me will succeed in doing something better than this. It cannot be satisfactory to my mind, whatever reasons may be alleged, that such a state of things should exist after such a period of time. You know certain troubles arose with transfers here and things of that sort, which one feels should not have arisen. I do not wish to dwell upon this point unduly, but I myself, as having a considerable interest in this property, and some others have thought for some time past that things were not as we could wish. Then there is no doubt when the board came to the point at which they required more money the argument seemed to come home to them, and the change was affected, and I trust, speaking for myself as now a member of the board, that it will not be unsatisfactory to the shareholders. Personally speaking, I should not have come upon this board, or taken any part in the administration of the company, had I not had a considerable interest in the mine, and a wish and desire to do the very best I can for it. I will pass from that point to the question of

THE COMPANY'S FINANCES.

On page 6 of the report you see that the net result of the past year is an outlay of just over 7,000*l.*, which, of course, increases to that extent the amount of capital sunk in the property. I do not know that I need delay you with the figures. There are the salaries and wages on the other side amounting practically to 4,000*l.*—the expenses of kaffirs. The mine, machinery, and plant figure at 1,867*l.* I am not quite satisfied with that figure, because we have nothing but complaints as to the condition of the pumps, though I hope by this time, at any rate, from telegrams we have received, that they are on the way to getting better pumping machinery, and I am sorry that so large an outlay of that kind should not have given us at this moment better machinery than we seem to have. Then there are stores, freight duty and transport, travelling expenses, postage, bank, and other charges with which I do not think I need trouble you. Taxes we have to pay to the Government, and the amount is not large, considering we have many thousands of acres. Then there is prospecting (434*l.*), which we are still carrying on, though at the same time we cannot help feeling that it is not an immediately reproductive outlay. Still, some of our farms are not absolutely ascertained as to area, and we do want to know exactly their capabilities and prospects, and the outlay altogether is not large. Then we come to the legal expenses in the Transvaal, which, practically, ought to be nothing at all, or very small, but they figure at 438*l.* That is part of certain legal expenses which were incurred in reference to the trouble we had as shareholders with regard to 6,000*l.* or 7,000*l.*, which was paid over to a Mr. Holland to pay off some digging rights on our property, but this instead of doing he kept himself, and we were at some expense before we could make him disgorge. That is part of the expense we were put to in recovering the money from him. Then we come to the expenditure in London, and here the legal expenses are large (1,337*l.*)—a very unsatisfactory amount indeed—but that is largely due to those troubles that occurred in reference to

THE FORGED TRANSFERS.

We have taken opinion as to whether directors who were managing your affairs at that time could be made responsible for that amount, and the opinion we now have is that we cannot make them responsible, and, therefore, that charge must be borne by the company. The directors' fees amount to 1,250*l.*, but we consider, the directors upon the board, that for a company doing as this has done, it is

rather a high figure, and we have no intention of taking anything like that sum, unless, of course, the sun shone very brightly upon the company, and the whole aspect of matters was changed. (Cheers.) You cannot, however, expect us to do the work absolutely for nothing, but such a large figure as that is unreasonable as long as we are struggling towards daylight. I have this fact to mention to you, which is one of considerable satisfaction. We know that 16,000*l.* was lent to the company on mortgage debentures, which fell due this month, or on Aug. 1 next. That was a serious position for the company to be in, but I am happy to say that the new board have made arrangements by which those

DEBENTURES ARE RENEWED FOR A PERIOD OF THREE YEARS

from July 1 last, which gives us a very considerable breathing space, in which we can do a great deal, and it puts the company in a comparatively sound and satisfactory financial position. Well, apart from that,

WE HAVE OBTAINED A SUM OF 10,000*l.*

upon the same terms from the British and Transvaal Financial Co. in order that we may have sufficient means to go forward, and not starve the mine, at any rate, for the next 12 months. That, again, puts us, at any rate for the next year, in a very satisfactory position to work the estate properly. I wish, in reference to those two advances, to tell you this, that both those debenture-holders—the gentlemen who lent us the original 16,000*l.*, and the company which has advanced us the other 10,000*l.*—are large shareholders in the mine, so that it is their interest, in order that the company may succeed, not in any way to wreck the concern, but to do the best they can for it. (Cheers.) I think I have stated sufficiently clearly and fully all I need tell you in reference to the finances of the company. I would like to come to the last point—the

POSITION OF THE PROPERTY.

I have here a *résumé* of a number of letters written by Mr. Duncan, our manager out there, which have been extracted for me by Col. Fludyer, who has joined the board, who himself is an experienced miner in Cornwall, and thoroughly understands the technical part of mining. Mr. Duncan has only been at the mine seven or eight months. He was not appointed by the board as at present constituted, but so far as we can see from his letters, and so far as we can understand from what we hear, Mr. Duncan seems to be a satisfactory and enterprising manager, and one who understands his work. I may tell you also that a Mr. McNellan has been on the property, and in the letters we have had from Mr. Duncan he tells us that Mr. McNellan is examining the mine with him, and spending a month on the spot, and that we shall have a full report on the position of the property from Mr. McNellan in the course of a mail or two. He has had large experience in the Transvaal, and is employed by the Government, and so far as we can learn we may place every trust and confidence in the report we shall shortly receive from him. The letters I have to deal with are simply those of Mr. Duncan.

PITH OF LETTERS FROM THE MANAGER.

He speaks (Feb. 10) as to the place being only one-tenth part prospected. He complains next that there are no huts in which to house the kaffirs, and we have made arrangements for him to spend sufficient money on huts, for unless you can make your labourers fairly comfortable, when the rain sets in, they are apt to go away and leave their work. On Mar. 10 he complains of the work that he has had to do, considering how long the mine has been at work, and says that several things ought to have been done long ago, and that for some months before he reached the property no mining whatever had been done. That is an extremely unsatisfactory state of things, but at the same time I feel bound to tell the exact reports we get from our manager as to what has been happening in the past. On Mar. 18 he writes again, and says that he is still working, and strongly advises opening up the mine as quickly as possible. Of course, it is not very satisfactory for us to find that this mine, which ought to have been opened up long ago, still wants opening up, but when you know it is

ONLY 90 FT. BELOW THE SURFACE,

you can well understand how very little work has really been done. In the letter dated Apl. 25 he says that "in prospecting north of the main reef very promising indications are visible." I will proceed to the three last letters we have received, one dated June 2:—

"I cannot too strongly state my opinion that the only work which can give us a permanent and profitable mine is sinking, and, of course, developing in depth, and although, as I have already said, it is always possible that we may come upon some valuable ground above the water-level, there is nothing lasting, and it is absolutely certain that the only way to prove the property is primarily by sinking." He also says:—"You will, of course, understand that I write with a pretty thorough knowledge of the property, and with a firm belief, based upon results and indications shown by the work actually done, that development in depth and on the main reef is the object to be attained to which every effort should be turned. On June 13 he writes:—"I have had the miners who were sinking the new east shaft at work in the 70-ft. level, and in the southern workings from the old 36 shaft. I am glad to say in the latter (the 36) we have succeeded in again finding the lode I have referred to as the rich counter, this time, no doubt, in its proper course, that is east and west, and it looks at present most promising. It is almost certain that this lode is actually a continuation of the rich dump mentioned previously, and men acquainted with the appearance of the stone from the old shoot declare this to be exactly the same, and that it is the same branch on the other side of the horizontal throw which must have been the cause of the loss of the branch below in the old days." This is beyond mere surmise. Then we have a further letter (June 20) in which he again refers to this portion of the work:—"In the 36 ft. workings, the branch referred to in my last and previous letters is still holding to the westward, and is looking very promising indeed, and carrying more gold. As soon as I can get labour, I shall start to drive east also on its course." As I have told you, the manager has been again and again telling us that we are not down deep enough, and that no real effort has been made to get thoroughly into the lode. Of course, we have complaints about the pumps, and time must be required to put them right, though I believe by this time the defects are almost remedied.

In times past it would not be correct to say time had not been allowed to get proper machinery to proceed to a greater depth, but directly you get to 100 ft. there is a great deal of water to contend with, and that must be properly pumped away, or otherwise the miners will waste their time. You see from the extracts read that Mr. Duncan is satisfied he has the proper kind of quartz there, and that it is only a question of sinking and a question also of providing him with sufficient supplies. It is the hope of our board with the supplies we have now that we shall be able to meet the requirements of the mine for a year at least, and to put him in a position, now that he is fairly equipped with money, to thoroughly develop the mine, and I trust it will turn out, as we have long believed it will, a thoroughly satisfactory venture. I now move, with much pleasure, "That the report of the directors be adopted." (Cheers.)

Mr. E. R. CUMMINS (director): I second the motion.

CRITICISMS AND SUGGESTIONS.

Mr. JOHN OGLE (chairman of the Graskop Co.): I suppose you carefully considered the best mode of raising money before you decided upon a further issue of debentures, because this mine, in all probability, will not be different from most of those in the Transvaal, and it will take, now that work has been seriously entered upon, a great deal more time than I fear you anticipate. I do not say that to depreciate the property, which I believe to be a good one. It has a record that no other property has in the Transvaal.

A VOICE: That is true. (Laughter.)

Mr. OGLE: The record of the management may be indifferent, but the record of the property is good, particularly with regard to the farm, Eersteling. (Hear, hear.) It has been a disappointment to me and many other shareholders that some other mode was not adopted for raising money so as to put it in a position to wait for the proper development of the property. Three years, you must know, is a very short period in mining, and many mines that I have known have taken double that time to develop into a success. I am afraid we shall come to the end of our tether again before we have made a mine of it.

A VOICE: Re-construct again.

Mr. OGLE: I would much prefer that we had re-constructed now, instead of raising debentures. (Hear, hear.) We have saddled ourselves with 2,600% debenture interest a year, in addition to the expenses of the mine. At the same time I have no doubt the board carefully considered the matter, and I hope I am not wrong in taking a serious view as to the period necessary to make the property paying. I am glad to hear your good opinion of Mr. Duncan, because he has an excellent reputation. He is a young man, and wherever he has gone has given satisfaction. Has Mr. McNellan much experience in the Transvaal? The formation in the Transvaal is different from elsewhere, and therefore a man who may be a very clever miner in Cornwall or England may not have much experience in the Transvaal. (Hear, hear.) In reference to the taxes—are they on the whole of the property or only upon such portions as have been surveyed? As to the renewal of the mortgage, I presume the greater part of it was owing to one of your directors.

The CHAIRMAN: Yes; and he is still a director.

SOMETHING MR. OGLE KNEW.

Mr. OGLE: I see there is something received from royalty on the gold produced; that I suppose is from the Graskop?

The CHAIRMAN: Yes, from the Graskop.

Mr. OGLE: I see you have received 2,036% on the purchase of a 20-stamp mill, but I understood Col. Malleon to say at the last meeting they were getting a mill up, and there was a great deal of delay about it, but that it was paid for.

Col. MALLESON: The mill sold was a mill that was never set up. The mill referred to at the last meeting is the mill now erected on the property, and is doing good work at the present time, and has been paid for.

REPLIES BY THE CHAIRMAN.

The CHAIRMAN: This is a second and more powerful mill. With reference to the observations of Mr. Ogle, Mr. Chater, who is one of our directors, is also a large bondholder. I think it will at once commend itself to the shareholders, because it is only natural that when any gentleman advances so large a sum of money, either he or his nominee would like to see that the company is being properly managed. With reference to Mr. McNellan, he has been seven years in the Transvaal, and employed by the Government. We consider him for those reasons, and because of other information we have, the most reliable man we could have selected. As to not developing as quickly as we hoped, we are not down more than 90 ft. In England we can sink at the rate of 60 ft. a month, but we cannot sink at that rate in South Africa. Supposing, however, we only do a quarter of that, you will get 180 ft. down in a year. You cannot do without pumping materials, and those we had were not working properly. Apparently nothing had been done at the mines for months before the new manager got there. The proper pumping machinery has now been placed at his disposal, and I do not see why they should not sink at least as fast as a quarter of the English rate.

MR. OGLE IS CHAIRMAN OF A SUCCESSFUL COMPANY,

but his mine is a branch of the Balkis, and I do not see why the parent should be less successful than the offspring, and I am sure Mr. Ogle would not wish it.

Mr. OGLE: Certainly not. (Cheers.)

Mr. HULEATT: Perhaps Col. Malleon will give us some little explanation of what has been done in the past.

Col. MALLESON: I shall be happy to respond to the call made upon me by this gentleman.

The CHAIRMAN (interrupting): I was going to ask the meeting whether they really want to go into this question. We may discuss the matter and have excuses offered till midnight, but none, in my opinion, will explain away the damaging fact that after all these years we are only down 90 ft. You have only to put two and two together, and the result is so obviously four, that it is useless speaking further, but if the meeting wish to hear Col. Malleon, by all means let them do it, but it is far better to treat this as a business meeting and have no wrangling over the past. (Hear, hear.)

Mr. HEWLETT: I still think we ought to have some explanation.

The CHAIRMAN: My own opinion is that there is no proper

explanation, and I will therefore ask you to accept the motion for the adoption of the report—carried unanimously.

Mr. ALLEN proposed the re-election of Col. Fludyer as a director—a man highly qualified by his technical and practical knowledge in every respect.

Mr. H. G. M. CONYBEARE (director) seconded the motion, which was carried.

VOICE OF EXPERIENCE.

Col. FLUDYER: I have had a long experience in mining, and believe and think that the speed of development here will be much more rapid than it has been. I see no reason why they should not sink 30 ft. a month in that shaft. I have sunk 60 ft. in a month (15 by 8 within the timber), 10 fms. in 24 days, but that was in England, where I had the best labour in the world, and such a rate cannot be obtained in the Transvaal. Still, I do think with the energy and experience of Mr. Duncan we have every reason to hope that he may be able, with fair luck and a proper lift of Cornish pumps—not a lot of new-fangled things that they do not know how to manage—I say we have every right to expect he will go down 30 ft. a month. The country is full of "droppers," and my experience of mineral lodes (Mr. Bewick is present, and will bear me out) is that in all these cases where there are large quantities of "droppers," when they drop into a large body of quartz they almost invariably enrich the lode. Mr. Duncan is confident that as we get down, and as the droppers fall into this lode, there will be a valuable property. The lode is 7 or 8 ft. wide, and if that will only produce ore of the value of $\frac{1}{2}$ oz. to the ton, we shall have a very rich mine indeed. The next time we assemble here I think we shall have a meeting of a different complexion from what we have had to-day.

Mr. OGLE, in complimentary terms, proposed the re-election of Mr. Cummins as a director.

Mr. CONYBEARE seconded the motion, which was carried unanimously.

On the motion of the CHAIRMAN, seconded by Mr. McMILLAN, Messrs. Monkhouse, Goddard and Co. were re-elected sole auditors at a remuneration of 25 guineas. Mr. Mace was not re-elected, but was awarded 10 guineas for his past services, as well as the special vote of thanks, which was proposed to him by Mr. OGLE in complimentary terms, and carried with great heartiness.

Mr. OGLE: It only remains now that we pass a vote of thanks to the chairman, which I propose. It is extraordinary how much he knows of the property considering the short time he has been at the head of affairs, but then, as he has intimated, he has been watching it for years.

The motion was carried by acclamation and the meeting ended.

GRETA COLLIERIES, LIMITED (NEW SOUTH WALES).

THE COMPANY "IN A BETTER POSITION TO-DAY THAN THEY WERE TWELVE MONTHS AGO"—A CONSIDERABLY-INCREASED OUTPUT—THE QUESTION OF THE STRIKE.

THE annual ordinary general meeting of this company was held at Winchester House, Old Broad Street, London, E.C., on Thursday, July 30, 1891, for the transaction of the following business:—1. To receive the directors' report and audited statement of accounts, made up to Mar. 31, 1891. 2. To declare a dividend. 3. To elect auditors.

Mr. M. Mowat

presided.

Mr. JERSEY BARNES (secretary) read the notice calling the meeting, and the report of the directors was taken as read.

The CHAIRMAN said: When I had the pleasure of seeing you last in this hall on the occasion of our statutory meeting, about a year ago, I put the position of affairs pretty fully before you, and I ventured to hope that the business then gave indications of what promised to be a fair season in the New South Wales coal trade—a trade which for many years past had been progressing by "leaps and bounds."

THE STRIKE.

But, gentlemen, the unexpected occasionally takes place, and in the following month of Aug. we were brought face to face with a strike, I believe unprecedented in the history of our colonies, which lasted for over 10 weeks, to the serious injury both of labour and capital. Nor was this all. On the resumption of work, it took some further time to get the trade back into its former channels. If you make allowance for this, I have no hesitation in saying we have done fairly well, for I have taken the trouble to go through a number of colonial colliery reports and balance-sheets, and I find "no dividend" by no means an uncommon expression, for the reason which I have mentioned above—namely, the great strike. Our special thanks are due to the Messrs. Harper, Prof. Benton, and other officials, for their management during this very trying crisis. Not only was their labour and anxiety increased, but they had to keep constant watch over your property, with the assistance of the police. If I were to read you extracts from the letters and newspapers of the period, I am sure the labours of these gentlemen would be as much appreciated by every shareholder as they were by the directors in the trying months of Aug., Sept. and Oct. last year. As you are aware, the output of our colliery is not far short of one-twentieth of the total production of New South Wales, which in the year 1889 reached 3,203,443 tons. On joining the Associated Collieries, known in Sydney by the name of "The Vend," our output for the year under review was fixed at 150,000 tons, but with nearly three months' work knocked off, we have only reached a total of 109,000 tons. If you consider that this decreased output has had to bear the whole of the fixed expenses which were increased by watching charges and twelve months' debenture interest, you can by an easy arithmetical calculation make out how much better off, you would have been with an increased output—for the whole of the extra profits would have belonged to the ordinary shareholders.

ACCOUNTS.

With these remarks, gentlemen, I now propose to take you over the balance-sheet, for on every point which interests the com-

pany we want the shareholders to have the fullest information. Turn to the right-hand side—capital called up, 136,320l. This is in accordance with the prospectus, and of the 1,253l. 10s. in arrear, we have since received 242l. 10s., and look upon the balance as good. Debentures, 64,000l. A few remarks on this subject will come in very appropriately here. These debentures bear interest at 6 per cent.; they form a first charge on the property and assets of the company, for which 175,000l. was paid, and, in addition to this, and as if to make assurance doubly sure, there is about 64,000l.—the full sum of the debentures—of uncalled capital, which is reserved by the prospectus, specially for the debenture-holders, if need be. Our list of shareholders is a good one. A 6 per cent. security like our debentures, with so much behind it, in a money earning company, ought to be a very good one. The trust deed mentioned in the prospectus has been for some time in draft, and the delay in the execution is mainly due to one of the trustees for the debenture-holders having asked for an independent investigation of the title, which the directors readily assented to. A telegram received this week mentions that the titles have been settled, and a cablegram is to hand to-day, stating that "We will prepare as quickly as possible conveyance. Trustees." On receipt of a message that this has been done the directors will sign and seal the trust deed. Debts due by the company for debenture interest, 936l. This is the sum owing between Jan. 1 and Mar. 31, as treated through an adjustment account. Bills payable 5,126l. These bills are against cargoes of coals sent to San Francisco and Jarva for sale, and we receive remittances as the proceeds come in. Indeed, if you will turn to the other side you will find that part payments by means of bills receivable often come to hand before the due dates of the acceptances. Sundry creditors, 6,000l. Our chief creditors are the vendors for coals and loose stores, taken over according to an account which was lately gone into by the auditor, Mr. Page, when in Australia, and which has been accepted as correct. On the right-hand side you will find an entry for the cost of the property, mining rights, machinery and plant, 183,021l., and with reference to the same the auditors have made a foot-note with regard to depreciation. The directors have referred to this subject in their report, and I now beg your attention to what the managing director, Mr. W. A. Harper, writing from Sydney on May 11 last, says on the subject:—

"It will not be necessary to provide during the past year for depreciation of plant, as, instead of depreciating in value, very considerable sums have been spent in improving its standard of value, nor is there any depreciation chargeable against Greta for the duration of the lease, as the new lease will date for 21 years from now, instead of from last year as expected, and the one year off the Leconfield lease will not affect it."

The 183,021l. 0s. 11d. is made up of 175,000l., the purchase price, per prospectus, and 8,021l. 0s. 11d. expended during the year—which figures Mr. Page obtained in his examination of the Sydney books. In the profit and loss account, however, we have provided 2,426l. for renewals and repairs, and there can be little doubt from what I hear from Mr. Herbert Harper, who is now in this room, and whose presence we cordially welcome, the condition of Greta Colliery is better than when we took it over on Apl. 2, 1890. Stock of coals and stores calls for no explanation. Bills receivable have been already dealt with. Sundry debtors, 5,067l., refers mainly to outstandings for coal, which we consider good. The deposit of 3,437l. is made with the Associated Collieries in accordance with the rules of the "Vend," and we receive interest thereon, which is duly credited.

"A PLEASANT FEATURE."

The next item, cash 14,321l., a pleasant feature in the balance-sheet. The following entry is a small one for outlay in connection with the Leconfield estate, and the rest refer to expenses regarding which I shall have more to say later on. To come to the profit and loss account. One of our shareholders has asked for details of the credit item for 16,457l. 0s. 6d. I have much pleasure in furnishing the figures:—Gross profit on coal, 13,719l. 9s. 0d.; gross profit on powder account, 37l. 9s. 4d.; gross profit on freights stiffening account, 12l. 7s. 6d.; miners' leases, 170l. 10s. 4d.; Vend account, Associated Collieries, 2,499l. 12s. 7d.; commission on charter party, 17l. 11s.; total, 16,457l. 0s. 6d. In a concern of this nature the cost of superintendence and other outlay will always be considerable. While bearing economy in mind, we look to efficiency as a first essential, and the expenses in the colony, amounting to 3,742l., has been well spent money. Repairs and renewals have already been brought to your notice. The charges in London, according to some shareholders, are considered heavy. Let me give an explanation. Before we joined the "Vend" our agents, Messrs. Cheney and Eggar, received 2½ per cent. on sales, and for some years past they received considerably more than the figure charged in your accounts, which is about 3d. per ton on the quantity sold this season. The "Vend" rules do not permit of the payment of commissions in the old way, and we have therefore, to make an arrangement for a lump sum, which, although appearing large, really means a saving to the company. It may interest you to know that after Messrs. Cheney and Eggar accepted our agency they were offered much more liberal terms by another colliery, which they refused. The cost of cablegrams in working a business like ours, where we are so much dependent on the foreign trade, will always be considerable, no matter how elaborate our code, and I need not tell you that, by means of codifying, we make a word go as far as possible. The reduction in the tariff from 9s. 6d. per word to 4s. 2d. which came into operation in May last, should be the means of letting us off with a lighter bill during the current year. We shall always have to face a good round sum for travelling expenses. We must keep pace with the times and the keen competition, which is forced upon us by the nature of our business. Agents, in whom we have the utmost reliance, have been specially commissioned to visit the Dutch East Indies, The Straits, North and South America, and we consider the outcome of these visits has been highly satisfactory. The next entries are for the cost of establishment and directors' fees. The latter are in accordance with the articles of association, and I make bold to tell you that the work is by no means nominal as some have supposed. The great bulk of the sales and chartering are done on this side, and a committee of the board have to be in close communication with the manager who attends to the selling and chartering, for we have to keep the collieries going, and the business sometimes necessitates a risk which the manager would not take alone, but which in committee we endeavour to reduce to a minimum.

One of our number, Mr. George Blake Walker, whose experience in colliery matters is well known, visited the property in Jan. last. I have no hesitation in saying that this visit will be of immense value to the company, and all that Mr. Walker asked was the sum of 50l. towards his expenses. If the time spent in the service of the company is taken into account we are by no means overpaid. The debenture charge—3,986l.—includes 200 guineas paid to the trustees for the debenture-holders under an arrangement which was made at the time of the formation of the company. The preliminary expenses for law costs, stationery, &c., come to 631l. 1s. 10d., and we intend spreading this outlay over three years. I wish the nett balance for the shareholders had been larger, but a dividend of 2½ per cent. under the circumstances is not out of the way, and I hope it may be increased in years to come. We have done with the past; let us now look at the course of trade since Mar. 31. One of our chief markets—Chili—has been engaged in a civil war, which has rendered business most difficult, and the competition in the East was increased by the large number of steamers sent out in Apl. and May to catch the paying homeward freights, consequent on the activity of the wheat and rice trades with the East Indies. Coal was actually carried to Bombay for 6s. 9d. per ton, or little more than the sum required to cover the canal dues! Cardiff was sold for a time in Singapore at a figure at which we could not lay down Greta.

THE POSITION NOW BETTER THAN LAST YEAR.

Still, with the assistance which the visits to America and Java have given us, we are, in my opinion, in a better position to-day than we were 12 months ago. According to a memorandum which Mr. Cheney has prepared, his firm have sold and stemmed during the past four months about 25,000 tons, in addition to which the Sydney office have done direct business with Java and Sumatra, as well as a local trade which promises to increase considerably. Our daily output at Greta frequently reaches 700 tons per day, and improvements are being made by which this output can be increased. Since the great strike, we have confined our operations to Greta, and on the advice of Prof. Benton, Leconfield has not been worked. You will be glad to learn that we have acquired the lease for 40 years of the property which lies between Greta and Leconfield, known as the Parnell Estate, and we mean to work through this property, a sketch of which is on the table, into Leconfield. There is still, however, a matter of some importance to be settled with the vendors, and an arbitration will be held shortly. Since Mr. Herbert Harper came here he has done much towards a settlement, and the directors thank him for his services, and the straightforward way in which he has conducted the negotiations. We have ample security for whatever may be the result of the award. I am happy to add that our relations with the vendors remain unimpaired.

STOCK EXCHANGE QUOTATION.

The question of a Stock Exchange quotation was mentioned a year ago. We mean to apply for one when the trust deed is executed. With these remarks, I beg to propose "That the directors' report and audited statement of accounts to Mar. 31, 1891, be and are hereby adopted."

DISCUSSION.

Mr. H. M. SIMONS seconded the motion.

Mr. PINTO LEITE thought that there should be some committed or commission to go into the promises of the prospectus, and compare them with the results now presented. He also felt that the accounts being made up to the end of Mar., the result should be laid before the shareholders before July 31.

Mr. HARDIE was sorry to rise in antagonism to the board on the point raised by the last speaker. He had no amendment to propose, but he wished to offer a few remarks. He suggested a reduction in the number of the board or in the fees to 500l. He had recently issued a circular to the shareholders upon the subject. He had issued 105 circulars, and had had 50 replies, 40 of which supported his views.

Mr. CRAWFORD asked for some particulars as to the Sydney expenses.

Mr. FRASER also asked for a little fuller information, and thought that too much had been made of the strike. He asked the board to try and reduce the expenses, and to take reduced fees. He wanted to know why the Leconfield Colliery had not been worked; was there no coal there or what? He wanted to know why the profit in 1890 was 8,000l., and now was 3,000l.?

A SHAREHOLDER asked how these figures compared with the profit in 1889 of 15,000l.

THE CHAIRMAN REPLIES.

The CHAIRMAN, in reply, said that the directors had looked carefully after the property, and seen that it was in order, and there was no need for a commission or committee. This company had done quite as well as their neighbours. He could not answer questions sprung off-hand. Notice of such questions should have been given. As to the accounts being made up to Mar. and presented in July, the directors had done their best to get them over in time. The journey alone from Australia took six weeks. The auditors' fee of 25 guineas had reference to this side, and Mr. Page was "specially paid for the work he did in the colony." As to the past of the company and the remarks of Mr. Hardy, the directors had done their utmost to keep down expenses. He (the chairman) was quite aware that there was a kind of

CRUSADE AGAINST DIRECTORS' FEES

for the amount of work done by the directors. He assured the shareholders that the directors were not overpaid. If the shareholders could obtain the services of directors free, let them do so. The directors would not take what they had not earned. The matter should be fully and carefully considered. Some of his colleagues had told him the fees now were little enough, and if they were to be cut down they would lose their services. He considered that the shareholders were getting as good an article as was promised in the prospectus. As to the auditors' foot-note, it was a matter for the auditors themselves to explain. He concluded by giving various figures asked for by shareholders in explanation of the accounts.

Mr. SAXELBY (the solicitor), having given particulars upon various points as to Leconfield, &c., which matter, he said, would very shortly come on for arbitration, said that a proposal had been agreed to for the execution of a mortgage by the vendor company, so that this company was secured in any circumstances.

A SHAREHOLDER : Where does the arbitration take place ?

The SOLICITOR : In Sydney.

Replying to other remarks, Mr. SAXELBY stated that in a few days the matter of trustees would be settled. The matter would not involve much expense.

Mr. H. S. FOSTER said that the view of the directors was that the company would be entitled to compensation. He, personally, held a very strong view as to the arbitration, and to what this company would be entitled to.

Mr. PAGE (of the firm of auditors to the company, Messrs. Josolyne, Miles and Blow) said that all and every certificates given by their firm had been true and honest, or they would not have given them. As to the date of the balance-sheet, he thought it would have been impossible to get it sooner, and had he not been in Australia for other business there would have been a further delay of two months.

Mr. HERBERT HARPER (consulting engineer in the colony), at the request of the chairman, then addressed the meeting on various particulars connected with the company. As to the report of Harper and Harper, this was written in London by his partner, and was exactly how matters stood at that date. For the first four months of the year

THE TRADE WAS VERY SPASMODIC,

which made profits very small indeed. And then came the strike, but the greater part of the profit had been made since the strike, when the trade had been steadier.

After some further conversational discussion the motion was carried, an amendment for a committee to confer with the board being lost. The other

FORMAL BUSINESS,

including the approval of the appointment of Mr. H. S. Foster to a seat on the board, was duly transacted, and the proceedings closed with a vote of thanks to the chairman.

PALMAREJO MINING CO., LIMITED, AND THE MEXICAN MINERAL RAILWAY CO., LIMITED.

"REPORT OF PROCEEDINGS" OF A MEETING OF LARGE SHAREHOLDERS.

THE following is the report of a meeting at the Offices, held at the request of the directors on Monday.

Mr. F. Pigou

(chairman) presided.

[Our readers should distinctly understand that this report has been communicated by the company, and that representatives of the Press were refused admission.]

The CHAIRMAN in his speech said : The directors have asked you to meet them to consult as to the best method of getting to work at Palmarejo. When your present directors took office we found ourselves committed to the management of a company for which a capital of 400,000£. had been raised, but which was perfectly useless to the shareholders for the want of certain important works at that time (at the end of the first three years of the company's existence) not commenced, not even designed, the cost of which was not even guessed at, and for which no adequate provision had been made. We were promised that if we would carry these works out, the subject of finance was one which need not trouble us; and, had it not been for this understanding, most certainly I, for one, would not have accepted the position, as I should not be disposed to undertake the duties of a Chancellor of the Exchequer, in addition to those of a director of contracts, for the salary of a junior clerk. At the first meeting of shareholders at which I presided, I told you that we considered ourselves

MERELY AN ADMINISTRATIVE BOARD,

and I was not contradicted. Well, I went out to Palmarejo, settled the general design in conjunction with the engineer on the spot, and as soon as possible after my return the construction works were taken in hand, and the contract for the machinery for the mill was given out. Early in last year, as the work appeared too heavy for the staff, we engaged Mr. Pender—who had been most highly recommended to us for energy and ability—as manager at Palmarejo; and before he left England we explained the financial position of the company to him, and instructed him not only to be as economical as possible in executing the works, but also to draw up and send us a full estimate of the cost. I may say at once that I believe Mr. Pender has quite justified his appointment by exhibiting untiring energy and resource in the face of difficulties which would have daunted most men, and that the mill would not have been, as it is now, practically completed if we had not sent him out. Mr. Pender duly sent us the estimate we had asked for, and included in it a sum of 10,000£. for mill supplies, &c.; and, though he has expressed regret in some of his later letters that he made his estimate so low, it was only the other day that we found out that the construction works had cost 10,000£. more than he expected, and, therefore, that amount of working capital must still be provided.

ESTIMATES BELOW THE REQUIREMENTS.

It was on Mr. Pender's estimate, which we had every right to believe would cover all expenses, that we asked for the 75,000£., which was collected in Feb. last. Now, with a sort of prevision of the troubles that were likely to ensue if we had to come before the shareholders more than once for funds, we put ourselves and our friends to an immense amount of inconvenience to finance the company, and provide money to pay current expenses until we could be fairly assured as to the final requirements of the company; and I submit that by

sending a special and experienced agent, and acting on his estimate, we took the only plain, business-like course that was open to us. With reference to the complaints that have been made in various quarters as to the heavy terms offered for one year to those who will advance the funds now required by way of loan for that period, and with reference to communications from several shareholders, expressing fears that the company's profits will all be swallowed up by preference charges, I have to say that nothing whatever has happened to qualify the confident expectation we have had all along that the net profits of the mill will be something like 60,000£. to 80,000£. a year, and that if so all the preference charges—which after all are only charges necessarily incurred in getting to work—will be very inconsiderable, and after the first year's work a mere fleabite; and that the reason for offering a very high rate of interest for a temporary loan is that we had not the support from the general body of shareholders in raising the 75,000£. which we were promised, only about 50 shareholders out of about 2,500 subscribing to the issue of debentures, and thus protecting their own shares, and about six-sevenths of the debentures having therefore to be placed outside. What prospect, therefore, was there of raising the further sum now found to be necessary, among shareholders who had declined to pay the cost of the works which they had elected us to construct for them? I contest the right of anyone who is unable or unwilling to subscribe his quota of the expense to dictate the terms on which the money necessary to make his shares valuable shall be obtained from outsiders. I may mention, incidentally, that last autumn we asked some half-a-dozen of the principal shareholders to form themselves into a finance committee to assist the board in the duties which had unexpectedly, and I think unfairly, fallen on us. The committee met at the office of the company twice, examined the position of the company, had access to all details which could help them to form a judgment, told us that they had no suggestions to make and must leave matters in the directors' hands. They would, individually, however (and they did), subscribe liberally to the funds of the company, but as a committee they were of no use to us. Under these circumstances it is a matter of surprise to us that we got on as well as we did. The

MEXICAN EXPLORATIONS CO. HELPED US,

as you know, permanently, with their guarantee; and, amongst others, the Mexican Mineral Railway Co. assisted us temporarily with a loan of 11,000£. (duly repaid to them when the debentures were subscribed) to enable us to carry on the erection of the mill, &c., uninterruptedly during last winter. In addition to the 10,000£. still required for working capital at the mill and mines until bullion can be realised, a new requirement of 6,000£. has been sprung on us to enable us to carry on the pay stores in connection with the works. I ought to say here a few words in explanation of this store business, which is no doubt new to a great many of you. In these out of the way places special arrangements have to be made to supply the men with all the necessities of life. Nearly all mining companies do take this business in hand.

THE STORES.

If not, it is generally taken in hand by tradespeople in the near neighbourhood, who are a very great nuisance, who can charge what they like, and sell what they like. Ever since I have known this company our pay stores at Palmarejo have been carried on by us in partnership with a Mexican, and I may tell you that during the whole of the time we have found it a very profitable thing. We have done our best to provide that the men should not be overcharged, but at the same time the concern has been very profitable. We had originally 3,000£. working capital in this business, and the remainder was found by this Mexican. This partnership expired on May 24, and looking to the figures, we were very anxious that unless the partnership could be carried on, some fresh arrangements should be made by which the company should take over the stores. No desirable or profitable arrangement was come to, and it became necessary for us to take the whole stores business into our hands, and, consequently, to find the additional working capital to carry it on. This is the explanation of the 6,000£. now required, and will make our capital in the store 9,000£., which is none too much. The summary of the whole matter is, therefore, that we have enough money from the proceeds of the debentures to pay for the mill and works, but that 10,000£. for mill supplies and working capital, and 6,000£. for the pay stores must still be furnished, and furnished at once, if the crushing is to commence in Oct. I think I have

SAID ENOUGH TO EXCULPATE THE BOARD

from any charge of carelessness or inattention to the interests of the company; but, when I have done, if anyone has any remarks to make bearing upon the question which we are met together to discuss, viz.: the means of getting to work at the earliest possible moment, I shall be happy to listen, and, if I can, to reply to him. I now have to refer to the affairs of the

MEXICAN MINERAL RAILWAY CO.,

and I make no excuse for bringing them before you all, because, although it is true that it is a separate undertaking from the Palmarejo Mining Co., and that its funds have been subscribed to only a very moderate extent by Palmarejo Mining Co.'s shareholders, yet the two companies are most intimately and entirely dependent on each other, and I do not in the least exaggerate when I say that without either company the other could not possibly be a success. Without the Palmarejo Mining Co. to supply freight for the railway and to utilise the water power in the conduit, the Mexican Mineral Railway Co. would have nothing to look to to pay interest on its capital, and without the railway and water power the Palmarejo Mining Co.'s mines might just as well be in the moon as in Mexico for any chance there would be of profitably working the ores. It is, therefore, of absolutely vital importance to the Palmarejo Mining Co. that the completion of these works at the earliest possible moment should be assured; and of course serious delay, as well as increased cost to both companies, would result from any stoppage of the works until water is passing through the whole length of the conduit to the mill, and trains are running over the whole of the distance between the mill and the ore bins at Palmarejo. When the Mexican Mineral Railway Co. was formed, and I (for my sins, I suppose) was asked to join the board of it, the information as to the capital that would be required was furnished by data supplied by the Palmarejo Mining Co., which, I need hardly remind you, was

not at that time conducted by its present board of directors. That information gave us what has since turned out to be a completely erroneous idea of the character and cost of the proposed works, and I was under the impression, until I visited the spot, that our capital of 75,000 $\frac{00}{100}$., and 50,000 $\frac{00}{100}$., debentures, would be sufficient, not only to complete the works for the Palmarejo Mining Co., but also to undertake a similar small operation elsewhere, if the opportunity should offer. If I had any idea of trying to secure another contract, however, until this one was finished, my sojourn at Chinipas put an end to it, though it did not and could not tell me what persons of far larger experience than myself were unable to foresee, namely, that the execution of the works at Palmarejo alone, without counting the provision of plant and rolling stock and the cost of conveying them to the spot, would absorb the whole of the company's funds and some 20,000 $\frac{00}{100}$., besides. As soon as the Mexican Mineral Railway Co. had obtained its capital, we made attempts to get a contractor to undertake the work at a fixed price, but the only suggestion of a tender that was given to us named apparently so absurd a figure (I think 300,000 $\frac{00}{100}$.), that it became evident that

WE MUST UNDERTAKE THE WORK OURSELVES.

We therefore cast about for an engineer and manager, and we selected a gentleman who had constructed similar works before—not in Mexico, however, but in Japan—who understood the Spanish language, and who, from the enquiries we made about him we were satisfied, thoroughly understood his work and would carry it through in an intelligent and substantial fashion. He was previously a stranger to me, but I accompanied him to Chinipas, and I came to know him very well, and to be certain not only that he is an honest and capable English gentleman, but also that he knows his business. At a later period we were fortunate in finding another gentleman of similar character as assistant engineer, and both these gentlemen have stuck to their work most manfully in the face of most serious disappointments and unlooked for difficulties with the heavy character of the work, and the staff and labour—such as it is—with which they have had to make shift. The first estimate of the probable cost of the works in Mexico was sent home in May, 1889, and amounted to \$757,000 (Mexican), equal to 115,000 $\frac{00}{100}$., at the then rate of exchange of 6.63, and I frankly admit that it now appears to have been an error on the part of the board not to have made an effort at once to secure the few thousand pounds of additional capital which would be required if that estimate was correct. However, we had a very large sum of money in hand and on call at that time, and the estimate was so large that we thought the engineer had used over caution. We were also of opinion that when the works should be nearly completed it would be possible to raise a little extra money, if required, on easier terms than in the beginning of things when only a small amount of progress had been made.

VAGARIES OF SHAREHOLDERS.

You see, gentlemen, we had not then experience of the difficulty which we have had to face, namely, that shareholders who would freely find 400,000 $\frac{00}{100}$., capital to purchase a mine from persons of whom they knew nothing, and situated, as they must have known very well, in a most inaccessible and wild region, could hardly be induced to protect their own interests when a comparatively small sum—in the case I refer to only about 3 per cent. of the original capital—was required, as far as they were concerned, to put them in a position to earn the dividend for which they had waited so long. In October last a revised estimate was sent—the result of the experience gained up to that date—not differing greatly from the first one as to amount, being 778,000 Mexican dollars, or at the old rate of exchange 118,000 $\frac{00}{100}$.,—but putting back the probable date of completion for a few months; and that was followed by further information that the conduit would be completed in June and the railway in August; and I have not the shadow of a doubt that these statements were made in perfect good faith and represented the state of affairs as they appeared on the spot at the respective dates. This is no reason to the contrary; and we on this side had confidence in giving out these dates in the quarterly circulars, because they seemed to be borne out by and to correspond with the requisition for money to be sent out for payment of wages, &c., from time to time. I may here state—and the letters and telegrams are here to prove it—that every scrap of information, both as to time and money, has been given to the shareholders of both companies exactly as it has been received, and that there is no ground whatever for saying that we have either withheld or garbled any of them. That subsequent information has disappointed the hopes raised by earlier news is a fact that we all equally deplore, but the work has gone on steadily and with all the force that could be put upon it from time to time, and you must thank the nature of the work, and the circumstances under which it has had to be carried on, for the disappointments we have suffered—not the directors, who could only keep on pegging away, and who have succeeded in spite of all discouragements in bringing the operations within what is now at last a measurable distance of completion. On the receipt of

THE REVISED ESTIMATE OF OCTOBER LAST,

the directors were precluded from taking immediate action by the fact that the Palmarejo Mining Co. was then in the throes of attempting to raise its 75,000 $\frac{00}{100}$., and it would obviously have been useless to try to get money for the railway while that matter was uncertain. We were, however, at that time still flush of money, and were able to help to finance the Palmarejo Mining Co. through the winter by lending them a large sum of money, which was duly repaid. The directors ran a serious personal risk in doing this, but the immediate and temporary needs of the Palmarejo Mining Co. were so great at the time, and the consequences to the Mexican Mineral Railway Co. would have been so fatal if the Palmarejo Mining Co. were suffered to come to a standstill for want of funds, that they considered themselves justified in adopting the course they did—for which, however, they, of course, took security. I mention this, because I think it constitutes a fair claim on the shareholders of the Palmarejo Mining Co. for their assistance now that we require it, and they, if they find the comparatively small sum which will complete their requirements, are nearer the end of their troubles than we are—always provided, however, that we too pull through also, for without us they are as helpless as a steamer without its engines. As soon as the Palmarejo Mining Co. had obtained its 75,000 $\frac{00}{100}$., we set to work to obtain support for the Mexican Mineral Railway Co., and with such success that at

the general meeting held in May, Mr. Hart, who took the chair on the occasion, as I was very ill with the influenza, was able to ask for powers to issue the 30,000 $\frac{00}{100}$., additional debentures which we had then the fullest assurance was more than would be required, and to say that if we had had another week to work in before the meeting we would probably have been able to say that the whole amount had been already promised. Out of this 30,000 $\frac{00}{100}$., it was only proposed to issue 25,000 $\frac{00}{100}$., at once, and many persons very properly made it a condition of their subscription that the whole of this should be promised. This was not a matter of very great difficulty, and it was not a long time before the board was able to give the required assurance, though when it came to the point of paying up one or two failed to redeem their promises, but not to any large extent.

"REVISED" ESTIMATE REVISED.

So things went on until June 29, when we received the May report from the works, in which it was stated that on comparing the revised estimate of October last with the actual cost of the now completed sections it had become evident that the work was costing more than was supposed, and that if the cost of the remaining uncompleted sections should exceed the estimate in the like proportion, the whole works would require 15,000 $\frac{00}{100}$., more, which must be provided without delay. You will understand that this was not very pleasant reading, just after we had assured some of our best friends that no more money would be wanted, and were expecting to find the expenses dropping off. We at once telegraphed that the matter was very serious, and asked for an assurance that this was a final demand, and also for further information as to dates of completion, as it was evident that if more money had to be spent the works could not be ready in June and August. The reply was very long in coming, as it did not reach us until late on Friday last. This at least shows that they have become alive to the gravity of the situation, and have not answered thoughtlessly. I myself thoroughly believe that this time we have a covering report—that, taught by experience, every possible contingency as to both time and money has been provided for—and even over provided for. I do not speak without grounds, and the grounds are these: On Saturday the Palmarejo Mining Co. received a telegram confirming the requirements for the working expenses, &c., and the pay stores, and adding that the mill could start "early in October." Now, the mill could not start unless the conduit is complete throughout, and unless arrangements of some sort are made for bringing ore down from Palmarejo. Our telegram says that the final requirement is 25,000 $\frac{00}{100}$., not 15,000 $\frac{00}{100}$., and that the conduit will be finished late in October, and the railway about the end of the year. This is, undoubtedly, bad news for us in one sense, as it means a harder pull on our resources and a further stretch of our patience, which has already been so sorely tried. But, on the other hand, we now know the utmost we have to do and wait for—provided there is no delay on this side—and it rests with you to say whether you, who have borne the burthen and heat of the day, are to enjoy the fruit of our labours, or whether you will suffer this great undertaking to fall into the hands of others who will, at a trifling expense to themselves, take up the work where you lay it down, and make a fortune for themselves instead of earning good dividends for you.

JOINT STOCK TWINS.

Someone seems to have hit on the brilliant idea of providing the comparatively small sum wanted for the outfit at Palmarejo, and leaving the railway to stew in its own juice. Gentlemen, I think I have said enough to show you that that will not do. Litigation only would be the result, and that would benefit nobody but the lawyers, and possibly, but improbably, the wreckers. The fortunes of both companies are in one volume, and destruction to one, or even delay in the proceedings of one, would spell ruin to the other. For my own part I have devoted myself to the Palmarejo Mining Co., and the Mexican Mineral Railway Co. ever since I was persuaded to undertake a very thankless office, and I have attended to it daily, and for many hours a day, sacrificing other engagements from which I have derived, and could have continued to derive, much profit, and I have assisted it as much as I could financially. My colleagues have done likewise—less, perhaps, with their time, but with larger means. I know you will acquit us of having intentionally given false information, or of withholding proper information from you. We have been unsupported all through except by a few firm friends, and we have brought you to the verge of success, whilst you are no nearer to failure than you were—if you had only known it—at Christmas, 1890. I have often been tempted to retire from a position which has not been what it was represented to be, and where I am overworked and—if you will allow me to say so—underpaid, though I do not think you have heard me complain; but having taken the position I have stuck to it, and I shall continue to do so unless you are tired of me. It has been suggested that

I SHOULD AGAIN VISIT PALMAREJO,

and I am willing to go there, but not unless and until all the money is in hand, and the works are in operation or ready. There will then be many details connected with the management and development of the property which will be advanced by a visit of a part of the London directorate to the works, and I shall be prepared to undertake the somewhat tedious and rough journey again if you desire me to do so. (Cheers.) With regard to the main object of this meeting, we really must have the money immediately if we are to get to work. There is no question about it. We have got to the bottom of the requirements, and our people in Mexico have so far got on with the work that they can tell now exactly what is required. The directors have done all they can to raise this money and now it remains with you to do your part, and I would again impress upon you the fact that we must have the money, and a great deal of it at once, as bills are coming forward which must be duly met, or otherwise the whole matter becomes disorganised, and I cannot tell what the result would be.

DISCUSSION.

Mr. APPELGARTH enquired as to the time of starting work, which would be a satisfactory thing to know.

The CHAIRMAN: The date will probably be in Oct. I am perfectly confident in the statement of the engineer of the ditch that he will be ready in Oct., and the manager of the mine says he will be able to work the mill at the beginning of that month. If we are ready to work the mill then, we shall probably have 7 or

8 miles of the railway completed by that time, and it will be possible, therefore, to carry the ore to the mill over the remaining partially completed sections on mule back. We have been in correspondence about this question before now, but until the railway was completed a certain distance it was impossible to make any arrangements. The supply of mules would be totally insufficient; but now, after the rainy season, we understand that we can make arrangements for supplying the mill with ore in October. The telegram we had from the engineer of the railway tells us that the ditch would be ready in October, and the railway at about the end of the year, and he says further, in this telegram, that the ore can be carried down for three months part of the distance on mule back. We shall get a letter in due course confirming this telegram.

The CHAIRMAN, in reply to Mr. Edgar, said the amount required was 16,000£. for the Palmarejo Mining Co., and 25,000£. for the Mexican Mineral Railway Co.

Mr. CHEMERY asked the chairman if he were still of the same opinion, with reference to the value of the mine, as when he visited the mine.

The CHAIRMAN, in reply to Mr. Chemery, stated that he did not pretend to be a mining engineer, but since his return from Mexico nothing had happened to alter his views of

THE ENORMOUS VALUE OF THE MINE,

and the quantity of ore outside the mine.

Mr. TAFTT inquired how it was proposed to raise the money.

The CHAIRMAN, replying to Mr. Taftt, said that this was the question before the meeting.

Mr. GOLD remarked that he thought Mr. Taftt meant to inquire whether the directors had any proposition.

The CHAIRMAN, in reply, stated: The circular sent out last week for the temporary loan of the money for 12 months at 25 per cent. interest, was a hurried proposition which I did not quite like, but we have got to get the money and must offer any rate of interest—if interest will procure the amount necessary. If anyone can bring forward a reasonable scheme I will help you all in my power, but no scheme is of the slightest value which does not give us immediate funds. The security would be the mine and the Mexican Mineral Railway.

Mr. EDGAR remarked upon the form of the circular sent out asking for subscriptions to the Mineral Securities. It showed no security—capital only 1,000£. shares.

The CHAIRMAN explaining the issue of the first mortgage debentures, stated that the 100,000£. issued realised 75,000£.

VIEWS OF A SHARE AND BOND-HOLDER.

Mr. BRICE: Like a great many of the gentlemen present, I am a bondholder and a shareholder in both companies. I am an original shareholder of the Palmarejo Mining Co. I trusted to the statements in the prospectus being carried out long ago, but that is not so yet, and however much one may complain of what has taken place, it seems to me that the fault rests with those on the other side of the water. I purchased some of my shares at 35s. (cries of "And I, too"), but again, I purchased at a lower price, still my shares have stood me in at a good bit above 20s. Well, now there is no getting out of it, and there is no mincing of matters. I am chairman of the Mexican Explorations, Limited, which company has guaranteed the debentures and interest as they become due during the next 10 years. I thought at the time that the bargain which we made with the Palmarejo Mining Co. was a very good one, although I objected to it as a shareholder in the Palmarejo Mining Co. But things have now altered. We were then told, and we believed, that the amount, which was put finally at 75,000£., was ample for everything wanted, and I took great care to find out that this statement was correct. We were for seven months before we settled the bargain. I was thoroughly disgusted to hear for the first time, a fortnight ago, that the additional amount now asked for was required. I think the people on the other side and the managers should have calculated more correctly, and that at least a year ago we ought, as shareholders, to have had from the officials the figures we have got now. I think, however, we have got to the facts now, and it appears that the sum of 40,000£. to 50,000£. will be wanted to complete the works. If that sum is not forthcoming the property goes. The property upon which some half-million of money has been spent, which ought even now to bring in some 40,000£. or 70,000£. a year at the least, and, as a shareholder, I am not willing that it should go. At the time the 75,000£. was placed, less than 200 people, out of the 2,200 shareholders, by their efforts found the money, and out of the 300, less than 50 people found one-half of the amount. I think that every shareholder in this (as in every other company) should say: I am a partner with the other shareholders, and it is my duty to support the company, and, as far as I can I will find my share of its requirements. There is, gentlemen, what is called re-construction, and by means of that "so-called" re-construction every shareholder can be compelled to find his proportion, or go out of it altogether. This re-construction is a very expensive proceeding, resulting in the lawyers getting a very large picking. I can speak on this subject feelingly, as professionally I have been concerned in scores of them. Of this loan every shareholder ought to find his proportion, which proportion would be (taking into account the existing debentures) about one-third of his present holding of shares, and I think we should each do our best to subscribe one-third of our holding, taking into account what we already hold, to raise, say, 40,000£. or 50,000£. (rather the bigger amount) of second debentures charged on the Palmarejo property (shareholders in the Mexican Mineral Railway Co. ought to assist, for their property is worth little without the Palmarejo Mining Co.), interest might be at 10 or 12 per cent. and the debentures be repayable in 12 or 15 months (say 15 months to allow for contingencies) with provision to extend the time. Each shareholder must subscribe his proportion, otherwise giving to anyone taking more than his share, whether a shareholder or an outsider, one fully-paid share for every 1£. or other amount of debentures he subscribes.

COMMITTEE APPOINTED.

The CHAIRMAN: Would not such a proposition as that be an inducement for shareholders to subscribe in other names than their own?

Mr. BRICE continued at some length, and ended by strongly urging on the shareholders the necessity of raising the money without delay.

After further discussion of ways and means, a committee of the CHAIRMAN, a finance committee was appointed consisting of Messrs. Latham, Chemery, Taylor, Ward, Rees, and Mays and Hawley.

The committee at once proceeded to discuss the question with the directors.

REPORT OF THE COMMITTEE.

The undersigned, who, at the meeting of shareholders on the 27th inst., were requested to act as an advisory committee, report as follows:—1st. We have examined the documents asked for and submitted to us, also the latest cables from Palmarejo, together with the estimates referred to by the chairman at the meeting held on the 27th inst., and have much pleasure in confirming the chairman's statement, viz.:—That the amount of 50,000£. will be ample to place the mill, railway, conduit, and other works in a thoroughly efficient condition to produce dividends. 2nd. The delay in completion arises mainly from the railway, and this is practically finished and in running order for two-thirds of the total length, and as to the remaining one-third, some sections are in an advanced state, and the remainder are well in hand. 3rd. We have pleasure in stating that we consider the board have acted in good faith, and should be exonerated from all blame. 4th. We recommend strongly the adoption of the proposal for the issue of debentures attached hereto, whereby the company will be saved and placed upon a secure and solid foundation; thus also offering a sound investment to the present shareholders. 5th. We very strongly urge on the shareholders to subscribe for a proportion of their holdings, as the necessity is urgent to raise this money, and at once. 6th. We desire to call attention to the apportioning of the 50,000£. now asked for. The Palmarejo Mining Co. will require about 16,000£., and the amount required by the Mexican Mineral Railway Co. will be advanced by the Palmarejo Mining Co. to the Mexican Mineral Railway Co. on equitable terms to both companies, taking into consideration the terms upon which the Palmarejo Mining Co. now issues the 50,000£. debentures. Any surplus on completion of works will be set aside for the redemption of these debentures. At the request of the board the advisory committee will, should it be the desire of shareholders in general meeting, continue to act in conjunction with the board until the railway is finished, and regular crushings take place. The chairman of the Palmarejo Co. and the Mexican Mineral Railway Co. has consented to leave for Palmarejo during the autumn, and the committee are certain that his visit to the property, and his supervision while there, will be matter of great satisfaction to every shareholder. Applications are particularly requested on or before August 4.—V. W. CHEMERY, Chairman, A. W. LATHAM, Vice-Chairman.

July 28, 1891.

P.S.—The board issue a circular in accordance with the foregoing recommendations, but do not propose to call a meeting.

[It will be observed that only two of the committee sign the report, but it is understood the remainder agree to it.]

HOLLOWAY'S PILLS.—The ills of life are increased tenfold by the mode of life so many have to lead; most especially is this the case amongst the toilers in our factories and huge workshops of the manufacturing districts, whose digestions become impaired and nervous systems debilitated by the protracted confinement and enforced deprivation of healthy out-of-door exercise. The factory workers may almost be said to have diseases of their own, readily amenable, however, to treatment if not allowed to proceed unchecked. Holloway's Pills are the most effectual remedy ever discovered for the cure of liver and stomach complaints, as they act surely but gently, regulating the secretions without weakening the nerves or interfering with the daily work.

TELEGRAPHIC ADDRESS—

QUINLAND—LONDON.

MINING MARKET.

CITY, FRIDAY EVENING.

BUSINESS AND CONFIDENCE—GOLDEN CHANCES—UPS AND DOWNS OF THE WEEK—INDIAN RETURNS.

THE brokers who set business before pleasure began to put in an appearance on that, for the time being, by no means lively spot called the Mining Exchange, about Tuesday last, but soon left for home. The cause of their early exodus was, of course, the absence of business. Those brokers, however, who put pleasure before business had little cause to regret that they lingered for another day over their brief vacation. Nothing has occurred to disturb the unfortunately too placid stream of dull prices and depressed markets, though it must be owned that the feeling of insecurity felt very keenly a week or two ago has been, if not altogether removed, considerably softened.

The causes of the present depression, upon the pulse of which we have recently put the diagnostic finger, have lately received point and emphasis from the meetings of the various banking, discount, railway and other institutions—the reports of which show that there is a plethora of cash awaiting employment, but that the courage of the investor has not been screwed up to the point of action. At the present time there ought, under a normal state of things, to be a large amount of business. Vast sums have been circulated in the way of dividends all over the country; the prospects of the harvest (somewhat dimmed it must be owned by the constant rains) are on the whole excellent, and all that seems to be wanted is that the confidence should be restored, which was so severely shaken by the Barings' catastrophe and by the other cognate events which succeeded it.

One is lost in surprise on looking at the spheres of the investments generally, and those of mining particularly, at the opportunities which seem to be presented for picking up securities of all kinds at comparatively rubbish prices—securities which in a normal state of commercial affairs will unquestionably yield cent. per cent. upon a present investment. It is, however, no use preaching from such a text as this, for although the public believe what is said, they will not act upon it. Of course, the business man is desirous of keeping his cash in the most liquid form possible, and we can understand the mental reserve which possesses him in reviewing the position, but the ordinary investor or the bold speculator, who each in his way is supposed to be watching times and seasons—his abstention at the present time is what Lord Dundreary would say, "no fellah can understand."

At the same time, the week is not one of which all round complaint can justly be made. For example, there has been a good deal of business in Golden Feather and Golden Gate on the assumption that the weekly, might we not almost say daily, telegrams from Oroville's only Colonel are coming to fruition. It is felt on the market that there must come within the next few weeks a neck or nothing end to all Col. McLaughlin's predictions, or people will never believe in him, as in the Apocalypse, again.

There has also been a recovery in Tolima B's, and the end of the week has left both Flagstaff and Palmarejo firmer than the beginning found it. With respect to the latter concern, letters still pour in upon us, from which, for the edification of our readers, we have made a selection. The general opinion seems to be that nothing short of a re-modelling of the board will meet the exigencies of the situation, and that the longer the present directors leave things as they are, the more severe will be the reckoning which the shareholders at no distant date will demand from them. A feature of the market, not merely this week, but for several weeks past, has been the continual fall in Gravel Gold shares, which, about the time of the recent meeting, when all seemed so promising and so bright, were quoted at twice their present price. The resignation of the chairman of Dickens Custer had, if anything, a beneficial effect upon the shares, and the rumour that the Rainbow reef had been struck in the Mosman Mine advanced the shares to double the value quoted last week, but prices have not been maintained, and the market closes in an unsteady condition. Day Dawn Blocks have also been in good demand. There has also been a good deal of business in Callao Bis, and much buying has taken place in Barretts shares on the receipt of more favourable news from the mine.

The returns from the Indian mines are wholly good, and, as a broker said on the market to-day, "in the piping times of mining to what glorious prices would not such shares as these rise." The production is increasing month by month; the management is of the most unexceptionable kind; the latest machinic appliances are on the spot; the territory is administered by the British Government; and all the circumstances that one can name are of the most favourable kind, and yet the public are continually asking for some reliable mining investments at low prices. Look at the Indian mines, we say, and buy them at present prices. They will yield profit to the investor, and do credit to our recommendation.

It must be owned that the market is not responding to the American mines as it might be expected to do. We cannot understand the fall in such shares as Yankee Girl, American Belle, and a few others that might be named, because the news from the mines continues to be good and the returns satisfactory. Industrial attempts are being made to depress these shares by means of letters sent to every paper likely to insert them, but probably the real object is to enable those so acting to buy the shares at lower prices. If the shareholders part from their holdings on such flimsy temptation as this, no words of ours can save them from their folly or its consequences. Now that sales have commenced at Flagstaff and Emma Mines, we must own to a feeling of disappointment that the shares have not better responded to the facts, though we cannot but think that they will do so before the working season closes. The news from the Colonial mines is decidedly good, and there is more active activity in the shares than has been known for a long time past. The price of Australian Broken Hills, however, has not been maintained, and there is for the moment nothing to indicate a change for the better. The news from Gympie Great Eastern in respect to the flooding of the mine is not so serious as was at one time thought, and that from Mosman we have already referred to. Copper shares are firmer on a more favourable view of the statistics, and it is now admitted all over the vine districts that a large amount of sulphate of copper will be required to deal with the phylloxera, which is making its appearance unfortunately in new centres, and will have to be dealt with by this, the only drastic remedy, that has yet been found. In this connection it will be remembered that sulphate of copper so used is used for ever, and never re-appears again for re-consumption in the form of old copper.

The meetings of the week have been few but important. Richmond shares were firmer after the speech of Mr. Hopkins, which showed that for the last 20 years the shareholders have had an

average dividend of 16 per cent. per annum, and that not far short of a million sterling has been paid to them—in other words, three and a quarter times their original capital. In both the Richmond and the Williamsburg Mines the present appearances are encouraging. With regard to Sheba, when the aerial ropeway is perfected 4,000 tons of ore a month can be carried to the 60-stamp mill. The company is already getting not far short of 3,000 ozs. a month, and the position in every respect is good. It has been decided to re-construct D'Eresby and Jay Hawk Mines. South Condurrow shareholders went without a dividend. The corner has been turned in South Frances, and a small profit has taken the place of the heavy loss reported 16 weeks ago. All attempts to re-construct De Kaap Goldfields have been abandoned, and unless debentures can be raised the property will be lost.

Coming to business generally, there has been a perfect slump in the diamond market, and but little animation in South African Land or Gold shares.

Australians, with the exception of Broken Hill Consols, are all up, and the market is firm.

In the Indian section the returns were read favourably, but did not alter prices. An effort was made to depress Ooregums on the statement of cholera having broken out at the mine, but it proved unsuccessful.

Copper shares are firmer, and the outlook for them is on the whole good.

The Miscellaneous Market has been decidedly better, particularly for the mines mentioned above.

Tesoro Golds, to which we have more than once lately directed attention, are again higher, closing this week at 1s. 10½d. to 2s. 1½d. We entertain a good opinion of the mine, and shall expect to see quotations much higher yet.

The manager of Callington United Mines reports a discovery in the Redmoor Mine to which the management attach considerable importance.

In Home Mines there has been a slight revival of prices, notably in Carn Brea, Cook's Kitchen, South Frances, Wheal Agar, Wheal Basset, and Wheal Grenville. Dolcoath, Tincroft and South Crofty have, however, been weaker.

The immediate outlook is naturally more encouraging than it was last week, with a Bank Holiday to begin with, and a vacation, which was continued by many people further into the week.

KAFFIRS.

The only important change worth noting has been in Durban-Roodepoorts, which have had a substantial rise on the receipt of better news. Jubilees slightly rose, as also Stanhope. A few enquiries have been made for such shares as Geldenhuis, Jumpers, and Robinson, but it has not affected the price. City and Suburban and Ferreira show a fall. Other changes are but nominal.

Business:—A rise is shown in Durban Roodepoort of ⅜; Jubilee, ⅜; Main Reef, 6d.; and Stanhope, ⅜; whilst a fall has taken place in Piggs Peak, 6d.; Sheba, 6d.; Bantjes, 6d.; Bothas Reef, 6d.; City and Suburban, ⅜; Croesus, 6d.; Ferreira, ¼; Johannesburg Water, ⅜; Langlaagte, ⅜; May Consolidated, 6d.; Randfontein, 6d.; Salisbury, New, 6d.; Simmer and Jack, ⅜; and Vogelstruis, 6d.

AFRICAN LANDS.

A few transactions took place in Explorings, but although they have been lower they close without alteration in price on the week. Oceanas have only recovered part of their recent fall. Silatis are quoted slightly better in sympathy. London and Orange Free State, being offered, close lower. Transvaal Golds have not been supported, and the same remark applies to several others of this denomination, including Goldfields of South Africa and Read's Drift.

Business.—A rise is shown in Bechuanaland, ⅜; Oceana, ¼; and Silati, 6d.; whilst those down are British South African Chartered, ⅜; Exploration, ⅜; Goldfields of South Africa, ⅜; London and South African, ¼; London and Orange Free State, ½; Nooitgedacht, 6d.; Read's Drift, ¼; and Transvaal Gold, 6d.

INDIANS.

Very little business has characterised Mysore West and Mysore Wynaad shares, but Champion Reefs, Indian Consolidated, and Nundydroog have changed hands at ever varying prices, and quotations on the week are, if anything, a shade easier. Mysore Golds were bought on the good return, having previously been lower, and close firm. Ooregums fell on receipt of the cable stating that cholera had broken out at the mine. They, however, rallied, and close about the same. Goldfields have been considerably dealt in, and close good. Balaghat return was considered satisfactory, but there has been no particular change in the shares. They should go better. Nine Reefs are lower.

A rise is shown in Balaghat of 3d. and Goldfields of Mysore 6d., whilst Mysore remain firm. Others are unchanged.

DIAMONDS.

This market, generally speaking, has been dull with the exception of the gamble in De Beers. These during the week have

experienced various changes, and to-day had a sharp fall. At one time they were dealt in at 10½. They, however, recovered somewhat, but close much lower than last week's quotation.

Business.—There is no rise to record, whilst a fall is noted in De Beers of ¼; Gordon, 6d.; and New Jagersfontein, ½. Others remain unchanged.

AUSTRALIANS.

A considerable amount of business has taken place in this section, Mosmans being largely dealt in on improved prospects at the mine. They have, however, suffered from the reaction, and close easier, although showing a fair rise on the week. Day Dawn Blocks have been enquired for at an improvement. P.C.'s are firm, and Gympie Great Easterns, after being better, close about the same. New Queens were fairly well supported, but without any striking change. Australian Broken Hill shares, although actively dealt in, have declined.

Business.—B rise has taken place in Day Dawn Block of 6d.; Ditto P.C., 3d.; Mosman, 1s. 9d.; Scottish Australian, ½, and Wentworth Proprietary, ½. A fall is shown in Australian Broken Hill of ½, and Moruya, 9d., which complete the alterations in this section.

COPPER SHARES.

There has been much business doing in these shares during the last few days. Capes, Rio Tinto, Mason and Barry, and Tharsis, were bought considerably at increasing prices. They, however, do not close at best, although showing a fairly firm market.

Business.—A rise is shown in Capes of ¼; Libiola, ½; Mason and Barry, ½; Rio Tinto, ¾; and Tharsis, ½. The only fall has been one of ¼ in Copiapos.

GENERAL FOREIGN SHARES.

This section has moved unevenly, as the list that follows clearly shows.

Business.—A rise is shown in Balkis of 3d.; Barretts, 6d.; Flagstaff, 3d.; Golden Feather, 2s.; Golden Gate, ¼; Palmarejo, 1s.; Richmond, ½; and Tolima "B," ¼. Those down are the following:—Alamillos, ¼; American Belle, 6d.; Callao Bis, 3d.; Dickens Custer, 3d.; Gravel Gold, 6d.; Kapanga, 3d.; Linares, ½; Sierra Buttes, 1/8; and West Argentine, 6d.

The following list shows the principal changes which have taken place:—

LATEST FROM THE MINES.

INDIAN MINES.

BALAGHAT-MYSORE.—A telegram, dated Aug. 4, gives last month's return of gold as follows:—"292 tons of quartz produced 500 ozs. of gold." The company have sold, through Messrs. Johnson, Matthey and Co., Limited, the gold obtained in the month of June, which realised 1,850l. 4s. 1d.

MYSORE.—A telegram, dated Aug. 5, gives last month's return of gold as follows:—"3,510 tons yielded 5,032 ozs. of gold, and 563 ozs., from tailings; total, 5,650 ozs." The company have sold, through Messrs. Johnson, Matthey and Co., Limited, the gold obtained in the month of June, which realised 21,775l. 3s. 8d.

NUNDYDROOG.—A telegram, dated Aug. 4, gives last month's return of gold as follows:—"1,070 tons of quartz produced 2,044 ozs. of gold." The company have sold, through Messrs. Johnson, Matthey and Co., Limited, the gold obtained in the month of June, which realised 6,836l. 6s. 7d.

OREGUM.—A telegram from the mine, dated Aug. 4, is as follows:—"1,392 tons of quartz stamped in July produced 2,903 ozs. of gold. An epidemic of cholera has broken out." The company has sold the gold produced in June for 11,055l. 8s. 6d.

COLONIAL MINES.

BLUE SPUR AND GABRIEL'S GULLY.—A cable from the superintendent is as follows:—"July yield 157 ozs. Continued severe frost."

BRILLIANT.—A cablegram from Charters Towers, Aug. 3, reports that the company crushed 1,360 tons for 2,420 ozs. gold; value, 8,400l. A dividend of 2s. per share is declared on the 50,000 shares.

BROKEN HILL PROPRIETARY.—A cable states that during the week ending Thursday, the 6th inst., there were 4,693 tons of ore treated, yielding 563 tons of lead, containing 178,334 ozs. silver.

CUMBERLAND.—The sinking of the shaft, for which purpose the funds recently raised were required, was commenced last month. A cablegram received on the 5th inst. contains the following information:—"Have sunk 15 (fifteen) ft.; there is a great improvement daily."

DAY DAWN BLOCK AND WYNDHAM.—A cable from the general manager at Charters Towers gives the result of the crushing for the fortnight ending 1st inst.:—"Tons crushed, 730; yield of gold, 902 ozs.; approximate value, 3,110l.; fortnight's expenses, 1,200l."

DAY DAWN P.C.—A cablegram from the manager at Charters Towers gives the result of this company's crushing for the fortnight ending Aug. 1, viz.:—"1,090 tons, 1,270 ozs." (Estimated value, 4,445l.) "1,270 ozs. shipped per s.s. Jumna."

KANGARILLA.—Telegram from the mines:—"Concentration works formally started. Machinery works well. Concentrators in course of adjustment this week. Hope to start regular work on Aug. 10."

KAPANGA.—The directors have received the following telegram from the manager, viz.:—"Have crushed 100 tons; yield, 50 ozs."

MILL'S DAY DAWN UNITED.—Crushing for fortnight ending Aug. 1:—"865 tons crushed; 745 ozs. of gold; approximate value, 2,580l."

MOUNT LEYSHON.—Fortnightly crushing: 1,100 tons crushed, 250 ozs. gold; 30 stamps mill ran 288 hours.

MOUNT MORGAN.—Telegram:—"We pay 25,000l. on Monday, being dividend of 6d. per share (free of dividend tax) for the month of July."

MOUNT ZEEHAN.—The shipment of 24 tons silver-lead ore, ex s.s. Port Victor, gave on assay 66 per cent. of lead, and 102 1/2 ozs. of silver per ton; and the 22 tons, ex s.s. Wilcannia, gave on assay 69 1/2 per cent. of lead, and 110 1/2 ozs. of silver per ton.

SUNBURST.—Cablegram from Charters Towers:—"The company crushed for the past fortnight 262 tons, for 1,108 ozs. of gold; value, 3,800l. The dividend is increased to 1s. 6d. per share on the 48,000 shares."

TASMANIAN SILVER.—Telegram from the mine, July 31:—"Shaft is 50 ft.; will send on 15 tons selected ore from stack first week in Aug.; remainder when bags arrive."

WENTWORTH.—The following is the weekly telegraphic report from Mr. J. J. Cooper, M.E., the company's consulting engineer:—"During the week we have sunk 100 ft. and driven 30 ft. The improvement continues in Phoenix No. 1 vein, the assays showing from 190 ozs. to 200 ozs. per ton. In the Shamrock shaft, 184-ft. level, the vein is irregular and much mixed with country rock. Otherwise there has been no change worth reporting. Machine drills are doing excellent work. The organisation has been completed."

FOREIGN MINES.

ALMADA AND TIRITO.—A telegram received to-day states:—"Last month's profit was \$2,020. No rain yet, water scarce."

ANGLO-MEXICAN.—From cable advices just received the superintendent at the mine reports that the July shipment amounts to \$34,538. There was no shipment for July of last year.

DICKENS CUSTER.—The directors announce the retirement of the chairman, Mr. E. Wolseley, from his long connection with the company. Mr. Wolseley's retirement is solely due to press of private affairs. Mr. H. Chester Master has been elected chairman, and Mr. Thomas Allen a director of the company.

ELKHORN.—Cable from the mine :—"Bullion produced for week ending Aug. 1, \$9,260 (nine thousand two hundred and sixty dollars)."

ELMORE.—The manager (G. A. McConnick) cables under date Aug. 7 as follows :—"Have crushed about 200 tons, which has yielded on an average \$5 per ton."

GOLDFIELDS OF URUGUAY.—Telegraphed result of milling for month of July, 1891 :—"2,650 tons of ore crushed, 600 ozs. of bullion produced, value \$7,500; 42 stamps running 30 days."

GOLDEN FEATHER.—Cable from Col. Frank McLaughlin, the company's general manager at Oroville :—"With entire river in canal, have capacity for double the quantity of water, which assures us full seven months for future working seasons. Foot dam partly constructed and (this season's) outlook brilliant."

GOLDEN GATE ALLUVIAL SYNDICATE.—Cable from Col. Frank McLaughlin, the company's general manager at Oroville :—"Will start pumps to-morrow (Aug. 3); every prospect that we will be mining Aug. 15; entire seepage very small; great improvement in river bottom."

NEW GOLD HILL.—Ore report: Ore in stock, mined, week ending July 18, 191 tons; ore mined from winze, for week ending July 25, 10 tons; total ore in stock, 201 tons.

NEW RUSSELL.—A telegram from Mr. C. Stuart Bailey, who has arrived on the mine, is to the following effect :—"Started furnace on old workings; average sample of tailings gave 6 dwts. per ton."

PESTARENA.—The gold returns from the Pestarena Mine for the month of July were as follows :—491 ozs. 15 dwts. 20 grs. from 428 tons of ore, equal to 1 oz. 2 dwts. 23 grs. per ton.

PITTSBURGH CONSOLIDATED.—Cable from the mines, Aug. 4 :—"Total cost for month of July at mines and mill, inclusive, \$700; new machinery, \$8,300; bullion shipped, \$8,200."

SHENANGO RAILWAY AND MERCER COAL.—The board have resolved to declare, out of funds at present in hand, an interim distribution of 2s. per share, being at the rate of 1 per cent., upon the preferred shares of the company, payable on Saturday, Aug. 15. The transfer books will be closed from the 8th to the 15th day of Aug., both inclusive.

ST. JOHN DEL REY.—The directors have received the following telegram from the mines, dated Rio de Janeiro, Aug. 3 :—"32 fms. sunk, 3 fms. driven, during July."

TOLIMA.—Cablegram from the superintendent respecting the estimated July returns :—"The gross returns are 9,000l.; the nett profit is over 5,000l.; sunk 7 ft."

HOME MINES.

BOTALLACK.—A loss of 319l. on 16 weeks working was reported at the meeting. A call of 5s. per share was made, and it was decided to hold a special meeting to consider the advisability of sinking a central shaft.

SOUTH FRANCES.—A profit of 306l. was reported on 16 weeks working. The agents reported that they had stamped 900 tons more stuff and sold about 18 tons of tin more than that reported at the last meeting.

SOUTH FRANCES.—The position here has been much improved—a debit of 2,271l. at the last meeting being turned into a credit of 177l.

TIN SALES.—At the usual tin-ticketing held at Redruth, 318 tons realised 16,251l. or an average price of 51l. 19s. 1d., as against 51l. 17s. 7d. a fortnight since. The highest price was 59l. per ton, which was secured by Tindene for 4 tons, West Kitty coming next at 57l. 15s.

AFRICA.

LATEST FROM THE GOLD AND DIAMOND MINES.

STANHOPE.—830 ozs. of gold.

CITY AND SUBURBAN.—1,325 ozs. of gold.

JUBILEE.—Result of last month's crushing is 540 ozs. of gold; will not pay a dividend.

GELDENHUIS ESTATE.—Crushed 3,079 tons last month, which yielded 2,289 ozs. of gold.

FERREIRA.—Crushings for last month, 4,538 tons, yielding 3,173 ozs. of gold.

GELDENHUIS MAIN REEF.—The result of July crushing produced 450 ozs. from 800 tons.

SIMMER AND JACK.—Quartz crushed during month, 7,383 tons; obtained 3,319 ozs. gold during month.

MAY DEEP LEVEL.—26 day's milling; 605 tons crushed, yielding 594 ozs. gold; estimated value of concentrates, 522l.

FORBES REEF.—The mine manager reports: Owing to poor returns from surface soil, have stopped milling for the present.

MAY CONSOLIDATED.—The yield of gold during the past month (July) was 2,200 ozs. from 5,500 tons. Mill running 29 days.

COETZEESTROOM ESTATE.—Cable from the manager :—"Have crushed since last message 770 tons, giving $\frac{1}{2}$ dwts. per ton."

NORTH-EASTERN BULTFOUNTEIN.—Telegraphic advice announces for last week 11,000 loads, chiefly re-washings, producing diamonds 960 carats; increase of blue-ground on floors, 8,400 loads.

NEW CHIMES.—Extract from a letter received dated July 11 :—"Mill running 24 days with 25 stamps, crushing 774 tons (including 252 tons of old tailings), yielded 397 ozs. 16 dwts. retorted gold."

AFRICAN GOLD RECOVERY.—The company has contracted with the Nigel and the Meyer and Charlton Gold Mining Companies for 15,000 tons each of their tailings for treatment by the MacArthur-Forrest process.

WEMMER.—A cablegram advises the result of the July crushings as follows :—"1,300 tons crushed, yielding 1,100 ozs. of gold; 20 stamps working 22 days; and 46 ozs. gold from tailings." They also received, ex Roslin Castle at Cape, 1,244 ozs. gold.

ORIENTAL AND SHEBA VALLEY.—Cable :—"60 stamps running 33 days crushed 3,700 tons; yield, 540 ozs. gold and 30 tons concentrates, assaying 4 ozs. per ton. The mills have been shut down pending development of mine and change of management."

DURBAN-ROODEPOORT.—The directors have declared an interim dividend of 2s. per share (10 per cent.) free of income tax, payable at the Bank of Africa, 113, Cannon Street, E.C., on Saturday, the 29th inst. The July crushing of the company is 4,500 tons; 26 days working; 2,390 ozs.

TRANSVAAL GOLD EXPLORATION AND LAND.—Cablegram from the general manager :—"Mined during July, 625 tons; crushed 700 tons mixed ore (23 days, double shifts); yield, 370 ozs.; pans 475 ozs.; total for month, 845 ozs.; mines expenditure for 10 months current financial year, 16,810l."

BARRETT.—The mine manager reports a return of 128 ozs. for June. During the early part of the month the removal of an extra heavy lot of overburden, in order to get to a good bunch of ore ahead, caused some delay. Alluvial was looking better again, and the manager anticipates a better all round return for July.

FERREIRA.—Rock cut during the month, 368 ft. 6 ins. Milling results for the month: Stamps at work, 40; working days, 27; tons crushed, 4,261; tons crushed per head per day, 3; bar gold extracted, 4,001 ozs.; yield per ton, 18 dwt. 18 grs.; concentrates caught, 41 tons; percentage extracted in mill, 68; percentage of gold in concentrates, 2; percentage of gold in tailings, 29.

HENDERSON AND FORBES.—Mining report for June.—General work: Diamond boring machine has been taken from bottom of shaft at East Camp, and is now being fixed at West Camp to test the depth of No. 2 reef. The miners' hut, which was at cross-cut on north-west portion of concession, has been brought over to foot of Krantzij for the miner working there to live in.—G. W. HALL.

NEW PRIMROSE.—Development during the month in cross-cuts, drives, and raises was 653 ft., developing 8,500 tons ore. The cost of working for the month, including 845l. 6s. 9d. spent in development, has been 4,179l. 4s. 8d., leaving a profit of 3,335l. 15s. 4d. A dividend of 5 per cent. has been declared, payable to shareholders registered 30th ult., so soon as the list of transfers is received from the London office. July crushing, 2,363 ozs. from 14,647 tons; 50 stamps running 28 days.

JUMPERS.—The directors submit a summary of operations, and the result for June :—"Profit on month's operations, 1,549l. 3s. 3d. During the month there was expended upon permanent works, 581l. 14s. 7d.; upon buildings, machinery, &c., 803l. 11s. 7d. Driven and sunk during month, 332 ft. The improvement in the yield per ton, as expected, will be noted, and a further improvement may be looked for. 50 stamps crushing for Jumpers Co.; 50 stamps crushing for Geldenhuis Co. Cablegram : "Obtained 1,208 ozs. gold during July."

PIGG'S PEAK ESTATE.—Report for week ending July 4 :—"Devil's reef—Drive on top of the main shoot: Drove for the week 19 ft.; total, 70 ft.; no gold in panning. The 200-ft. level: Started July 1. South end: Cutting 41 ft. long and 10 ft. wide, and 15 ft. at face. Started drifting this morning with five boys. North end: Cutting 34 ft. long, 10 ft. wide, and 15 ft. at face. Will be ready to start drifting on Monday with six boys. Ten boys on roads for bringing machinery to the battery. Remaining boys cutting wood for the battery. McGready's works: Shaft sunk for the week 9 ft.; total, 29 ft. 6 ins.; reef about 1 ft. wide, and shows good prospects in panning. Amount of cutting for the week, 30 ft. Peak—Pigg's drive: Drove 2 ft.; total, 224 ft. Cross-cut north: Drove for the week 20 ft.; ground softer, and gives a little gold in panning. England's reef: Cutting for drive, 30 ft.; driving, 4 ft. Work progressing slowly on account of water."

CERRO DE PASCO.—The manager writes Barberton, July 3 :—"Block F, Extension: South-east cross-cut has been driven 56 ft., making

total distance, 262 ft.; the last 76 ft. through hard sand stone, which has retarded the progress in this drive very much. At 261 ft. we cut a quartz reef, which has since been proved to be 10 ft. wide, and carries good gold. We have two European miners and 18 natives engaged on this work. Block 12: North-east cross-cut has been driven 49 ft., making total distance, 108 ft. At 69 ft. from entrance, we cut a quartz reef 2 ft. wide, which carries gold. At 93 ft., we cut a quartz reef 18 ins. wide, which also carries traces of gold. We have one European miner and nine natives engaged in this cross-cut. East end: The drive on this reef at the lowest level, which was suspended at 38 ft. from entrance by the late mining captain, in consequence of the reef having been cut off by a slide, has been continued through the faulted ground 47 ft. during the month. We are now through the slide, and in the original solid formation, and shall shortly begin cross-cutting for the lost reef. We have one European miner and 10 natives engaged on this work. Block F, Main shaft: We have eight natives continually engaged drawing water at this shaft.

COMMERCIAL NOTES.

METALS.

THE Metal Market has been fairly active during the current week.

Bank rate remains $2\frac{1}{2}$ per cent. Bar silver, after touching 46 $\frac{1}{2}$ d., closed yesterday at 45 $\frac{1}{2}$ d. per oz., and to-day's price is 45 $\frac{1}{2}$ d. per oz.

COPPER has improved and G.M.B. warrants have gradually advanced from 52 $\frac{1}{2}$ to 53 $\frac{1}{2}$ 2s. 6d. cash, and 52 $\frac{1}{2}$ 10s. to 53 $\frac{1}{2}$ 15s. three months. To-day's prices are 53 $\frac{1}{2}$ cash, and 53 $\frac{1}{2}$ 12s. 6d. three months. The monthly statistics showed a visible supply of 57,782 tons, against 57,325 tons on July 1. Supplies to England and France during July, 9,075 tons; deliveries, 8,618 tons. We quote English tough 56 $\frac{1}{2}$ to 57 $\frac{1}{2}$; best selected, 57 $\frac{1}{2}$ to 58 $\frac{1}{2}$; strong sheets, 65 $\frac{1}{2}$ to 66 $\frac{1}{2}$; India sheets, 60 $\frac{1}{2}$ 10s. to 61 $\frac{1}{2}$ 10s.; yellow metal, 5 $\frac{1}{2}$ d. to 6 $\frac{1}{2}$ d.; ore, 9s. 9d. to 10s. 9d. per unit.

TIN has been quiet. Straits sold from 90 $\frac{1}{2}$ 15s. to 91 $\frac{1}{2}$ cash, and three months from 91 $\frac{1}{2}$ 5s. to 91 $\frac{1}{2}$ 10s. To-day's prices are 91 $\frac{1}{2}$ 5s. cash, and 91 $\frac{1}{2}$ 12s. 6d. three months. Australian is scarce, and has commanded from 10s. to 20s. prem. over Straits; buyers at 92 $\frac{1}{2}$ 2s. 6d. cash. English ingots, 94 $\frac{1}{2}$ to 94 $\frac{1}{2}$ 10s. The Dutch Market has been quiet; Banca quoted at 54 $\frac{1}{2}$ d.; Billiton, 54 $\frac{1}{2}$ d.

TIN PLATES in improved demand. We quote ordinary coke at 13s. 6d. to 14s., Liverpool. The stock is 119,404 boxes, against 422,366 boxes on Jan. 1.

SPELTER, steady. Ordinary brands about 23 $\frac{1}{2}$ 15s., ex ship here.

SHEET ZINC.—110 tons in public sale yesterday sold at 26 $\frac{1}{2}$ nett at works.

LEAD dull. We quote soft Spanish, 12 $\frac{1}{2}$ 5s. to 12 $\frac{1}{2}$ 6s. 3d.; soft English, 12 $\frac{1}{2}$ 7s. 6d. to 12 $\frac{1}{2}$ 12s. 6d.; L. B., 13 $\frac{1}{2}$; sheets for export, 13 $\frac{1}{2}$ 5s.; home trade, 13 $\frac{1}{2}$ 10s.

QUICKSILVER steady but inactive. Rothschild's price, 7 $\frac{1}{2}$ 15s.; seconds, 7 $\frac{1}{2}$ 14s. to 7 $\frac{1}{2}$ 14s. 6d.

ANTIMONY dull and little doing. We quote 45 $\frac{1}{2}$ for Hallett's, and other makers ask about this price.

DIVIDENDS DECLARED AND ANNOUNCED FOR WEEK ENDING AUG. 8.

REPORT OF MEETING.

JAY HAWK MINING CO., LIMITED.

PASSING OF RE-CONSTRUCTION RESOLUTIONS.

AN extraordinary general meeting was held at the Offices of the company, Dashwood House, New Broad Street, on Wednesday, for the purpose of passing resolutions for the re-construction of the company.

The Hon. Ashley Ponsonby

presided.

The SECRETARY (Mr. A. J. Lavington) having read the notice of meeting,

The CHAIRMAN stated that in view of the proposed amalgamation with the Lone Pine Co., particulars of which have been already sent to the shareholders, it became necessary to go into voluntary liquidation. The shareholders would remember that Capt. Prideaux, who had been sent out to manage the property, conceived the idea that an amalgamation with the Lone Pine Mine would be of great benefit, and he strongly urged the directors to come to terms with that company. In the course of the correspondence Capt. Prideaux sent home a report, which had been circulated amongst the shareholders, and which the directors thought was good enough to warrant them in entering into negotiations for the amalgamation. Some of the larger shareholders, however, thought it advisable to have the report confirmed, and yesterday the cable report of that agent came to hand, and was in every respect confirmatory of Capt. Prideaux's statement. Under those circumstances he would not detain them by any lengthened speech, but at once move the first resolution: "That the company be wound up voluntarily under the provisions of the Companies Acts, 1862 to 1867."

This, having been seconded by Mr. BREWER, was unanimously agreed to.

IMPORTANT TELEGRAM.

The CHAIRMAN then proposed the resolution dealing with the re-construction; and this having been seconded by Lieut.-Col. GERMAN, a discussion ensued on the terms, it being ultimately agreed that the shares in the new company should be issued with a liability of 3s. 6d. per share.

The SECRETARY having read the telegram confirming the report as under:—

"I have inspected the Lone Pine Mine, and can confirm Capt. Prideaux's report. The mine has every appearance of permanence. The mines are valuable, and I recommend their purchase."

A SHAREHOLDER inquired whether the chairman could tell the meeting who it was that had been instructed to inspect.

The CHAIRMAN: Mr. Grothe is the gentleman who was selected for the business. I am informed that he is a gentleman at the very top of his profession, and one whose opinion may be accepted absolutely.

Mr. ALTON: I can verify the fact of the position the gentleman occupies. I have known him for some long time now. He was formerly a director of the Tharsis Co., and contributed to the success of the company. Latterly he has been occupied with the affairs of the United Mexican Co., and brought them from a state of chaos to their present satisfactory condition. I have no hesitation in saying that I look upon the fact of his confirming Capt. Prideaux's report as an assurance of the extreme value of the mine, and I shall be prepared to apply for as many as possible of the shares not taken by the shareholders should there be any such, though after the report received I doubt if any will be left.

Mr. CHESTON: The report received is by cable, I presume; that being so, will the written report when received be circulated amongst the shareholders?

Mr. GOLDSMID: Before the question is answered, let me add my testimony respecting Mr. Grothe. I can in every way confirm the remarks of Mr. Alton. In my opinion Mr. Grothe's statement may be absolutely and implicitly received.

The CHAIRMAN: Directly the written report of Mr. Grothe is in our hands it shall be printed and circulated amongst the shareholders.

The resolutions were then put to the meeting and unanimously agreed to, and it was decided to hold the confirmatory meeting on the 20th inst.

The meeting separated with the usual vote to the chairman.

PUBLICATIONS RECEIVED.—"Report of the Director and Treasurer of the Michigan Mining School, Houghton, Michigan, 1886-1891." "Les Roumains Hongrois et la Nation Hongroise. Réponse au Mémoire des Etudiants Universitaires de Roumanie. Budapest, Juillet, 1891." "County Councils and Technical Education." J. C. Buckmaster. London: Blackie and Son, Limited, 49, Old Bailey, E.C.

HOLLOWAY'S OINTMENT.—Go where you may, in every country and in all climes, persons will be found who have a ready word of praise for this Ointment. For chaps, chafes, scalds, bruises, and sprains, it is an invaluable remedy; for bad legs, bad breasts, and piles, it may be confidently relied upon for effecting a sound and permanent cure. In cases of puffed ankles, erysipelas, and rheumatism, Holloway's Ointment gives the greatest comfort by reducing the inflammation, cooling the blood, soothing the nerves, adjusting the circulation, and expelling the impurities. This Ointment should have a place in every nursery. It will cure all those manifold skin affections, which, originating in childhood, gain strength with the child's growth.

BRITISH MINING INTELLIGENCE.

DEVON GREAT CONSOLS (Aug. 6).—Watson's engine shaft: In the 172-fm. level west the lode is 2½ ft. wide, composed of capel, quartz, and a little mundic and copper ores. In the 160-fm. level east the lode continues large—5 ft. wide—and is yielding 4 tons of copper ores per fm. In the 160-fm. level west the lode is 4 ft. wide, consisting of capel, quartz, and a little copper ore and mundic. The stopes throughout the mines are looking well. We have on the quay 832 tons of copper ores computed, for sale on the 20th inst.—W. CLEMO.

DRAKEWALLS.—During the past month the engine shaft has been sunk 2 fms. 1 ft. 6 ins., making the depth 9 fms. 1 ft. 6 ins. below the 160-fm. level. The ground continues much the same as for some time past, composed of granite, strong capel, with occasional small veins of tin. There is no change to notice in the 160 driving east, the lode still maintains its very fine appearance, and is producing 4 tons of mundic per fm. and saving work for tin; 3 fms. 4 ins. has been driven in the past month. The lode in the 160 driving west is yielding a little more mundic intermixed with tin, and is looking very promising; 2 fms. 3 ft. has been driven in the past month. In the 147 driving east we have just passed through a small cross-course 6 ins. wide, which has disordered the lode for the time. The ground, however, is easier for exploration, and more water is flowing through the lode; 1 fm. 5 ft. 9 ins. has been driven in the past month. The rise in the back of the 160 west has been put up 4 ft. in the past month, and, as stated in a former report, we have put the men to break mundic in the back of the 160 west. The stope in the back of the 160 west is yielding 10 tons mundic per fm., and saving work for tin, and the lode in No. 2 stope in the back of the 160 west 8 tons mundic per fm.; and No. 3 stope is producing 7 tons mundic per fm. with a little tin. The lode in the stope in the bottom of the 147 east is yielding 14 tons mundic per fm., and saving work for tin, and the stope in the back of the 132-fm. level west of the cross-course is producing 2 tons copper ore and 4 tons mundic per fm. The arsenic soot weighed off on Saturday last 77 tons 10 cwt. 2 qrs. The machinery throughout the mine is in fairly good working order.

EAST BLUE HILLS (Aug. 5).—The 35 end and stope east of shaft is opening out fairly well, and is worked by tributaries who are breaking average tin stone. We have started a rise in back of the 40-fm. level west to communicate with the 30-fm. level on the north section; this is for two purposes—ventilation, and to open out a section of tribute ground. The 30 ends on the north and south sections are unaltered since last reported. The several tribute pitches are opening out fairly well. We have set a pair of tributaries to drive the 10-fm. level west, and work the back and bottom of this level, at 12s. in the £ for tin, and 3½ per fm. for the end. This is improving, and turning out some nice tin stuff for the men.—J. WHITE.

EAST GRASSINGTON (Aug. 4).—Manager's report.—Hammond shaft: In the 47 west the encasing rock is somewhat easier for progress, and the vein improving, a small leader of clay and spar, well charged with lead ore, coming in, and the hard rider spar giving out. We are now within 8 fms. of reaching the perpendicular of the old underlay shaft, opposite which we purpose sinking a new perpendicular shaft to enable us to systematically develop the lode beneath the shale beds in the western ground. Stope in back of level in a vein 2 ft. wide, producing 20 cwt. of lead ore per fm. No. 3 sump: Owing to the heavy influx of water met with beneath the horizontal bed we have decided to put intermediate levels at this depth. In the western end the lode is 2 ft. wide, carrying gossan, limespar, and sulphate of barytes, mixed with branches of blue and grey lead ores, worth fully 20 cwt. per fm., and the same value applies to the eastern end. Stope in intermediate level yields 10 cwt. of lead ore per fm. Harris' main engine shaft: This shaft, sunk 12 ft. by 7 ft., in hard limestone rock, has been deepened 19 ft. 6 ins. during the past month, and is now down 43 ft. 6 ins. below the 47 plat; the rapid rate of progress attained here cannot but be considered as highly satisfactory. In the 47 we have intersected the main lode east of the fourth cross-vein, and, so far as proved, is wide and ore, and letting out much water. Stope in back of level worth 25 cwt. of lead ore per fm. In the 37 east the vein is to-day narrower, producing saving work for dressing. Two stopes, worth respectively 8 and 10 cwt. of lead ore per fm. On surface all is going on well. We weigh off a parcel of pig lead this afternoon.

LEADHILLS (Aug. 3).—Brown's vein: The 145-fm. level north of Jeffrey's shaft shows a vein above 4 ft. wide, mostly quartz and spar of promising character, but without ore. The stope above the 145 north of Jeffrey's shaft is worth 10 cwt. of ore per fm. The stope above the 145 south of Wilson's shaft is worth 35 cwt. of ore per fm. The stope above the 145 north of Wilson's shaft is worth 40 cwt. of ore per fm. No. 1 stope above the 130 north of Jeffrey's shaft is worth 20 cwt. of ore per fm. No. 2 stope is worth 35 cwt. of ore per fm. No. 3 stope is worth 10 cwt. per fm. The stope above the 130 south of Wilson's shaft is worth 20 cwt. of ore per fm. The 115-fm. level north of Jeffrey's shaft is in a vein above 4 ft. wide, almost wholly spar, with ore 30 cwt. per fm. The stope above the 115 north of Jeffrey's shaft is worth 20 cwt. of ore per fm. The 100-fm. level north of Jeffrey's shaft shows a vein above 4 ft. wide, charged with quartz and dark stone, and only stones of ore occasionally. The stope above the 100 south of Wilson's shaft is worth 10 cwt. of ore per fm. The 85-fm. level north of Jeffrey's shaft is in a vein above 4 ft. wide, charged mainly with spar of a kindly nature, and very wet, but without ore. The 70-fm. level south of Wilson's shaft is now in a vein above 4 ft. wide, charged with improved stone, but continues without ore. The two stopes above the 35 south of Flat Rod shaft are worth 50 and 30 cwt. of ore per fm. respectively. Sarrowcole vein: Gripp's adit north of George's Roust vein is in a vein 4 ft. wide, mostly of kindly spar and ore, worth 20 cwt. per fm.—T. NEWBINGING.

NEW MINERA.—Report for two weeks ending July 31.—The 275-yd. level—No. 2 rise and stope: The ground is heavy, and a driving has been started east in the side of the lode in order to procure stuff to fill up. The 255-yd. level has been stopped. The 295-yd. level: The driving west has not been resumed, but will be when the connection is made with the 315-yd. level. Driving east of winze in a lode 8 ft. wide, and worth 4 tons blende per fm. Winze below 295 is now considered deep enough and waiting to be holed from the 315. The 315-yd. level: Driven this fortnight, 12 yds.; lode still good; worth 3 tons blende and 1 ton lead ore per fm. Dressing: Six trucks of blende have been sent off this week. The foundations for the new mill are progressing.

PRINCE OF WALES (Aug. 5).—In the 180-fm. level east we have taken down the lode, which is fully 2 ft. wide, more defined in character, and producing fair quality tinstuff. We have also taken down the lode in this level west, which is 2 ft. wide, and improving in its nature and value. In the 166 west we are driving by the side of the lode, which, as far as seen, appears to be large and productive. There is a change taking place in the ground in cross-cut south, it being highly mineralised, and some of it almost approaching the character of lode stone.—S. ROBERTS, J. PROWSE.

ROMAN GRAVELS (Aug. 6).—The 155 north is driven 13½ fms.; lode in present forebreast being 4 ft. wide, producing good lead ore and blende stuff, say, ½ ton to the fm., and improving. We hope now that the forebreast is just entering the ore ground, and that we shall be able to report a further improvement next week. The 155 on caunter vein is driven 13 fms. 5 ft., the lode in forebreast being in two divisions, which are together 4½ ft. wide, but at present not to value. We are, however, pleased to be able to tell you that all the water is now cut down to this level from the 140 south-east. The 140 south-east is again improving, and is to-day worth 1½ tons of lead ore per fm. We have this week commenced a rise behind this forebreast for the purpose of proving how high the bunch of ore goes up and of laying open ground for stopes. We have also started a winze in the 140 north, where the vein is worth 2 tons of lead ore per fm. The stopes in this level are without change since last report. The 140 south is driven 9 fms. 4 ft. beyond No. 1 winze; lode in present end 5 ft. wide, producing good stones of blende. The 125 south is worth 1 ton to the fm., and good progress is being made in the preparations by cutting ground for new winze and for placing the air engine in position for the winding of the vein stuff and water. This winze will go down in ore ground close to Lewis winze 110 to 125, and we hope to be able to report to you soon that the part of the vein being carried in the winze is worth 2 tons of lead ore per fm. All other points are without change during the week. The 20 tons of blende sold to-day realised 137½. We have sampled 50 tons of lead ore to-day for sale next week.—A. WATERS.

SOUTH DARREN (Aug. 6).—The shaft continues worth 15 cwt. of silver-lead ore per fm. It is nearly 10 fms. under the 142. The 130 end west is worth 12 cwt. of silver-lead ore per fm. It fell off in the beginning of the week, but is to-day looking better.—J. MITCHELL.

VAN (Aug. 6).—The cross-cut south at the 160-fm. level is now driven 13 fms. from the old lode towards the south lode; the ground is still very compact and hard, but fair progress is being made by six men. In the forebreast to-day there is a strong facing of lead ore on a cross-joint or bed, with water issuing therefrom, and this we consider indicates the approach to one of the branches of lead passed through at the 135-fm. level, when the cross-cut there was being driven to intersect the south vein. The two stopes in the roof of the 150-fm. level (on the old lode) are producing 15 cwt. of lead ore per fm., and a mixture of blende. The stope over the 135-fm. level on the south lode is worth 25 cwt. of lead ore per fm. At the 120-fms. level (about 82 fm. east of Seaham's shaft) the part of the lode in the end continues a strong mixture of lead and blende ores, but as we believe there is much of the lode on the north side of the drive here, we have to-day put the men to cross-cut northwards to prove the lode to the footwall; six men are employed here with rock-drills. The cross-cut driving south behind this end is still in a strong part of the lode, which shows good spots of blende and lead; we think we are nearing the south or hanging-wall of the vein at this point. Seaham's winze: The cross-cut south at the 150-fm. level has been driven 9 fms. 5 ft., in lode all the way, and the south wall reached. We shall therefore now drive eastwards along that part of this great lode at the point where it contained the most lead and blende, passed through in the cross-cut. A Sandycroft drill is used here. The stope over the 105, 90 and 75-fm. levels are producing 15 cwt. of lead ore per fm., and we are accumulating ore stuff both underground and at surface, with a view to resume operations shortly and keep them going regularly in the future.—J. PAULL.

WHEAL CREBOR (Aug. 4).—The lode in the 156 end driving east is harder and slower to drive in. We are pushing on the drive as fast as we can. The part of the lode carried is worth 5 tons of good quality arsenical mundic per fm. The lode in the end driving west at the 132 on the south part is yielding 3 tons of mundic and a little copper ore per fm. The lode in the stope in the bottom of the 144 east of winze is worth 2 tons of copper ore and 4 tons of mundic per fm. The lode in the stope in the back of the 132 west of cross-cut is yielding 3 tons of copper ore and 4 tons of mundic per fm. Our tributaries are busy clearing the broken ore out of their pitches and getting it ready for the next sampling.—P. D. HOLMAN.

WHEAL METAL AND FLOW (Aug. 5).—The 27 end east of Watson's engine shaft on Metal lode is from 2 to 3 ft. wide, and when washed on the vanning shovel shows a little tin—more than usual. The end is letting out a little more water, and should the lode at present still further improve it would greatly enhance the value of the mine.—S. P. CURTIS.

WHEAL UNY (Aug. 5).—In the 244 cross-cut we have passed through the lode 13 ft., which is turning out very well, and worth for tin 15½ per cubic fm. We are not satisfied that we have the south wall yet, and shall have another blast in face of the end to-day, and intend to open out east and west in the lode with another machine to-morrow. Will report more fully on this next week. The 230 ends east and west unaltered. The 203 end west is improving, and now worth 15½ per fm. Here we can open out for another good stope early. All other points without change since last reported.—J. WHITE.

FOREIGN MINING INTELLIGENCE.

ASIA MINOR (July 24).—Chief Mine: The lode in the Ara Dere winze is strong, and now producing about 10 cwt. silver-lead and some copper. There is a marked improvement in intermediate air shaft west, worth fully 22 cwt. Main adit is now going forward on a lode quite as masterly as formerly. One or two other points are looking a little more promising for ore, but at present are producing nothing worth valuing. Kaya Bashi Mine: The end east is worth about 9 cwt. of lead and 1 ton of blende. This point looks good for further improvement. Dolu Dere Mine: The winze is producing some fair ore stuff. There is a marked improvement in the end east, worth 10 cwt. This point looks very promising. Work in the mines and at surface has been much impeded owing to Turkish and Greek

holidays. Dressing floors: Production to 24th, 7,707 tons crushed, yielding 532 tons rich silver-lead.

AUSTRALIAN BROKEN HILL CONSOLS.—The manager reports for fortnight ending June 25:—Engine shaft: The 280 level west driven 3 ft.; total, 424 ft.; ground very hard. Rise on rich vein: Reached the upper end of rich vein during the fortnight, and having continued the rise a further 15 ft. without coming upon it again, it is evident that the upper portion of this vein has been worked out, and that any rich ore we may now come upon here will only be detached bodies. Incline shaft in rich shoot; sunk 16 ft.; total, 94 ft. Although the lode here has widened, the rich ore for the time being is confined to the hanging and footwall, an intrusion of rock having suddenly come in between the two. This intrusion has existed for some days, but may at any moment cut out and give place to ore as before. Indeed, our chances of an important development here are very good, but meantime our output has been seriously affected by the intrusion mentioned. The yield for the fortnight from both incline and rise consisting of 2 tons of sulphide of silver fahlerz and native silver, containing 17,439 ozs. of silver, now being cased for London. In addition to this, there is an output from other parts of the mine of 25 tons of ore, containing 5,977 ozs. of silver, or a total of 23,416 ozs. Rise north-west from incline risen 9 ft.; total, 9 ft. Ore is now showing in the carbonate of iron. Intermediate level west of rise driven 4½ ft.; total, 28½ ft.; no change. Block 95: Shaft on underlay of lode sunk 10 ft.; total, 38 ft. Water still increasing. Block 97: North shaft sunk 22 ft.; total, 131 ft.; no change.

BONNIE DUNDEE.—Mine manager's report for fortnight ending June 20:—Have continued stoping from the back of No. 7 level. There is no change in the stope east of winze. We have still about 1 ft. of stone mixed through 6 ft. of formation. About the same amount of stone in face of stope at present. In the stope west of winze the reef is not looking quite so well as we expected, the reef having proved to be broken up a good deal as we have opened the ground up. However, there is about from 6 to 8 ins. of reef going up in the back of the stope, and about 10 ins. running back flat into the hanging-wall, which we are now following. The stone in both stopes should crush about 1 oz. per ton. Have sunk the winze from this level a further depth of 20 ft. This being a sufficient depth for the bottom of the No. 8 level, I started to drive to meet this level, and drove a distance of 40 ft.; total depth of winze, 123 ft.; have had four men engaged at this work for the fortnight. Have driven No. 8 south-west level a further distance of 33 ft., with six men, for the fortnight, and broke through to the winze to-day, and we now have splendid ventilation right through all the works; total distance from shaft to winze, including the 4 ft. driven from the winze, 155 ft. We had fair ground, so was able to make better headway with the driving than I expected. I intend to start four men cross-cutting for the footwall on Monday, and put the other six men to stope from the winze. I shall start the stoping about 60 ft. up the winze from No. 8 level. Have raised about 34 tons of stone for the fortnight. All machinery and gear in good order.

BRATSBURG.—Report for week ending July 25:—Hoffnung Mine: No. 2 adit level maintains the same value as when last reported on, viz., ¾ ton per fm., as do also the rises Nos. 1 and 2 in the back of this level. No. 3 adit level has still further improved since last report; now yielding fully 1 ton per fm., and the rise in the back here is unchanged. There is no change to report at No. 4 level, the man engaged driving here having been taken out of the mine for the purposes of the smelting company. The trial level at Murchison's section, we are pleased to report, has increased in value to 1½ ton per fm., and the ore is of better than average quality. Johannes Mine: The level driving west on Howard lode is now worth ¾ ton per fm., and the eastern level 1 ton per fm. The stopes here continue very good. Surface work and remarks: The carriage of the ore to Bandakslid has gone forward with regularity, as has also the dressing operations. We have been engaged haymaking, but the getting in of it has been somewhat hindered by the weather, which has been against this class of work. We are daily expecting to hear that the Edward Arthur has arrived at Skien to load the third cargo.—J. D. HOLMAN, T. F. SMITH.
